Objection 1. Vicious actions are the contrary of virtuous actions. But human laws do not prohibit all vices, as I have said. Therefore, human laws also do not command every virtuous action.

Obj. 2. Virtuous actions come from virtue. But virtue is the aim of laws, and so what comes from virtue cannot fall within legal precepts. Therefore, human laws do not command every virtuous action.

Obj. 3. Laws are ordained for the common good, as I have said. But some virtuous actions are ordained for private, not the common, good. Therefore, laws do not command every virtuous action.

On the contrary, the Philosopher says in the *Ethics:* "Laws command courageous and temperate and gentle behavior, and likewise regarding other virtues and vices, commanding the former and forbidding the latter."

I answer that we distinguish specific virtues by their objects, as is evident from what I have said before. But we can relate all the objects of virtues either to the private good of a person or to the common good of the people. For example, one can perform courageous acts either to preserve the political community or to uphold the rights of one's friends, and similarly with other virtuous acts. And laws are ordained for the common good, as I have said. And so there are no virtues regarding whose actions laws could not command. But laws do not command regarding every action of every virtue. Rather, they only command things that can be ordained for the common good, whether immediately, as when things are done directly for that good, or mediately, as when lawmakers ordain things belonging to good training, which trains citizens to preserve the common good of justice and peace.

Reply Obj. 1. Human laws do not by strict command prohibit every vicious action, just as they do not command every virtuous action. But human laws prohibit some acts of particular vices, just as they command some acts of particular virtues.

Reply Obj. 2. We call actions virtuous in two ways. We call them virtuous in one way because persons perform virtuous deeds. For example, just actions consist of doing just things, brave actions consist of doing brave things. And human laws command virtuous acts in this way. We call actions virtuous in a second way because persons perform virtuous deeds as virtuous persons do. And the actions of virtuous persons always come from virtue and do not fall within legal precepts, although lawmakers aim to induce such behavior.

Reply Obj. 3. There are no virtues whose actions cannot be ordained for the common good, either directly or indirectly, as I have said.

Fourth Article
Does Human Law Impose Obligation on Human Beings in the Court of Conscience?

We thus proceed to the fourth inquiry. It seems that human law does not impose obligation on human beings in the court of conscience, for the following reasons:

Objection 1. Lower powers cannot impose laws on the courts of higher powers. But the power of human beings, which establishes human laws, is inferior to God's power. Therefore, human law cannot impose laws on the court of God, that is, the court of conscience.

Obj. 2. The judgment of conscience depends most of all on God's commandments. But human laws sometimes nullify God's commandments, as Mt. 15:6 says: "You have nullified God's commandment for the sake of your traditions." Therefore, human laws do not impose obligation regarding conscience.

Obj. 3. Human laws often bring defamation and injury to human beings. Just so, Is. 10:1–2 says: "Woe to those who establish wicked laws and inscribe injustices when they write laws, in order to oppress the poor in the courts and do violence in cases involving the lowly of my people." But all are permitted to avoid oppression and violence. Therefore, human laws do not impose obligation on human beings regarding conscience.

On the contrary, 1 Pet. 2:19 says: "It is a blessing if one, suffering unjustly, endures sorrows for the sake of conscience."

I answer that laws established by human beings are either just or unjust. If just, they indeed have obligatory force in the court of conscience from the eternal law, from which they are derived. Just so, Prov. 8:15 says: "Kings rule through me, and lawmakers decree justice." And we call laws just from three perspectives: (1) from their end, namely, when they are ordained for the common good; (2) from their authority, namely, when the laws enacted do not surpass the power of the lawmakers; (3) from their form, namely, when they impose proportionately equal burdens on citizens for the common good.

And laws are unjust in two ways. They are unjust in one way by being contrary to the human good in the foregoing respects. Laws may be unjust regarding their end, as when authorities impose burdensome laws on citizens to satisfy the authorities' covetousness or vainglory rather than to benefit the community. Or laws may be unjust regarding the authority to make them, as when persons enact laws that exceed the power committed to them. Or laws may be unjust regarding their form, as when burdens, even if ordained for the common good, are disproportionately imposed on the people. And such laws are acts of violence rather than laws, since "unjust laws do not seem to be laws," as Augustine says in his work *On Free Choice*. And so such laws do not oblige in the court of conscience, except perhaps to avoid scandal or civil unrest, to avoid which human beings ought to yield even their rights. Just so, Mt. 5:40–41 says: "If someone has taken your coat from you, give the person your cloak as well, and if someone has forced you to go one mile, go with the person another two."

Laws can be unjust in a second way by being contrary to the divine good (e.g., the laws of tyrants inducing their subjects to worship idols or to do anything else contrary to the divine law). And it is never permissible to obey such laws, since "we ought to obey God rather than human beings," as Acts 5:29 says.

Reply Obj. 1. The Apostle says in Rom. 13:1–2: "All human power is from God, and so those who resist the power" in matters belonging to its scope "resist God's ordination." And so such persons become guilty in respect to their conscience.

Reply Obj. 2. The argument of this objection is valid about human laws ordained contrary to God's commandments. And the scope of human power

does not extend to such laws. And so one should not obey human laws in such matters.

Reply Obj. 3. The argument of this objection is valid about laws that inflict unjust burdens on citizens, and also the scope of power granted by God does not extend to such laws. And so human beings are not obliged in such cases to obey the laws if it be possible to resist them without giving scandal or causing greater harm.

Fifth Article
Is Everyone Subject to the Law?

We thus proceed to the fifth inquiry. It seems that not everyone is subject to the law, for the following reasons:

Objection 1. Only those for whom laws are established are subject to the law. But the Apostle says in 1 Tim. 1:9 that "laws are not established for the righteous." Therefore, the righteous are not subject to human law.

Obj. 2. Pope Urban says, and the *Decretum* maintains: "No reason demands that those guided by private law be constrained by public law." But all spiritual persons, who are sons and daughters of God, are guided by the private law of the Holy Spirit. Just so, Rom. 8:14 says: "Those moved by the Spirit of God are God's children." Therefore, not every person is subject to human law.

Obj. 3. The Jurist says that "rulers are exempt from the laws." But those exempt from the law are not subject to it. Therefore, not everyone is subject to the law.

On the contrary, the Apostle says in Rom. 13:1: "Let every soul be subject to higher powers." But any persons not subject to the law that higher powers establish seem not to be subject to the powers. Therefore, all persons should be subject to human law.

I answer that, as is evident from what I have said before, two things belong to the nature of law: first, indeed, that law be the rule of human actions; second, that law have coercive power. Therefore, human beings can be subject to the law in two ways. They can be subject to law in one way as the ones regulated by the rule. And in this regard, all those subject to a power are subject to the laws the power establishes. But one may not be subject to a power in two ways. One may not be subject to a power in one way because one is absolutely free from subjection to the power. And so those belonging to one political community or kingdom are not subject to the laws of the ruler of another political community or kingdom, since such persons are not subject to that ruler's dominion. One may not be subject to a power in a second way insofar as one is ruled by a higher law. For example, a person subject to a proconsul ought to be ruled by the proconsul's commands but not regarding matters from which the emperor exempted the person. For regarding the latter, a person directed by a higher command is not bound by the command of an inferior power. And so those absolutely subject to the law may not be bound by the law regarding matters about which they are ruled by a higher law.

We say in a second way that some are subject to the law as the coerced to the power coercing. And in this respect, only the wicked, not the virtuous and righteous, are subject to the law. For what is coerced and forced is contrary to the will. But the will of the virtuous is in accord, and the will of the wicked in discord, with the law. And so only the wicked, not the virtuous, are subject to the law in this respect.

Reply Obj. 1. The argument of this objection is valid about being subject to the law by way of coercion. For then "the law is not established for the righteous," since "they are a law unto themselves" because "they manifest what the law requires written in their hearts," as the Apostle says in Rom. 2:14–15. And so the law does not have the coercive force in their regard that the law has regarding the wicked.

Reply Obj. 2. The law of the Holy Spirit is superior to every human law. And so spiritual persons, insofar as they are guided by the law of the Holy Spirit, are not subject to human law regarding things contrary to the Holy Spirit's guidance. But it belongs to the Holy Spirit's guidance that spiritual persons be subject to human laws, as 1 Pet. 2:13 says: "Be subject to every human creature for God's sake."

Reply Obj. 3. We say that rulers are exempt from the law regarding its coercive force, since, properly speaking, one is not coerced by oneself, and law has coercive force only by the power of a ruler. Therefore, we say that rulers are exempt from the law because no one can pass sentence on them if they act contrary to the law. And so a gloss on Ps. 51:4, "I have

sinned against you alone," etc., says that "there is no one who is competent to judge the deeds of a king."

But regarding the directive power of law, rulers are subject to the law by their own will. Just so, the *Decretals* say: "Rulers should follow the law that they decree for others. And the authority of a wise man says: 'Obey the law you yourself decreed.'" Also, the Lord reproves "those who preach and do not practice" and "those who impose heavy burdens on others but do not themselves want to lift a finger to move them," as Mt. 23:3–4 relates. And so, regarding God's judgment, rulers are not exempt from the law regarding its directive power, and they should willingly, not by coercion, fulfill the law.

Also, rulers are above the law insofar as they can, if it be expedient, alter the law and dispense from it at certain times and places.

Sixth Article
Are Those Subject to the Law Permitted to Act Contrary to the Letter of the Law?

We thus proceed to the sixth inquiry. It seems that those subject to the law are not permitted to act contrary to the letter of the law, for the following reasons:

Objection 1. Augustine says in his work *On True Religion:* "Although human beings judge about temporal laws when they decree them, the subjects will not be permitted to judge about them after they have been decreed and established. Rather, subjects should judge according to the laws." But if one disregards the letter of the law, claiming that one preserves the lawmaker's aim, such a one seems to judge about the law. Therefore, those subject to the law are not permitted to disregard the letter of the law in order to preserve the lawmaker's aim.

Obj. 2. Only those who frame laws are competent to interpret them. But human beings subject to the law are not competent to frame them. Therefore, such human beings are not competent to interpret them. Rather, such human beings ought always to act according to the letter of the law.

Obj. 3. Every wise person knows how to explain the person's aim in words. But we ought to esteem wise those who frame laws, since wisdom says in Prov. 8:15: "Kings rule through me, and the framers of laws decree justice." Therefore, we should judge about the lawmaker's aim only by the words of the law.

On the contrary, Hilary says in his work *On the Trinity:* "We should understand the meaning of statements from the reasons for making them, since speech ought to be governed by things, not things by speech". Therefore, we ought to pay more attention to the lawmaker's aim than to the very words of the law.

I answer that, as I have said before, every law is ordained for the commonweal and has the force and nature of law insofar as it is so ordained. But a law has no power to bind morally insofar as it falls short of this ordination. And so the Jurist says: "No aspect of law or favor of equity allows us to render severe by a harsher interpretation contrary to the benefit of human beings things wholesomely introduced for their benefit." And it often happens that observing the law is generally beneficial to the commonweal but most harmful to it in particular cases. Therefore, since lawmakers cannot envision all particular cases, they direct their aim at the common benefit and establish laws regarding things that generally happen. And so one should not observe a law if a case happens to arise in which observance of the law would be harmful to the commonweal. For example, if a law should decree that the gates of a besieged city remain shut, this is for the most part for the benefit of the commonweal. But if a situation should arise in which enemy soldiers are pursuing some citizens defending the city, it would be most harmful to the community if the gates were not to be opened to admit the defenders. And so, contrary to the letter of the law, the city gates should be opened in such a situation in order to preserve the commonweal, which is the lawmaker's intention.

And yet we should note that not everyone is competent to interpret what may be useful or not useful for the community if observance of the letter of the law does not risk a sudden danger that needs to be immediately resolved. Rather, only rulers are competent to make such interpretations, and they have authority in such cases to dispense citizens from laws. On the other hand, if there be a sudden danger that does not allow enough time to be able to have recourse to a superior, the very necessity includes an implicit dispensation, since necessity is not subject to the law.

Reply Obj. 1. Those who in cases of necessity act contrary to the letter of the law do not judge about the law itself. Rather, they judge about particular cases, in which they perceive that they should not observe the letter of the law.

Reply Obj. 2. Those who follow the lawmaker's aim do not, absolutely speaking, interpret the law. Rather, they interpret the law regarding particular cases in which evidence of harm makes it clear that the lawmaker intended otherwise than the letter of the law. For if they have any doubt, they ought to act according to the letter of the law or consult superiors.

Reply Obj. 3. No human being's wisdom is so great as to be able to contemplate every single case. And so one cannot adequately express in words the things suitable for an intended end. And if a lawmaker could contemplate all cases, the lawmaker, to avoid confusing citizens, need not express all of them. Rather, the lawmaker should establish laws regarding what generally happens.

WAR AND KILLING

ST II–II

Question 40

On War

[This question is divided into four articles, one of which is translated here.]

First Article
Is It Always Sinful to Wage War?

We thus proceed to the first inquiry. It seems that it is always sinful to wage war, for the following reasons:

Objection 1. Punishment is inflicted only for sin. But the Lord declares that those who wage war will be punished, as Mt. 26:52 says: "Those who take to the sword will perish by the sword." Therefore, all wars are unlawful.

Obj. 2. Everything contrary to a divine precept is a sin. But waging war is contrary to a divine precept, since Mt. 5:39 says: "I tell you not to resist evil," and Rom. 12:19 says: "Do not defend yourselves, dearly beloved, but leave it to [God's] wrath." Therefore, it is always sinful to wage war.

Obj. 3. Only sin is contrary to a virtuous act. But war is contrary to peace. Therefore, war is always a sin.

Obj. 4. Every exercise regarding something lawful is lawful, as is evidently the case with scientific exercises. But the church prohibits the warlike exercises in tournaments, since the church denies those who die in such contests Christian burial. Therefore, war seems to be absolutely sinful.

On the contrary, Augustine says in a sermon on the centurion's servant: "If Christian teaching were altogether to condemn war, the soldiers in the Gospel who sought salutary advice [Lk. 3:14] would be told to cast aside their arms and abandon military service altogether. But Christ told them: 'Do violence to no one, and be content with your pay.' And if Christ commanded them to be satisfied with their pay, he did not forbid military service."

I answer that three things are required for a war to be just. The first requirement is indeed that the ruler at whose command the war is to be waged have the lawful authority to do so. For it belongs to no private citizen to initiate war, since private persons can pursue vindication of their rights through the decisions of their superiors. Likewise, it belongs to no private citizen to initiate war because no private citizen can call on the people to wage war, which has to be done in wars. Rather, since the care of the common weal has been entrusted to rulers, it belongs to them to protect the common weal of the city or kingdom or province subject to them. And they lawfully use physical weapons to defend the common weal against domestic rebels when they punish malefactors, as the Apostle says in Rom. 13:4: "He [the ruler] does not carry a sword without cause, since he is God's servant, an avenger to execute wrath on the evildoer." Just so, it also belongs to rulers to use weapons of war to protect the common weal against foreign enemies. And Ps. 82:4 tells rulers: "Rescue the poor and free the needy from the hands of sinners." And so Augustine says in his work *Against Faustus*: "The natural order conducive to peace among mortals requires that the legitimate authority to undertake war, and deliberation regarding war, be in the hands of rulers."

Second, there needs to be a just cause to wage war, namely, that the enemy deserves to have war waged against it because of some wrong the enemy has inflicted. And so Augustine says in his *Questions on the Heptateuch*: "We usually define just wars as those that avenge wrongs, when peoples or political communities need to be punished either because they have failed to rectify wrongs committed by their subjects, or because they have failed to restore property unjustly seized."

Third, those waging war need to have a right intention, namely, an intention to promote good or avoid evil. And so Augustine says: "For true worshipers of God, wars waged with zeal for peace and not out of desire for gain or out of cruelty, to restrain the wicked and assist the good, are also conducive of peace." But even if legitimate authority declares war, and the cause is just, wars may be unlawful because they are waged with a wicked intention. For Augustine says in his work *Against Faustus*: "Desire to harm, vengeful cruelty, unsatiated and implacable animus, savagery in renewing combat, lust for dominance, and the like are justly condemned in the matter of waging war."

Reply Obj. 1. Augustine says in his work *Against Faustus*: "They take to the sword who take up arms against the life of another without any superior or legitimate authority either commanding or allowing it." But they who use the sword by the authority of a ruler or judge, if they be private citizens, or out of zeal for justice, by the authority of God, as it were, if they be public officials, do not themselves "take to" the sword. Rather, they "use" the sword committed to them by another. And so they do not deserve punishment.

Still, even those who use the sword sinfully are not always slain by the sword, although they always perish by their own sword, since they are eternally punished for their sinful use of the sword unless they repent.

Reply Obj. 2. As Augustine says in his work *On the Lord's Sermon on the Mount*, human beings should always observe such precepts in readiness of spirit, namely, that they be ready, if necessary, not to resist and not to defend themselves. But sometimes one should act otherwise for the sake of the common good, and also for the good of those against whom one is fighting. And so Augustine says in a letter to Marcellinus: "We need to do many things against those whom we punish with a kindly severity against their will. For they are beneficially vanquished who are snatched from the licentiousness of sin, since nothing is more miserable than the happiness of sinners, which feeds a punishable licentiousness and, like an internal enemy, strengthens an evil will."

Reply Obj. 3. Even those who wage just war strive for peace. And so they are only contrary to the evil peace that the Lord "did not come to send upon the earth," as Mt. 10:34 says. And so Augustine says in a letter to Boniface: "We do not seek peace in order to wage war. Rather, we wage war in order to achieve peace. Therefore, be peacemakers in waging war, so that you may, in winning, bring to those against whom you war the benefit of peace."

Reply Obj. 4. Not all military exercises by human beings are forbidden. Rather, only disordered and dangerous military exercises that give rise to slayings and plunderings are forbidden. And the ancients took part in military exercises without such risks. And so the ancients called them "military exercises" or "bloodless wars," as Jerome makes clear in one of his letters.

OBEDIENCE AND SEDITION

Question 42

On Rebellion

[This question is divided into two articles, one of which is translated here.]

Second Article
Is Rebellion Always a Mortal Sin?

We thus proceed to the second inquiry. It seems that rebellion is not always a mortal sin, for the following reasons:

Objection 1. Rebellion signifies "a military insurrection," as a gloss on 2 Cor. 12:20 makes clear. But war is not always a mortal sin and sometimes just and lawful, as I have maintained before. Therefore, much more can there be rebellion without mortal sin.

Obj. 2. Rebellion is a form of discord, as I have said. But there can be discord without mortal sin, and sometimes without any sin. Therefore, there can also be rebellion with mortal sin or any sin.

Obj. 3. We praise those who deliver a people from the power of a tyrant. But this cannot be easily done without a popular insurrection if some of the people strive to maintain the tyrant, and others strive to unseat him. Therefore, there can be rebellion without sin.

On the contrary, the Apostle in 2 Cor. 12:20 prohibits rebellion along with other sins that are mortal. Therefore, rebellion is a mortal sin.

I answer that as I have said, rebellion is contrary to the unity of citizens (that is, the people) of a political community or kingdom. But Augustine says in *The City of God* that wise persons define the people as "a popular assembly legally constituted and bound by common interest, not any popular assembly." And so the unity contrary to rebellion is evidently one of law and common interest. Therefore, rebellion is obviously contrary to both justice and the common good. And so rebellion is, by its nature, a mortal sin and more serious insofar as the common good, which rebellion subverts, surpasses private goods, which private disputes subvert.

And the leaders of rebellions indeed first and chiefly incur the sin of rebellion, and they sin most seriously. Second, supporters of rebellion who disturb the common good also incur the sin of rebellion. But we should not call those resisting the rebels and defending the common good seditious, just as we do not call those defending themselves brawlers, as I have said before.

Reply Obj. 1. Lawful war is waged for the benefit of the community, as I have said before. But rebellion is waged against the common good of the people. And so rebellion is always a mortal sin.

Reply Obj. 2. Discord from what is not clearly good can occur without sin. But discord from what is clearly good cannot happen without sin. And rebellion, which is contrary to the unity of the people, something clearly good, is the latter kind of discord.

Reply Obj. 3. Tyrannical governance is unjust, since it is ordained for the private good of the ruler, not for the common good, as the Philosopher makes clear in the *Politics* and the *Ethics*. And so disturbance of such governance does not have the character of rebellion, except, perhaps, in cases where the tyrant's governance is so inordinately disturbed that the subject people suffer greater harm from the resulting disturbance than from the tyrant's governance. Rather, tyrants, who by seeking greater domination incite discontent and rebellion in the people subject to them, are the rebels. For governance is tyrannical when ordained for the ruler's own good to the detriment of the people.

PROPERTY

Question 66

On Theft and Robbery

First Article
Is the Possession of External Goods Natural to Human Beings?

We thus proceed to the first inquiry. It seems that the possession of external goods is not natural, for the following reasons:

Objection 1. No one should ascribe to self what belongs to God. But dominion over all creatures belongs uniquely to God, as Ps. 24:1 says: "The Lord's is the earth," etc. Therefore, the possession of goods is not natural to human beings.

Obj. 2. Basil, explaining the words of the rich man who in Lk. 12:18 said, "I shall gather all my harvest and my possessions," says: "Tell me, which goods are yours? Whence did you get them and bring them into existence?" But human beings can appropriately claim that things they possess by nature are their own. Therefore, human beings do not by nature possess external goods.

Obj. 3. Ambrose says in his work *On the Trinity*: "Dominion denotes power." But human beings have no power over external things, since they cannot alter the nature of such things. Therefore, the possession of external goods is not natural to human beings.

On the contrary, Ps. 8:6 says: "You [God] have put all things under their feet," that is, the feet of human beings.

I answer that we can consider external things in two ways. We can consider them in one way regarding their nature, which is subject only to God's power, which all things obey at his whim, not to the power of human beings. We can consider external things in a second way regarding their use. And then human beings have dominion over external things from nature, since human beings can, by their powers of reason and will, make use of external things for personal benefit, as the things were made for human beings' sake. For less perfect things exist for the sake of more perfect things, as I have maintained before. And the Philosopher by the latter argument proves in the *Politics* that the possession of external goods is natural to human beings. And the natural dominion over the other creatures, which according to reason (in which the image of God consists) belongs to human beings, is evident in the very creation of human beings, as Gen. 1:26 says: "Let us make human beings in our likeness and image, and let them have dominion over the fish of the sea," etc.

Reply Obj. 1. God has the chief dominion over all things. And he in his providence has ordained some things for the material sustenance of human beings. And so human beings have dominion from nature regarding the power to use such things.

Reply Obj. 2. The rich man is criticized because he thought external goods belonged chiefly to him, as if he had not received them from another, namely, God.

Reply Obj. 3. The argument of this objection is valid regarding dominion over external goods regarding their nature, which indeed belongs only to God, as I have said.

Second Article
Are Individuals Permitted to Possess Property as Their Own?

We thus proceed to the second inquiry. It seems that individuals are not, for the following reasons:

Objection 1. Everything contrary to the natural law is illicit. But all things are by the natural law common possessions, and individual ownership of possessions is indeed contrary to possession by the community. Therefore, no human being is permitted to appropriate external goods for self.

Obj. 2. Basil, explaining the words of the rich man in Lk. 12:18, says: "As those who come to public events ahead of time would prevent those coming later from attending, by appropriating for selves what is ordained for common use, so the rich think that common goods they seize first, belong to them." But it is illicit to prevent others from possessing common goods. Therefore, it is illicit to appropriate common goods for self.

Obj. 3. Ambrose says, and the *Decretum* holds: "Let no one call one's own what is common property." But he calls external goods common property, as his prior remarks make clear. Therefore, it seems that no one is permitted to appropriate external goods for self.

On the contrary, Augustine says in his work *On Heresies*: "The 'Apostolics' have most arrogantly so designated themselves because they do not receive into their fellowship the married or those possessing their own property. (The Catholic Church likewise has very many monks and celibate clerics.)" But these heretics hold this view because, cut off from the church, they think that the married and possessors of property, which they themselves are not, have no hope of salvation. Therefore, it is false to say that human beings are not permitted to possess their own property.

I answer that two things belong to human beings regarding external goods. One is the power to manage and disperse external goods. And human beings are permitted to possess them as their own in that regard. And this is necessary for human life for three reasons. First, indeed, the power to manage and dispense external goods is necessary for human life because individuals are more careful in managing goods that belong to them alone than goods that are common to all or many. This is so because individuals, shunning work, leave common property to the care of others, as happens when there are many servants.

Second, the power of individuals to manage and dispense external goods is necessary for human life because human affairs are conducted in a more orderly fashion if the requisite care in managing external goods be entrusted to individuals. On the other hand, there would be confusion if unspecified individuals were to manage everything.

Third, the power of individuals to manage and dispense external goods is necessary for human life

because human beings content with their own property live in a condition of peace. And so we observe that quarrels arise rather frequently among those who possess goods in common and not individually.

And the use of external goods is the second thing that belongs to human beings regarding the goods. And human beings in that regard should not possess external goods as their own but as common possessions, namely, in such a way that they readily share the goods when others are in need. And so the Apostle says in 1 Tim. 6:17–18: "Teach the rich of this world to distribute and share readily."

Reply Obj. 1. We do not ascribe the common character of external goods to the natural law because the natural law dictates that all such goods should be possessed in common, and nothing possessed as one's own. Rather, we ascribe the common character of external goods to the natural law because there is a division of possessions by human agreement which belongs to positive law, as I have said before, and not by the natural law. And so the individual ownership of possessions is not contrary to the natural law, although the intervention of human reason adds this to the natural law.

Reply Obj. 2. Those who come early to public events and were to open the way for others to attend, would not act improperly. And likewise, the rich do not act improperly if they before others take possession of property that was in the beginning common, and share the property with others. But the rich sin if they indiscriminately prevent others from using the property. And so Basil says in the same place: "Why are you rich and others beggars, except that you gain the merit of dispensing your wealth well, and that others are rewarded for their patience?"

Reply Obj. 3. When Ambrose says: "Let no one call common property one's own," he is speaking about individual ownership in regard to the use of external goods. And so he adds: "Those who spend too much are guilty of robbery."

Disputed Questions on Virtue

On the Virtues in General

Article 1
Are Virtues Habits?[1]

Reply

"Virtue," according to the meaning of the word, designates what completes a power. That is why virtue is also called strength, since a thing achieves its impulse or movement through the power it has that has been made complete. For "virtue," as the word implies, refers to a power's perfection. Accordingly, the Philosopher says in *On the Heavens* 1.11 (281a15) that virtue is the utmost extent of power in a thing. However, power is said to be directed to activity. Therefore, we see what completes a power when the power engages in its perfect operation. Furthermore, because whatever operates has its operation as its end (since everything, according to the Philosopher in *On the Heavens* 2.3 (286a8), is for the sake of its operation as its proximate end), each thing is good to the extent that it is fully directed to its end. That is why virtue makes its possessors good and their activity good too, as *Ethics* 2.6 (1106a15–17) states. What is more, this line of argument also makes it clear that virtue is the disposition of what has been perfected to what is best, as stated in *Physics* 7.3 (246b23).

All these accounts apply to the virtue of anything whatsoever: A horse's virtue is what makes it and its activity good—and the same is true for the virtue of a stone, or a human being, or anything else.

However, the manner in which a power is completed varies in keeping with which of various characters it has; for one sort of power only acts, another is only acted on and moved, and a third sort acts and is acted on.

Accordingly, a power that only acts does not need anything introduced into it to be the source of its acts. That is why the virtue of such a power is just the power itself. Examples of this sort of power include the divine power, the agent intellect, and natural powers. Hence, the virtues of these powers are not habits of any kind, but these very powers, which are complete in themselves.

On the other hand, those powers that are only acted upon are powers that do not act unless they are moved by others. Their acting or not acting is not up to them; instead, they act through the impulse of the power moving them. The sensory powers, considered in themselves, are of this kind, which is why the Philosopher says in *Ethics* 6.2 (1139a19) that they are not the source of any acts. These powers are perfected for performing their acts by the introduction of something else—something that is in them *not* in the persistent way forms are in their subjects, but merely in the way an undergoing is. (The image in the eye's pupil is an example of this.) For this reason, the virtues of these powers are not habits either. Instead, they are the powers themselves insofar as they have actually been acted on by their corresponding active causes.

The powers that both act and are acted upon are those that are moved by what acts on them in such a way that their movers do not determine them to a single course. Instead, their acting or not acting is up to them. To this group belong powers that are rational in some way. These powers are rendered complete for acting by the introduction of something that is in them not merely the way an undergoing is, but the way a form is that is stable and persists in its subject. Even so, the result is not that these forms necessarily compel the power to one course, because if they did, the power would not be in control of its acts. The virtues of these powers are neither the powers themselves, nor undergoings (as with the sensory powers),

1. Objections and responses to objections are omitted throughout this selection from the work.

nor qualities that act necessarily, like the affective qualities of natural things. Instead, they are habits, through which one can act when one wills to, as the Commentator says in *On the Soul* 3.18. Moreover, Augustine says in *On the Good of Marriage* 21 that a habit is that by which one acts when the need arises.

So, it is clear from these remarks that the virtues are habits, and it is also clear how habits differ from the second and third species of quality. It is readily apparent how they differ from the fourth species, shape: Shape, as such, does not imply a directedness to act.

On the basis of these remarks, we can also show that we need virtuous habits for three reasons.

First, for steadfastness in our operation. After all, what depends on the operation alone changes easily if it has not been stabilized by a habitual inclination.

Second, we need them to perform a perfect operation readily. That is because, unless a habit in some way inclines the rational power to one course, then whenever we have to perform an operation, we must always first make an inquiry about what to do. We have a clear example of this in the case of someone who has not yet acquired the relevant habit of knowledge but wants to reflect, and in the case of someone who lacks the relevant habit of virtue but wants to act as virtue demands. For this reason, the Philosopher says in *Ethics* 3.8 (1117a22) that our unanticipated actions are done from habit.

Third, we need virtuous habits to bring our perfect activity to fulfillment pleasurably. Habit is responsible for this. Because it has the mode of a nature, it makes the activity proper to it connatural, so to speak, and therefore pleasurable, since appropriateness causes pleasure. Accordingly, the Philosopher holds that pleasure in what one does is a sign of one's habit (*Ethics* 2.3, 1104b3–5).

Article 2
Is the Definition of Virtue Asserted by Augustine Accurate?

Augustine's definition: "Virtue is a good quality of the mind, by which one lives rightly, which no one uses badly, which God works in us without us."[2]

Reply

This formulation captures the definition of virtue, and if we leave out the last clause, it applies to every human virtue.

As said (a. 1 reply), virtue perfects a power as regards its perfect act. So, because a perfect act is the end of the power or the agent, virtue makes both the power and the agent good, as noted earlier (a. 1 reply). Accordingly, the definition of virtue includes something about the act's perfection, and something about the perfection of the power or agent.

Two things are required for an act's perfection. First, the act must be right. Second, the habit from which it springs must be incapable of being the source of a contrary act. After all, a source of both good and bad acts cannot, of its own nature, be a perfect source of a good act. That is because a power's perfection must be the source of a good act in such a way that it cannot be the source of a bad one in any way. That is why the Philosopher says in *Ethics* 6.3 (1139b14–18) that opinion is not a virtue, whereas knowledge is: Opinion can be true or false, but we have knowledge only of what is true. The first requirement for a perfect act is designated by the clause "by which one lives rightly," and the second by the clause "which no one uses badly."

Virtue also makes its subject good. In this connection, we must consider three things: (a) The *subject itself* is specified by the expression "of the mind," since human virtue can be only in what belongs to a human being as such. (b) The intellect's *perfection* is designated by the word "good," since something is called good because of its directedness to its end. (c) Finally, "quality" designates the *way it inheres* in its subject, because virtues are not in their subject the way undergoings are but the way habits are, as pointed out above (a. 1 reply).

All these elements apply to moral, intellectual, and theological virtues, regardless of whether the virtues are acquired or infused. But the clause Augustine adds to these—"which God works in us without us"—applies only to infused virtues.

---

2. Aquinas takes this definition from the *Sentences* of Peter Lombard (2.27.1). The definition, as stated, dates back to Prosper of Aquitaine (*Sentences* 106), who had collected the definition's elements from Augustine's scattered remarks in *On Free Choice of the Will* (2.18–19).

Article 3
Can a Power of the Soul Be a Subject of Virtue?

Reply

There are three ways a subject can be related to its accident:

a. As its sustainer. That is because an accident does not subsist through itself; rather, its subject sustains it.
b. As a potentiality to an actuality. That is because a subject underlies an accident as a potentiality for its actuality (and that explains why an accident is called a form).
c. As a cause to its effect. That is because the principles of a subject are essential principles of its accident.

One accident cannot be the subject of another in the first way. The reason is that no accident subsists through itself, and so no accident can serve as another's sustainer (unless we were to say that one accident is another's sustainer insofar as *it* is sustained by its subject).

However, in the second and third ways, one accident can be related to another in the manner of a subject. After all, there are accidents that are in potentiality to others: Transparency is in potentiality to light, and a surface is in potentiality to color. Moreover, one accident can be another's cause: Moisture causes flavor, for instance. Indeed, we say one accident is another's subject in this manner—not because one accident can sustain another, but because a subject can receive one accident through another's mediation.

We say that a power of the soul is a subject of a habit in this manner too. For one thing, a habit is related to a power of the soul as an actuality to a potentiality; for the power is indeterminate in its own nature, and through a habit it is determined to this or that. Moreover, acquired habits are caused through the principles of the soul's powers.

In reply, then, the soul's powers are subjects of virtues in this sense: A virtue is in the soul through a power's mediation.

Article 4
Can the Irascible and Concupiscible Appetites Be Subjects of Virtue?

Reply

Everyone agrees on one part of the answer to this question, while their views on another part are incompatible with each other. Everyone concedes that some virtues are in the irascible and concupiscible appetites (for instance, temperance in the concupiscible and courage in the irascible). But then differences arise about this claim.

Some thinkers find that there are two distinct sets of irascible and concupiscible appetites: one in the higher part of the soul, and the other in the lower part. They say that the irascible and concupiscible appetites in the soul's higher part can be subjects of virtue because these powers belong to the rational nature, while that is not true of the irascible and concupiscible powers in the soul's lower part, since they belong to the sensory and animal nature. However, I have already discussed this in a different investigation (namely, whether we can find in the higher part of the soul two distinct powers, one of which is an irascible appetite and the other a concupiscible, strictly speaking).

At any rate, whatever anyone might say about *this* issue, we must maintain that there are virtues in the irascible and concupiscible appetites that are in the soul's lower part, as the Philosopher says (*Nicomachean Ethics* 3.10 1117b24), and others say as well. The following will make this evident.

Since "virtue" refers to what completes a power, as said above (a. 1 reply), and since a power concerns an act, we must locate human virtue in those powers that can be sources of a human act. But it is not called a human act just because it is exercised in or by a human being in any way whatsoever, since in certain activities plants and nonhuman animals are just like us. Rather, human acts are those acts specially characteristic of human beings. Now human beings, as opposed to other sorts of creatures, have this as a special characteristic as regards their acts: They have control over their acts. Therefore, any acts over which human beings have control are human acts, strictly speaking, while those over which they lack

control are not, even if they occur *in* human beings (for instance, digesting, growing, etc.). So there can be human virtue in something that is the source of this sort of act—an act over which one has control.

However, we should be aware that acts of this sort can have a threefold source. One source is the primary mover and commander, through which human beings have control over their acts. This is reason or will. The second is a moved mover—the sensory appetite—which is moved by the higher appetite insofar as it obeys reason, and then in turn moves our limbs by its command. The third is what is moved only: our limbs.

Although both the limbs and the lower appetite are moved by the higher part of the soul, they are moved in different ways. A limb obeys a command of the higher part, and it does so blindly and without any resistance, in keeping with the order of nature, as long as nothing hinders it. The hand and the foot provide clear examples. On the other hand, the lower appetite has its own characteristic inclination arising from its own nature, and this explains why it does not obey the higher appetite blindly but sometimes resists. Accordingly, Aristotle says in his *Politics* 1.5 (1254b4–5) that the soul governs the body by a despotic reign, as a master governs a slave, who does not have the resources to resist the master's command in any respect. On the other hand, the rational part governs the soul's lower parts by a royal and political reign, the way kings and leaders of cities govern free persons, who in some cases have the right and the resources to oppose the commands of the king or leader.

Therefore, to perform a perfect human act, we need nothing in our external members beyond their natural disposition, by which they are naturally suited to be moved by reason. However, in our lower appetite, which can oppose reason, we do need something if it is to perform without opposition the operation reason commands. For if the operation's immediate source is imperfect, the operation must be imperfect, however perfect its higher source may be. So, if the lower appetite were not perfectly disposed to following reason's command, the operation, whose proximate source is the lower appetite, would not be perfectly good, since some opposition from the sensory appetite would accompany it. Because of this, the lower appetite would feel a certain sadness, since the higher appetite would have moved it violently. This is what happens in people with strong desires they do not follow because reason forbids it. Therefore, when someone's operation must concern matters that are the objects of the sensory appetite, in order for the operation to be good, there needs to be a disposition—a perfection—in the sensory appetite to enable it to submit to reason easily. We call this sort of disposition a virtue.

Therefore, when a virtue concerns what lies in the irascible power's characteristic sphere, then this sort of virtue is also said to be in the irascible power as its subject. This is the case with courage, which is concerned with fear and daring, magnanimity, which is concerned with hope for demanding things, and gentleness, which is concerned with anger. Furthermore, when a virtue concerns what lies in the concupiscible power's characteristic sphere, then it is said to be in the concupiscible power as its subject. This is the case with chastity, which concerns sexual pleasures, and sobriety and abstinence, which concern the pleasures of food and drink.

Article 5
Is the Will a Subject of Virtue?

Reply

Through a virtuous habit, the power that is its subject acquires a perfection for performing its act. That is why a power does not need a virtuous habit to do something it extends to by its very nature.

Virtue directs the soul's powers to what is good; for virtue is what makes its possessors good and their activity good too (*Nicomachean Ethics* 2.6 1106a15–17). However, what virtue does for the soul's other powers, the will already has by its very nature as the power of will, since its object is what is good. Accordingly, the will inclines to what is good in the way that the concupiscible appetite inclines to what is pleasurable and the sense of hearing is directed to sound. Thus the will does not need a virtuous habit to incline it to a good correlative to it, since it inclines to this good by its very nature as the power of will. However, for goods that surpass this correlation, the will does need a virtuous habit.

Now, each thing's appetite tends to that thing's own, characteristic good. So, there are two ways a good can surpass this correlation: (1) in respect of the human species, and (2) in respect of the individual.

In the first case, the will is raised to a good that surpasses the boundaries of the human good. (By "human" I mean that which a human being is capable of through natural powers.) But above the human good is the divine good. Charity, and likewise hope, raise the human will to this.

In the second case, someone seeks to achieve another's good, but the will does not pass beyond the confines of the human good. In this case, justice perfects the will, along with all the virtues tending toward others, such as generosity and the like. After all, justice is another's good, as the Philosopher says in *Ethics* 5.1 (1130a4).

Accordingly, two virtues are in the will as their subject: charity and justice. An indication of this is that these two virtues do not concern the passions, as temperance and courage do, even though they belong to the soul's appetitive part. It is clear, then, that they are not in the sensory appetite, where the passions are, but in the rational appetite—the will—in which there are no passions, since every passion is in the sensory part of the soul, as *Physics* 7.3 (248a6–9) proves. For the same reason, the virtues that *do* concern the passions (as courage concerns fear and daring, and temperance concerns desires) must be in the sensory appetite. Nor need there be any virtue in the will on account of these passions. That is because, in the case of these passions, the good is what is in keeping with reason, and the will is naturally inclined to this by its very nature as the power of will, since this is the will's own characteristic good.

Article 6
Is There Virtue in the Practical Intellect As Its Subject?

Reply

What marks the distinction between a natural and a rational power is that the former is determined to one object, while the latter is indifferently disposed to many.

Now, when an animal or rational appetite inclines to its desirable object, this must be due to some prior cognition of that object. After all, inclining to an end without any prior cognition is characteristic of natural appetite (as heavy objects, for instance, incline to the earth's center). However, because the object of animal and rational appetite must be an apprehended good, the appetite can have a natural inclination toward it and the cognitive power can have a natural judgment concerning it as long as that good takes a single form. This is the case for nonhuman animals; for due to the weakness of their active principle, which extends to just a few things, they engage in just a few operations. Consequently, what is good for all members of the same species takes a single form. That is why their cognitive power gives them a natural judgment about their proper good, which takes this single form, and their appetite gives them a natural inclination to it. It is thanks to such natural judgments and appetites that all swallows build their nests in a uniform way, and all spiders weave their webs in a uniform way (and we can make this sort of observation about any other kind of nonhuman animal).

Human beings, in contrast, are capable of multiple and diverse operations because of the excellence of their active principle, their soul, whose power in a way extends to an infinite number of things. Therefore, a natural appetite for what is good, or a natural judgment about it, would not be enough to ensure our acting rightly. For that, appetite and judgment would have to be further determined and perfected.

True, a human being *does* incline by a natural appetite to pursue his own good. Still, since the good for human beings takes a wide variety of forms and consists in many things, one could not have a natural appetite for one's own good when that good has been made determinate in the light of all the conditions required to make it one's own good. That is because this good varies, taking many forms in keeping with the diversity of these conditions (such as persons, places, and so on).

For the same reason, one could not have a natural judgment about one's own good. This type of judgment is uniform and insufficient for pursuing a good of this sort. That is why each human being has had to use reason, whose function is to draw connections among diverse things, to ascertain and discern what his own good is, where that good is made determinate in the light of all circumstances, insofar as he should

pursue that good in the here and now. Without a habit to perfect it, reason can do this about as well as it can discern a conclusion of some theoretical science when it does not have the relevant habit of knowledge: imperfectly and with difficulty. Therefore, just as a habit of science must perfect contemplative reason if it is to discern correctly what is knowable in that science, a habit must also perfect practical reason if it is to discern correctly the human good in each case when one is to act. We call this virtue "prudence," and its subject is practical reason.

Prudence also perfects all the moral virtues, seated in the appetitive part. Every one of these virtues produces an inclination in the appetite to some kind of human good. For instance, justice produces an inclination to the good of equality in things relevant to communal life, temperance to the good of restraint from sensual desires, and so on for each virtue. However, each of these goods can be brought about in various ways—and not in the same way in all cases. Therefore, to establish the right way, human beings need prudence in judgment. All the other virtues, then, have their rightness and the fullness of their goodness from this judgment, which is why the Philosopher says that the mean in moral virtue is determined in accordance with right reason. Because all appetitive habits obtain the character of virtue from this rightness and fullness of goodness, prudence is a cause of all the virtues of the appetitive part, which are called "moral" insofar as they are prudent. And that is why Gregory says in *Morals on the Book of Job* 22 that the other virtues can be virtues only if they do prudently what they strive after.

Article 7
Is There Virtue in the Contemplative Intellect?

Reply

Virtue is ascribed to a thing in light of its relation to what is good because, as the Philosopher says, a thing's virtue is what makes its possessor good and makes its activity good too (*Nicomachean Ethics* 2.6 1106a15–17). For instance, a horse's virtue is what makes it a good horse, and makes it gallop and bear a rider well—which is a horse's task. So, a habit will have the character of virtue because it is directed to a good.

But there are two ways a habit can be directed to a good. It is directed to a good *formally* when it is directed to a good under its character as good; but it is directed to a good *materially* when it is directed to something that is good, but not under its character as good. Only the appetitive part of the soul has as its object a good under its character as good; for good is what all things have an appetite for. Therefore, those habits in the appetitive part or dependent on it are directed formally to something good. That is why they have the character of virtue most fully. In contrast, the habits neither in nor dependent upon the appetitive part can be directed materially to something good, but they cannot be directed to a good formally—to a good under its character as good. That explains why they can be called virtues in a way, but not as strictly speaking as habits of the first sort.

We must next take into consideration that the intellect, whether contemplative or practical, can be perfected by a habit in two ways. In the first way, it is perfected absolutely and in itself, insofar as it precedes—that is, moves—the will. In the second way, it is perfected by a habit insofar as the intellect follows the will—that is, elicits its own act at the will's command. The intellect can be perfected in both these ways because these two powers—namely, intellect and will—encompass each other, as I have explained.

So, the habits that are in the contemplative or practical intellect in the first way can be called virtues in some sense, but not in the full sense. It is in this first way that understanding, knowledge, and wisdom are in the contemplative intellect, and craft is in the practical intellect. After all, people are said to have understanding or knowledge insofar as their intellects have been perfected for knowing the truth, which is the intellect's good. And while the truth can be willed (since a person can will to understand the truth), it is not because of any such willing that the habits under discussion reach their perfection. That is because having knowledge does not make one willing to consider the truth; it just makes one adept at doing so, and so the consideration of truth is due to knowledge not insofar as that consideration is willed, but insofar as one's considering is directly trained on its object. It is likewise with craft in the practical intellect. So, craft does not perfect artisans so as to give

them appropriate volitions to apply their skill. It only gives them the knowledge and the aptitude to do so.

On the other hand, a habit that is in the contemplative or practical intellect insofar as the intellect follows the will has the character of virtue more truly because it gives a person not just the knowledge and the ability to act rightly, but also the volition. This is the case with faith and prudence, but in different ways.

Faith perfects the contemplative intellect in that the will commands the intellect. This is obvious from the act of faith: People assent through intellect to what surpasses human reason only because they will to do so. As Augustine says, only someone who wills to believe can do so (*Tractates on the Gospel of John* 26.2). Faith, it turns out, is like temperance in this respect: It exists in the contemplative intellect in such a way that it submits to the will's command, just as temperance exists in the concupiscible appetite in such a way that it submits to reason's command. As regards believing, then, the will commands the intellect not just as regards performing an act of belief, but also as regards determining the object of belief. That is because the intellect, as a result of the will's command, assents to a determinate object of belief, just as the concupiscible appetite, thanks to temperance, aims at the mean that reason determines.

In contrast, prudence exists in the practical intellect or reason, as I have said, but in such a way that the will determines not its object, but only its end. *Prudence* figures out its own object: Presupposing as its end the good intended by the will, prudence figures out the ways to realize and preserve this good.

From what has been said, it is clear that the habits in the intellect are related to the will in different ways. Some do not depend on the will at all, except as concerns their use, and even *this* accidentally, since the use of this sort of habit—such as knowledge, wisdom, and craft—depends on the will and on the habit itself in different ways. After all, these habits bring us to the perfection not of *wanting* to use them appropriately, but only of being *able* to use them. Next, there is an intellectual habit that depends on the will to give it its principle, since in practical matters the end is a principle. Prudence is related to the will in this way. Finally, there is a habit that also has its object determined for it by the will. This is the case with faith.

Although all these habits can be called virtues in a way, the last two have the character of virtue more fully and more strictly speaking. However, they are not on that account more excellent or more perfect habits.

Article 8
Are Virtues in Us Naturally?

Reply

People's disagreement about the way we attain virtues and knowledge mirrors their disagreement about the production of natural forms.

There have been some who maintained that [natural] forms preexisted in matter actually, although in a hidden way, and that a natural agent brought them from latency into the open. Anaxagoras held this view, asserting that all things were in all things. As a result, everything could be generated from everything.

In contrast, others have claimed that forms are totally from an external source—either from participation in Ideas, as Plato held, or from the Agent Intellect, as Avicenna held—and that natural agents merely dispose matter to the form.

The third option, Aristotle's, holds a middle course. He holds that forms preexist in the potentiality of matter, but an external natural agent brings them into actuality (*Generation of Animals* 2.3).

It is the same when it comes to knowledge and the virtues. Some thinkers have held that they are in us by nature, and that study merely unblocks them. Plato seems to have held this. He maintained that participation in separated Forms has caused us to have knowledge and the virtues, but that union with the body hinders the soul from using them. We must unfetter them through studying the various fields of knowledge and through exercise of the virtues.

However, others have said that an outpouring from the Agent Intellect causes us to have knowledge and the virtues. Our study and exercise of virtue dispose us to receive its influence.

The third view holds a middle course: Knowledge and virtue are in us naturally insofar as we have the aptitude for them, although their completion is not in us naturally (*Nicomachean Ethics* 1 1103a25–26). This middle view is better, for just as [the correspond-

ing middle view] about natural forms takes away nothing from the power of natural agents, so this view regarding the acquisition of knowledge and virtue through study and exercise preserves the causal efficacy of these efforts.

We must keep in mind, however, that there are two ways an aptitude for a perfection and form can be in a subject: (1) because of a passive potentiality only (for instance, in the matter of air there is an aptitude for the form of fire); or (2) because of a passive and an active potentiality jointly (for instance, a body that can be cured has an aptitude for health both because it is receptive of health and because it has within itself an active principle of health). It is in this second way that humans have a natural aptitude for virtue. That aptitude is due in part to the nature of our species, since the aptitude for virtue is common to all human beings, and in part to the individual's nature, insofar as some people are more apt for virtue than others.

To make this clear, we must be aware that in human beings there are three possible subjects of virtue: intellect, will, and the lower appetite, which is divided into the concupiscible and irascible. This is evident from what has been explained earlier (aa. 4–7). Furthermore, we must bear in mind that for each of these there is, in some fashion, both the ability to receive virtue and an active source of virtue.

It is clear that the soul's intellective part contains the possible intellect, which is in potentiality to all intelligible things. Intellectual virtue consists in the knowledge of these intelligibles. It is also clear that the intellective part contains the agent intellect, by whose light these potentially intelligible things become actually intelligible. Among these intelligible things, there are certain ones that people come to know right from the outset without intellectual endeavor and inquiry. Into this class fall first principles, and not just principles in contemplative fields (for instance, "Each whole is greater than one of its parts," and other principles like this), but also those in practical matters (for instance, "What is bad is to be avoided," and other principles like this). Now, these naturally known principles are the sources of all subsequent cognition, whether practical or contemplative, which we acquire through intellectual endeavor.

It is clear that there is a natural active source in the will's case, too. That is because the will is naturally inclined to the ultimate end, and the end in practical matters has the character of a natural source. Therefore, the will's inclination is an active source—and a source in respect of every disposition acquired in the soul's affective part through the exercise of its powers. Moreover, it is clear that the will itself, insofar as it is a power indifferently disposed to alternative ways of achieving the end, is able to receive a habitual inclination to these or those alternative ways.

Finally, the irascible and concupiscible appetites are naturally obedient to reason and so are naturally receptive of virtue. Their virtue comes to perfection in them insofar as they are disposed to pursuing the good of reason.

All the aforementioned starting points of the virtues result from the nature of the human species and so are common to all of us. However, there is one kind of starting point of virtue that results from the nature of the individual, insofar as a human being is inclined to the activity of some virtue due to his natural constitution or the celestial bodies' influence. While this inclination is a starting point of virtue, it is not a perfect virtue, because that requires reason's moderation. That is why the definition of virtue includes the clause that virtue disposes one to choose the mean according to right reason. After all, anyone who followed an inclination like this without reason's discrimination would frequently sin.

Just as this last starting point of virtue does not have the character of perfect virtue without reason's contribution, neither do any of the starting points discussed earlier. That is because (a) it is through reason's investigation that we come to specifics on the basis of general principles; (b) it is through reason's functioning that a person is led from the desire for the ultimate end to the means suited to that end; and (c) it is reason that, by commanding them, makes the concupiscible and irascible appetites subject to itself. Accordingly, it is clear that reason's contribution is needed to bring a virtue to completion, whether the virtue is in the will, or in the irascible or concupiscible appetites.

Note, however, that the starting point of virtue in a higher part of the soul is directed to the virtue in a lower part. For instance, we are rendered apt for

virtue in the will through the starting point of virtue that is in the will and the one that is in the intellect, while we are rendered apt for virtue in the irascible and concupiscible appetites through both the starting point of virtue in those appetites and the starting point in the higher powers. However, the converse is not true. Accordingly, it is also clear that reason, which is higher [than the other powers], works for the completion of every virtue.

Now, the operative principles *reason* and *nature* are divided in opposition, as *Physics* 2 makes clear, because a rational power is disposed to alternatives, while a nature is directed to one thing. Therefore, it is clear that a virtue's perfection stems not from nature, but from reason.

Article 9
Do We Acquire Virtues through Acts?

Reply

Virtue is a power's utmost extent (*On the Heavens* 281a15). The utmost extent is that to which a power reaches in order to perform a perfect operation, and that in turn is the operation's being good. Clearly, then, each thing's virtue is that through which it produces a good operation. Now, each thing is for the sake of its operation. Moreover, each thing is good insofar as it is well disposed to its end. We must conclude, then, that each thing is good, and operates well, through the virtue characteristic of it.

However, the good characteristic of one sort of thing is different from the good characteristic of a different sort, for when perfectible things are diverse, their perfections are diverse. Therefore, a human being's good is different from a horse's or a stone's good.

Moreover, there are various ways of understanding the good of human beings themselves, depending on the various perspectives from which they are viewed. After all, the good of a human being as a human being is different from the good of a human being as a citizen. For the good of a human being as a human being is that one's reason be perfected in its apprehension of truth and that one's lower appetites be regulated as reason's rule requires; for it is being rational that makes humans human. However, the good of a human being as a citizen is that one be directed as the city requires as regards all its people. Accordingly, the Philosopher says in *Politics* 3.4 (1276b34) that the virtue that makes one a good human being is not the same as the virtue that makes one a good citizen.

However, human beings are not just citizens of the earthly city. They have a share in the heavenly society of Jerusalem, whose ruler is the Lord and whose citizens are the angels and all the saints, whether they are reigning in glory and resting in their heavenly homeland or are still making their earthly pilgrimage, according to the Apostle in Ephesians 2:19: "You are fellow citizens with the saints, and members of God's household," etc. But human nature is not enough to enable us to have a share in this society. Rather, God's grace elevates us to this. Clearly, then, we cannot acquire through our natural endowments the virtues of human beings as sharers in this society. So, our acts do not cause these virtues. They are infused in us as a divine gift.

However, the virtues of human beings considered as human, or as sharers in the earthly city, do not surpass the capacity of human nature. So, human beings can acquire them through their natural endowments and by their own acts. This is clear from what follows. If one has a natural aptitude for some perfection, and if this aptitude is due to a passive principle only, one *can* acquire it, but not by one's own act. One can acquire it by the action of an external natural agent, the way air receives light from the sun. In contrast, if one has a natural aptitude for some perfection due to both an active and a passive principle, in that case one can attain it by one's own act. For instance, a sick person's body has a natural aptitude for health both because the subject is naturally receptive of health and because the body possesses the natural power to heal. That is why a sick person is sometimes cured without the action of an external agent.

It was shown in the previous question that human beings' natural aptitude for virtue is due to active and passive principles (a. 8). This is apparent just from the ordered relationship the soul's powers bear to each other. For in the intellective part there is a principle that stands as passive, the possible intellect, which the agent intellect brings to its perfection. Next, the actualized intellect moves the will, since the good, as that is understood by the intellect, is the end that moves the appetite. Moreover, once reason moves it,

the will is naturally suited to move the sensory appetite, that is, the irascible and concupiscible powers, which are naturally subject to reason. Therefore, it is clear that any virtue, which makes a human being's operation good, has its active principle in the human being, and by its own action this principle can bring the virtue to actuality, whether in the intellect, the will, or the irascible and concupiscible powers.

However, the virtues in the intellective part are brought to actuality in a different way from the virtues in the appetitive part, for the following reason. The action of the intellect (and of any cognitive power) occurs through its being made in a way like the object of cognition, and so the intellective part acquires an intellectual virtue through the agent intellect's making it comprehend species, either actually or habitually. In contrast, the action of an appetitive virtue consists in an inclination to a desirable object, and so to acquire virtue, the appetitive part must be given an inclination to something determinate.

Next, we must keep in mind that a natural thing's inclination results from its form, and so it is an inclination to one course, in keeping with the form's demands. As long as the form persists, that sort of inclination cannot be eliminated, nor can one opposed to it be instilled. This consideration explains why natural things do not develop or lose habits for acting in certain ways. After all, no matter how many times someone tosses a rock in the air, the rock never acquires the habit of flying upward. Instead, it is continuously inclined to a downward movement. However, things indifferently disposed to alternatives do not have a form by which they are steered in a determinate way to a single course. Instead, the mover corresponding to each determines it to a single course. It is precisely because it is determined to that course that it becomes disposed to it to a degree; and when the mover corresponding to it inclines and determines it to that same course over and over, it ingrains a determinate inclination in it. As a result, the disposition that has been implanted is a form tending to a single course in the mode of a nature, so to speak. That is why we call a habit a second nature.

Accordingly, because the appetitive power is indifferently disposed to alternatives, it tends to one of them only insofar as reason determines it to that one. Therefore, when reason repeatedly inclines the appetitive power to one certain thing, a disposition is ingrained in it. Through this disposition, the appetite is inclined to the single course that has become habitual. A disposition ingrained in this way is a habit of virtue.

Therefore, a virtue of the appetitive part, if we think about it correctly, is just a disposition or form that reason has stamped and impressed on the appetitive power. For this reason, no matter how strong the appetitive power's disposition for some object is, it can have the character of virtue only if it bears reason's mark. That is why the definition of virtue makes reference to reason. In fact, the Philosopher says in *Ethics* 2.6 (1106b36–1107a2) that virtue is a habit of choosing, lying in a mean determined by reason, as the prudent person would determine it.

Article 13
Does Virtue Lie in a Mean?

Reply

Moral and intellectual virtues do lie in a mean, but in different ways. However, theological virtues do not lie in a mean, except, perhaps, coincidentally.

To make this clear, we need to keep in mind that the good of any thing with a standard and measure consists in its conforming to that standard or measure. That is why we say that a thing is well disposed when it has neither more nor less than it ought to.

Next, we must note that the moral virtues' matter is human actions and passions, just as craft's matter is producible items. Therefore, just as the good in the case of items that craft makes consists in their receiving the measure demanded by the craft, which is the standard for artifacts, so the good in the case of human actions and passions is that they attain the measure of reason, which is the standard and measure for all human actions and passions. For since having reason is what makes a human being human, it must be that a human being's good is to be as reason demands. When people exceed or fall short of reason's measure in their actions or passions, this is bad. Therefore, since a human being's good is human virtue, it follows that moral virtue consists in a mean between excess and deficiency, where excess, deficiency, and the mean are taken with respect to reason's standard.

Some of the intellectual virtues—the virtues seated in reason itself—are practical, such as prudence and craft. Others are contemplative, such as wisdom, knowledge, and understanding. The practical virtues have as their matter either human passions and actions or the products of craft themselves, while the speculative virtues have necessary things as their matter. Reason is related to these two sorts of matter in different ways. When reason plays an active role regarding its objects, it serves as their standard and measure, as has already been explained. However, it stands to the things it contemplates as what is measured and gauged to its standard and measure, since our intellect's good is the truth, which our intellect attains when it corresponds to the thing.

Therefore, just as the moral virtues consist in a mean determined by reason, the same mean characterizes prudence, a virtue of the practical intellect concerning morality, in that it sets the mean for actions and passions. This fact is apparent from the definition of moral virtue, since moral virtue, as *Ethics* 2.6 (1106b36) explains, is a habit of choice, consisting in a mean as the prudent person would determine it. Therefore, both prudence and moral virtue have the same mean, but in prudence it is like a stamp, while in moral virtue it is like what is stamped. In the same vein, the rightness of a craft (which rightly fashions) and of an artifact (which is rightly fashioned) is the same.

The mean for the contemplative intellectual virtues will be the truth itself, which is found in it insofar as it attains its measure. This is not a mean between contraries on the part of the thing, for the contraries between which we find the mean of virtue belong not to the measure but to what is measured, insofar as it can exceed or fall short of the measure, as is evident from what I have said about moral virtues. Therefore, we must take the contraries between which lies the mean of the intellectual virtues on the part of the intellect itself. These contraries in the intellect are opposed based on affirmation and negation, as *On Interpretation* (14 23b3) makes clear. Therefore, between opposed affirmations and negations we find the mean of the contemplative intellectual virtues, and these are truths. For instance, it is true when we say that something is the case when it is the case or that something is not the case when it is not; but when we say that something is the case when it is not, this will be a falsehood of excess, and when we say that something is not the case when it is, this will be a falsehood of deficiency.

Therefore, if the intellect did not have in itself a contrariety of its own, over and above the contrariety in things, we could not find a mean and extremes in the intellectual virtues. Now, it is clear that we can find in the will no contrariety that is its own. There is just contrariety based on its relation to the contrary things it wills. That is because the intellect understands something insofar as it is in the *intellect*, while the will is moved to things as they are *in themselves*. Therefore, if there is a virtue in the will based on its relation to its measure and standard, this sort of virtue will not consist in a mean. That is because we cannot find extremes on the part of the measure, but only on the part of what is measured, insofar as it exceeds or falls short of the measure.

Finally, the theological virtues are directed to their matter or object—God—by the will's mediation. While this is clear in the case of charity and hope, it is the same for faith: It is true that faith is in the intellect, but that is so due to the will's commanding it, for no one believes without willing it. Therefore, since God is the standard and measure of the human will, it is clear that the theological virtues do not lie in a mean, if we are speaking of them in their own right, even if it is sometimes the case that one of them lies in a mean coincidentally, as will be explained later.

On the Cardinal Virtues

Article 1
Prudence, Justice, Courage, and Temperance: Are These Four the Cardinal Virtues?

Reply

"Cardinal" derives from *cardo* ("hinge"), on which a door turns, as in Proverbs 26:14: "As the door turns on its hinge, so does the slothful upon his bed." And so we call those virtues "cardinal" that serve as a basis for human life, for life serves as the door through which we enter.

A human life is one that is fitting for a human being. In humans, we find a sensory nature, in which

we resemble nonhuman animals; practical reason, which is a distinctive characteristic in keeping with the level we occupy; and contemplative intellect, which is not found in us in the perfect way the angels have it, but in a partial way. That is why the contemplative life is not human, properly speaking, but superhuman, while the life of sensual pleasure, which embraces sensory goods, is not human but bestial. And so human life, properly speaking, is the active life, which consists in the exercise of the moral virtues. That is why those virtues are properly called "cardinal" on which our whole moral life in a way turns and is grounded, as on the foundations for this sort of life. That is why these virtues are also called "fundamental."

We must keep in mind, however, that four conditions characterize a virtuous act:

(a) The substance of the act itself must be modified in itself; and on this basis we call an act good, on the grounds that it concerns the matter it ought to concern and is outfitted with the circumstances it ought to have.
(b) The act must have the right mode of relation to its subject. In other words, it must be steadfast in clinging to it.
(c) The act must have the right mode of correlation to something external as to its end.

These three conditions concern what reason directs, but the fourth concerns that directing reason itself:

(d) There must be knowledge.

The Philosopher touches on these four conditions in *Ethics* 2.4 (1105a31–33), where he says that it is not enough for virtue that acts are carried out justly and temperately, which has to do with the modification of the act (a). The agent must satisfy three further conditions.

(a′) The agent must have knowledge.

This has to do with the knowledge that directs action (d).

(b′) The agent must choose, and choose for the sake of this (that is, the right end).

This has to do with the act's rightness in relation to something external (c).

(c′) The agent must be disposed to be steadfast and unwavering and act accordingly (b).

So then, these four—directing knowledge (d), rightness (c), steadfastness (b), and moderation (a)—even though all of them are necessary for any virtuous act, each one, taken by itself, has a certain preeminence in certain specific matters and activities.

As regards practical knowledge, three sorts of steps are needed. The first is deliberation and the second is judgment about what we have deliberated. It is the same with contemplative reason, where we also find inquiry or discovery and judgment. However, because the practical intellect commands avoiding and pursuing, and the contemplative intellect does not, as *On the Soul* 3.9 (432b26–29) says, a third step pertains to practical reason: to issue commands about what we should do. This last is preeminent, and the other two are directed to it.

With respect to the first step, we are perfected by the virtue of good deliberation, which enables us to take counsel well. *Synesis* and *gnomē*,[1] which make us good at judging, as *Ethics* 6.9–10 says, perfect us in the second sort. But it is prudence that makes reason good at commanding, as that same book says. So, it is clear that what is preeminent in directing knowledge is the concern of prudence, and that is why we list prudence as the cardinal virtue in the area of practical knowledge.

In a similar way, an act's rightness in relation to something external has the character of goodness and praiseworthiness, even when matters concern the agent himself alone. However, it is praised above all in matters concerning another, that is, when he performs a right act not just in matters that concern himself, but also in those that include his interaction with others. For the Philosopher says in *Ethics* 5.1 (1129b33–1130a1) that many people can use virtue in their own affairs, but when it comes to affairs concerning others they cannot. Therefore, we list justice

1. Both are virtues guiding our judgment. *Synesis* appeals to moral rules that apply under ordinary conditions. When we face circumstances in which those rules fail to apply, we need to appeal to the higher principles from which those common rules are derived to discriminate what we should do, and that is the task of *gnomē*.

as the fundamental virtue in these matters. Justice adapts us in the right way to the others we must interact with and establishes a balanced relationship with them. That is why things adapted in the right way are commonly called "justified."

Now, moderation, or restraint, garners praise and has the character of goodness, especially when we are intensely driven by a passion that reason ought to restrain so that we reach virtue's mean. Passion drives us above all to pursue the strongest pleasures, which are the pleasures of touch. That is why we hold the cardinal virtue in this area to be temperance, which curbs desires for pleasures of touch.

Steadfastness, finally, garners praise and has the character of goodness especially where passion most strongly urges us to flee; and this occurs above all in the greatest dangers, which are mortal dangers. That is why we hold the cardinal virtue in this area to be courage, which buttresses us in the good of perseverance as we face mortal dangers.

Of these four virtues, prudence is in reason, justice in the will, courage in the irascible appetite, and temperance in the concupiscible. Only these powers can be sources of human—that is, voluntary—acts.

From this discussion, the account of the cardinal virtues is clear, both as regards the modes each virtue has, which serve as their formal character, and as regards their matter, and as regards their subject.

Article 2
Are the Virtues Connected So That Those with One Virtue Have Them All?

Reply

We can speak about virtues in two ways: as perfect or as imperfect. And while the perfect virtues are mutually connected, the imperfect virtues are not necessarily connected.

To make this clear, it is important to know that virtue is what makes human beings and their activity good, and so the sort of virtue that makes us and our activity perfectly good is perfect virtue. In contrast, a virtue is imperfect if it makes us and our activity good not absolutely, but in a certain respect. In human activities, we achieve what is good absolutely by satisfying a standard for human acts. There is one such standard that is distinctive of humans and belongs to our level: right reason. But there is another that stands to our activities as their transcendent first measure, and that is God. We attain right reason through prudence, which is right reason about activities open to us, as the Philosopher says in *Ethics* 6.5 (1140b20–21). But we attain God through charity, according to 1 John 4:16: "He who abides in love abides in God, and God in him."

Accordingly, there are three levels of virtue. There are some that are imperfect in every respect: the ones that do not accompany prudence and are not linked to right reason. These include the inclinations some people have to certain activities of the virtues. These may even be congenital inclinations, as Job 31:18 says: "From my infancy pity grew up with me, and it came out with me from my mother's womb." Inclinations such as these are not all together in everyone. Rather, some people have an inclination to one sort of activity while others have an inclination to another. These inclinations lack the defining character of virtue. That is because no one can use a virtue badly, as Augustine says, but one can use these sorts of inclinations badly and harmfully if one uses them without prudential discretion, just as a horse that lacks sight will fall all the harder the faster it runs. That is why Gregory says in *Morals on the Book of Job* 22.1.2 that unless the other virtues do what they seek in a prudent way, they cannot be virtues at all. So, inclinations without prudence do not have the character of virtue completely.

Those virtues that attain right reason, yet do not attain God himself through charity, occupy the second level. These virtues are perfect in a respect: in relation to the human good. However, they are not perfect absolutely speaking, since they do not attain the first standard that is our ultimate end, as Augustine says in *Against Julian* (4.3.21). Therefore they fall short of the true character of virtue, just as moral inclinations without prudence also fall short of it.

The third level consists of those virtues that are perfect absolutely speaking, the ones that accompany charity; for these virtues make a person's activity good absolutely speaking, since they enable it to reach even the ultimate end.

We must bear in mind further that just as there cannot be moral virtues without prudence (for the reason just given), there cannot be prudence without

the moral virtues, for the following reason. Prudence is right reason about what we can do. Now, in order for there to be right reason in any genus, we must have a right evaluation and judgment about the principles from which that reasoning proceeds. In geometry, for instance, we cannot have a right evaluation without having right reason about geometrical principles. Now, the principles of what we can do are ends, for our ends give the things we ought to do their character as things we ought to do. Now, a person has a right evaluation of an end due to morally virtuous habits; for, as the Philosopher says in *Ethics* 3.5 (1114a32–b1), the way the end appears to one depends on the sort of person one is. For instance, the good in keeping with virtue appears desirable as an end to virtuous people, while to vicious people what appears desirable as an end is what corresponds to the vice they have. (Something similar holds of the sense of taste when it is diseased and when it is healthy.) Therefore, whoever has prudence must have the moral virtues as well.

Likewise, whoever has charity must have all the other virtues, for the following reason. Human beings have charity through divine infusion, according to Romans 5:5: "The charity of God is poured forth in our hearts by the Holy Spirit, who has been given to us." However, whenever God gives things an inclination to something, he also gives them certain forms that are the principles of the operations and movements toward whatever things God inclines them. For instance, he gives fire the lightness through which it swiftly and easily rises. And so, as Wisdom 8 says, "He orders all things sweetly." In like fashion, then, God must infuse along with charity those forms (in this case, habits) that readily issue in the acts that charity inclines us to. Now, charity inclines us to all the acts of the virtues: Since it concerns our ultimate end, it commands all the acts of the virtues. That is because any craft or virtue that regards an end commands those crafts or virtues that bear on the end. For instance, military science commands the equestrian art, which in turn commands the craft of bridle making, as *Ethics* 1.1 (1094a9–14) says. Therefore, as becomes his wisdom and goodness, God infuses all the virtuous habits together with charity. That is why 1 Corinthians 12:4 says: "Charity is patient, charity is kind," etc.

Therefore, if we are talking about those virtues that are perfect absolutely speaking, these are connected because of charity: We cannot have any of these virtues without charity, and if we have charity we have them all. On the other hand, if we are talking about the virtues that have the second level of perfection (perfection with regard to the human good), these virtues are connected through prudence: There can be no moral virtue without prudence, and we cannot have prudence if we lack a moral virtue. However, if we are talking about the four cardinal virtues insofar as they imply certain general conditions of the virtues, then their connection stems from the fact that for an act to be virtuous, it is not enough for one of these conditions to be present, but all of them must be. This is the way Gregory appears to explain their connection in *Morals on the Book of Job* 22.1.2.

NICCOLÒ MACHIAVELLI

Niccolò Machiavelli (1469–1527) was born, lived, and died in Renaissance Florence, but his thought was immersed in antiquity, in the Sparta of Lycurgus, the Athens of Solon and Pericles, and most of all in Republican Rome. And it is this immersion that establishes Machiavelli as the central political thinker in the tradition of Renaissance humanism. Its results are reflections about political ideals and political practice, about Fortune and *virtù* (ingenuity, skill, excellence), about honor, reputation, and power. But Machiavelli's thoughts are not mere fantasies; they are meant to be effective, to order political life, and to renew the past for the present. Writing to his friend Francesco Vettori in Rome, Machiavelli describes himself as a student of just this kind:

> When evening comes, I return to my home, and I go into my study; and on the threshold, I take off my everyday clothes, which are covered with mud and mire, and I put on regal and curial robes; and dressed in a more appropriate manner I enter into the ancient courts of ancient men and am welcomed by them kindly, and there I taste the food that alone is mine, and for which I was born. . . . I have noted down what I have learned from their conversation, and I composed a little work, *De principatibus* [*The Prince*]. . . .

Machiavelli was born on May 3, 1469, into a respectable middle-class family. His father had a deep commitment to the Latin classics, a devotion which he obviously conveyed to his son. In 1498, shortly after the execution of the Dominican prophetic prior Girolamo Savonarola, the unknown and inexperienced Machiavelli was installed as chancellor of the Second Chancery of the city, a position which he held for fourteen years. It was not a prestigious or powerful role but one that involved him with the nitty-gritty of domestic and especially foreign affairs. In the course of those years, he served as secretary to the board assigned to establish a citizens' militia, assisted Piero Soderini, his mentor and the city's chief executive after 1502, and participated in a number of foreign diplomatic missions. On many occasions, Machiavelli was able to observe major political figures, who subsequently in his writings became models for types of political conduct and leadership. These include Cesare Borgia, whom he observed three times between 1502 and 1503, Pope Julius II, and the Emperor Maximilian.

When Soderini was forced to leave Florence and the republic dissolved, Machiavelli was arrested, tortured, and exiled to his country estate. These political events, as one commentator puts it, were "a personal misfortune" but also a "catalyst for his political imagination." Forced into retirement, Machiavelli turned to study and writing. He joined a circle of Florentine intellectuals who met for conversation about literary and political matters at the Oricellari Gardens, owned by Cosimo Rucellai. It was here that he presented ideas that eventually became part of his extensive defense of republican liberty or self-government, the causes and nature of political corruption, the need for a civil religion, and the benefits of mixed constitution, the *Discourses on the First Ten Books of Titius Livius*.

The Prince, Machiavelli's most famous work, was written in this historical setting and for precise purposes. The son of Lorenzo de Medici had been elected Pope Leo X in 1513. With the republic under Soderini in ruins, the Medicis were destined to return to control Florence. The times were propitious for a union of Italian leadership under the Medicis, which would rule both Rome and Florence. In July to December of 1513, Machiavelli interrupted work on his commentary on Livy's *Histories* and set out in *The Prince* his

conception of daring political rule, a form of leadership that would exploit the prince's skill (*virtù*) to take advantage of what Fortune provided in order to gain power, glory, and security. It was a conception of instrumental morality, ancient in design, that directly conflicted with Christian morality, but that at the same time was tailored to appeal to the Medicis' needs and aspirations. It was a conception of human excellence appreciating and coping with the changing contingencies of circumstance in such a way that the prince's ultimate goals could be achieved.

The Prince, then, was Machiavelli's handbook for the strategies required to capitalize on the rare opportunity the Medicis faced. It was also his way of showing fidelity to that goal and of advancing himself as a candidate for a political role in the Medician government. He hoped that his friend Vettori, the Florentine ambassador to Rome, would intercede with the Medicis on his behalf, and so he wrote to Vettori about his work. But Vettori never did so, and the plan to seek Medician patronage and political office failed.

For the remainder of his life, Machiavelli lived in exile and neglect. He wrote extensively on war, language, and history. But he was never invited to return to public life. In 1527 he died, living long enough to see the Medici driven out of Florence and the republic reestablished. Four years later, in 1531, the *Discourses* were published, and then in 1532 *The Prince*, the works on which his fame rests to this day. To some, *The Prince* is a work of realism and practical sensitivity; to many, a cynical, immoral treatise that borders on the diabolical; to others, however, *The Prince* exemplifies a return to an early ethic, a morality, born in antiquity, that acknowledges the changes of Fortune, the variety of abilities and skills required to cope with contingencies, and the role of power, boldness, and even violence in political life.

Letter to Francesco Vettori

To His Excellency the Florentine Ambassador to his Holiness the Pope, and my benefactor, Francesco Vettori, in Rome.

Your Excellency. "Favors from on high are always timely, never late."[1] I say this because I had begun to think I had, if not lost, then mislaid your goodwill, for you had allowed so long to go by without writing to me, and I was in some uncertainty as to what the reason could be. All the explanations I could think of seemed to me worthless, except for the possibility that occurred to me, that you might have stopped writing to me because someone had written to tell you I was not taking proper care of your letters to me; but I knew that I had not been responsible for their being shown to anyone else, with the exception of Filippo and Paolo.[2]

Anyway, I have now received your most recent letter of the 23rd of last month. I was delighted to learn you are fulfilling your official responsibilities without fussing and flapping. I encourage you to carry on like this, for anyone who sacrifices his own convenience in order to make others happy is bound to inconvenience himself, but can't be sure of receiving any thanks for it. And since fortune wants to control everything, she evidently wants to be left a free hand; meanwhile we should keep our own counsel and not get in her way, and wait until she allows human beings to have a say in the course of events. That will be the time for you to work harder, and keep a closer eye on events, and for me to leave my country house and say: "Here I am!"

Since I want to repay your kind gesture, I have no alternative but to describe to you in this letter of mine how I live my life. If you decide you'd like to swap my life for yours, I'll be happy to make a deal.

I am still in my country house: Since my recent difficulties began I have not been, adding them all together, more than twenty days in Florence. Until recently I have been setting bird snares with my own hands. I've been getting up before dawn, making the bird-lime, and setting out with a bundle of cages on my back, so I look like Geta when he comes back from the harbor laden down with Amphitryo's books. I always caught at least two thrushes, but never more than six. This is how I spent September;[3] since then I am sorry to say I have had to give up my rather nasty and peculiar hobby, so I will describe the life I lead now.

I get up in the morning at daybreak and go to a wood of mine where I am having some timber felled. I stay there two hours to check on the work done during the preceding day and to chat to the woodcutters, who are always involved in some conflict, either among themselves or with the neighbors. I could tell you a thousand fine stories about my dealings over this wood, both with Frosino da Panzano and with others who wanted some of the timber. Frosino in particular had them supply some cords without mentioning it to me, and when I asked for payment he wanted to knock off ten lire he said I had owed him for four years, ever since he beat me at cards at Antonio Guicciardini's. I began to cut up rough; I threatened to charge with theft the wagon driver who had fetched

3. [Ridolfi points out that Machiavelli must have meant to write November, since this is the month for thrush hunting.]

the wood. However, Giovanni Machiavelli intervened, and got us to settle our differences. Batista Guicciardini, Filippo Ginori, Tommaso del Bene, and a number of other citizens each bought a cord from me when the cold winds were blowing. I made promises to all of them, and supplied one to Tommaso. But in Florence it turned out to be only half a cord, because there were he, his wife, his servants, and his sons to stack it: They looked like Gabburra on a Thursday when, assisted by his workmen, he slaughters an ox.[4] Then, realizing I wasn't the one who was getting a good deal, I told the others I had run out of wood. They've all complained bitterly about it; especially Battista, who thinks this is as bad as anything else that has happened as a result of the battle of Prato.[5]

When I leave the wood I go to a spring, and from there to check my bird-nets. I carry a book with me: Dante, or Petrarch, or one of the minor poets, perhaps Tibullus, Ovid, or someone like that. I read about their infatuations and their love affairs, reminisce about my own, and enjoy my reveries for a while. Then I set out on the road to the inn. I chat to those who pass by, asking them for news about the places they come from. I pick up bits and pieces of information, and study the differing tastes and various preoccupations of mankind. It's lunchtime before I know it. I sit down with my family to eat such food as I can grow on my wretched farm or pay for with the income from my tiny inheritance. Once I have eaten I go back to the inn. The landlord will be there, and, usually, the butcher, the miller, and a couple of kiln owners. With them I muck about all day, playing card games. We get into endless arguments and are constantly calling each other names. Usually we only wager a quarter, and yet you could hear us shouting if you were in San Casciano. So, in the company of these bumpkins, I keep my brain from turning moldy, and put up with the hostility fate has shown me. I am happy for fate to see to what depths I have sunk, for I want to know if she will be ashamed of herself for what she has done.

When evening comes, I go back home, and go to my study. On the threshold I take off my work clothes, covered in mud and filth, and put on the clothes an ambassador would wear. Decently dressed, I enter the ancient courts of rulers who have long since died. There I am warmly welcomed, and I feed on the only food I find nourishing, and was born to savor. I am not ashamed to talk to them, and to ask them to explain their actions. And they, out of kindness, answer me. Four hours go by without my feeling any anxiety. I forget every worry. I am no longer afraid of poverty, or frightened of death. I live entirely through them.

And because Dante says there is no point in studying unless you remember what you have learned, I have made notes of what seem to me the most important things I have learned in my dialogue with the dead, and written a little book *On princedoms*[6] in which I go as deeply as I can into the questions relevant to my subject. I discuss what a principality is, how many types of principality there are, how one acquires them, how one holds onto them, why one loses them. And if any of my little productions have ever pleased you, then this one ought not to displease you; and a ruler, especially a new ruler, ought to be delighted by it. Consequently, I have addressed it to His Highness Giuliano.[7] Filippo Casavecchia has seen it; he can give you a preliminary report, both on the text, and on the discussions I have had with him: though I am still adding to the text and polishing it.

You may well wish, Your Excellency, that I should give up this life, and come and enjoy yours with you. I will do so if I can; what holds me back at the moment is some business that won't take me more than six weeks to finish. Though I am a bit concerned the Soderini family is there,[8] and I will be obliged,

4. [In other words, just as the butcher turns a large ox into a small pile of steaks, so Tommaso and his family turned a large pile of wood into a small, neat, and cheap stack.]

5. [The Battle of Prato (1512) had led to the downfall of Soderini, the return of the Medici, and Machiavelli's own dismissal from office.]

6. [*De principatibus*, Machiavelli calls it.]

7. [Giuliano de' Medici, the senior member of the Medici family after his brother, Pope Leo X.]

8. [Piero and his brother Cardinal Francesco were in Rome.]

if I come, to visit them and socialize with them. My concern is that I might intend my return journey to end at my own house, but find myself instead dismounting at the prison gates. For although this government is well established and solidly based, still it is new, and consequently suspicious, nor is there a shortage of clever fellows who, in order to get a reputation like Pagolo Bertini's, would put me in prison, and leave me to worry about how to get out. I beg you to persuade me this fear is irrational, and then I will make every effort to come and visit you before six weeks are up.

I have discussed my little book with Filippo, asking him whether it was a good idea to present it or not; and if I ought to present it, then whether I should deliver it in person, or whether I should send it through you. My concern is that if I do not deliver it in person Giuliano may not read it; even worse, that chap Ardinghelli[9] may claim the credit for my latest effort. In favor of presenting it is the fact that the wolf is at the door, for my funds are running down, and I cannot continue like this much longer without becoming so poor I lose face. In any case, I would like their lordships, the Medici, to start putting me to use, even if they only assign me some menial task, for if, once I was in their employment, I did not win their favor, I would have only myself to blame. As for my book, if they were to read it, they would see the fifteen years I have spent studying statecraft have not been wasted: I haven't been asleep at my desk or playing cards. Anyone should be keen to employ someone who has had plenty of experience and has learned from the mistakes he made at his previous employers' expense. As for my integrity, nobody should question it: For I have always kept my word, and I am not going to start breaking it now. Someone who has been honest and true for forty-three years, as I have been, isn't going to be able to change character. And that I am honest and true is evident from my poverty.

So: I would like you to write to me again and let me have your opinion on this matter. I give you my regards. Best wishes.

Niccolò Machiavegli in Florence
10 December 1513.

9. [Secretary to Pope Leo X.]

The Prince

Niccolò Machiavelli to His Magnificence Lorenzo de' Medici.[1]

Those who wish to acquire favor with a ruler most often approach him with those among their possessions that are most valuable in their eyes, or that they are confident will give him pleasure. So rulers are often given horses, armor, cloth of gold, precious stones, and similar ornaments that are thought worthy of their social eminence. Since I want to offer myself to your Magnificence, along with something that will symbolize my desire to give you obedient service, I have found nothing among my possessions I value more, or would put a higher price upon, than an understanding of the deeds of great men, acquired through a lengthy experience of contemporary politics and through an uninterrupted study of the classics. Since I have long thought about and studied the question of what makes for greatness, and have now summarized my conclusions on the subject in a little book, it is this I send your Magnificence.

And although I recognize this book is unworthy to be given to Yourself, yet I trust that out of kindness you will accept it, taking account of the fact there is no greater gift I can present to you than the opportunity to understand, after a few hours of reading, everything I have learned over the course of so many years, and have undergone so many discomforts and dangers to discover. I have not ornamented this book with rhetorical turns of phrase, or stuffed it with pretentious and magnificent words, or made use of allurements and embellishments that are irrelevant to my purpose, as many authors do. For my intention has been that my book should be without pretensions, and should rely entirely on the variety of the examples and the importance of the subject to win approval.

I hope it will not be thought presumptuous for someone of humble and lowly status to dare to discuss the behavior of rulers and to make recommendations regarding policy. Just as those who paint landscapes set up their easels down in the valley in order to portray the nature of the mountains and the peaks, and climb up into the mountains in order to draw the valleys, similarly in order to properly understand the behavior of the lower classes one needs to be a ruler, and in order to properly understand the behavior of rulers one needs to be a member of the lower classes.

I therefore beg your Magnificence to accept this little gift in the spirit in which it is sent. If you read it carefully and think over what it contains, you will recognize it is an expression of my dearest wish, which is that you achieve the greatness your good fortune and your other fine qualities seem to hold out to you. And if your Magnificence, high up at the summit as you are, should occasionally glance down into these deep valleys, you will see I have to put up with the unrelenting malevolence of undeserved ill fortune.

1. [Lorenzo (1492–1519) was the grandson of Lorenzo the Magnificent (1449–92), son of Piero de' Medici (1471–1503, ruler of Florence, 1492–94), and nephew of Giovanni de' Medici (1475–1521), who became Pope Leo X in 1513. Lorenzo became Duke of Urbino in 1516. We know Machiavelli originally intended to give *The Prince* to Lorenzo's uncle and Leo's brother, Giuliano de' Medici (1479–1516).—D.W.]

CHAPTER 1

How many types of principality are there? And how are they acquired?

All states, all forms of government that have had and continue to have authority over men, have been and are either republics or principalities. And principali-

ties are either hereditary, when their rulers' ancestors have long been their rulers, or they are new. And if they are new, they are either entirely new, as was Milan for Francesco Sforza,[2] or they are like limbs added on to the hereditary state of the ruler who acquires them, as the kingdom of Naples has been added on to the kingdom of Spain.[3] Those dominions that are acquired by a ruler are either used to living under the rule of one man, or accustomed to being free; and they are either acquired with soldiers belonging to others, or with one's own; either through fortune or through strength [*virtù*].

CHAPTER 2

On hereditary principalities.

I will leave behind me the discussion of republics, for I have discussed them at length elsewhere. I will concern myself only with principalities. The different types of principality I have mentioned will be the threads from which I will weave my account. I will debate how these different types of principality should be governed and defended.

I maintain, then, it is much easier to hold on to hereditary states, which are accustomed to being governed by the family that now rules them, than it is to hold on to new acquisitions. All one has to do is preserve the structures established by one's forebears, and play for time if things go badly. For, indeed, an hereditary ruler, if he is of no more than normal resourcefulness, will never lose his state unless some extraordinary and overwhelming force appears that can take it away from him; and even then, the occupier has only to have a minor setback, and the original ruler will get back to power.

Let us take a contemporary Italian example: The Duke of Ferrara was able to resist the assaults of the Venetians in '84, and of Pope Julius in 1510, only because his family was long established as rulers of that state. For a ruler who inherits power has few reasons and less cause to give offense; as a consequence he is more popular; and, as long as he does not have exceptional vices that make him hateful, it is to be expected he will naturally have the goodwill of his people. Because the state has belonged to his family from one generation to another, memories of how they came to power, and motives to overthrow them, have worn away. For every change in government creates grievances that those who wish to bring about further change can exploit.

CHAPTER 3

On mixed principalities.

New principalities are the ones that present problems. And first of all, if the whole of the principality is not new, but rather a new part has been added on to the old, creating a whole one may term "mixed," instability derives first of all from a natural difficulty that is to be found in all new principalities. The problem is that people willingly change their ruler, believing the change will be for the better; and this belief leads them to take up arms against him. But they are mistaken, and they soon find out in practice they have only made things worse. The reason for this, too, is natural and typical: You always have to give offense to those over whom you acquire power when you become a new ruler, both by imposing troops upon them, and by countless other injuries that follow as necessary consequences of the acquisition of power. Thus, you make enemies of all those to whom you have given offense in acquiring power, and in addition you cannot keep the goodwill of those who have put you in power, for you cannot satisfy their aspirations as they thought you would. At the same time you cannot use heavy-handed methods against them, for you are obliged to them. Even if you have an overwhelmingly powerful army, you will have needed the support of the locals to take control of the province. This is why Louis XII of France lost Milan as quickly as he gained it.[4] All that was needed to take

2. [Sforza acquired Milan in 1450. See below, chapter twelve.]

3. [Ferdinand the Catholic (1452–1516) acquired Naples in 1504. See below, chapters three and twenty-one.]

4. [Louis XII (1462–1515) became King of France in 1498 and invaded Italy in 1499. He gained Milan in February 1500 and lost it in April.]

it from him the first time were Ludovico's own troops. For those who had opened the gates to him, finding themselves mistaken in their expectations and disappointed in their hopes of future benefit, could not put up with the burdensome rule of a new sovereign.

Of course it is true that, after a ruler has regained power in rebel territories, he is much more likely to hang on to it. For the rebellion gives him an excuse, and he is able to take firmer measures to secure his position, punishing delinquents, checking up on suspects, and taking precautions where needed. So, if the first time the King of France lost Milan all that was needed to throw him out was Duke Ludovico growling on his borders, to throw him out a second time it took the whole world united against him, and the destruction or expulsion from Italy of his armies.[5] We have seen why this was so.

Nevertheless, he lost Milan both times. We have discussed why he was almost bound to lose it the first time; now we must discuss why he managed to lose it the second. What remedies should he have adopted? What can someone in the King of France's position do to hold on to an acquisition more effectively than he did?

Let me start by saying these territories that are newly added on to a state that is already securely in the possession of a ruler are either in the same geographical region as his existing possessions and speak the same language, or they are not. When they are, it is quite straightforward to hold on to them, especially if they are not used to governing themselves. In order to get a secure hold on them one need merely eliminate the surviving members of the family of their previous rulers. In other respects one should keep things as they were, respecting established traditions. If the old territories and the new have similar customs, the new subjects will live quietly. Thus, Burgundy, Brittany, Gascony, and Normandy have for long quietly submitted to France. Although they do not all speak exactly the same language, nevertheless their customs are similar, and they can easily put up with each other. He who acquires neighboring territories in this way, intending to hold on to them, needs to see to two things: First, he must ensure their previous ruler has no heirs; and second, he must not alter their old laws or impose new taxes. If he follows these principles they will quickly become inseparable from his hereditary domains.

But when you acquire territories in a region that has a different language, different customs, and different institutions, then you really have problems, and you need to have great good fortune and great resourcefulness if you are going to hold on to them. One of the best policies, and one of the most effective, is for the new ruler to go and live in his new territories. This will make his grasp on them more secure and more lasting. This is what the Sultan of Turkey has done in Greece.[6] All the other measures he has taken to hold on to that territory would have been worthless if he had not settled there. For if you are on the spot, you can identify difficulties as they arise, and can quickly take appropriate action. If you are at a distance, you only learn of them when they have become serious, and when it is too late to put matters right. Moreover, if you are there in person, the territory will not be plundered by your officials. The subjects can appeal against their exactions to you, their ruler. As a consequence they have more reason to love you, if they behave themselves, and, if they do not, more reason to fear you. Anyone who wants to attack the territory from without will have to think twice, so that, if you live there, you will be unlucky indeed to lose it.

The second excellent policy is to send colonies to settle in one or two places; they will serve to tie your new subjects down. For it is necessary either to do this, or to garrison your new territory with a substantial army. Colonies do not cost much to run. You will have to lay out little or nothing to establish and maintain them. You will only offend those from whom you seize fields and houses to give to your settlers, and they will be only a tiny minority within the territory. Those whom you offend will be scattered and become poor, so they will be unable to do you any harm. All the rest will remain uninjured, and so ought

5. [Louis regained Milan after the battle of Novara (April 1500), and lost it again after the Battle of Ravenna (April 1512), Ludovico Sforza (1451–1510), younger son of Francesco Sforza, ruled Milan from 1494 to 1500.]

6. [Constantinople became capital of the Turkish empire in 1453.]

to remain quiet; at the same time they will be afraid to make a false move, for they will have before them the fate of their neighbors as an example of what may happen to them. I conclude such colonies are economical, reliable, and do not give excessive grounds for resistance; those who suffer by their establishment are in no position to resist, being poor and scattered, as I have said. There is a general rule to be noted here: People should either be caressed or crushed. If you do them minor damage they will get their revenge; but if you cripple them there is nothing they can do. If you need to injure someone, do it in such a way that you do not have to fear their vengeance.

But if, instead of establishing colonies, you rely on an occupying army, it costs a good deal more, for your army will eat up all your revenues from your new territory. As a result, your acquisition will be a loss, not a gain. Moreover, your army will make more enemies than colonies would, for the whole territory will suffer from it, the burden moving from one place to another as the troops are billeted first here, then there. Everybody suffers as a result, and everyone becomes your enemy. And these are enemies who can hurt you, for they remain, even if beaten, in their own homes. In every respect, then, an occupying army is a liability, while colonies are an asset.

In addition, anyone who finds himself with territory in a region with different customs from those of his hereditary possessions should make himself the leader and protector of neighboring powers who are weaker than he is, and should set out to weaken his powerful neighbors. He should also take care no outsider as powerful as himself has any occasion to intervene. Outside powers will always be urged to intervene by those in the region who are discontented, either because their ambitions are unsatisfied, or because they are afraid of the dominant powers. So, long ago, the Aetolians invited the Romans into Greece;[7] and, indeed, in every other region the Romans occupied they were invited by local people. It is in the nature of things that, as soon as a foreign power enters into a region, all the local states that are weak rally to it, for they are driven by the envy they have felt for the state that has exercised predominance over them. As a result, the invader does not have to make any effort at all to win over these lesser states, because they all immediately ally themselves to the territory he has acquired there. He only has to take care they do not become too strong and exercise too much influence. He can easily, with his own troops and his new allies' support, strike down the powerful states, and make himself the arbiter of all the affairs of the region. Anyone who does not see how to play this role successfully will quickly lose what he has gained, and, while he holds it, will have innumerable difficulties and vexations.

The Romans, in the regions they seized, obeyed these principles admirably. They settled colonies; were friendly towards the weaker rulers, without building up their strength; broke the powerful; and did not allow foreign powers to build up support. Let me take just the region of Greece as an example.[8] The Romans favored the Acheans and the Aetolians; they crushed the Kingdom of Macedon; they expelled Antiochus[9] from the region. Despite the credit the Acheans and the Aetolians had earned with them, they never allowed them to build up any independent power; nor did the blandishments of Philip[10] ever persuade them to treat him as a friend before they had destroyed his power; nor did Antiochus's strength intimidate them into permitting him to retain any territory in that region.

The Romans did in such matters what all wise rulers ought to do. It is necessary not only to pay attention to immediate crises, but to foresee those that will come, and to make every effort to prevent them. For if you see them coming well in advance, then you can easily take the appropriate action to remedy them, but if you wait until they are right on top of you, then the prescription will no longer take effect, because the disease is too far advanced. In this matter it is as doctors say of consumption: In the beginning the disease is easy to cure, difficult to diagnose; but, after a while, if it has not been diagnosed

7. [211 B.C. See Livy, bk. 26, ch. 24.]

8. [The events to which Machiavelli refers occurred in 192 B.C. to 189 B.C. See Livy, bk. 37.]

9. [Antiochus III, King of Syria.]

10. [Philip V of Macedon.]

and treated early, it becomes easy to diagnose and hard to cure. So, too, in politics, for if you foresee problems while they are far off (which only a prudent man is able to do) they can easily be dealt with; but when, because you have failed to see them coming, you allow them to grow to the point that anyone can recognize them, then it is too late to do anything.

The Romans always looked ahead and took action to remedy problems before they developed. They never postponed action in order to avoid a war, for they understood you cannot escape wars, and when you put them off only your opponents benefit. Thus, they wanted to have a war with Philip and Antiochus in Greece, so as not to have one with them in Italy. At the time they could have avoided having a war at all, but this they did not want. They never approved the saying that nowadays is repeated *ad nauseam* by the wise: "Take advantage of the passage of time." Rather they relied on their strength [*virtù*] and prudence, for in time anything can happen, and the passage of time brings good mixed with evil, and evil mixed with good.

But let us return to the kings of France, and let us see whether they followed any of the principles I have outlined. I will discuss Louis, not Charles, for, since Louis held territory in Italy for a longer time, we can have a better understanding of the policies he was following.[11] We will see he did the opposite of what one ought to do in order to hold on to territory in a region unlike one's hereditary lands.

King Louis was brought into Italy by the ambition of the Venetians, who hoped to gain half of the territory of Lombardy as a result of his invasion. I do not want to criticize the king's decision to ally with the Venetians. Since he wanted to get a foothold in Italy, and since he had no friends in that region (rather the opposite, for all the gateways to Italy were closed against him as a result of the actions of King Charles), he was obliged to take what allies he could get. His decision would have been a good one, if he had done everything else right. Now when the king had conquered Lombardy, he at once recovered the reputation Charles had lost for him. Genoa gave itself up and the Florentines became his friends. Everybody came forward to meet him as he advanced and sought his friendship: the Marquis of Mantua, the Duke of Ferrara, Bentivoglio, the Countess of Forlì, the rulers of Faenza, Pesaro, Rimini, Camerino, Piombino, the citizens of Lucca, Pisa, and Siena. Then the Venetians were able to see the risk they had chosen to run; in order to acquire a couple of fortresses in Lombardy, they had made the King of France master of two-thirds of Italy.

Now consider how easy it would have been for the king to preserve his authority in Italy if he had followed the principles I have laid out, and if he had protected and defended all his new friends. They were numerous, weak, and fearful, some afraid of the Church, some of the Venetians, and so had no choice but to remain loyal to him; and with their help he could easily have overwhelmed the surviving great powers. But he had no sooner got to Milan than he did the opposite, coming to the assistance of Pope Alexander so he could occupy the Romagna.[12] He did not realize that by this decision he weakened himself, alienating his friends and those who had flung themselves into his arms; and at the same time strengthened the Church, adding to its already extensive spiritual authority an increased temporal power. And having made one error he was forced to make another, for, in order to put a stop to Alexander's ambitions, and to prevent his gaining control of Tuscany, he was obliged to march into Italy once more. Nor was he satisfied with having strengthened the Church and thrown away his alliances, but in addition, because he wanted the Kingdom of Naples, he agreed to divide it with the King of Spain.[13] Where he had been all-powerful in Italy, he now shared his power with another, giving ambitious rulers in the region and those who were discontented with him someone to whom they could turn. Where he could have left in the Kingdom of Naples a king who was on his payroll, he threw him out, and replaced him

11. [Charles VIII (1470–98) ruled France from 1492 and invaded Italy in 1494. He was crowned King of Naples in 1494, but was forced out of Italy in 1495. Louis invaded Italy in 1499. His forces were decisively defeated as the Second Battle of Novara, 1512.]

12. [See below, chapter seven.]

13. [Louis agreed to divide the Kingdom of Naples with Ferdinand the Catholic in 1500, but lost the whole state to him in 1504.]

with someone who might aspire to kick out the French.

It is perfectly natural and normal to want to acquire new territory; and whenever men do what will succeed towards this end, they will be praised, or at least not condemned. But when they are not in a position to make gains, and try nevertheless, then they are making a mistake, and deserve condemnation. If the King of France had the military capacity to attack Naples, he should have done so; if he did not have it, he should not have proposed to partition the territory. The division of Lombardy between France and Venice was justified because it gave the French a foothold in Italy; the division of Naples was blameworthy, for it was not justifiable on the same grounds.

Thus, Louis had made the following five mistakes: He wasted his alliance with the lesser states; he increased the strength of one of the more powerful Italian states; he invited an extremely powerful foreign state to intervene in Italy; he did not go and live in Italy; he did not establish settlements there. Even these mistakes might have had no evil consequences while he lived, had he not made a sixth, attacking the Venetians. Had he not strengthened the Church and brought the Spanish into Italy, then it would have been reasonable and appropriate to attack them; but having done what he had done, he should never have given his consent to a policy aimed at their destruction. For as long as they remained powerful, the others would never have been prepared to undertake an attack upon Lombardy. For the Venetians would not have consented to Lombardy's falling into the hands of others, and not themselves; while the others would not have wanted to take Lombardy from the King of France only to give it to the Venetians, and would not have had the courage to try to take it away from both of them.

And if someone were to reply that King Louis allowed Alexander to take the Romagna, and the King of Spain to have the Kingdom of Naples, in order to avoid a war, I would answer as I did above: One should never allow a problem to develop in order to avoid a war, for you end up not avoiding the war, but deferring it to a time that will be less favorable. And if others were to appeal to the promise the king had given to the pope, to help him seize the Romagna in return for the pope's giving him a divorce and making the Bishop of Rouen a cardinal, I would reply with what I will say later on the subject of whether and to what extent rulers should keep their word.

Thus, King Louis lost Lombardy because he did not follow any of the policies others have adopted when they have established predominance within a region and have wanted to hold on to it. There is nothing remarkable about what happened: It is entirely natural and predictable. I spoke about these matters with the Cardinal of Rouen in Nantes, when Valentino (as Cesare Borgia, son of Pope Alexander, was commonly called) was taking possession of the Romagna. The cardinal said to me that the Italians did not understand war; so I told him that the French did not understand politics, for if they did, they would not allow the church to acquire so much power. And in practice we have seen that the strength of the papacy and of the King of Spain within Italy has been brought about by the King of France, and they in turn have been the cause of his own ruin. From this one can draw a general conclusion that will never (or hardly ever) be proved wrong: He who is the cause of someone else's becoming powerful is the agent of his own destruction; for he makes his protegé powerful either through his own skill or through his own strength, and either of these must provoke his protegé's mistrust once he has become powerful.

CHAPTER 4

Why the kingdom of Darius, which Alexander occupied, did not rebel against his successors after Alexander's death.

When you think of the difficulties associated with trying to hold on to a newly acquired state, you might well be puzzled: Since Alexander the Great had conquered Asia in the space of a few years, and then died when he had scarcely had time to take possession of it, at that point you would expect the whole state to rebel.[14] Nevertheless, Alexander's successors

14. [Alexander conquered Asia between 334 and 327 B.C., and died in 323 B.C.]

maintained possession of it and had no difficulty in keeping hold of it, beyond the conflicts that sprung up between themselves as a result of their own ambitions. My explanation is that the principalities recorded in history have been governed in two different ways: either by a single individual, and everyone else has been his servant, and they have helped to govern his kingdom as ministers, appointed by his grace and benevolence; or by a monarch together with barons, who, not by concession of the ruler, but by virtue of their noble lineage, hold that rank. Such barons have their own territories and their own subjects: subjects who recognize them as their lords and feel a natural affection for them. In those states that are governed by a single individual and his servants, the sovereign has more authority in his own hands; for in all his territories there is no one recognized as having a right to rule except him alone; and if his subjects obey anyone else, they do so because he is the ruler's minister and representative, and they do not feel any particular loyalty to these subordinate authorities.

In our own day the obvious examples of these two types of ruler are the Sultan of Turkey and the King of France. All the kingdom of Turkey is ruled by a single monarch, and everyone else is his servant. He divides his kingdom into sanjaks,[15] sending administrators, whom he replaces and transfers as he thinks best, to rule them. But the King of France is placed among a multitude of long-established nobles, whose rights are recognized by their subjects and who are loved by them. They have their own inherited privileges, and the king cannot take them away without endangering himself. If you compare these two states, you will realize it would be difficult to seize the sultan's kingdom, but, once you had got control of it, it would be very easy to hold on to it.

It would be difficult to occupy the lands of the sultan for two reasons: The local authorities of that kingdom will not invite you to invade, nor can you hope those around the ruler will rebel, making your task easier. And this for the reasons I have explained. For, since they are all his slaves, and indebted to him, it is harder to corrupt them; and even if you can corrupt them, they are not going to be much use to you, for they cannot command the obedience of the people, as I have explained. Consequently, anyone attacking the sultan must expect to find the Turks united in his defense and must rely more on his own strength than on the disorder of his opponents. But once he has defeated them and has destroyed their forces on the field of battle so completely they cannot muster an army, then he has no one to worry about except the sultan's close relatives. Once he has got rid of them, then there is no one left for him to fear, for there is no one else with influence over the people. Just as the invader, before his victory, had no reason to hope for support, so, after his victory, he has no reason to fear opposition.

The opposite is true in kingdoms governed like that of France. For it is easy to invade them, once one has gained the support of some local noble. For in such kingdoms one can always find malcontents who hope to benefit from innovation. These, as we have seen, can ease your entrance into the state and help you win victory. But then, when you try to hold on to power, you will find the nobility, both those who have been your allies and those you have defeated, present you with an infinity of problems. It simply is not sufficient to kill the ruler and his close relatives, for the rest of the nobility will survive to provide leadership for new insurrections. You cannot win their loyalty or wipe them out, so you will always be in danger of losing your kingdom should anything go wrong.

Now if you ask yourself what sort of state it was Darius ruled, you will see it was similar to that of the sultan. So it was necessary for Alexander, first to take on his forces and seize control of the territory. Once he was victorious, and Darius was dead, Alexander had a firm grip on his new lands, for the reasons I have given. And his successors, if they had stayed united, could have enjoyed them at their leisure; nor was there any resistance to them in that kingdom, apart from their own conflicts with one another. But states that are organized after the French model cannot be held onto, once seized, with such ease. This is why there were frequent rebellions in Spain, France,[16] and Greece against the Romans. For there

15. [An administrative region.]

16. [Machiavelli uses "France" to refer both to modern France and the ancient province of Gaul. Because one

were many rulers in those territories, and as long as people remembered them, the Romans were always unsure of their grip. Once the memory of these rulers had faded completely away, thanks to the long duration of Roman rule, they became secure in their possession. Even after that, each faction among the Romans, when they fought among themselves, could call on the support of a section of those provinces, depending on the influence they had built up within them. The subjects of these territories, because their former rulers had no heirs, had no loyalties except to Roman leaders. Once you have considered all these matters, you will not be at all surprised at the ease with which Alexander held on to Asia or at the difficulties other conquerors (one might take Pyrrhus as one example among many) have had in keeping control of their acquisitions. The crucial factor in these differing outcomes is not the strength [*virtù*] or weakness of the conqueror but the contrasting character of the societies that have been conquered.

CHAPTER 5

How you should govern cities or kingdoms that, before you acquired them, lived under their own laws.

When the states one acquires by conquest are accustomed to living under their own laws and in freedom, there are three policies one can follow in order to hold on to them: The first is to lay them waste; the second is to go and live there in person; the third is to let them continue to live under their own laws, make them pay you, and create there an administrative and political elite who will remain loyal to you. For since the elite are the creation of the head of state, its members know they cannot survive without both his friendship and his power, and they know it is in their interest to do everything to sustain it. It is easier to rule a city that is used to being self-governing by employing its own citizens than by other means, assuming you do not wish to destroy it.

Examples are provided by the Spartans and the Romans. The Spartans took Athens and Thebes, establishing oligarchies there. However, they lost them again.[17] The Romans, in order to hold on to Capua, Carthage, and Numantia razed them and never lost them.[18] They sought to govern Greece according to more or less the same policies as those used by Sparta, letting the Greek cities rule themselves and enforce their own laws, but the policy failed, so in the end they were obliged to demolish many cities in that territory in order to hold on to them. The simple truth is there is no reliable way of holding on to a city and the territory around it, short of demolishing the city itself. He who becomes the ruler of a city that is used to living under its own laws and does not knock it down, must expect to be knocked down by it. Whenever it rebels, it will find strength in the language of liberty and will seek to restore its ancient constitution. Neither the passage of time nor good treatment will make its citizens forget their previous liberty. No matter what one does, and what precautions one takes, if one does not scatter and drive away the original inhabitants, one will not destroy the memory of liberty or the attraction of the old institutions. As soon as there is a crisis, they will seek to restore them. This is what happened in Pisa after it had been enslaved by the Florentines for a hundred years.[19]

But when cities or provinces are used to being ruled by a monarch, and one has wiped out his relatives and descendants, then matters are very different. They are used to being obedient. Their old ruler is gone, and they cannot agree among themselves as to who should replace him. They do not know how to rule themselves. The result is that they are slower to take up arms, and it is easier for a new ruler to win them over and establish himself securely in power. But in

of his beliefs is that the French have not changed, I have kept his terminology as a reminder of his conviction that there is a real continuity between the ancient world and the present.]

17. [The Spartan-sponsored oligarchies controlled Athens from 404 to 403 B.C. and Thebes from 382 to 379 B.C.]

18. [Capua in 211 B.C., Carthage in 146 B.C., Numantia in 133 B.C.]

19. [Pisa was controlled by Florence from 1406 to 1494, and recaptured in 1509.]

former republics there is more vitality, more hatred, more desire for revenge. The memory of their former freedom gives them no rest, no peace. So the best thing to do is to demolish them or to go and live there oneself.

CHAPTER 6

About new kingdoms acquired with one's own armies and one's own skill [*virtù*].

No one should be surprised if, in talking about completely new kingdoms (that is, states that are governed by someone who was not a ruler before, and were themselves not previously principalities), I point to the greatest of men as examples to follow. For men almost always walk along the beaten path, and what they do is almost always an imitation of what others have done before. But you cannot walk exactly in the footsteps of those who have gone before, nor is it easy to match the skill [*virtù*] of those you have chosen to imitate. Consequently, a prudent man will always try to follow in the footsteps of great men and imitate those who have been truly outstanding, so that, if he is not quite as skillful [*virtù*] as they, at least some of their ability may rub off on him. One should be like an experienced archer, who, trying to hit someone at a distance and knowing the range [*virtù*] of his bow, aims at a point above his target, not so his arrow will strike the point he is aiming at, but so, by aiming high, he can reach his objective.

I maintain that, in completely new kingdoms, the new ruler has more or less difficulty in keeping hold of power depending on whether he is more or less skillful [*virtuoso*]. Now you only find yourself in this situation, a private individual only becomes a ruler, if you are either lucky, or skillful [*virtù*]. Both luck and skill enable you to overcome difficulties. Nevertheless, he who relies least on luck has the best prospect of success. One advantage is common to any completely new sovereign: Because he has no other territories, he has no choice but to come in person and live in his new kingdom. Let us look at those who through their own skill [*virtù*], and not merely through chance, have become rulers. In my view, the greatest have been Moses, Cyrus, Romulus, Theseus, and others like them.[20]

Obviously, we should not discuss Moses' skill, for he was a mere agent, following the instructions given him by God. So he should be admired, not for his own skill, but for that grace that made him worthy to talk with God. But let us discuss Cyrus and the others who have acquired existing kingdoms or founded new ones. You will find them all admirable. And if you look at the actions and strategies of each one of them, you will find they do not significantly differ from those of Moses, who could not have had a better teacher. If you look at their deeds and their lives, you will find they were dependent on chance only for their first opportunity. They seized their chance to make of it what they wanted. Without that first opportunity their strength [*virtù*] of purpose would never have been revealed. Without their strength [*virtù*] of purpose, the opportunity they were offered would not have amounted to anything.

Thus, it was necessary for Moses to find the people of Israel in Egypt, enslaved and oppressed by the Egyptians, so they, in order to escape from slavery, would be prepared to follow him. It was essential for Romulus to have no future in Alba, it was appropriate he should have been exposed at birth, otherwise he would not have formed the ambition of becoming King of Rome and succeeded in founding that nation. It was necessary that Cyrus should find the Persians hostile to the rule of the Medes, and the Medes weak and effeminate from too much peace. Theseus could not have demonstrated his strength of purpose [*virtù*] if he had not found the Athenians scattered. These opportunities made these men lucky; but it was their remarkable political skill [*virtù*] that enabled them to recognize these opportunities for what they were. Thanks to them their nations were ennobled and blessed with good fortune.

Those who become rulers through strength of purpose [*vie virtuose*], as they did, acquire their kingdoms with difficulty, but they hold on to them with ease.

20. [Cyrus overcame the Medes around 550 B.C. and founded the Persian Empire. Romulus is the mythical founder of Rome, and Theseus the slayer of the Minotaur and founder of Athens (1234 B.C.): Machiavelli took them to be genuine historical persons.]

And much of the difficulty they have in getting to power derives from the new institutions and customs they are obliged to establish in order to found their governments and make them secure. One ought to pause and consider the fact that there is nothing harder to undertake, nothing more likely of failure, nothing more risky to pull off, than to set oneself up as a leader who plans to found a new system of government. For the founder makes enemies of all those who are doing well under the old system, and has only lukewarm support from those who hope to do well under the new one. The weakness of their support springs partly from their fear of their adversaries, who have the law on their side, partly from their own want of faith. For men do not truly believe in new things until they have had practical experience of them. So it is that, whenever those who are enemies of the new order have a chance to attack it, they do so ferociously, while the others defend it half-heartedly. So the new ruler is in danger, along with his supporters.

It is necessary, however, if we are going to make sense of his situation, to find out if our innovator stands on his own feet, or depends on others to prop him up. That is, we need to know if he is obliged to try to obtain his objectives by pleading, or whether he can resort to force. In the first case, he is bound to come to a bad end, and won't achieve anything. But when he can stand on his own feet, and can resort to force, then he can usually overcome the dangers he faces. Thus it is that all armed prophets are victorious, and disarmed ones are crushed. For there is another problem: People are by nature inconstant. It is easy to persuade them of something, but it is difficult to stop them from changing their minds. So you have to be prepared for the moment when they no longer believe: Then you have to force them to believe. Moses, Cyrus, Theseus, and Romulus would not have been able to make their peoples obey their new structures of authority for long if they had been unarmed. This is what happened, in our own day, to Friar Girolamo Savonarola.[21] He and his new constitution were destroyed as soon as the multitude began to stop believing in him. He had no way of stiffening the resolution of those who had been believers or of forcing disbelievers to obey.

Thus the founders of new states have immense difficulties to overcome, and dangers beset their path, dangers they must overcome by skill and strength of purpose [*virtù*]. But, once they have overcome them, and they have begun to be idolized, having got rid of those who were jealous of their superior qualities, they are established, they are powerful, secure, honored, happy.

We have looked at some noble examples, and to them I want to add one less remarkable. Nevertheless, it has some points of similarity to them, and I want it to stand for all the other lesser examples I could have chosen. My example is Hiero of Syracuse.[22] He was a private individual who became ruler of Syracuse. He, too, did not depend on luck once he had been given his opportunity. The people of Syracuse were oppressed and elected him as their military commander; so he deserved to be made their ruler. He was so remarkable [*di tanta virtù*], even before he became a ruler, history records "that he had everything one would look for in a king, except a kingdom." He disbanded the old militia and instituted a new one. Dropped his old friends and chose new ones. Since both his friends and his soldiers were his creatures, he had laid the foundations for constructing any political system he chose. He, too, had difficulties enough to overcome in acquiring power, and few in holding on to it.

CHAPTER 7

About new principalities that are acquired with the forces of others and with good luck.

Those who, having started as private individuals, become rulers merely out of good luck, acquire power with little trouble but have a hard time holding on

21. [Girolamo Savonarola (b. 1452) was a Dominican friar and prophetic preacher. He dominated Florentine politics from the expulsion of the Medici in 1494 until 1498, when he was executed as a heretic.]

22. [Hiero II became King of Syracuse in 269 B.C. Machiavelli's sources are Polybius, bk. 7, ch. 8, and Justin, bk. 23, ch. 4.]

to it. They have no problems on the road to power, because they leap over all the obstacles; but dangers crowd around them once they are in power. I am talking about people who are given a state, either in return for money, or out of the goodwill of him who hands it over to them. This happened to many individuals in Greece, in the cities of Ionia and the Hellespont, who were made rulers by Darius, who wanted them to hold their cities for his own greater safety and glory.[23] So, too, with those who, having been private citizens, were made emperors of Rome because they had corrupted the soldiers.[24] Such rulers are entirely dependent on the goodwill and good fortune of whoever has given them power. Good will and good fortune are totally unreliable and capricious. Such rulers do not know how to hold on to their position and cannot do so. They do not know how, because they have always been private citizens, and only a brilliant and immensely skillful [*di grande virtù*] man is likely to know how to command without having had training and experience. They cannot because they have no troops of their own on whose loyalty and commitment they can count.

Moreover, states that spring up overnight, like all other things in nature that are born and grow in a hurry, cannot have their roots deep in the soil, so they shrivel up in the first drought, blow over in the first storm. Unless, as I have said, those who are suddenly made into rulers are of such extraordinary capacity [*virtù*] they can work out on the spot how to hold on to the gift fortune has unexpectedly handed them; and those preparations the others made before they became rulers, they must find a way of making after the event.

I want to add to the one and the other of these two ways of becoming a ruler, by skill [*virtù*] or by luck, two examples drawn from the events that have occurred in our own lifetimes: the examples of Francesco Sforza and Cesare Borgia. Francesco, by using the right methods and consummate skill [*virtù*], started out as a private citizen and ended up as Duke of Milan. And what he had acquired with painstaking effort, he held on to without trouble.[25] On the other hand Cesare Borgia, who was called Duke Valentino by the common people, acquired his state thanks to the good fortune of his father, and when that came to an end he lost it.[26] This despite the fact he used every technique and did all the things a prudent and skillful [*virtuoso*] man ought to do, to entrench himself in those territories that the arms and fortune of others had acquired for him. For, as I said above, he who does not prepare the foundations first can (in principle), if he is immensely skillful [*virtù*], make up for it later, although the architect will find catching up a painful process, and there is a real danger the building will collapse. So, if we look at all the things Borgia did, we will see he had laid solid foundations for future power. I do not think it irrelevant to discuss his policies, because I cannot think of any better example I could offer a new ruler than that of his actions. And if his strategy did not lead to success, this was not his fault; his failure was due to extraordinary and exceptional hostility on the part of fortune.

Pope Alexander VI, in setting out to make his son the duke into a ruler, was faced with considerable immediate and long-term difficulties. In the first place, he could find no way of making him the lord of any territory, except territory that belonged to the church. And he knew if he took land from the church to give to Cesare, he would have to overcome the opposition of the Duke of Milan, and also of the Venetians, for both Faenza and Rimini were already under Venetian protection. Secondly, he saw the armed forces of Italy, and particularly those he could hope to employ, were under the control of individuals who had reason to fear any increase in papal power. Consequently, he could not regard them as reliable. He could not trust the Orsini, the Colonna, or their associates, but there was no one else to whom he could turn.[27] So it was necessary to break out of this framework, and to bring disorder to the territories of

23. [Machiavelli is refering to Greek-speaking cities in Asia and the Hellespont in the sixth century B.C.]

24. [See below, chapter nineteen.]

25. [See below, chapter twelve.]

26. [Cesare Borgia (1475–1507) was the natural son of Rodrigo Borgia (1431–1503), who became Pope Alexander VI in 1492. He began the conquest of the Romagna in 1499.]

27. [On the Orsini and the Colonna, see below, chapter eleven.]

his opponents, so he could safely seize a part of them. This proved easy, for he found the Venetians, for reasons of their own, had decided to invite the French to invade Italy. He not only did not oppose this, but he facilitated it by dissolving the previous marriage of King Louis. So the king marched into Italy, with the help of the Venetians and the consent of Alexander. No sooner was he in Milan than the pope had borrowed forces from him for the attack on the Romagna, which was ceded to him out of fear of the King of France.

So, once Cesare had been made Duke of the Romagna, and the Colonnesi had been beaten, wanting to hang on to his new territories and make further conquests, he was faced with two obstacles. In the first place, his military forces did not appear reliable. In the second, the King of France might oppose him. He had made use of the troops of the Orsini, but they were likely to abandon him, and not only prevent him from making further acquisitions, but take from him what he had already acquired. And the same was true of the king. He had an indication of how far he could trust the Orsini when, after Faenza had been taken by storm, he attacked Bologna, for he discovered they had no appetite for that battle.[28] And as for the king, he discovered his attitude when, having seized the Duchy of Urbino, he attacked Tuscany, for Louis made him abandon that enterprise.[29] So the duke decided he must no longer depend on the troops and the good fortune of others.

The first thing he did was to weaken the factions of the Orsini and the Colonna in Rome. All the nobles who were allied to these families he won over to himself, making them members of his court, and giving them substantial pensions. He favored them with civil and military appointments appropriate to their standing. Thus, in the course of a few months, their attachment to their factions was dissolved, and they became committed to the duke. Next, he looked for a chance to crush the Orsini, having already defeated the forces of the Colonna family. He soon had his chance and he made the most of it. For the Orsini, having realized late in the day that the growing strength of the duke and the pope would be their ruin, called a meeting at Magione, near Perugia. From that meeting sprang the rebellion of Urbino and the uprisings in the Romagna that almost destroyed the duke; but he overcame all resistance with the help of the French.[30] And, having got back his authority and realizing he could trust neither the French nor other external forces, he decided that, in order to prevent their allying against him, he must deceive them. He so successfully concealed his intentions that the Orsini, represented by Signor Paolo, made peace with him. The duke took every opportunity to ingratiate himself with Paolo, giving him money, clothes, and horses. So the leaders of the Orsini were brought, unsuspecting, to Sinigallia, where they were at his mercy.[31] Having got rid of the leaders and won the allegiance of their followers, the duke could feel he had laid decent foundations for his future power. He had control of all the Romagna and the Duchy of Urbino, and it looked as though he had won over the Romagna and acquired the support of its population, who were beginning to enjoy a new prosperity.

Now, since it is worth paying attention to this question, and since it would be sensible to imitate Cesare's actions, I want to amplify what I have just said. Once the duke had subdued the Romagna, he found it had been under the control of weak nobles, who had rather exploited than governed their subjects and had rather been the source of conflict than of order, with the result the whole province was full of robbers, bandits, and every other type of criminal. So he decided it was necessary, if he was going to make the province peaceful and obedient to his commands, to give it good government. He put Mr. Remiro d'Orco, a man both cruel and efficient, in charge, and gave him absolute power. D'Orco in short order established peace and unity, and acquired immense authority. At that point, the duke decided such unchecked power was no longer necessary, for he feared people might come to hate it. So he established a civil court in the center of the province, placing an

28. [In the spring of 1501.]

29. [In the summer of 1502.]

30. [October 1502.]

31. [They were captured on 31 December 1502. Some were killed at once; others a few weeks later.]

excellent judge in charge of it, and requiring every city to appoint a lawyer to represent it before the court. Since he knew the harsh measures of the past had given rise to some enmity towards him, in order to purge the ill-will of the people and win them completely over to him, he wanted to make clear that, if there had been any cruelty, he was not responsible for it, and that his hard-hearted minister should be blamed. He saw his opportunity and exploited it. One morning, in the town square of Cesena, he had Remiro d'Orco's corpse laid out in two pieces, with a chopping board and a bloody knife beside it.[32] This ferocious sight made the people of the Romagna simultaneously happy and dumbfounded.

But let us get back to where we were. I was saying the duke found himself rather powerful and had taken precautions against immediate dangers, for he had built up a military force that he had planned himself and had in large part destroyed neighboring forces that could be a threat to him. So what remained, if he wanted to make further acquisitions, was the problem of the King of France; for he knew the king had, late in the day, realized his policy towards Borgia had been misconceived and would not allow him to make further conquests. So Borgia began to look for new alliances and to prevaricate with the French when they dispatched a force towards the Kingdom of Naples to attack the Spanish who were laying siege to Gaeta.[33] His intention was to protect himself against them, which he would soon have succeeded in doing, if Alexander had gone on living.

These were the policies he pursued with regard to his immediate concerns. But there were future problems he also had to consider. In the first place, he had to worry that a new pope would be hostile to him and would try to take from him what Alexander had given him. He had four ways of trying to deal with this threat. In the first place, he set out to eliminate all the relatives of those rulers whose lands he had seized, to make it difficult for the pope to restore their previous rulers. Second, he sought to acquire the allegiance of the nobility of Rome, as I have explained, so he could use them to restrict the pope's freedom of action. Third, to make as many as possible of the members of the College of Cardinals his allies. Fourth, to acquire so much power, before the pope died, that he would be able on his own to resist a first attack. Of these four policies he had successfully carried out three by the time Alexander died; the fourth he had almost accomplished. Of the rulers he had dispossessed, he murdered as many as he could get his hands on, and only a very few survived. The Roman nobility were his supporters, and he had built up a very large faction in the College of Cardinals. As far as new acquisitions were concerned, he had plans for conquering Tuscany; he already held Perugia and Piombino; and he had taken Pisa under his protection. And, as soon as he would no longer have to worry about the King of France (which was already the case, for the French had already lost the Kingdom of Naples to the Spanish, with the result that both France and Spain were now obliged to try to buy his friendship), he would be free to seize Pisa. After which, Lucca and Siena would quickly give in, partly because they hated the Florentines, and partly because they would have been terrified. The Florentines could have done nothing.

If he had succeeded in all this (and he was on the point of succeeding in the very year Alexander died) he would have acquired so much strength and so much authority he would have become his own master. He would no longer have depended on events outside his control and on the policies of others, but would have been able to rely on his own power and strength [*virtù*]. But Alexander died only five years after Cesare Borgia had unsheathed his sword.[34] He found himself with only his control over the Romagna firmly established, with everything else up in the air, caught between two powerful hostile armies, and dangerously ill. But the duke was so pugnacious and so strong [*virtù*], he so well understood what determines whether one wins or loses, and he had laid such sound foundations within such a short time, that, if he had not had these enemy armies breathing down his neck, or if he had been in good health, he could have overcome every difficulty.

I am justified in claiming he had laid sound founda-

32. [26 December 1502.]
33. [1503.]
34. [18 August 1503.]

tions, for the Romagna remained loyal to him in his absence for more than a month; in Rome, although he was half dead, he was quite safe, and although the Ballioni, the Vitelli, and the Orsini congregated in Rome, they could not muster a following to attack him; and, if he was not in a position to choose who should be pope, he could at least veto anyone he did not trust. So, if he had been well when Alexander died he would have been able to deal with his problems without difficulty. He told me himself, on the day Julius II was elected,[35] that he had asked himself what he would do if his father died and had been confident he could handle the situation, but that it had never occurred to him that when his father died he himself would be at death's door.

So, now I have surveyed all the actions of the duke, I still cannot find anything to criticize. It seems to me I have been right to present him as an example to be imitated by all those who come to power through good luck and thanks to someone else's military might. For, since he was great-hearted and ambitious, he had no choice as to what to do; and he only failed to achieve his goals because Alexander died too soon, and he himself fell ill. So anyone who decides that the policy to follow when one has newly acquired power is to destroy one's enemies, to secure some allies, to win wars, whether by force or by fraud, to make oneself both loved and feared by one's subjects, to make one's soldiers loyal and respectful, to wipe out those who can or would want to hurt one, to innovate, replacing old institutions with new practices, to be both harsh and generous, magnanimous and open-handed, to disband disloyal troops and form new armies, to build alliances with other powers, so kings and princes either have to win your favor or else think twice before going against your wishes—anyone who thinks in these terms cannot hope to find, in the recent past, a better model to imitate than Cesare Borgia.

His only mistake was to allow Julius to be elected pope, for there he made a bad choice. The choice was his to make, for as I have said, if he could not choose who should be pope, he could veto anyone he did not like, and he should never have agreed to any cardinal's being elected with whom he had been in conflict in the past, or who, once he had been elected, would have been likely to be afraid of him. For men attack either out of fear or out of hatred. Those who had scores to settle with him included San Piero ad Vincula, Colonna, San Giorgio, Ascanio; all the others, if elected pope, would have had good reason to fear him, with the exception of Rouen and of the Spanish cardinals. The Spanish were his relatives and allies; Rouen was powerful, having the support of the King of France. So the duke's first objective should have been to ensure a Spaniard was elected pope; failing that, he should have agreed to the election of Rouen and vetoed that of San Piero ad Vincula. If he imagined recent gestures of goodwill make the powerful forget old injuries, he was much mistaken. So the duke made a mistake during the election of the pope, and this mistake was, in the end, the cause of his destruction.

35. [28 October 1503. Giuliano della Rovere (1443–1513) had been appointed Cardinal of San Piero ad Vincula in 1471, when his uncle became Pope Sixtus IV. For Machiavelli's assessment of his papacy, see below, chapters eleven and twenty-five.]

CHAPTER 8

Of those who come to power through wicked actions.

But since there are two other ways a private citizen can become a ruler, two ways that do not simply involve the acquisition of power either through fortune or strength [*virtù*], I feel I cannot omit discussion of them, although one of them can be more fully treated elsewhere, where I discuss republics. These are, first, when one acquires power through some wicked or nefarious action, and second when a private citizen becomes ruler of his own country because he has the support of his fellow citizens. Here I will talk about the first of these two routes to power, and will use two examples, one ancient, one modern, to show how it is done. These will be sufficient, I trust, to provide a model for anyone who has no alternative options. I do not intend to discuss in detail the rights and wrongs of such a policy.

Agathocles of Sicily became King of Syracuse, although he was not merely a private citizen, but of

humble and poverty-stricken origins.[36] He was the son of a potter, and from start to finish lived a wicked life; nevertheless, his wicked behavior testified to so much strength [*virtù*] of mind and of body that, when he joined the army, he was promoted through the ranks to the supreme command. Having risen so high, he decided to become the sole ruler and to hold on to power, which he had originally been granted by the consent of his fellow citizens, by violence and without being dependent on anyone else. Having entered into a conspiracy with a Carthaginian called Hamilcar, who was commander of a hostile army serving in Sicily, one morning he called together the people and the senate of Syracuse, as if he wanted to discuss matters of government policy, and, at a prearranged signal, had his soldiers kill all the senators and the richest citizens. With them out of the way, he made himself ruler of the city and held power without any resistance. Although the Carthaginians twice defeated his armies and even advanced to the walls of the city, he was not only able to defend his city, but, leaving part of his army behind to withstand the siege, he was able to attack the Carthaginians in Africa with the remainder of his forces. Within a short time he had forced them to lift the siege and was threatening to conquer Carthage. In the end they were obliged to come to terms with him, leaving Sicily to Agathocles in return for security in Africa.

If you consider Agathocles' bold achievements [*azioni e virtù*], you will not find much that can be attributed to luck; for, as I have said, he did not come to power because he had help from above, but because he worked his way up from below, climbing from rank to rank by undergoing infinite dangers and discomforts until in the end he obtained a monopoly of power, and then holding on to his position by bold and risky tactics.

One ought not, of course, to call it *virtù* [virtue or manliness] to massacre one's fellow citizens, to betray one's friends, to break one's word, to be without mercy and without religion. By such means one can acquire power but not glory. If one considers the manly qualities [*virtù*] Agathocles demonstrated in braving and facing down danger, and the strength of character he showed in surviving and overcoming adversity, then there seems to be no reason why he should be judged less admirable than any of the finest generals. But on the other hand, his inhuman cruelty and brutality, and his innumerable wicked actions, mean it would be wrong to praise him as one of the finest of men. It is clear, at any rate, that one can attribute neither to luck nor to virtue [*virtù*] his accomplishments, which owed nothing to either.

In our own day, when Alexander VI was pope, Oliverotto of Fermo, whose father had died a few years before, was raised by his maternal uncle, Giovanni Fogliani.[37] As soon as he was old enough he joined the forces of Paolo Vitelli, so that, with a good military training, he could pursue a career in the army.[38] When Paolo died, he signed up with his brother, Vitellozzo. In a very short time, because he was bright and had both a strong body and a lively spirit, he became Vitellozzo's second-in-command. Soon he thought it to be beneath his dignity to serve under another, and so he conspired to occupy Fermo, relying on the help of some citizens of that city who preferred to see their fatherland enslaved than free, and on the support of Vitellozzo. He wrote to his uncle, saying that, since he had been away from home for many years, he wanted to come to visit him and to see his city, and so, in a manner of speaking, reacquaint himself with his inheritance. He said he had only gone to war in order to acquire honor. So his fellow citizens would be able to see he had not been wasting his time, he wanted to arrive in state, accompanied by a hundred men on horseback, some of them his friends, and others his servants. He asked his uncle to ensure that the inhabitants of Fermo received him with respect: This would not only enhance his own reputation, but that of his uncle, who had raised him.

Giovanni did everything he could for his nephew. He ensured he was greeted by the people of Fermo with every honor, and he put him up in his own

36. [Agathocles (361–289 B.C) seized control of Syracuse in 317 B.C. Machiavelli's source is Justin, bk. 22.]

37. [Oliverotto Euffreducci (b. ca. 1475) seized Fermo in 1501. Borgia had him killed at Senigallia in December 1502.]

38. [The Florentines made Vitelli commander of their forces in 1498 and executed him in 1499. See below, chapter twelve.]

house. After a few days had gone by, and he had had time to make the arrangements necessary for the carrying out of his wicked plans, he held a lavish banquet at his uncle's, to which he invited his uncle and the most powerful citizens of Fermo. After the food had been eaten, and the guests had been entertained in all the ways that are customary upon such occasions, Oliverotto deliberately began discussing serious questions, talking about the greatness of Pope Alexander and his son Cesare, and about their undertakings. When his uncle Giovanni and the others picked up the subject, he sprang to his feet, saying such matters should be discussed in a more private place. He withdrew into another room, where Giovanni and all the other leading citizens followed. No sooner had they sat down than soldiers emerged from their hiding places and killed Giovanni along with all the rest. Once the killing was over, Oliverotto got on his horse and took possession of the city, laying siege to the government building. Those in authority were so terrified they agreed to obey him and to establish a new regime of which he was the head. With all those who had something to lose and would have been able to resist him dead, he was able to entrench himself by establishing new civilian and military institutions. Within a year of coming to power, he was not only securely in control of Fermo, but had become a threat to all the cities round about. It would soon have been as difficult to get rid of him as to get rid of Agathocles, had he not allowed himself to be taken in by Cesare Borgia, when, as I have already explained, he got rid of the Orsini and the Vitelli at Sinigallia. Oliverotto was seized at the same time, and, a year after he had killed his uncle, he was strangled along with Vitellozzo from whom he had learned how to be bold [*virtù*] and how to be wicked.

Perhaps you are wondering how Agathocles and others like him, despite their habitual faithlessness and cruelty, have been able to live safely in their homelands year after year, and to defend themselves against their enemies abroad. Why did their fellow subjects not conspire against them? After all, mere cruelty has not been enough to enable many other rulers to hang on to power even in time of peace, let alone during the turmoil of war. I think here we have to distinguish between cruelty well used and cruelty abused. Well-used cruelty (if one can speak well of evil) one may call those atrocities that are committed at a stroke, in order to secure one's power, and are then not repeated, rather every effort is made to ensure one's subjects benefit in the long run. An abuse of cruelty one may call those policies that, even if in the beginning they involve little bloodshed, lead to more rather than less as time goes by. Those who use cruelty well may indeed find both God and their subjects are prepared to let bygones be bygones, as was the case with Agathocles. Those who abuse it cannot hope to retain power indefinitely.

So the conclusion is: If you take control of a state, you should make a list of all the crimes you have to commit and do them all at once. That way you will not have to commit new atrocities every day, and you will be able, by not repeating your evil deeds, to reassure your subjects and to win their support by treating them well. He who acts otherwise, either out of squeamishness or out of bad judgment, has to hold a bloody knife in his hand all the time. He can never rely on his subjects, for they can never trust him, for he is always making new attacks upon them. Do all the harm you must at one and the same time, that way the full extent of it will not be noticed, and it will give least offense. One should do good, on the other hand, little by little, so people can fully appreciate it.

A ruler should, above all, behave towards his subjects in such a way that, whatever happens, whether for good or ill, he has no need to change his policies. For if you fall on evil times and are obliged to change course, you will not have time to benefit from the harm you do, and the good you do will do you no good, because people will think you have been forced to do it, and they will not be in the slightest bit grateful to you.

CHAPTER 9

Of the citizen-ruler.

But, coming to the alternative possibility, when a private citizen becomes the ruler of his homeland, not through wickedness or some act of atrocity, but through the support of his fellow citizens, so that

we may call him a citizen-ruler (remember we are discussing power acquired neither by pure strength [*virtù*] nor mere luck—in this case one needs a lucky cunning), I would point out there are two ways to such power: the support of the populace or the favor of the elite. For in every city one finds these two opposed classes. They are at odds because the populace do not want to be ordered about or oppressed by the elite; and the elite want to order about and oppress the populace. The conflict between these two irreconcilable ambitions has in each city one of three possible consequences: rule by one man, liberty, or anarchy.

Rule by one man can be brought about either by the populace or the elite, depending on whether one or the other of these factions hopes to benefit from it. For if the elite fear they will be unable to control the populace, they begin to build up the reputation of one of their own, and they make him sole ruler in order to be able, under his protection, to achieve their objectives. The populace on the other hand, if they fear they are going to be crushed by the elite, build up the reputation of one of their number and make him sole ruler, in order that his authority may be employed in their defense. He who comes to power with the help of the elite has more difficulty in holding on to power than he who comes to power with the help of the populace, for in the former case he is surrounded by many who think of themselves as his equals, and whom he consequently cannot order about or manipulate as he might wish. He who comes to power with the support of the populace, on the other hand, has it all to himself: There is no one, or hardly anyone, around him who is not prepared to obey. In addition, one cannot honorably give the elite what they want, and one cannot do it without harming others; but this is not true with the populace, for the objectives of the populace are less immoral than those of the elite, for the latter want to oppress, and the former not to be oppressed. Thirdly, if the masses are opposed to you, you can never be secure, for there are too many of them; but the elite, since there are few of them, can be neutralized.

The worst a ruler who is opposed by the populace has to fear is that they will give him no support; but from the elite he has to fear not only lack of support, but worse, that they will attack him. For the elite have more foresight and more cunning; they act in time to protect themselves, and seek to ingratiate themselves with rivals for power. Finally, the ruler cannot get rid of the populace but must live with them; he can, however, get by perfectly well without the members of the elite, being able to make and unmake them each day, and being in a position to give them status or take it away, as he chooses.

In order to clarify the issues, let me point out there are two principal points of view from which one should consider the elite. Either they behave in a way that ties their fortunes to yours, or they do not. Those who tie themselves to you and are not rapacious, you should honor and love; those who do not tie themselves to you are to be divided into two categories. If they retain their independence through pusillanimity and because they are lacking in courage, then you should employ them, especially if they have good judgment, for you can be sure they will help you achieve success so long as things are going well for you, and you can also be confident you have nothing to fear from them if things go badly. But if they retain their independence from you out of calculation and ambition, then you can tell they are more interested in their own welfare than yours. A ruler must protect himself against such people and fear them as much as if they were publicly declared enemies, for you can be sure that, in adversity, they will help to overthrow you.

Anyone who becomes a ruler with the support of the populace ought to ensure he keeps their support; which will not be difficult, for all they ask is not to be oppressed. But anyone who becomes a ruler with the support of the elite and against the wishes of the populace must above all else seek to win the populace over to his side, which will be easy to do if he protects their interests. And since people, when they are well-treated by someone whom they expected to treat them badly, feel all the more obliged to their benefactor, he will find that the populace will quickly become better inclined towards him than if he had come to power with their support. There are numerous ways the ruler can win the support of the populace. They vary so much depending on the circumstances they cannot be reduced to a formula, and, consequently, I will not go into them here. I will simply conclude

by saying a ruler needs to have the support of the populace, for otherwise he has nothing to fall back on in times of adversity.

Nabis, ruler of the Spartans, survived an attack by the confederate forces of all Greece, together with an almost invincible Roman army, and successfully defended both his homeland and his own hold on power. All he needed to do, when faced with danger, was neutralize a few; but if he had had the populace opposed to him, this would have been insufficient.[39] Do not think you can rebut my argument by citing the well-worn proverb, "Relying on the people is like building on the sand." This is quite true when a private citizen depends upon them and gives the impression he expects the populace to free him if he is seized by his enemies or by the magistrates. In such a case one can easily find oneself disappointed, as happened to the Gracchi in Rome and to Mr. Giorgio Scali in Florence.[40] But if you are a ruler and you put your trust in the populace, if you can give commands and are capable of bold action, if you are not nonplused by adversity, if you take other necessary precautions, and if through your own courage and your policies you keep up the morale of the populace, then you will never be let down by them, and you will discover you have built on a sound foundation.

The type of one-man rule we are discussing tends to be at risk at the moment of transition from constitutional to dictatorial government. Such rulers either give commands in their own name, or act through the officers of state. In the second case, their situation is more dangerous and less secure. For they are entirely dependent on the cooperation of those citizens who have been appointed to the offices of state, who can, particularly at times of crisis, easily deprive them of their power, either by directly opposing them or by simply failing to carry out their instructions. It is too late for the ruler once a crisis is upon him to seize dictatorial authority, for the citizens and the subjects, who are used to obeying the constituted authorities, will not, in such circumstances, obey him, and he will always have, in difficult circumstances, a shortage of people on whom he can rely. For such a ruler cannot expect things to continue as they were when there were no difficulties, when all the citizens are conscious of what the government can do for them. Then everyone flocked round, everyone promised support, everyone was willing to die for him, when there was no prospect of having to do so. But when times are tough, when the government is dependent on its citizens, then there will be few who are prepared to stand by it. One does not learn the danger of such an erosion of support from experience, as the first experience proves fatal. So a wise ruler will seek to ensure that his citizens always, no matter what the circumstances, have an interest in preserving both him and his authority. If he can do this, they will always be faithful to him.

39. [Nabis (ca. 240–192 B.C.) became ruler of Sparta in 207 B.C. Livy (bk. 34) puts the number assassinated at eighty.]

40. [The Gracchi brothers (Tiberius Sempronius [163–133 B.C.] and Gaius Sempronius [153–121 B.C.]) were advocates of agrarian reform who both died in riots. Scali was a populist leader in Florence during the Ciompi rising of 1378 but was executed for an attack on the authorities in 1382.]

CHAPTER 10

How one should measure the strength of a ruler.

There is another factor one should take into account when categorizing rulers: One should ask if a ruler has enough resources to be able, if necessary, to look after himself, or whether he will always be dependent on having alliances with other rulers. In order to clarify this question, I would maintain those rulers can look after themselves who have sufficient reserves, whether of troops or of money, to be able to put together a sound army and face battle against any opponent. On the other hand, I judge those rulers to be dependent on the support of others who could not take the field against any potential enemy, but would be obliged to take shelter behind the walls of their cities and castles, and stay there. We have talked already about those who can look after themselves, and we will have more to say in due course; to those who are in

the second situation, all one can do is advise them to build defenseworks and stockpile arms, and to give up all thought of holding the open ground. He who has well fortified his city and who has followed the policies towards his own subjects that I have outlined above and will describe below, can be sure his enemies will think twice before they attack him, for people are always reluctant to undertake enterprises that look as if they will be difficult, and no one thinks it will be easy to attack someone who is well-fortified and has the support of the populace.

The cities of Germany are free to do as they please. They have little surrounding territory, and obey the emperor only when they want. They fear neither him nor any other ruler in their region, for they are so well-fortified everyone thinks it will be tedious and difficult to take them. They all have appropriate moats and ramparts, and more than enough artillery. They always keep in the public stores enough food and drink, and enough firewood, to be able to hold out for a year. Moreover, in order to be able to keep the populace quiet and to guarantee tax revenues, they always keep in stock enough supplies to keep their subjects occupied for a year in those crafts that are the basis of the city's prosperity and provide employment for the bulk of the people. They also emphasize military preparedness and have numerous ordinances designed to ensure this.

A ruler, therefore, who has a well-fortified city, and who does not set out to make enemies, is not going to be attacked; and, suppose someone does attack him, his adversary will have to give up in disgrace. For political circumstances change so fast it is impossible for anyone to keep an army in the field for a year doing nothing but maintaining a siege. And if you are tempted to reply that if the people have property outside the city walls and see it burning, then they will not be able patiently to withstand a siege, and that as time goes by, and their own interests are damaged, they will forget their loyalty to their ruler; then I reply that a ruler who is strong and bold will always be able to overcome such difficulties, sometimes encouraging his subjects to think relief is at hand, sometimes terrifying them with stories of what the enemy will do to them if they concede defeat, sometimes taking appropriate action to neutralize those who seem to him to be agitators. Moreover, it is in the nature of things that the enemy will burn and pillage the countryside when they first arrive, at which time the subjects will still be feeling brave and prepared to undertake their own defense. So the ruler has little to fear, for after a few days, when the subjects are feeling less courageous, the damage will already have been done, and it will be too late to prevent it. Then they will be all the more ready to rally to their ruler, believing him to be in their debt, since they have had their houses burnt and their possessions looted for defending him. It is in men's nature to feel as obliged by the good they do to others, as by the good others do to them. So if you consider all the factors, you will see it is not difficult for a wise ruler to keep his subjects loyal during a siege, both at the beginning and as it continues, providing they are not short of food and of arms.

CHAPTER 11

About ecclesiastical states.

All that remains for us to discuss, at this point, is the ecclesiastical states. As far as they are concerned, all the problems are encountered before one gets possession of them. One acquires them either through strength [*virtù*] or through luck, but one can hold on to them without either. For they are maintained by their long-established institutions that are rooted in religion. These have developed to such a pitch of strength they can support their rulers in power no matter how they live and behave. Only ecclesiastical rulers have states, but no need to defend them; subjects, but no need to govern them. Their states, though they do not defend them, are not taken from them; their subjects, though they do not govern them, do not resent them, and they neither think of replacing their rulers nor are they in a position to do so. So these are the only rulers who are secure and happy. But because they are ruled by a higher power, which human intelligence cannot grasp, I will say no more about them; for, since they have been built up and maintained by God, only a presumptuous and rash person would debate about them. Nevertheless, if someone were to ask me how it comes about that the

church has acquired so much temporal power, given that, until the papacy of Alexander [VI], the rulers of Italy, and indeed not only those who called themselves rulers, but every baron and lord, no matter how small, regarded the papacy's temporal power as of little significance, while now a King of France trembles at its power, for a pope has kicked him out of Italy and been the ruin of the Venetians: Though the answer to this question is well known, I think it will not be a waste of time to remind you of the main principles.

Before Charles, King of France, invaded Italy, control over this geographical region was divided between the pope, the Republic of Venice, the King of Naples, the Duke of Milan, and the Republic of Florence.[41] These rulers were obliged to have two principal preoccupations: In the first place, they had to make sure no foreign power brought an army into Italy; in the second, they had to make sure none of the Italian powers increased its territory. The powers they were most concerned about were the pope and the Venetians. In order to prevent the Venetians from expanding all the rest had to cooperate, as happened when the Venetians tried to take Ferrara.[42] In order to keep the pope in his place they relied on the nobles of Rome. These were divided into two factions, the Orsini and the Colonna, and so there was always occasion for friction between them. Because both factions were constantly in arms within sight of the pope, their strength kept the pope weak and sickly. Although there was occasionally a pope who had ambitions, Sixtus [IV] for example, yet neither luck nor skill enabled him to free himself of that handicap.

The real cause was the shortness of the popes' lives. On average, a pope lived ten years, which was scarcely enough time to crush one of the factions. Suppose a pope had almost destroyed the Colonna; his successor would prove to be an enemy of the Orsini, would rebuild the power of the Colonna, and would not have time to crush the Orsini. The result was the temporal power of the pope was not thought by the Italians to be of much importance. Then along came Alexander VI, who, more than all the other popes there have been, demonstrated how much a pope, using both money and arms, could get his own way. It was Alexander who, by making use of Duke Valentino and by taking advantage of the invasion of Italy by the French, brought about all those things I have mentioned above, when discussing the achievements of the duke.[43] Although his objective was not to make the church, but rather the duke, powerful, nevertheless, he did make the church a power to be reckoned with. It was the church that, after he had died and the duke had been destroyed, inherited the results of his labors.

After him came Julius [II]. The church was already powerful, for it had control of the whole of the Romagna, and the barons of Rome had been crushed, and the two factions of Orsini and Colonna had, as a result of the hiding given them by Alexander, been eliminated. Moreover, Julius had opportunities to accumulate money of a sort that had not existed before Alexander. Julius not only took over where Alexander had left off, but made further advances. He planned to acquire Bologna, to destroy the power of the Venetians, and to throw the French out of Italy. He not only laid plans, but he succeeded in everything he undertook. His achievements were all the more admirable in that his goal was to build up the power of the Church, not of any private individual. He kept the factions of the Orsini and the Colonna in the feeble condition in which he had found them. Although they made some efforts to rise again, two things kept them down: in the first place, the new power of the church, which intimidated them; and in the second, the fact none of their number were cardinals, for it is the cardinals who have been at the origin of the conflicts between the factions. These two factions have never behaved themselves at times when they have had cardinals, for the cardinals, both in Rome and outside Rome, foster the factions, and the barons are obliged to come to their support. Thus the ambition of the prelates is the cause of the conflicts and tumults among the nobility.

Now His Holiness Pope Leo [X] has acquired the papacy, along with all its immense temporal power. We may hope, if his predecessors made it a military

41. [Charles VIII invaded Italy in 1494.]

42. [In 1482–84.]

43. [See chapter seven.]

power to be reckoned with, he, who is so good and has so many virtues [*virtù*], will not only increase its power, but also make it worthy of respect.

CHAPTER 12

How many types of army are there, and what opinion should one have of mercenary soldiers?

So far I have discussed one by one the various types of one-man rule I listed at the beginning, and I have to some extent described the policies that make each type succeed or fail. I have shown the various techniques employed by numerous individuals who have sought to acquire and to hold on to power. Now my task is to outline the various strategies for offense and defense that are common to all these principalities. I said above it was necessary for a ruler to lay good foundations; otherwise, he is likely to be destroyed. The principal foundations on which the power of all governments is based (whether they be new, long-established, or mixed) are good laws and good armies. And, since there cannot be good laws where there are not good armies, and since where there are good armies, there must be good laws, I will omit any discussion of laws, and will talk about armies.

Let me begin by saying, then, that a ruler defends his state with armies that are made up of his own subjects, or of mercenaries, or of auxiliary forces, or of some combination of these three types. Mercenaries and auxiliaries are both useless and dangerous. Anyone who relies on mercenary troops to keep himself in power will never be safe or secure, for they are factious, ambitious, ill-disciplined, treacherous. They show off to your allies and run away from your enemies. They do not fear God and do not keep faith with mankind. A mercenary army puts off defeat for only so long as it postpones going into battle. In peacetime they pillage you, in wartime they let the enemy do it. This is why: They have no motive or principle for joining up beyond the desire to collect their pay. And what you pay them is not enough to make them want to die for you. They are delighted to be your soldiers when you are not at war; when you are at war, they walk away when they do not run. It should not be difficult to convince you of this, because the sole cause of the present ruin of Italy has been the fact that for many years now the Italians have been willing to rely on mercenaries. It is true that occasionally a ruler seems to benefit from their use, and they boast of their own prowess, but as soon as they face foreign troops their true worth becomes apparent. This is why Charles, King of France, was able to conquer Italy with a piece of chalk; and the person who said we were being punished for our sins spoke the truth.[44] But our sins were not the ones of which he was thinking, but those I have been discussing. Because these were the sins of our rulers, our rulers as well as the common people had to pay the price for them.

I want now to make crystal clear the worthlessness of mercenary armies. Mercenary commanders are either excellent or not. If they are excellent, you cannot trust them, for they will always be looking for ways of increasing their own power, either by turning on you, their employer, or by turning on others whom you want them to leave alone. On the other hand, if they are not first rate [*virtuoso*], then they will be the ruin of you in the normal course of events. And if you want to reply the same problems will arise whoever makes up the army, whether they are mercenaries or not, I will argue it depends on whether they take their orders from a sovereign or from a republic. A sovereign ought to go to war himself, and be his own general. A republic has to send one of its citizens. If it chooses someone who turns out not to be a successful soldier, it must replace him; if it chooses someone who is successful, it must tie his hands with laws, to ensure he keeps within the limits assigned to him. Experience shows individual sovereigns and republics that arm the masses are capable of making vast conquests; but mercenary troops are always a liability. Moreover, it is harder for a treacherous citizen to suborn an army consisting of his own fellow subjects than one made up of foreigners.

Rome and Sparta were armed and free for many centuries. The Swiss are armed to the teeth and do not have to take orders from anyone. In ancient history,

44. [The chalk was used by Charles's quartermasters to mark the soldiers' billets. Savonarola attributed Charles's victory to sins such as fornication and usury.]

we can take the Carthaginians as an example of the consequences of relying on mercenaries. They were in danger of being oppressed by their mercenary soldiers when the first war with Rome was over,[45] despite the fact they employed their own citizens as commanders. Philip of Macedon was made general of the Theban armies after the death of Epaminondas; and, after he had won the war, he enslaved the Thebans.[46] In modern times, Milan, after Duke Filippo died, employed Francesco Sforza to fight the Venetians. Once he had defeated the enemy at Caravaggio, he joined forces with them to attack the Milanese, his employers.[47] Sforza his father, who was employed by Queen Giovanna of Naples, abandoned her without warning and without defenses.[48] As a consequence, she was obliged to throw herself into the embrace of the King of Aragon in order to hold on to her kingdom. If the Venetians and the Florentines have in the past succeeded in acquiring new territory with mercenary armies, and if their commanders have not seized the conquests for themselves, but have held onto them for their employers, this, I would argue, is because the Florentines have had more than their share of luck. For of the first-rate [*virtuosi*] commanders, whom they would have had reason to fear, some have not been victorious, some have not been in sole command, and some have turned their ambitions elsewhere. It was John Hawkwood who did not win: We cannot know if he would have proved reliable had he been victorious, but no one can deny that if he had won Florence would have been his for the taking.[49] Sforza always had to share command with the Braccheschi, and neither could act for fear of the other. Francesco turned his ambitions to Lombardy; Braccio[50] turned his against the church and the Kingdom of Naples.

But let us look at what happened only a short time ago. The Florentines made Paolo Vitelli their commander.[51] He was a very astute man, and, despite being of modest origin, he had acquired a tremendous reputation. If he had succeeded in taking Pisa, no one can deny the Florentines would have needed his goodwill, for, if he had transferred his support to their enemies, they would have been without defenses; and if they had managed to keep his support, they would have had no choice but to do as he told them.

Consider next the conquests made by the Venetians. You will see they ran no risks and won magnificent victories as long as they relied on their own troops, which was until they tried to conquer territory on the mainland. When they armed both the nobility and the populace they had a magnificent fighting force [*operorono virtuosissimamente*], but when they began to fight on the mainland they abandoned this sound policy [*questa virtù*], and began to copy the other Italian states. When they began their conquests on the mainland, because they had little territory there, and because their own reputation was fearsome, they had little to fear from their mercenary commanders. But as their conquests extended, as they did under Carmagnola, they began to discover their mistake.[52] They recognized he was a first-rate [*virtuosissimo*] general, and that they had, under his command, defeated the Duke of Milan, but they realized he had lost his taste for war, and concluded they could no longer win with him, because he no longer wanted victory; but they could not dismiss him, or the land they had acquired would go with him. So, in order to neutralize him, they had to kill him. Since then they have employed as commanders of their forces Bartolemeo of Bergamo, Roberto of San Severino, the Count of Pitigliano, and others like them. With such commanders they had reason to fear defeat, not the consequences of victory. And indeed they were defeated at Vailà, where, in one day, they lost all they had acquired with so much effort in eight hundred years.[53] For with mercenary troops one acquires new territory slowly, feebly, after many attempts; but one loses so much so quickly that it seems an act of God.

45. [In 346 B.C.]

46. [In 338 B.C.]

47. [In 1448.]

48. [In 1420.]

49. [Hawkwood (ca. 1320–94) began to be employed by Florence in 1380.]

50. [Andrea Fortebraccio (1368–1424).]

51. [In 1498.]

52. [Francesco Bussone, Count of Carmagnola (b. ca. 1390), hired by the Venetians in 1425, executed in 1432.]

53. [The Battle of Vailà, generally known as Agnadello, 4 May 1509.]

And, since these examples have been drawn from recent Italian experience, and since Italy has been entirely dependent on mercenary forces for many years, I want to trace the present state of affairs back to its source, so that, having seen the origin and development of the problem, it will be easier to see how to correct it. You need to understand, then, that in modern times, as soon as the authority of the Holy Roman Empire began to be rejected in Italy, and the pope began to acquire greater authority in temporal affairs, Italy began to be divided into a number of different states. Many of the larger cities went to war against the nobility of the surrounding countryside, who had been oppressing them, and who were, at first, supported by the emperor. The Church, on the other hand, favored the cities in order to build up its temporal authority. In many other cities individual citizens established princedoms. So Italy came to be more or less divided up between those who owed allegiance to the papacy and a number of independent republican city states. Since neither the priests nor the citizens of the republics were accustomed to fighting wars, they began to employ foreigners in their armies.

The first to win a reputation for these mercenary troops was Alberigo of Conio in the Romagna.[54] Among those who were trained by him were Braccio and Sforza, who were, at the height of their powers, the arbiters of Italian affairs. After them came all the others who have commanded mercenary forces down to the present time. The outcome of all their prowess [*virtù*] has been that Italy has, in quick succession, been overrun by Charles, plundered by Louis, raped by Ferdinand, and humiliated by the Swiss.

The first objective these mercenary commanders have pursued has been to destroy the reputation of the infantry in order to build up that of their own forces. They did this because they have had no resources of their own, but have been dependent on their contracts. A few infantry would have done little for their reputation, while they could not afford to feed a large number. So they specialized in cavalry, for they could feed a reasonably large number, and with them win respect. It came to the point that in an army of twenty thousand soldiers there would not even be two thousand infantry. In addition, they have done everything they could to free themselves and their troops from trouble and from danger. During skirmishes between opposing forces they did not kill each other: Indeed, they not only took prisoners, but released them without demanding a ransom. They were in no hurry to assault fortifications under cover of darkness, while the defending troops were far from eager to mount sorties against their assailants. When they made camp they did not protect themselves with trenches or palisades. They passed the winters in barracks. And all these practices were permitted by their standing orders and were invented, as I said, so they could avoid effort and risk: so much so that they have reduced Italy to a despicable slavery.

54. [Really the first Italian: He had been preceded, for example, by Hawkwood. He was victor at Marino (1379) and died in 1409.]

CHAPTER 13

About auxiliary troops, native troops, and composite armies.

Auxiliaries are the other sort of useless troops. You rely on auxiliaries when you appeal to another ruler to come with his own armies to assist or defend you. This is what Pope Julius did in recent times, when, having discovered the incompetence of his mercenary troops during the siege of Ferrara, he decided to rely on auxiliaries, and reached an agreement with King Ferdinand of Spain that he would come to his assistance with his men and arms.[55] Auxiliary troops can be useful and good when fighting on their own behalf, but they are almost always a liability for anyone relying on their assistance. For if they lose, it is you who are defeated; if they win, you are their prisoner. There are plenty of examples of this in ancient history, but I do not want to stray from the contemporary case of Pope Julius II; he can have had no idea what he was doing when, in the hope of acquiring Ferrara, he placed himself entirely into the hands of a foreigner. But he was lucky: The outcome was neither defeat nor imprisonment, so he did not have to pay the price for his foolish decision. His auxiliaries were routed

55. [In 1510.]

at Ravenna,[56] but then the Swiss came along and drove out the victors, so that, contrary to everyone's expectation, including his own, he did not end up either a prisoner of his enemies, who had fled, or of his auxiliaries, for it was not they who had been victorious. Another example: The Florentines, having no troops of their own, brought ten thousand French soldiers to take Pisa.[57] This decision placed them in more danger than at any other time during their troubles. Again, the Emperor of Constantinople, in order to attack his neighbors, brought ten thousand Turks into Greece. They, when the war was over, had no intention of leaving: This was the beginning of Greece's enslavement to the infidels.[58]

He, then, who has no desire to be the victor should use these troops, for they are much more dangerous than mercenaries. If your auxiliaries win you are ruined, for they are united in their obedience to someone else. If your mercenaries win it takes them more time and more favorable circumstances to turn against you, for they are not united among themselves, and it is you who recruited and paid them. If you appoint an outsider to command them, it takes him time to establish sufficient authority to be able to attack you. In short, where mercenaries are concerned the main risk is cowardice; with auxiliaries it is valor [*virtù*].

A wise ruler, therefore, will always avoid using mercenary and auxiliary troops, and will rely on his own forces. He would rather lose with his own troops than win with someone else's, for he will not regard it a true victory if it is won with troops that do not belong to him. I never hesitate to cite Cesare Borgia as a model to be imitated. This duke entered the Romagna with an auxiliary army, for his troops were all Frenchmen, and he used it to take Imola and Forlì.[59] But since he did not feel such troops were reliable, he then switched over to mercenaries, believing that using them involved fewer risks, and so he hired the Orsini and the Vitelli. But in practice he found them unreliable, treacherous, and dangerous, and so he got rid of them and formed his own army. And it is easy to see the differences among these three types of army, for you only have to consider how the duke's reputation changed, depending on whether he was relying on the French alone, on the Orsini and the Vitelli, or on his own troops and his own resources. With each change of policy it increased, but he was only taken seriously when everyone could see he was in complete command of his own forces.

I wanted to stick to examples that are both recent and Italian, but I cannot resist mentioning Hiero of Syracuse, since I have already discussed him above. He, when he was made commander-in-chief by the Syracusans, as I have described, quickly realized their mercenary army was worthless, for it was made up of condottieri like our own Italian armies. He decided he could not risk either keeping them on, or letting them go, so he had them massacred. Thereafter, he went to war with troops of his own, not with other people's soldiers. I also want to remind you of an Old Testament story that is relevant. When David proposed to Saul that he should go and fight with Goliath, the Philistine champion, Saul, in order to give him confidence, dressed him in his own armor. David, having tried it on, rejected it, saying he could not give a good account of himself if he relied on Saul's weapons. He wanted to confront the enemy armed with his sling and his knife.[60]

In short, someone else's armor either falls off, or it weighs you down, or it trips you up. Charles VII, father of King Louis XI, having through good luck and valor [*virtù*] driven the English out of France,[61] recognized that it was essential to have one's own weapons and, so, issued instructions for the establishment of a standing army of cavalry and infantry. Later, his son King Louis abolished the infantry[62] and began to recruit Swiss troops. It was this mistake, imitated by his successors, that was, as we can see from recent events, the cause of the dangers faced by that kingdom.[63] For he built up the reputation of the Swiss

56. [11 April 1512.]

57. [In 1500.]

58. [The war lasted from 1341 to 1347; Constantinople did not finally fall to the Turks until 1453.]

61. [In 1453.]

62. [In 1474.]

63. [Machiavelli is thinking of the defeats of 1512, which had virtually forced the French out of Italy.]

while undermining his own military capacity, for he destroyed his own infantry and made his own cavalry dependent on the support of foreign troops, for they, having become accustomed to fighting alongside the Swiss, no longer think they can win without them. The result is the French dare not fight against the Swiss, and without the Swiss they are ineffective against anyone else. So the French armies have been mixed, partly mercenary and partly native. Such a mixed army is much preferable to one made up only of auxiliaries or only of mercenaries, but it is much inferior to one made up entirely of one's own troops. The French example is sufficient to make the point, for the Kingdom of France would be able to overcome any enemy if the foundations laid by Charles VII had been built upon, or even if his instructions had merely been kept in force. But men are foolish, and they embark on something that is attractive in its outward appearance, without recognizing the evil consequences that will follow from it: a point I have already made when talking about consumption.

A ruler who cannot foresee evil consequences before they have time to develop is not truly wise; but few have such wisdom. And if one studies the first destruction of the Roman Empire one discovers it came about as a result of the first recruitment of Gothic soldiers,[64] for from that moment the armies of the Roman Empire began to grow feeble. And all the strength [*virtù*] that ebbed from the Romans accrued to the Goths. I conclude, therefore, that no ruler is secure unless he has his own troops. Without them he is entirely dependent on fortune, having no strength [*virtù*] with which to defend himself in adversity. Wise men have always believed and said that, "Nothing is so fragile as a reputation for strength that does not correspond to one's real capacities." Now one's own troops can be made up out of one's subjects, or one's citizens, or one's dependents: All others are either mercenaries or auxiliaries. And the correct way of organizing one's own troops is easy to find out by looking over the instructions given by the four rulers whose conduct I have approved, or by finding out how Philip, the father of Alexander the Great, and how many other republics and sovereigns levied and trained troops: I have complete confidence in their methods.

CHAPTER 14

What a ruler should do as regards the militia.

A ruler, then, should have no other concern, no other thought, should pay attention to nothing aside from war, military institutions, and the training of his soldiers. For this is the only field in which a ruler has to excel. It is of such importance [*virtù*] that military prowess not only keeps those who have been born rulers in power, but also often enables men who have been born private citizens to come to power. On the other hand, one sees that when rulers think more about luxuries than about weapons, they fall from power. The prime reason for losing power is neglect of military matters; while being an expert soldier opens the way to the acquisition of power.

Francesco Sforza, because he had troops, became Duke of Milan,[65] having begun life as a private citizen. His descendants, who had no taste for the sweat and dust of a soldier's life, started out as dukes and ended up as private citizens. For, among the other deleterious consequences of not having one's own troops, one comes to be regarded with contempt. There are several types of disgrace a ruler should avoid, as I will explain below. This is one of them. For there is no comparison between a ruler who has his own troops and one who has not. It is not to be expected that someone who is armed should cheerfully obey someone who is defenseless, or that someone who has no weapon should be safe when his employees are armed. For the armed man has contempt for the man without weapons; the defenseless man does not trust someone who can overpower him. The two cannot get on together. So, too, a ruler who does not know how to organize a militia, beyond the other dangers he faces, which I have already described, must recognize that he will not be respected by his troops, and that he cannot trust them.

64. [In 376.]

65. [In 1450.]

So a ruler must think only of military matters, and in time of peace he should be even more occupied with them than in time of war. There are two ways he can prepare for war: by thinking and by doing. As far as actions are concerned, he should not only keep his troops in good order and see they are well-trained; he should be always out hunting, thereby accustoming his body to fatigue. He should take the opportunity to study the lie of the land, climbing the mountains, descending into the valleys, crossing the plains, fording rivers, and wading through marshes. He should spare no effort to become acquainted with his own land, and this for two reasons. First, the knowledge will stand him in good stead if he has to defend his state against invasion; second, his knowledge and experience on his own terrain will make it easy for him to understand any other landscape with which he has to become acquainted from scratch. The hills, the valleys, the plains, the rivers, the marshes of, for example, Tuscany have a good deal in common with those of the other regions of Italy. A knowledge of the terrain in one region will make it easy for him to learn about the others. A ruler who lacks this sort of skill does not satisfy the first requirement in a military commander, for it is knowledge of the terrain that enables you to locate the enemy and to get the edge over him when deciding where to camp, in what order to march, how to draw up the troops on the field of battle, and where to build fortifications.

Philopoemon,[66] ruler of the Achaeans, is much praised by the historians,[67] but in particular he is admired because during peacetime he thought about nothing but warfare. When he was out riding in the countryside with his friends, he would often halt and ask: "If the enemy were up on those hills, and we were down here with our army, who would have the better position? How should we advance, following the rule book, to attack him? If we wanted to retreat, how would we set about it? If they were retreating, how would we pursue them?" And so he would invite them to discuss, as they rode along, all the possible eventualities an army may have to face. He listened to their views, he explained his own and backed them up with arguments. Thanks to this continual theorizing he ensured that, if he was at the head of an army, he would be perfectly prepared for anything that might happen.

Such theorizing is not enough. Every ruler should read history books, and in them he should study the actions of admirable men. He should see how they conducted themselves when at war, study why they won some battles and lost others, so he will know what to imitate and what to avoid. Above all he should set himself to imitate the actions of some admirable historical character, as great men have always imitated their glorious predecessors, constantly bearing in mind their actions and their ways of behaving. So, it is said, Alexander the Great took Achilles as his model; Caesar took Alexander; Scipio took Cyrus. If you read the life of Cyrus that was written by Xenophon and then study the life of Scipio you will realize to what extent those qualities that are admired in Scipio derive from Cyrus: His chastity, his affability, his kindness, his generosity, all are modelled upon Cyrus as Xenophon portrays him. A wise ruler will follow these examples. He will never relax during peacetime, but will always be working to take advantage of the opportunities peace presents, so he will be fully prepared when adversity comes. When his luck changes, he must be ready to fight back.

CHAPTER 15

About those factors that cause men, and especially rulers, to be praised or censured.

Our next task is to consider the policies and principles a ruler ought to follow in dealing with his subjects or with his friends. Since I know many people have written on this subject, I am concerned it may be thought presumptuous for me to write on it as well, especially since what I have to say, as regards this question in particular, will differ greatly from the recommendations of others.[68] But my hope is to write

66. [253–184 B.C.]

67. [Livy, bk. 25, ch. 28. Machiavelli would also have known the accounts in Plutarch and Polybius.]

68. [Machiavelli is thinking in particular of Cicero, *De officiis,* and Seneca, *De clementia.*]

a book that will be useful, at least to those who read it intelligently, and so I thought it sensible to go straight to a discussion of how things are in real life and not waste time with a discussion of an imaginary world. For many authors have constructed imaginary republics and principalities that have never existed in practice and never could; for the gap between how people actually behave and how they ought to behave is so great that anyone who ignores everyday reality in order to live up to an ideal will soon discover he has been taught how to destroy himself, not how to preserve himself. For anyone who wants to act the part of a good man in all circumstances will bring about his own ruin, for those he has to deal with will not all be good. So it is necessary for a ruler, if he wants to hold on to power, to learn how not to be good, and to know when it is and when it is not necessary to use this knowledge.

Let us leave to one side, then, all discussion of imaginary rulers and talk about practical realities. I maintain that all men, when people talk about them, and especially rulers, because they hold positions of authority, are described in terms of qualities that are inextricably linked to censure or to praise. So one man is described as generous, another as a miser [*misero*] (to use the Tuscan term; for "avaricious," in our language, is used of someone who has a rapacious desire to acquire wealth, while we call someone a "miser" when he is unduly reluctant to spend the money he has); one is called open-handed, another tight-fisted; one man is cruel, another gentle; one untrustworthy, another reliable; one effeminate and cowardly, another bold and violent; one sympathetic, another self-important; one promiscuous, another monogamous; one straightforward, another duplicitous; one tough, another easy-going; one serious, another cheerful; one religious, another atheistical; and so on. Now I know everyone will agree that if a ruler could have all the good qualities I have listed and none of the bad ones, then this would be an excellent state of affairs. But one cannot have all the good qualities, nor always act in a praiseworthy fashion, for we do not live in an ideal world. You have to be astute enough to avoid being thought to have those evil qualities that would make it impossible for you to retain power; as for those that are compatible with holding on to power, you should avoid them if you can; but if you cannot, then you should not worry too much if people say you have them. Above all, do not be upset if you are supposed to have those vices a ruler needs if he is going to stay securely in power, for, if you think about it, you will realize there are some ways of behaving that are supposed to be virtuous [*che parrà virtù*], but would lead to your downfall, and others that are supposed to be wicked, but will lead to your welfare and peace of mind.

CHAPTER 16

On generosity and parsimony.

Let me begin, then, with the qualities I mentioned first. I argue it would be good to be thought generous; nevertheless, if you act in the way that will get you a reputation for generosity, you will do yourself damage. For generosity used skillfully [*virtuosamente*] and practiced as it ought to be, is hidden from sight, and being truly generous will not protect you from acquiring a reputation for parsimony. So, if you want to have a reputation for generosity, you must throw yourself into lavish and ostentatious expenditure. Consequently, a ruler who pursues a reputation for generosity will always end up wasting all his resources; and he will be obliged in the end, if he wants to preserve his reputation, to impose crushing taxes upon the people, to pursue every possible source of income, and to be preoccupied with maximizing his revenues. This will begin to make him hateful to his subjects, and will ensure no one thinks well of him, for no one admires poverty. The result is his supposed generosity will have caused him to offend the vast majority and to have won favor with few. Anything that goes wrong will destabilize him, and the slightest danger will imperil him. Recognizing the problem, and trying to economize, he will quickly find he has acquired a reputation as a miser.

So we see a ruler cannot seek to benefit from a reputation as generous [*questa virtù del liberale*] without harming himself. Recognizing this, he ought, if he is wise, not to mind being called miserly. For, as time goes by, he will be thought of as growing ever more generous, for people will recognize that as a result of his parsimony he is able to live on his income,

maintain an adequate army, and undertake new initiatives without imposing new taxes. The result is he will be thought to be generous towards all those whose income he does not tax, which is almost everybody, and stingy towards those who miss out on handouts, who are only a few. In modern times nobody has succeeded on a large scale except those who have been thought miserly; the others came to nothing. Pope Julius II took advantage of a reputation for generosity in order to win election, but once elected he made no effort to keep his reputation, for he wanted to go to war. The present King of France[69] has fought many wars without having to impose additional taxes on his people, because his occasional additional expenditures are offset by his long-term parsimony. The present King of Spain[70] could not have aspired to, or achieved, so many conquests if he had had a reputation for generosity.

So a ruler should not care about being thought miserly, for it means he will be able to avoid robbing his subjects; he will be able to defend himself; he will not become poor and despicable, and he will not be forced to become rapacious. This is one of those vices that make successful government possible. And if you say: But Caesar rose to power thanks to his generosity, and many others have made their way to the highest positions of authority because they have both been and have been thought to be generous. I reply, either you are already a ruler, or you are on your way to becoming one. If you are already a ruler, generosity is a mistake; if you are trying to become one then you do, indeed, need to be thought of as generous. Caesar was one of those competing to become the ruler of Rome; but if, having acquired power, he had lived longer and had not learned to reduce his expenditures, he would have destroyed his own position. You may be tempted to reply: Many established rulers who have been thought to be immensely generous have been successful in war. But my answer is: Rulers either spend their own wealth and that of their subjects, or that of other people. Those who spend their own and their subjects' wealth should be abstemious; those who spend the wealth of others should seize every opportunity to be generous. Rulers who march with their armies, living off plunder, pillage, and confiscations are spending other people's money, and it is essential they should seem generous, for otherwise their soldiers will not follow them. With goods that belong neither to you nor to your subjects, you can afford to be generous, as Cyrus, Caesar, and Alexander were. Squandering other people's money does not do your reputation any harm, quite the reverse. The problem is with squandering your own. There is nothing so self-defeating as generosity, for the more generous you are, the less you are able to be generous. Generosity leads to poverty and disgrace, or, if you try to escape that, to rapacity and hostility. Among all the things a ruler should try to avoid, he must avoid above all being hated and despised. Generosity leads to your being both. So it is wiser to accept a reputation as miserly, which people despise but do not hate, than to aspire to a reputation as generous, and as a consequence, be obliged to face criticism for rapacity, which people both despise and hate.

CHAPTER 17

About cruelty and compassion; and about whether it is better to be loved than feared, or the reverse.

Going further down our list of qualities, I recognize every ruler should want to be thought of as compassionate and not cruel. Nevertheless, I have to warn you to be careful about being compassionate. Cesare Borgia was thought of as cruel; but this supposed cruelty of his restored order to the Romagna, united it, rendered it peaceful and law-abiding. If you think about it, you will realize he was, in fact, much more compassionate than the people of Florence, who, in order to avoid being thought cruel, allowed Pistoia to tear itself apart.[71] So a ruler ought not to mind the disgrace of being called cruel, if he keeps his subjects peaceful and law-abiding, for it is more compassionate to impose harsh punishments on a few than, out of excessive compassion, to allow disorder to spread,

69. [Louis XII.]

70. [Ferdinand the Catholic.]

71. [In 1501.]

which leads to murders or looting. The whole community suffers if there are riots, while to maintain order the ruler only has to execute one or two individuals. Of all rulers, he who is new to power cannot escape a reputation for cruelty, for he is surrounded by dangers. Virgil has Dido say:

> Harsh necessity, and the fact my kingdom is
> new, oblige me to do these things,
> And to mass my armies on the frontiers.[72]

Nevertheless, you should be careful how you assess the situation and should think twice before you act. Do not be afraid of your own shadow. Employ policies that are moderated by prudence and sympathy. Avoid excessive self-confidence, which leads to carelessness, and avoid excessive timidity, which will make you insupportable.

This leads us to a question that is in dispute: Is it better to be loved than feared, or vice versa?[73] My reply is one ought to be both loved and feared; but, since it is difficult to accomplish both at the same time, I maintain it is much safer to be feared than loved, if you have to do without one of the two. For of men one can, in general, say this: They are ungrateful, fickle, deceptive and deceiving, avoiders of danger, eager to gain. As long as you serve their interests, they are devoted to you. They promise you their blood, their possessions, their lives, and their children, as I said before, so long as you seem to have no need of them. But as soon as you need help, they turn against you. Any ruler who relies simply on their promises and makes no other preparations, will be destroyed. For you will find that those whose support you buy, who do not rally to you because they admire your strength of character and nobility of soul, these are people you pay for, but they are never yours, and in the end you cannot get the benefit of your investment. Men are less nervous of offending someone who makes himself lovable, than someone who makes himself frightening. For love attaches men by ties of obligation, which, since men are wicked, they break whenever their interests are at stake. But fear restrains men because they are afraid of punishment, and this fear never leaves them. Still, a ruler should make himself feared in such a way that, if he does not inspire love, at least he does not provoke hatred. For it is perfectly possible to be feared and not hated. You will only be hated if you seize the property or the women of your subjects and citizens. Whenever you have to kill someone, make sure you have a suitable excuse and an obvious reason; but, above all else, keep your hands off other people's property; for men are quicker to forget the death of their father than the loss of their inheritance. Moreover, there are always reasons why you might want to seize people's property; and he who begins to live by plundering others will always find an excuse for seizing other people's possessions; but there are fewer reasons for killing people, and one killing need not lead to another.

When a ruler is at the head of his army and has a vast number of soldiers under his command, then it is absolutely essential to be prepared to be thought cruel; for it is impossible to keep an army united and ready for action without acquiring a reputation for cruelty. Among the extraordinary accomplishments of Hannibal, we may note one in particular: He commanded a vast army, made up of men of many different nations, who were fighting far from home, yet they never mutinied and they never fell out with one another, either when things were going badly, or when things were going well.[74] The only possible explanation for this is that he was known to be harsh and cruel. This, together with his numerous virtues [*virtù*], meant his soldiers always regarded him with admiration and fear. Without cruelty, his other virtues [*virtù*] would not have done the job. Those who write about Hannibal without thinking things through both admire the loyalty of his troops and criticize the cruelty that was its principal cause. If you doubt my claim that his other virtues [*virtù*] would have been insufficient, take the case of Scipio.[75] He was not only unique in his own day, but history does not

72. [Virgil, *Aeneid*, I, 563–4.]

73. [Cicero, *De officiis*, bk. 2, ch. 7, § 23–24.]

74. [Hannibal (247–ca. 183 B.C.) campaigned in Italy from 218 to 203 B.C. Machiavelli's source is Polybius, bk. 11, ch. 19.]

75. [Scipio (ca. 236–183 B.C.) defeated Hannibal at Zama in North Africa (202 B.C.).]

record anyone his equal. But his army rebelled against him in Spain.[76] The sole cause of this was his excessive leniency, which meant his soldiers had more freedom than is compatible with good military discipline. Fabius Maximus criticized him for this in the senate and accused him of corrupting the Roman armies. When Locri was destroyed by one of his commanders,[77] he did not avenge the deaths of the inhabitants, and he did not punish his officer's insubordination. He was too easygoing. This was so apparent that one of his supporters in the senate was obliged to excuse him by saying he was no different from many other men, who were better at doing their own jobs than at making other people do theirs. In course of time, had he remained in command without learning from his mistakes, this aspect of Scipio's character would have destroyed his glorious reputation. But, because his authority was subordinate to that of the senate, not only were the consequences of this defect mitigated, but it even enhanced his reputation.

I conclude, then, that, as far as being feared and loved is concerned, since men decide for themselves whom they love, and rulers decide whom they fear, a wise ruler should rely on the emotion he can control, not on the one he cannot. But he must take care to avoid being hated, as I have said.

CHAPTER 18

How far rulers are to keep their word.

Everybody recognizes how praiseworthy it is for a ruler to keep his word and to live a life of integrity, without relying on craftiness. Nevertheless, we see that in practice, in these days, those rulers who have not thought it important to keep their word have achieved great things, and have known how to employ cunning to confuse and disorientate other men. In the end, they have been able to overcome those who have placed store in integrity.

You should therefore know there are two ways to fight: one while respecting the rules, the other with no holds barred. Men alone fight in the first fashion, and animals fight in the second.[78] But because you cannot always win if you respect the rules, you must be prepared to break them. A ruler, in particular, needs to know how to be both an animal and a man. The classical writers, without saying it explicitly, taught rulers to behave like this. They described how Achilles, and many other rulers in ancient times, were given to Chiron the centaur to be raised, so he could bring them up as he thought best. What they intended to convey, with this story of rulers' being educated by someone who was half beast and half man, was that it is necessary for a ruler to know when to act like an animal and when like a man; and if he relies on just one or the other mode of behavior he cannot hope to survive.

Since a ruler, then, needs to know how to make good use of beastly qualities, he should take as his models among the animals both the fox and the lion, for the lion does not know how to avoid traps, and the fox is easily overpowered by wolves.[79] So you must be a fox when it comes to suspecting a trap, and a lion when it comes to making the wolves turn tail. Those who simply act like a lion all the time do not understand their business. So you see a wise ruler cannot, and should not, keep his word when doing so is to his disadvantage, and when the reasons that led him to promise to do so no longer apply. Of course, if all men were good, this advice would be bad; but since men are wicked and will not keep faith with you, you need not keep faith with them. Nor is a ruler ever short of legitimate reasons to justify breaking his word. I could give an infinite number of contemporary examples to support my argument and to show how treaties and promises have been rendered null and void by the dishonesty of rulers; and he who has known best how to act the fox has come out of it the best. But it is essential to know how to conceal how crafty one is, to know how to be a clever counterfeit and hypocrite. You will find people are so simple-minded and so preoccupied with their immediate concerns, that if you set out to deceive them, you will always find plenty of them who will let themselves be deceived.

76. [In 206 B.C. Livy, bk. 28, chs. 24–29.]
77. [In 205 B.C.]
78. [Cicero, *De officiis*, bk. 1, ch. 11, § 34.]
79. [The fox and the lion are from Cicero, *De officiis*, bk. 1, ch. 13, § 41.]

Among the numerous recent cases one could mention, there is one of particular interest. Alexander VI had only one purpose, only one thought, which was to take people in, and he always found people who were willing victims. There never has been anyone who was more convincing when he swore an oath, nor has there been anybody who has ever formulated more eloquent oaths and has at the same time been quicker to break them. Nevertheless, he was able to find gulls one after another, whenever he wanted them, for he was a master of this particular skill.

So a ruler need not have all the positive qualities I listed earlier, but he must seem to have them. Indeed, I would go so far as to say that if you have them and never make any exceptions, then you will suffer for it; while if you merely appear to have them, they will benefit you. So you should seem to be compassionate, trustworthy, sympathetic, honest, religious, and, indeed, be all these things; but at the same time you should be constantly prepared, so that, if these become liabilities, you are trained and ready to become their opposites. You need to understand this: A ruler, and particularly a ruler who is new to power, cannot conform to all those rules that men who are thought good are expected to respect, for he is often obliged, in order to hold on to power, to break his word, to be uncharitable, inhumane, and irreligious. So he must be mentally prepared to act as circumstances and changes in fortune require. As I have said, he should do what is right if he can; but he must be prepared to do wrong if necessary.

A ruler must, therefore, take great care that he never carelessly says anything that is not imbued with the five qualities I listed above. He must seem, to those who listen to him and watch him, entirely pious, truthful, reliable, sympathetic, and religious. There is no quality that it is more important he should seem to have than this last one. In general, men judge more by sight than by touch. Everyone sees what is happening, but not everyone feels the consequences. Everyone sees what you seem to be; few have direct experience of who you really are. Those few will not dare speak out in the face of public opinion when that opinion is reinforced by the authority of the state. In the behavior of all men, and particularly of rulers, against whom there is no recourse at law, people judge by the outcome. So if a ruler wins wars and holds on to power, the means he has employed will always be judged honorable, and everyone will praise them. The common man accepts external appearances and judges by the outcome; and when it comes down to it only the masses count; for the elite are powerless if the masses have someone to provide them with leadership. One contemporary ruler,[80] whom it would be unwise to name, is always preaching peace and good faith, and he has not a shred of respect for either; if he had respected either one or the other, he would have lost either his state or his reputation several times by now.

CHAPTER 19

How one should avoid hatred and contempt.

Because I have spoken of the more important of the qualities I mentioned earlier, I want now to discuss the rest of them briefly under this general heading, that a ruler must take care (I have already referred to this in passing) to avoid those things that will make him an object of hatred or contempt. As long as he avoids these he will have done what is required of him, and he will find having a reputation for any of the other vices will do him no harm at all. You become hateful, above all, as I have said, if you prey on the possessions and the women of your subjects. You should leave both alone. The vast majority of men, so long as their goods and their honor are not taken from them, will live contentedly, so you will only have to contend with the small minority who are ambitious, and there are lots of straightforward ways of keeping them under control. You become contemptible if you are thought to be erratic, capricious, effeminate, pusillanimous, irresolute. You should avoid acquiring such a reputation as a pilot steers clear of the rocks. Make every effort to ensure your actions suggest greatness and endurance, strength of character and of purpose. When it comes to the private business of your subjects, you should aim to ensure you never have to change your decisions once they have been taken, and that you acquire

80. [Ferdinand the Catholic.]

a reputation that will discourage people from even considering tricking or deceiving you.

A ruler who is thought of in these terms has the sort of reputation he needs; and it is difficult to conspire against someone who is respected in this way, difficult to attack him, because people realize he is on top of his job and has the loyalty of his employees. For rulers ought to be afraid of two things: Within the state, they should fear their subjects; abroad, they should fear other rulers. Against foreign powers, a good army and reliable allies are the only defense; and, if you have a good army, you will always find your allies reliable. And you will find it easy to maintain order at home if you are secure from external threats, provided, that is, conspiracies against you have not undermined your authority. Even if foreign powers do attack, if you have followed my advice and lived according to the principles I have outlined, then, as long as you keep a grip on yourself, you will be able to resist any attack, just as I said Nabis of Sparta was able to. But where your subjects are concerned, when you are not being attacked by foreign powers, you have to be wary of secret conspiracies.[81] The best protection against these is to ensure you are not hated or despised, and the people are satisfied with your rule. It is essential to accomplish this, as I have already explained at length.

Indeed, one of the most effective defenses a ruler has against conspiracies is to make sure he is not generally hated. For conspirators always believe the assassination of the ruler will be approved by the people. If they believe the people will be angered, then they cannot screw up the courage to embark on such an enterprise, for conspirators have to overcome endless difficulties to achieve success. Experience shows the vast majority of conspiracies fail. For a conspirator cannot act alone, and he can only find associates among those whom he believes are discontented. As soon as you tell someone who is discontented what you are planning, you give him the means to satisfy his ambitions, because it is obvious he can expect to be richly rewarded if he betrays you. If he betrays you, his reward is certain; if he keeps faith with you, he faces danger, with little prospect of reward. So, you see, he needs either to be an exceptionally loyal friend or to be a completely intransigent enemy of the ruler, if he is to keep faith with you. So we can sum up as follows: The conspirators face nothing but fear, mutual distrust, and the prospect of punishment, so they lose heart; while the ruler is supported by the authority of his office and by the laws, and protected both by his supporters and by the forces of government. So, if you add to this inbuilt advantage the goodwill of the populace, then it is impossible to find anyone who is so foolhardy as to conspire against you. For in most situations a conspirator has to fear capture before he does the deed; but if the ruler has the goodwill of the people, he has to fear it afterwards as well, for the people will turn on him when the deed is done, and he will have nowhere to hide.

I could give an infinite number of examples to illustrate this, but I will confine myself to one only, a conspiracy that took place during the lifetime of our parents. Mr. Annibale Bentivoglio, grandfather of the present Mr. Annibale, was at the time ruler of Bologna. The Canneschi conspired against him and assassinated him.[82] His only surviving relative was Mr. Giovanni, who was still in the cradle. But as soon as he was killed the people rose up and killed all the Canneschi. This happened because the family of Bentivoglio had, in those days, the goodwill of the people. Their loyalty was such that, there being no surviving member of the family in Bologna who could, now Annibale was dead, take over the government, and they having heard that in Florence there was a member of the family, someone who so far had been nothing more than the son of a blacksmith, the citizens of Bologna came to Florence to fetch him and made him the ruler of their city. He ruled it until Mr. Giovanni was old enough to take office.

I conclude, then, that a ruler need not worry much about conspiracies as long as the people wish him well; but if the people are hostile to him and hate him, then he should fear everything and everyone. States that are well-governed and rulers who are wise make every effort to ensure the elite are not driven to despair, and to satisfy the masses and keep them content; for this is one of the most important tasks a ruler must set himself.

81. [Influential in Machiavelli's discussion of conspiracies is Aristotle, *Politics*, bk. 8.]

82. [In 1445.]

Among the states that are well-ordered and well-ruled at the present time is France. There you will find innumerable good institutions that ensure the freedom of action and security of the king. First among them is the *parlement* and its authority.[83] For whoever set up the government of that country understood the powerful are ambitious and insolent, and judged it necessary they should be bridled so they could be controlled, but on the other hand he recognized the hatred most people have for the powerful, whom they have reason to fear, and the consequent need to reassure and protect the great. So he did not want this to be the responsibility of the king, in order to avoid his alienating the powerful by favoring the people or alienating the people by favoring the powerful, and he established an independent tribunal, whose task it is, without incurring blame for the king, to crush the powerful and defend the weak. This arrangement is as intelligent and prudent as could be, and makes a substantial contribution to the security of the king and the stability of the kingdom. This institution enables us to recognize a significant general principle: Rulers should delegate responsibility for unpopular actions, while taking personal responsibility for those that will win favor. And once again I conclude a ruler should treat the powerful with respect, but at all costs he should avoid being hated by the people.

Many perhaps will think, if they consider the lives and deaths of some of the Roman emperors, that these provide examples contrary to the opinion I have expressed. For it would seem some of them lived exemplary lives and demonstrated great strength [*virtù*] of character, yet they fell from power, or rather they were killed by their retainers, who had conspired against them. Since I want to reply to this objection, I will discuss the characters of some of the emperors, explaining the reasons why they were destroyed, and show they do not tell against my argument. This will primarily involve pointing out factors that would seem significant to anyone who read the history of those times. I will confine myself to discussing all those emperors who came after Marcus Aurelius, up to and including Maximilian:[84] that is, Marcus, his son Commodus, Pertinax, Julian, Severus, his son Antoninus Caracalla, Macrinus, Heliogabulus, Alexander, and Maximilian.

The first thing to be remarked is that, where in most states one only has to contend with the ambition of the great and the effrontery of the populace, the emperors of Rome had to face a third problem: They had to put up with the cruelty and greed of their soldiers. This was so difficult to do that it caused the downfall of many of the emperors, for it was almost impossible to satisfy both the soldiers and the populace. The people loved peace and quiet and, for this reason, liked their rulers to be unassuming; but the soldiers wanted the emperor to be a man of war and liked him to be arrogant, cruel, and rapacious. They wanted him to direct his aggression against the populace, so they could double their income and give free rein to their greed and cruelty. The result was those emperors who did not have a sufficiently intimidating reputation to keep both populace and soldiers in check (either because they did not think such a reputation desirable, or because they were incapable of acquiring it) were always destroyed. Most of them, especially those who acquired power without inheriting it, recognizing the difficulty of pleasing both soldiers and people, concentrated on pleasing the soldiers, thinking it could do little harm to alienate the populace. They had no choice, for, since rulers are bound to be hated by someone, their first concern must be to ensure they are not hated by any significant group; and, if they cannot achieve this, then they must make every possible effort to avoid the hatred of those groups that are most powerful. And so those emperors who had not inherited power and, thus, were in need of particularly strong support, attached themselves to the soldiers rather than to the people; a policy that proved successful or not, depending on whether the particular ruler in question knew how to establish his reputation with the army. For these reasons, then, Marcus, Pertinax, and Alexander, all of whom were unassuming, lovers of justice, haters

83. [The *parlement* was the highest court of appeal. Its members belonged to a distinct social caste, the *noblesse de robe*.]

84. [In other words, the period from 161 to 238. Machiavelli follows Herodian closely, probably relying on Poliziano's Latin translation.]

of cruelty, sympathetic and kind, all came, apart from Marcus, to a tragic end. Marcus alone lived honorably and died peaceably, for he inherited power, and did not have to repay a debt to either the soldiers or the populace. Moreover, since he had many virtues [*virtù*] that made him widely respected, he was able, during his own lifetime, to keep both groups in their place, and he was never hated or despised. But Pertinax was made emperor against the wishes of the soldiers, who, being accustomed to an unbridled life under Commodus, were unable to tolerate the disciplined way of life Pertinax wanted to impose on them. So he made himself hated, and to this hatred was added contempt, for he was an old man, and so his rule had scarcely begun before he fell from power.

Here we should note one can become hated for the good things one does, as much as for the bad. That is why, as I said above, a ruler who wants to hold on to power is often obliged not to be good, for when some powerful group—whether the populace, the soldiers, or the elite—whose support you feel it is essential to have if you are to survive, is corrupt, then you have to adapt to its tastes in order to satisfy it, in which case doing good will do you harm. But let us turn to Alexander. He was so good that among the other things for which he is praised is the fact that during the fourteen years he retained power, nobody was ever executed at his orders without due trial. Nevertheless, he was thought effeminate, and blamed for being under the influence of his mother, and so he came to be despised, the army conspired against him and killed him.

By contrast, let us consider the qualities of Commodus, of Severus, Antoninus Caracalla, and Maximinus. They were, you will find, in the highest degree bloodthirsty and rapacious. In order to satisfy the soldiery, they did not fail to commit every possible type of crime against the populace; and all of them, with the exception of Severus, came to a bad end. For Severus was such a strong ruler [*in Severo fu tanta virtù*] that, with the support of the army, even though the populace were oppressed by him, he could always rule successfully; for his strength [*virtù*] inspired awe in the minds of both soldiers and people: The people were always to a considerable degree stupefied and astonished by him, while the soldiers were admiring and satisfied. Because his deeds were commendable in a new ruler, I want to pause to point out how well he understood how to play the part both of the fox and of the lion: These are the two styles of action I have maintained a ruler must know how to imitate. Severus, because he knew what a coward Julian the new emperor was, persuaded the army he had under his command in Slavonia that it was a good idea to march on Rome to revenge the death of Pertinax, who had been killed by his praetorian guard. With this excuse, and without displaying any ambition to seize the throne, he set out for Rome; and his army was in Italy before anyone knew it had left its station. When he reached Rome, the senate, out of fear, elected him emperor and had Julian put to death. Severus, having begun like this, faced two problems if he wanted to gain effective control of the whole empire: In Asia there was Niger, commander of the Asiatic armies, who had had himself proclaimed emperor; in the West there was Albinus, who also aspired to power. Because he thought it would be dangerous to take on both of them at once, he decided to attack Niger and deceive Albinus. So he wrote to Albinus saying now that he had been elected emperor by the senate, he wanted to share his authority with him. He offered him the title of Caesar and had the senate appoint him co-ruler. Albinus accepted these proposals at face value. But as soon as Severus had defeated and killed Niger and pacified the eastern empire, he returned to Rome and attacked Albinus in the senate, complaining that he, far from being grateful for the generosity he had been shown, had wickedly sought to assassinate him. Severus claimed to have no choice but to go and punish this ingrate. So he attacked him in France and deprived him of his offices and of his life.

Anyone who examines Severus's actions with care will find he was both a ferocious lion and a cunning fox. He will find he was feared and respected by all, and he was not hated by the armies. So it is no surprise Severus, who had not inherited power, was able to hold on to a vast empire, for his immense reputation was a constant defense against the hatred the populace might otherwise have felt for his exactions. Antoninus his son was also a man whose remarkable abilities inspired awe in the populace and gratitude in the soldiers. For he was a man of war, able to make light of the most arduous task and contemptuous of delicate

food and all other luxuries. This made all his soldiers love him. Nevertheless, his ferocity and cruelty were without parallel. He did not only kill vast numbers of individuals, but, on one occasion, a large part of the population of Rome, and, on another, the whole of Alexandria. So he came to be loathed by everyone, and even his close associates began to fear him, with the result he was killed by a centurion while he was surrounded by his own troops. One should note rulers have no protection against an assassination like this, carried out by a truly determined individual, for anyone who is prepared to die can attack them. But, nevertheless, rulers should not worry unduly about such assassins because they are extremely rare. You should try merely to avoid giving grave injury to anyone you employ who comes close to you in the course of business. Antoninus had done just this, for he had outrageously put to death a brother of the centurion who killed him, and had repeatedly threatened the centurion's own life; yet he employed him as a bodyguard. This was foolhardy, and the disastrous outcome could have been predicted.

Now we come to Commodus, who had no difficulty in holding on to power, because he had inherited it, being the son of Marcus. All he had to do was follow in his father's footsteps, and he would have been satisfactory to both soldiers and populace. But, because he was by nature cruel and brutal, he began to ingratiate himself with the soldiers and to encourage them to be undisciplined, so he would be able to give his own rapacity free rein against the people. On the other hand, he did not maintain his own dignity. Often, when he went to the amphitheater, he came down and fought with the gladiators, and he did other things that were despicable and incompatible with imperial majesty. So he became contemptible in the eyes of his soldiers. He was hated by the people and despised by the soldiers, so there was soon a conspiracy against him and he was killed.

There remains for us to discuss the character of Maximinus. He was a most warlike individual. The armies had been irritated by the feebleness of Alexander, whom I have already discussed, and so, with him out of the way, they elected Maximinus emperor. But he did not hold on to power for long, for there were two things that made him hateful and contemptible. In the first place, he was of the lowest social status, having once been a shepherd in Thrace (a fact known to everyone, and one that made them all regard him with disdain); in the second, when he was elected emperor he had delayed going to Rome and taking possession of the throne, but had acquired a reputation for terrible cruelty because his representatives, in Rome and throughout the empire, had acted with great ferocity. So everybody was worked up with disdain for his humble origins and agitated with hatred arising from their fear of his ferocity. First Africa rebelled, and then the senate and the whole population of Rome; soon all Italy was conspiring against him. His own army turned against him. They were laying siege to Aquileia, but were finding it hard to take the city, to which was added their distaste for his cruelty. Seeing so many united against him, they lost their fear of him and killed him.

I do not want to discuss Heliogabulus, Macrinus, and Julian, for they were entirely contemptible and fell from power quickly. We can now come to the end of this discussion. I would have you note the rulers of our own day do not face in such an acute form the problem of having to adopt policies that involve breaking the law in order to satisfy their soldiers' appetites; for, although you cannot afford entirely to ignore contemporary soldiers, you can handle them easily. Modern rulers do not face standing armies with long experience of ruling and administering provinces, such as the Roman armies had. But if in those days it was more important to give satisfaction to the soldiers than to the populace, that was because the soldiers were more to be feared than the populace. Now all rulers, with the exception of the sultans of Turkey and of Egypt, need to be more concerned to satisfy the populace than the soldiers, for the populace are the greater threat. I make an exception of the ruler of Turkey, for at all times he is surrounded by twelve thousand infantry and fifteen thousand cavalry, on whom depends the security and strength of his government. It is essential for him, more than anything else, to retain their loyalty. Similarly, the Sultan of Egypt is entirely at the mercy of his soldiers, so that he, too, must keep their loyalty, no matter what the consequences for the populace may be. And one should note the Sultan of Egypt is in a different position from all other rulers; for he is comparable

to the Christian pope, who also cannot be described as either a hereditary or a new ruler. For the sons of the old ruler do not inherit his office and remain in power, but the new ruler is elected by a group who have the authority to appoint him. Since this arrangement has long been in existence, you cannot call the sultan a new ruler, for he faces none of the difficulties faced by those who are new to power. Even though he himself is new to power, the principle of succession is long-established, and ensures his authority is acknowledged as unquestioningly as would be the case if he were an hereditary ruler.

Let us return to our subject. I believe everyone should agree in the light of this discussion that hatred and contempt caused the fall of the emperors we have been considering, and will also understand how it comes about that, with one group of them following one line of policy and the other its opposite, in both groups one ruler was successful and the rest were killed. For it was pointless and dangerous for Pertinax and Alexander, who were new rulers, to try to imitate Marcus, who had inherited power; similarly it was a bad mistake for Caracalla, Commodus, and Maximinus to imitate Severus, for they lacked the strength [*virtù*] that would have been necessary for anyone following in his footsteps. Thus, a new ruler, who has not inherited power, should not follow the example of Marcus, but need not follow that of Severus. He ought to imitate in Severus those features that are essential for him to establish himself securely in power, and in Marcus those features that are effective and win glory for someone who is seeking to preserve a government that has already entrenched itself.

CHAPTER 20

Whether the building of fortresses (and many other things rulers regularly do) is useful or not.

Some rulers, in order to ensure they have a firm grip on power, have disarmed their subjects. Others have divided up the territories over which they rule. Some have positively encouraged opposition to their own authority. Others have set out to win over those who were hostile to them when they first came to power. Some have built fortresses. Others have destroyed them. It is impossible to pass definitive judgment on any of these policies until one considers the particular circumstances that existed in the state where the policy was adopted. Nevertheless, I will talk in general terms in so far as the subject itself permits.

No new ruler, let me point out, has ever disarmed his subjects; on the contrary, when he has found them disarmed, he has always armed them. For, when you arm them, their arms become yours, those who have been hostile to you become loyal, while those who have been loyal remain so, and progress from being your obedient subjects to being your active supporters. Because not every subject can be armed, provided you ensure those who receive arms stand to benefit, you will be more secure in your dealings with the others. When they recognize this diversity of treatment, it will make them all the more obliged to you; while the unarmed will forgive you, for they will recognize it is necessary that those who face more dangers and have more onerous obligations should be better rewarded. But if you take their arms away from those who have been armed, you begin to alienate them. You make it clear you do not trust them, either because you think they are poor soldiers or disloyal. Whichever view they attribute to you, they will begin to hate you. And, since you cannot remain undefended, you will be obliged to rely on mercenary troops, with the consequences we have already discussed. No matter how good they are, they will be unable to defend you against a combination of powerful foreign powers and hostile subjects. So, as I have said, a new ruler who has not inherited power has always formed his own army. There are innumerable examples in history. But when a ruler acquires a new state, which is simply added on to his existing territories, then it is essential to disarm the people, with the sole exception of those who have actively supported you in taking power. And they too, over time, and as opportunity occurs, should be encouraged to become weak and effeminate. You should arrange things so that all the weapons in your new state are in the hands of those of your own troops who were closely associated with you in your old territories.

Our ancestors, particularly those who were thought wise, used to say it was necessary to hold Pistoia by encouraging factional divisions, and Pisa by building

fortresses. So, in some of the territory they occupied, they encouraged divisions in order to have better control. This was a sound policy in the days when Italy experienced a balance of power;[85] but I do not think it can be recommended now. For I do not believe any good ever comes of internal conflicts. It is certain that when enemy forces approach you run the risk that divided cities will go over to the other side, for the weaker of the two internal factions will attach itself to the invaders, and the stronger will not be able to retain power against enemies within and without the walls.

The Venetians, following, I believe, the same line of thought as our ancestors, encouraged the division of the cities under their control into the two factions of Guelfs and Ghibellines.[86] Although they never allowed the conflicts between them to go so far as bloodshed, they encouraged these tensions so the inhabitants of these cities would be fully occupied with their own internal disagreements and would not unite against their masters. But history shows this policy did not pay off. For, when they were defeated at Vailà,[87] one of the factions quickly plucked up courage and deprived them of all their territories. Such policies, indeed, imply the ruler is weak, for a robust government would never allow such divisions, since you only benefit from them in time of peace, when they enable you to manage your subjects more easily; when war comes, such a policy proves to be misconceived.

There is no doubt rulers become powerful as they overcome the difficulties they face and the opposition they encounter. So fortune, especially when she wants to make a new ruler powerful (for new rulers have more need of acquiring a reputation than ones who have inherited power), makes him start out surrounded by enemies and endangered by threats, so he can overcome these obstacles and can climb higher on a ladder supplied by his enemies. Therefore, many conclude a wise ruler will, when he has the opportunity, secretly foster opposition to his rule, so that, when he has put down his opponents, he will be in a more powerful position.

Rulers, and especially those who are new to power, have sometimes found there is more loyalty and support to be had from those who were initially believed to be opposed to their rule, than from those whom from the start they could count on. Pandolfo Petrucci, ruler of Siena, governed his state by relying more on those who were supposed to be hostile to him than on his supporters.[88] But we cannot discuss this policy in general terms, because its success depends upon circumstances. I will only say those men who have been hostile when a ruler first acquires power, but who belong to those social groups that need to rely on government support in order to maintain their position, can always be won over by the new ruler with the greatest of ease. And they are all the more obliged to serve him faithfully because they know it is essential for them to undo by their actions the negative assessment that was initially made of them. Thus, the ruler can always get more out of them than out of those who, being all too confident of his goodwill, pay little attention to his interests.

And, since it is relevant to our subject, I do not want to fail to point out to rulers who have recently acquired a state through the support of people living within it, that they should give careful consideration to the motives of those who supported them. If they did not give their support out of natural affection for you, but gave it only because they were not happy with their previous government, you will find you can only retain their loyalty with much trouble and effort, for there is no way in which you will be able to keep them happy. If you think about it and consider the record of ancient and modern history, you will realize it will be much easier for you to win the loyalty of those men who were happy with the previous government and were therefore opposed to your seizure of power, than of those who, because they were unhappy with it, became your allies and encouraged you to take power from it.

Rulers have been accustomed, in order to have a more secure grip on their territories, to build fortresses. They are intended to be a bridle and bit for those who plan to rebel against you, and to provide

85. [From 1454 to 1494.]

86. [These factions were present in many Italian cities. The Guelfs supported the papacy (and later the French), the Ghibellines the Holy Roman Emperor.]

87. [In 1509.]

88. [Petrucci (1450–1512) was effective ruler of Siena from 1487 until his death.]

you with a secure refuge in the event of an unexpected attack. I approve of this policy, for it was used by the Romans. Nevertheless, Mr. Niccolò Vitelli, in our own day, had two fortresses in Città di Castello destroyed so he could hold on to that state.[89] Guido Ubaldo, the Duke of Urbino, when he returned to power, having previously been driven into exile by Cesare Borgia, completely destroyed all the fortresses in his territory.[90] He believed that without them it would be harder to deprive him once again of power. The Bentivogli, when they recovered power in Bologna, adopted the same policy.[91]

We must conclude that fortresses are useful or not, depending on circumstances, and that, if they are useful at one time, they may also do you harm at another. We can identify the relevant factors as follows: A ruler who is more afraid of his subjects than of foreign powers should build fortresses; but a ruler who is more afraid of foreign powers than of his subjects should do without them. The castle of Milan, which was built by Francesco Sforza,[92] has done and will do more damage to the house of Sforza than any other defect in that state. For the best fortress one can have is not being hated by one's subjects; for if you have fortresses, but your subjects hate you, they will not save you, for your subjects, once they have risen in arms, will never be short of foreign allies who will come to their support.

In recent times, there is no evidence that fortresses have been useful to any ruler, except for the Contessa of Forlì, when her husband Count Girolamo died:[93] Because she could take refuge in one she was able to escape the popular uprising, hold out until assistance came from Milan, and retake her state. Circumstances at the time were such that the populace could not get assistance from abroad; but later, even she gained little benefit from her fortresses when Cesare Borgia attacked her, and the populace, still hostile to her, joined forces with the invaders.[94] So, both at first and later, it would have been safer for her not to have been hated by her people than to have fortresses. Consequently, having considered all these factors, I would praise both those who build fortresses and those who do not, but I would criticize anyone who, relying on his fortresses, thought it unimportant that his people hated him.

CHAPTER 21

What a ruler should do in order to acquire a reputation.

Nothing does more to give a ruler a reputation than embarking on great undertakings and doing remarkable things. In our own day, there is Ferdinand of Aragon, the present King of Spain. He may be called, more or less, a new ruler, because having started out as a weak ruler he has become the most famous and most glorious of all the kings of Christendom. If you think about his deeds, you will find them all noble, and some of them extraordinary. At the beginning of his reign he attacked Granada, and this undertaking was the basis of his increased power.[95] In the first place, he undertook the reconquest when he had no other problems to face, so he could concentrate upon it. He used it to channel the ambitions of his Castilian barons, who, because they were thinking of the war, were no threat to him at home. Meanwhile, he acquired influence and authority over them without their even being aware of it. He was able to raise money from the church and from his subjects to build up his armies. Thus, this lengthy war enabled him to build up his military strength, which has paid off since. Next, in order to be able to engage in more ambitious undertakings, still exploiting religion, he practiced a pious cruelty, expropriating and expelling from his kingdom the Marranos: an act without parallel and truly despicable. He used religion once more as an excuse to justify an attack on Africa.[96] He then attacked Italy and has recently[97] invaded France. He

95. [The Muslim state of Granada was conquered between 1480 and 1492.]
96. [In 1509.]
97. [In 1512.]

is always plotting and carrying out great enterprises, which have always kept his subjects bewildered and astonished, waiting to see what their outcome would be. And his deeds have followed one another so closely that he has never left space between one and the next for people to plot uninterruptedly against him.

It is also of considerable help to a ruler if he does remarkable things when it comes to domestic policy, such as those that are reported of Mr. Bernabò of Milan.[98] It is a good idea to be widely talked about, as he was, because, whenever anyone happened to do anything extraordinary, whether good or bad, in civil life, he found an imaginative way to reward or to punish them. Above all a ruler should make every effort to ensure that whatever he does it gains him a reputation as a great man, a person who excels.

Rulers are also admired when they know how to be true allies and genuine enemies: That is, when, without any reservations, they demonstrate themselves to be loyal supporters or opponents of others. Such a policy is always better than one of neutrality. For if two rulers who are your neighbors are at war with each other, they are either so powerful that, if one of them wins, you will have to fear the victor, or they are not. Either way, it will be better for you to take sides and fight a good fight; for, if they are powerful, and you do not take sides, you will still be preyed on by the victor, much to the pleasure and satisfaction of his defeated opponent. You will have no excuse, no defense, no refuge. For whoever wins will not want allies who are unreliable and who do not stand by him in adversity; while he who loses will not offer you refuge, since you were not willing, sword in hand, to share his fate.

The Aetolians invited Antiochus to Greece to drive out the Romans.[99] Antiochus sent an ambassador to the Achaeans, who were allies of the Romans, to encourage them to remain neutral; while the Romans urged them to fight on their side. The ruling council of the Achaeans met to decide what to do, and Antiochus's ambassador spoke in favor of neutrality. The Roman ambassador replied: "As for what they say to you, that it would be sensible to keep out of the war, there is nothing further from your true interests. If you are without credit, without dignity, the victor will claim you as his prize."

It will always happen that he who is not your ally will urge neutrality upon you, while he who is your ally will urge you to take sides. Rulers who are unsure what to do, but want to avoid immediate dangers, generally end up staying neutral and usually destroy themselves by doing so. But when a ruler boldly takes sides, if your ally wins, even if he is powerful, and has the ability to overpower you, he is in your debt and fond of you. Nobody is so shameless as to turn on you in so ungrateful a fashion. Moreover, victories are never so overwhelming that the victor can act without any constraint: Above all, victors still need to appear just. But if, on the other hand, your ally is defeated, he will offer you refuge, will help you as long as he is able, and will share your ill-fortune, in the hope of one day sharing good fortune with you. In the second case, when those at war with each other are insufficiently powerful to give you grounds to fear the outcome, there is all the more reason to take sides, for you will be able to destroy one of them with the help of the other, when, if they were wise, they would be helping each other. The one who wins is at your mercy; and victory is certain for him whom you support.

Here it is worth noting a ruler should never take the side of someone who is more powerful than himself against other rulers, unless necessity compels him to, as I have already implied. For if you win, you are your ally's prisoner; and rulers should do everything they can to avoid being at the mercy of others. The Venetians allied with the King of France against the Duke of Milan, when they could have avoided taking sides; they brought about their own destruction.[100] But when you cannot help but take sides (which is the situation the Florentines found themselves in when the pope and the King of Spain were advancing with their armies to attack Lombardy)[101] then you should take sides decisively, as I have explained. Do not for a moment think any state can always take safe decisions, but rather think every decision you take

98. [Bernabò Visconti ruled Milan from 1354 to 1385.]
99. [192 B.C. The source is Livy, bk. 35, chs. 48, 49.]
100. [In 1499.]
101. [In 1512.]

involves risks, for it is in the nature of things that you cannot take precautions against one danger without opening yourself to another. Prudence consists in knowing how to assess risks and in accepting the lesser evil as a good.

A ruler should also show himself to be an admirer of skill [*virtù*] and should honor those who are excellent in any type of work. He should encourage his citizens by making it possible for them to pursue their occupations peacefully, whether they are businessmen, farmers, or are engaged in any other activity, making sure they do not hesitate to improve what they own for fear it may be confiscated from them, and they are not discouraged from investing in business for fear of losing their profits in taxes; instead, he should ensure that those who improve and invest are rewarded, as should be anyone whose actions will benefit his city or his government. He should, in addition, at appropriate times of the year, amuse the populace with festivals and public spectacles. Since every city is divided into guilds or neighborhoods, he ought to take account of these collectivities, meeting with them on occasion, showing himself to be generous and understanding in his dealings with them, but at the same time always retaining his authority and dignity, for this he should never let slip in any circumstances.

CHAPTER 22

About those whom rulers employ as advisers.

A ruler's choice as to whom to employ as his advisers is of foremost importance. Rulers get the advisers they deserve, for good rulers choose good ones, bad rulers choose bad. The easiest way of assessing a ruler's ability is to look at those who are members of his inner circle. If they are competent and reliable, then you can be sure he is wise, for he has known both how to recognize their ability and to keep them faithful. But if they are not, you can always make a negative assessment of the ruler; for he has already proved his inadequacy by making a poor choice of adviser.

Nobody who knew Mr. Antonio of Venafro[102] when he was adviser to Pandolfo Petrucci, ruler of Siena, could fail to conclude that Pandolfo was a brilliant man, for how else would he come by such an adviser? For there are three types of brains: One understands matters for itself, one follows the explanations of others, and one neither understands nor follows. The first is best, the second excellent, the third useless. It followed logically that if Pandolfo was not in the first rank, then he was at least in the second. For anyone who can judge the good or evil someone says and does, even if he does not have an original mind, will recognize what his adviser does well and what he does ill, and will encourage the first and correct the second. An adviser cannot hope to deceive such an employer, and will do his best.

But there is one infallible way for a ruler to judge his adviser. When you see your adviser give more thought to his own interests than yours, and recognize everything he does is aimed at his own benefit, then you can be sure such a person will never be a good adviser. You will never be able to trust him, for he who runs a government should never think of his own interests, but always of his ruler's, and should never suggest anything to his ruler that is not in the ruler's interests. On the other hand the ruler, in order to get the best out of his adviser, should consider his adviser's interests, heaping honors on him, enriching him, placing him in his debt, ensuring he receives public recognition, so that he sees that he cannot do better without him, that he has so many honors he desires no more, so much wealth he desires no more, so much status he fears the consequences of political upheaval. When a ruler has good advisers and knows how to treat them, then they can rely on each other; when it is otherwise, either ruler or adviser will suffer.

CHAPTER 23

How sycophants are to be avoided.

I do not want to omit an important subject that concerns a mistake it is difficult for rulers to avoid making, unless they are very wise and good judges of men. My subject is sycophants, who pullulate at court. For men are so easily flattered and are so easily taken in by praise, that it is difficult for them to defend

102. [Machiavelli did, indeed, know Antonio Giordani of Venafro.]

themselves against this plague, and in defending themselves they run the risk of making themselves despicable. For there is no way of protecting oneself against flattery other than by making it clear you do not mind being told the truth; but, when anyone can tell you the truth, then you are not treated with sufficient respect. So a wise ruler ought to find an alternative to flattery and excessive frankness. He ought to choose wise men from among his subjects, and give to them alone freedom to tell him the truth, but only in reply to specific questions he puts to them, not on any subject of their choice. But he ought to ask them about everything, and listen to their replies; then think matters over on his own, in his own way. His response to each of his advisers and their advice should make it apparent that the more freely they talk, the happier he will be. But he should listen to no one who has not been designated as an adviser, he should act resolutely once he has made up his mind, and he should cling stubbornly to his decisions once they have been taken. He who acts otherwise either is rushed into decisions by flatterers or changes his mind often in response to differing advice. Either way, people will form a poor opinion of him.

I want, on this subject, to refer to an example from recent history. The cleric Luca,[103] an adviser to Maximilian, the present emperor, speaking of his sovereign, said that he did not ask for anyone's advice, and that he never did anything the way he wanted to: which was because he did not follow the principles I have just outlined. For the emperor is a secretive man, he keeps things to himself and never asks anyone's advice. But, when his decisions begin to be discovered, which is when they begin to be put into effect, he begins to be criticized by those who are close to him, and, as one might expect, he is persuaded to change his mind. The result is that he undoes each day what he did the day before; that nobody ever knows what he really wants or intends to do; and that one cannot rely upon his decisions.

A ruler, therefore, should always take advice, but only when he wants to, not when others want him to; he should discourage everybody from giving him advice without being asked; but he should be always asking, and, moreover, he should listen patiently to the answers, provided they are truthful. But if he becomes persuaded someone, for whatever reason, is not telling him the truth, he should lose his temper. There are many who think some rulers who have a reputation for being prudent do not really deserve to be thought so, claiming that the rulers themselves are not wise, but that they merely receive good advice. But without doubt they are mistaken. For this is a general rule without exceptions: A ruler who is not himself wise cannot be given good advice. Unless, I should say, he hands over all decisions to one other person and has the good luck to pick someone quite exceptionally prudent. But such an exceptional arrangement will not last long, for the man who takes all the decisions will soon take power. But a ruler who is not wise, if he takes advice from more than one person, will never get the same advice from everyone, nor will he be able to combine the different proposals into a coherent policy unless he has help. His advisers will each think about his own interests, and he will not be able to recognize their bias or correct it. This is how it has to be, for you will find men are always wicked, unless you give them no alternative but to be good. So we may conclude that good advice, no matter who it comes from, really comes from the ruler's own good judgment, and that the ruler's good judgment never comes from good advice.

103. [Also known to Machiavelli.]

CHAPTER 24

Why the rulers of Italy have lost their states.

The policies I have described, if prudently followed, will make a new ruler seem long-established and will rapidly make his power better entrenched than it would be if he had long held office. For the actions of a new ruler are much more closely scrutinized than those of an hereditary ruler; and new rulers, when they are seen to be strong [*virtuose*], attract much more support and make men more indebted to them than do hereditary rulers. For men are much more impressed by what goes on in the present than by what happened in the past; and when they are satisfied with what is happening now, they are delighted and ask for nothing more. So they will spring

to a new ruler's defense, provided he plays his part properly. Thus, he will be doubly glorious: He will have begun a new tradition of government, underpinned and ornamented with good laws, good arms, good allies, and good examples; just as he is doubly shamed who, being born a ruler, has lost power through lack of skill in ruling.

And if you consider those Italian rulers who have lost power in recent years, such as the King of Naples, the Duke of Milan, and others, you will find: First, they all had in common an inadequate military preparation, for the reasons I have discussed above at length; second, you will see that some of them either were at odds with their own populace or, if they had the support of the populace, did not know how to protect themselves from the elite; for without these defects they would not have lost states that were strong enough to put an army in the field. Philip of Macedon (not the father of Alexander, but the Philip who was defeated by Titus Quintius)[104] did not have a large state in comparison with the territory controlled by the Romans and the Greeks who attacked him; nevertheless, because he was a military man and a ruler who knew how to treat his populace and how to protect himself from the elite, he was able to sustain a war against superior forces for several years; and if, at the end, he lost control of several cities, he nevertheless retained his kingdom.

So our own rulers, each of whom had been in power for many years and then lost it, should not blame fortune but their own indolence. For when times were quiet they never once considered the possibility that they might change (it is a common human failing not to plan ahead for stormy weather while the sun shines). When difficult times did come, they thought of flight not of self-defense. They hoped the populace, irritated by the insolence of their conquerors, would recall them to power. This plan is a good one if there is no alternative policy available; but it is stupid to adopt it when there are alternatives. No one would be happy to trip and fall merely because he thought someone would help him back to his feet. Either no one comes to your assistance; or if someone does, you are the weaker for it, for your strategy for self-defense has been ignominious, and your fate has not been in your own hands. No method of defense is good, certain, and lasting that does not depend on your own decisions and your own strength [*virtù*].

104. [Philip V, defeated in 197 B.C.]

CHAPTER 25

How much fortune can achieve in human affairs, and how it is to be resisted.

I am not unaware of the fact that many have held and still hold the view that the affairs of this world are so completely governed by fortune and by God that human prudence is incapable of correcting them, with the consequence that there is no way in which what is wrong can be put right. So one may conclude that there is no point in trying too hard; one should simply let chance have its way. This view has come to be more widely accepted in our own day because of the extraordinary variation in circumstances that has been seen and is still seen every day. Nobody could predict such events. Sometimes, thinking this matter over, I have been inclined to adopt a version of this view myself. Nevertheless, since our free will must not be eliminated, I think it may be true that fortune determines one half of our actions, but that, even so, she leaves us to control the other half, or thereabouts. And I compare her to one of those torrential rivers that, when they get angry, break their banks, knock down trees and buildings, strip the soil from one place and deposit it somewhere else. Everyone flees before them, everyone gives way in face of their onrush, nobody can resist them at any point. But although they are so powerful, this does not mean men, when the waters recede, cannot make repairs and build banks and barriers so that, if the waters rise again, either they will be safely kept within the sluices or at least their onrush will not be so unregulated and destructive. The same thing happens with fortune: She demonstrates her power where precautions have not been taken to resist her [*dove non è ordinata virtù a resisterle*]; she directs her attacks where she knows banks and barriers have not been built to hold her. If you think about Italy, which is the location of all these changes in circumstance, and the origin of

the forces making for change, you will realize she is a landscape without banks and without any barriers. If proper precautions had been taken [*s'ella fussi reparata da conveniente virtù*], as they were in Germany, Spain, and France, either the flood would not have had the consequences it had, or the banks would not even have been overwhelmed. And what I have said is enough, I believe, to answer the general question of how far one can resist fortune.

But, turning rather to individuals, note we see rulers who flourish one day and are destroyed the next without our being able to see any respect in which they have changed their nature or their attributes. I think the cause of this is, in the first place, the one we have already discussed at length: A ruler who depends entirely on his good fortune will be destroyed when his luck changes. I also think a ruler will flourish if he adjusts his policies as the character of the times changes; and similarly, a ruler will fail if he follows policies that do not correspond to the needs of the times. For we see men, in those activities that carry them towards the goal they all share, which is the acquisition of glory and riches, proceed differently. One acts with caution, while another is headstrong; one is violent, while another relies on skill; one is patient, while another is the opposite: And any one of them, despite the differences in their methods, may achieve his objective. One also sees that of two cautious men, one will succeed, and the other not; and similarly we see that two men can be equally successful though quite different in their behavior, one of them being cautious and the other headstrong. This happens solely because of the character of the times, which either suits or is at odds with their way of proceeding. This is the cause of what I have described: that two men, behaving differently, achieve the same result, and of two other men, who behave in the same way, one will attain his objective and the other will not. This is also the cause of the fact that the sort of behavior that is successful changes from one time to another. Take someone who acts cautiously and patiently. If the times and circumstances develop in such a way that his behavior is appropriate, he will flourish; but if the times and circumstances change, he will be destroyed for he will continue to behave in the same way. One cannot find a man so prudent he knows how to adapt himself to changing circumstances, for he will either be unable to deviate from that style of behavior to which his character inclines him, or, alternatively, having always been successful by adopting one particular style, he will be unable to persuade himself that it is time to change. And so, the cautious man, when it is time to be headstrong, does not know how to act and is destroyed. But, if one knew how to change one's character as times and circumstances change, one's luck would never change.

Pope Julius II always acted impetuously; the style of action was so appropriate to the times and circumstances in which he found himself that the outcome was always successful. Consider his first attack on Bologna, when Mr. Giovanni Bentivoglio was still alive.[105] The Venetians were not happy about it; nor was the King of Spain; he had discussed such an action with the French, who had reached no decision. Nevertheless, because he was ferocious and impetuous, he placed himself personally at the head of his troops. This gesture made the Spanish and the Venetians hesitate and do nothing: the Venetians out of fear, and the Spanish because they wanted to recover the territories they had lost from the Kingdom of Naples. On the other hand, he dragged the King of France along behind him. For the king saw it was too late to turn back, and he wanted an alliance with him in order to weaken the Venetians, so he concluded he could not deny him the support of French troops without giving him obvious grounds for resentment. So Julius, by acting impetuously, achieved something no other pope, no matter how skillful and prudent, had been able to achieve. For, if he had delayed his departure from Rome until everything had been arranged and the necessary alliances had been cemented, as any other pope would have done, he would never have succeeded. The King of France would have found a thousand excuses, and his other allies would have pointed out a thousand dangers. I want to leave aside his other actions, for they were all similar, and they were all successful. He did not live long enough to experience failure. But, if the times had changed so that it was necessary to proceed with caution, he would have been destroyed. He would never have been able to change the style of behavior to which his character inclined him.

105. [In 1506.]

I conclude, then, that since fortune changes, and men stubbornly continue to behave in the same way, men flourish when their behavior suits the times and fail when they are out of step. I do think, however, that it is better to be headstrong than cautious, for fortune is a lady. It is necessary, if you want to master her, to beat and strike her. And one sees she more often submits to those who act boldly than to those who proceed in a calculating fashion. Moreover, since she is a lady, she smiles on the young, for they are less cautious, more ruthless, and overcome her with their boldness.

CHAPTER 26

Exhortation to seize Italy and free her from the barbarians.

Having considered all the matters we have discussed, I ask myself whether, in Italy now, we are living through times suitable for the triumph of a new ruler, and if there is an opportunity for a prudent and bold [*virtuoso*] man to take control of events and win honor for himself while benefiting everyone who lives here. It seems to me so many factors come together at the moment to help out a new ruler that I am not sure if there has ever been a more propitious time for such a man. If, as I said, Moses could only demonstrate his greatness [*virtù*] because the people of Israel were slaves in Egypt; if we would never have known what a great man Cyrus was if the Persians had not been oppressed by the Medes; if the remarkable qualities of Theseus only became apparent because the Athenians were scattered abroad; so now, the opportunity is there for some bold Italian to demonstrate his greatness [*virtù*]. For see the conditions to which Italy has been reduced: She is more enslaved than the Jews, more oppressed than the Persians, more defenseless than the Athenians. She has no leader, no organization. She is beaten, robbed, wounded, put to flight: She has experienced every sort of injury. Although so far there has been the occasional hint of exceptional qualities in someone, so that one might think he had been ordained by God to redeem Italy, yet later events have shown, as his career progressed, that he was rejected by fortune. So Italy has remained at death's door, waiting for someone who could bind her wounds and put an end to the sack of Lombardy, to the extortion of Tuscany and of the Kingdom of Naples, someone who could heal her sores which long ago became infected. One can see how she prays to God that he will send her someone who will redeem her from this ill treatment and from the insults of the barbarians. One can see every Italian is ready, everyone is eager to rally to the colors, if only someone will raise them high.

At the moment, there is nowhere Italy can turn in her search for someone to redeem her with more chance of success than to your own illustrious family, which is fortunate and resourceful [*virtù*], is favored by God and by the church (indeed the church is now at its command). The undertaking is straightforward, if you keep in mind the lives and the deeds of the leaders I have mentioned. Of course those men were exceptional and marvelous; but, nevertheless, they were only men, and none of them had as good an opportunity as you have at the moment. For their undertakings were not more just than this one, or easier, nor was God more their ally than he is yours. This is truly just: "A war is just if there is no alternative, and the resort to arms is legitimate if they represent your only hope."[106] These circumstances are ideal; and when circumstances are ideal there can be no great difficulty in achieving success, provided your family copies the policies of those I have recommended as your models. Beyond that, we have already seen extraordinary and unparalleled events. God has already shown his hand: The sea has been divided; a cloud has escorted you on your journey; water has flowed out of the rock; manna has fallen from on high. Everything has conspired to make you great. The rest you must do for yourselves. God does not want to have to do the whole thing, for he likes to leave us our free will so we can lay claim to part of the glory by earning it.

There is no need to be surprised that none of the Italian rulers I have discussed has been able to accomplish what I believe your family can achieve, or to be disheartened if during all the wars that have been fought, all the political upheavals that have taken place, it has seemed as if the Italians have completely lost their capacity to fight and win [*la virtù militare*]. This is simply because the traditional

106. [Livy, bk. 9, ch. 1.]

way of doing things in Italy is mistaken, and no one has appeared who has known how to bring about change. Nothing does more to establish the reputation of someone who comes new to power than do the new laws and the new institutions he establishes. These, when they are well thought out and noble in spirit, make a ruler revered and admired. In Italy we have the raw materials: You can do anything you wish with them. Here we have people capable of anything [*virtù grande*], all they need are leaders who know what to do. When it comes to fighting one-on-one the Italians prove themselves to be stronger, quicker, cleverer. But when it comes to the clash of armies, the Italians are hopeless. The cause lies in the inadequacy of the leaders. Those who know what to do are not obeyed, and everyone thinks he knows what to do. So far there has been no one who has known how to establish an authority, based on fortune and ability [*virtù*], such that the others will obey him. This is the reason why, through the whole of the last twenty years, during all the wars that have taken place in that time, not a single army consisting solely of Italians has done well. Twenty years ago the Italians were defeated at Taro; since then at Alexandria, Capua, Genoa, Vailà, Bologna, Mestre.

So, if your illustrious family wants to follow in the footsteps of those excellent men who liberated the nations to which they belonged, you must, before you do anything else, do the one thing that is the precondition for success in any enterprise: Acquire your own troops. You cannot hope to have more faithful, more reliable, or more skillful soldiers. And if each soldier will be good, the army as a whole will be better still, once they see their ruler place himself at their head and discover he treats them with respect and sympathy. It is necessary, though, to get such an army ready, if we are to be able to defend Italy from the foreigners with Italian strength and skill [*con la virtù italica*].

It is true that the Swiss and Spanish infantries are thought to be intimidating; nevertheless, they both have their defects, so a third force could not only stand up to them, but could be confident of beating them. For the Spanish cannot withstand a cavalry charge; and the Swiss have reason to be afraid of infantry, should they come up against any as determined to win as they are. Thus, we have seen that the Spanish cannot withstand an attack by the French cavalry, and we will see in practice that the Swiss can be destroyed by the Spanish infantry. It is true that we have yet to see the Spanish properly defeat the Swiss, but we have seen an indication of what will happen at the Battle of Ravenna,[107] when the Spanish infantry clashed against the German battalions, for the Germans rely on the same formation as the Swiss. There the Spanish, thanks to their agility and with the help of their bucklers, were able to get underneath the pikes of the Germans and were able to attack them in safety, without the Germans' having any defense. If the cavalry had not driven them off, they would have wiped them out. So, since we know the weakness of each of these infantries, we ought to be able to train a new force that will be able to withstand cavalry and will not be afraid of infantry. To accomplish this we need specially designed weapons and new battle formations. This is the sort of new undertaking that establishes the reputation and importance of a new ruler.

So you should not let this opportunity slip by. Italy, so long enslaved, awaits her redeemer. There are no words to describe with what devotion he would be received in all those regions that have suffered from foreign invasions which have flooded across the land. No words can describe the appetite for revenge, the resolute determination, the spirit of self-sacrifice, the tears of emotion that would greet him. What gates would be closed to him? What community would refuse to obey him? Who would dare be jealous of his success? What Italian would refuse to pledge him allegiance? Everyone is sick of being pushed around by the barbarians. Your family must commit itself to this enterprise. Do it with the confidence and hope with which people embark on a just cause so that, marching behind your banner, the whole nation is ennobled. Under your patronage, may we prove Petrarch right:

> Virtue [*virtù*] will take up arms against
> savagery,
> And the battle will be short.
> For the courage of old is not yet dead
> In Italian hearts.[108]

107. [11 April 1512.]

108. [Petrarch, *Italia mia* (*Ai Signori d'Italia*), ll. 93–6.]

Discourses

Niccolò Machiavelli to Zanobi Buondelmonti and Cosimo Rucellai,[1] Greetings.

I send you a present which, if it does not measure up to the obligations I have to you, is unquestionably the most valuable thing Niccolò Machiavelli could send you. For in it I have put in words all that I know and all I have learned from an extensive experience of the affairs of the world and endless reading about them. Neither you nor anybody else could ask more of me, so you have no reason to complain if this is all I have given you. Of course you may regret my inadequate intelligence when you find my discussions inadequate, and my poor judgment when, as I often do, I present a mistaken argument. In the circumstances, I am not sure which of us has least reason to be obliged to the other: I to you, who forced me to write a work which I, left to myself, would never have written, or you to me, if, in writing, I have not given you satisfaction. So accept this gift as we accept all gifts from friends, for then we always give more weight to the intention that lies behind the gift than to the quality of the gift itself.

And please believe that my manuscript gives me only one satisfaction, which is when I think that, even if I have been mistaken in many particular matters I discuss, I know that I have not made a mistake in at least one thing: in having chosen you, to whom above all others my *Discourses* are addressed. I feel that in so doing I have expressed some gratitude for the benefits I have received from you. Moreover, I have avoided adopting the normal practice of authors, for they nearly always dedicate their books to some ruler, and, blinded by ambition and avarice, they praise him as if he had all possible virtuous [*virtuose*] qualities, when they ought to criticize him for having every despicable characteristic. So I, in order to avoid falling into this mistake, have chosen, not princes, but people whose innumerable fine qualities make them worthy to be princes. I have chosen, not rulers who can reward me with titles, honors, and wealth, but private citizens who would reward me if they could. If you want to make sound judgments, you should admire those who are generous in spirit, not those who have the resources to be generous, respect those who know how to rule, not those who have no idea of how to rule, but are in power. Writers praise Hiero of Syracuse more when they describe him while he was still a private citizen than Perseus of Macedon while he was king, for Hiero was fit to be king, even if he had no kingdom, while Perseus had none of the attributes of a true ruler other than a kingdom.[2]

So enjoy this book if you can. You are responsible for what is good in it, and for what is bad. If your judgment is so poor that you continue to enjoy reading me, then I will not fail to complete my commentary on Livy, as I originally promised you I would. Farewell.

From Machiavelli, *Selected Political Writings*, edited and translated by David Wootton (Indianapolis: Hackett Publishing Company, 1994). Copyright © 1994. Reprinted by permission of the publisher.

1. [Buondelmonti and Rucellai were close friends who took part in discussions of politics with Machiavelli in the Oricellari gardens. They were both of distinguished families. Rucellai died in 1519; Buondelmonti in exile in 1527. In the editions of 1531 this letter appears at the end, not the beginning of the *Discourses*. It is possible that Machiavelli intended to substitute it for the preface to book one, or, alternatively, that it survives from an early draft and was intended to be deleted.—D.W.]

2. [For Hiero, see *The Prince*, chapter six. Perseus, King of Macedon from 179 to 168 B.C., lost his kingdom on the battlefield.]

BOOK I

Preface

Men are by nature envious. It has always been as dangerous to propose new ways of thinking and new institutions as it is to seek unknown oceans and undiscovered continents.[3] People are much quicker to criticize than to praise what others have done. Nevertheless, spurred on by an instinctive desire I have always had to do those things that I believe will further the common good and benefit everybody, I have refused to be intimidated. I have resolved to set out on a road no one has travelled before me. My journey may be tiresome and difficult, but I can hope it will prove rewarding, at least if people are willing to judge sympathetically the purpose of my labors. If my limited intelligence, my lack of experience of contemporary politics, and my inadequate knowledge of classical history will make my efforts defective and of very limited use to others, I will at least be pointing out the way to someone with greater ability [*virtù*], more analytical skill, and better judgment, someone who will be capable of achieving what I have aimed at. Perhaps no one will praise my efforts; in any event, I do not deserve to be reproached.

Think of the respect in which we hold antiquity. Often, to take just one example, a single fragment of an antique statue will be purchased at enormous expense by someone who wants to look at it every day. He will give it a place of honor in his house and allow those who aspire to be sculptors to copy it. The sculptors then make every effort to do work comparable to it. Think, on the other hand, of the immensely skillful [*virtuosissime*] deeds the history books record for us, deeds done by ancient kingdoms and classical republics, by kings, generals, citizens, legislators, and others who have worn themselves out for their homelands. These deeds may be admired, but they are scarcely imitated. Indeed, everybody goes to great lengths to avoid copying them, even if it only concerns an insignificant detail. The result is not a trace of the classical military and political skills [*quella antiqua virtù*] survives. I cannot help but be both astonished and dismayed by this. Especially when I notice that when citizens find themselves caught up in legal disagreements, or when they fall ill, they always appeal to the legal decisions of the ancients, they always follow the medical remedies prescribed by them. For the civil laws are nothing other than decisions handed down by classical jurists, decisions that have been codified, and are now taught to lawyers by our own jurists. Similarly, medicine is simply the experience of classical doctors, on the basis of which contemporary doctors make their decisions. Nevertheless, in organizing republics, in administering states, in ruling kingdoms, in training armies and fighting wars, in passing judgment on subjects, and in planning new conquests, when it comes to all these activities, one does not find a single ruler or republic who tries to learn from the ancients.

I do not believe the cause of this is the feebleness contemporary religion has instilled in the world, nor the evil consequences that a supercilious indolence has had for many Christian countries and cities. The real problem is people do not properly understand the history books. When they read them they do not get out of them the meaning that is in them. They chew on them but do not taste them. The result is countless people read them and enjoy discovering in them the great variety of events they record, but never think of imitating them, presuming it would not be just difficult but would be simply impossible to do as the ancients did. As if the heavens, the sun, the elements, human beings had changed in their movement, organization, and capacities, and were quite different from what they were in days gone by. My intent has been to rescue men from this mistake, so I have decided I must write about all the books of Livy's history that have survived the ravages of time, explaining whatever I think is important if one is to understand them. In doing so, I will draw on my knowledge of ancient and modern affairs. My hope is that those who read my comments will be able without difficulty to draw from them those practical benefits one ought to expect to gain from the study of history. Although my undertaking is a difficult one, nevertheless, helped by those who have encouraged me to embark on this enterprise, I believe I will have so much success that anyone coming after me will only have a little to do before he completes my task.

3. [Machiavelli presumably had the discoveries of Columbus in mind.]

Chapter 1

On the universal origins of any city whatever, and on how Rome began.

Those who read how the city of Rome began, who established its laws, and how it was organized will not marvel that so much excellence [*virtù*] was preserved in that city for so many centuries; and that later it gave birth to the vast empire the Roman republic eventually controlled. Since I want to talk first about its birth, I will start by saying all cities are constructed either by men born in the place where the city is built or by foreigners. In the first case, the inhabitants decide to build a city because they have been spread out in many tiny settlements in which they have not felt secure, for each settlement on its own, because of its location and because of the small number of its inhabitants, is incapable of resisting the assaults of an attacker. Nor are they in a position to assemble in joint defense when they see the enemy coming, either because it takes too long, or because, even if they could assemble in time, they would be obliged to abandon many of their settlements and would soon see them plundered by their enemies. So, to avoid these dangers, urged on either by their own individual judgments or by some one member of their group who has greater influence among them, they gather together to live in a single place they have chosen, one that will be more convenient to live in, and that will be easier to defend.

Athens and Venice are among the many cities that originated in this way. Athens, under the leadership of Theseus, was constructed by scattered inhabitants for the sort of reasons I have outlined.[4] Venice was established by numerous little groups who had taken refuge on certain tiny islands at the end of the Adriatic sea.[5] They were trying to escape the wars that continually broke out in Italy in the period following the collapse of the Roman empire as a result of the arrival of new groups of barbarians. They organized themselves, without there being any one individual in overall control, to live according to those laws that were, in their view, most conducive to their preservation. Their enterprise was a success because of the lengthy period of peace the site they had chosen ensured for them, for their lagoon was impenetrable, and the tribes who were invading Italy had no ships with which to attack them. So, from the most humble beginnings, they were able to rise to the eminent position they now occupy.

The second case, when foreigners come and build a city, takes two forms, depending on whether the immigrants are free men or men who owe allegiance to others. In the latter case a republic or a ruler may send out colonists in order to reduce the pressure of population in their existing settlements; or because they have recently conquered new territory and want to defend it effectively and inexpensively (the Romans built many such cities throughout their empire); or such a city may be built by a ruler who does not intend to live there, but to immortalize himself through it, as Alexander did by building Alexandria. Because such cities do not start out free, it rarely happens that they make great strides and come to be regarded as the capital cities of their own countries. It is in this category that we should place the construction of Florence, for (no matter whether it was built by Sulla's soldiers or by the inhabitants of the hilltops of Fiesole, who, given confidence by the long peace that the whole world benefited from under Augustus, came down to live in the plain of the Arno) it was built under Roman rule, nor could it, at the beginning, control any territory beyond what was assigned it at the pleasure of the emperor.

Cities are built by free men when a group of people, either under the command of a ruler or acting on their own, are forced to abandon the land of their birth and to seek new territory because of disease, or hunger, or war. They may occupy the cities that already exist in the territory they conquer, as Moses did, or they may build from scratch, as Aeneas did. It is in this latter case that one can fully appreciate the skill [*virtù*] of the architect as it is reflected in the fate of his city, for the history of the city will be more or less marvelous depending on whether its first founder is more or less skillful [*virtuoso*]. The skill [*virtù*] of the founder can be judged by two things:

4. [According to legend, Theseus founded Athens in 1234 B.C.]

5. [Settlement of Venice is supposed to have begun in 451.]

firstly, by his choice of a site for the construction of the new city; secondly, by the laws he draws up for it.

Men act either out of necessity or free choice. Since it seems that men are the most admirable [*maggior virtù*] where they have the least freedom of choice, one must consider whether it might not be better to choose an infertile region for the construction of a city so that its inhabitants will be forced to be industrious and prevented from being self-indulgent, and so that they will be more united, having less occasion for conflict because of the poverty of their land. We can see this happened at Ragusa, and in many other cities built in similar locations. Such a choice of location would be without doubt wiser and would lead to the best outcome, if men were content to live off their own possessions and did not want to try to get control of the property of others. But since men can only secure themselves by building up power, one must avoid building a city in a barren location, but rather settle the most fertile land, whose fecundity will make possible growth, so one will be able both to defend oneself against attackers and to defeat anyone who stands in the way of one's own power. In order to ensure the location does not lead to self-indulgence, one must design the laws to force people to do what the location does not force them to do. Thus, one should imitate those wise men who have lived in countries that have been delightful and fertile, countries apt to produce lazy men who are incapable of any manly [*virtuoso*] work. In order to avoid the disadvantages that would result from the delightfulness of the land if it caused self-indulgence, they required all those who were liable to military service to drill, so that by means of such regulations their inhabitants became better soldiers than those living in territory that is naturally harsh and infertile. The Kingdom of Egypt is an example of this: Despite the fact that the country is exceptionally fertile, the artificial necessity imposed by the laws was so effective that Egypt produced the finest men; and if their names had not been lost in antiquity, we would be able to see they deserved more praise than Alexander the Great and many others whose deeds remain fresh in our memory. And if you had examined the state of the sultan, with its regiments of Mamelukes and its Turkish militia, before they were abolished by the Sultan Selim,[6] you would have seen there much drilling of soldiers and would have learned how much the Turks feared the self-indulgence the generosity of their country might induce in them, had they not introduced strict legal penalties to prevent it.

So I conclude it is wiser to choose to settle in a fertile place, provided the consequences of that fertility are kept within due limits by legislation. Deinocrates the architect came to Alexander the Great when Alexander wanted to build a city to magnify his own reputation.[7] He showed him how he could build on Mount Athos: The site, apart from being easily defended, could be cut away so the new city would have the shape of a human body, which would be a remarkable and extraordinary thing and worthy of Alexander's greatness. But when Alexander asked him what the inhabitants of the city would live on he replied he had not given the matter any thought. Alexander laughed, and, leaving Mount Athos intact, built Alexandria in a place where people would want to settle because of the fecundity of the countryside and the ease of access to the sea and to the Nile.

Let us now consider the construction of Rome. If you take it that Aeneas was its first founder, you will think of it as one of the cities built by foreigners.[8] If you believe it was founded by Romulus, you will think of it as founded by men born in the vicinity.[9] Either way you will agree it was founded in freedom and was not under any outsider's authority. You will also recognize—we will return to this subject later—the extent to which the laws established by Romulus, Numa, and the other early legislators imposed an artificial necessity upon the inhabitants, so the fertility of the site, the ease of access to the sea, the frequent victories of their armies, and the extensive territory that fell under Roman control could not corrupt them even over the course of many centuries. Their laws ensured they had more admirable qualities [*virtù*]

6. [The Mamelukes ruled Egypt from 1252 to 1516, when they were defeated by the Ottoman Turks.]

7. [Deinocrates designed Alexandria in 322 B.C.]

8. [Aeneas's flight from the defeat of Troy to Italy is recounted by Livy.]

9. [Livy prefers the story of Romulus and Remus, sons of Mars and wolf-children, but, unlike Machiavelli, he treats it as myth, not history.]

than any other city or republic has ever been able to boast of in its citizens.

The deeds of the Romans that are celebrated in Livy's history occurred either as a result of public or of private decisions and either inside or outside the city. I will begin by discussing those things that happened inside the city and as a result of public decision-making, that I take to be worthy of more detailed discussion, and we will need to explore all the consequences that flowed from them. This first book, or at least this first part, will be taken up with a discussion of these matters.

Chapter 2

On the different types of republic that exist, and on how to categorize the Roman republic.

I want to leave aside any discussion of those cities that were under the authority of outsiders from the beginning, and to discuss only those that began completely free of external domination and were ruled by their own wills from the beginning, whether as republics or as princedoms. These cities, since they began in a variety of ways, have had a variety of constitutions and legal systems. In some, either at the very beginning or soon after their foundation, a single individual wrote all the laws at once—Lycurgus, for example, gave the Spartans their laws[10]—while others acquired their laws by chance, little by little, according to the circumstances, as happened in Rome. We can call fortunate any republic in which there appears a leader so prudent he is able to give them a code of law they have no need to revise, but under which they can live securely. We know the Spartans obeyed the laws of Lycurgus for eight hundred years without corrupting them and without any serious internal conflict. On the other hand, we can call in some degree unfortunate any city that does not chance upon a prudent lawmaker, and is obliged to revise its laws for itself. And among these cities, moreover, those are most unfortunate that are furthest from having the right laws; and those are furthest astray whose constitution is quite unlike the one that would lead them to their true and ideal goal. For it is almost impossible for a city that finds itself in this situation to have enough good luck to be able to sort itself out. Those others that, if they do not have a perfect constitution, yet have started out in the right direction and are in a position to improve, can, as opportunity presents itself, become perfect. But this is certainly true: One never establishes a constitution without encountering danger. For enough men will never agree to a new law that changes the constitution of the city unless they are persuaded it is essential to pass it, and they will only be persuaded of this if they see themselves to be in danger, so it can easily happen that the republic is destroyed before she arrives at a perfect constitution. The republic of Florence is a good example of this: Defeat in the Battle of Arezzo led to her reorganization;[11] defeat in the Battle of Prato in 1512 led to her dissolution.[12]

I want now to discuss the constitution of Rome and the events that made it possible for her to achieve perfection. Some who have written about constitutions say they are of three types, which they call "monarchy," "aristocracy," and "democracy."[13] They say anyone drawing up the constitution of a city must choose from these the one he thinks most appropriate. Others, who are widely thought to be wiser, say there are six types of constitution, of which three are inherently bad and three are inherently good, although even the good ones are so easily corrupted they, too, can quickly become pernicious. The good ones are the three I have already mentioned; the bad ones are three others that derive from these three, and each of which is so like the good constitution it most resembles that it is easy for one to turn into the other. Thus, monarchies easily become tyrannies, aristocracies become oligarchies, and democracies slide into anarchy. The result is that if a lawmaker establishes a constitution for a city that corresponds to one of the three

10. [Lycurgus is supposed to have drawn up his laws ca. 884 B.C.]

11. [Defeat in 1502, and pressure from Cesare Borgia, led to Piero Soderini being made gonfaloniere for life.]

12. [I.e., the restoration of the Medici.]

13. [The rest of this chapter is profoundly influenced by Polybius, *Histories*, bk. 6.]

good forms of government it will not last long, for no precaution is sufficient to ensure it will not slip into its opposite, for the good [*la virtute*] and the bad are, when it comes to constitutions, closely related.

These different types of government developed among men by accident. When the world began, it had few inhabitants, and they lived for a while apart from one another as the animals do. As their numbers multiplied they gathered together, and in order to be better able to defend themselves, they began to defer to one among their number who was stronger and braver than the rest. They made him, as it were, their leader and obeyed him. This was the origin of knowledge of those things that are good and honest as opposed to those that are pernicious and evil. For men saw that, if someone harmed his benefactor, his associates despised him and felt compassion for his victim. They learned to think ill of the ungrateful and to approve of those who were grateful. They came to realize the injuries that were done to someone else could equally be done to themselves. In order to avoid such evils, they gathered together to make laws and to lay down punishments for those who broke them: This was the invention of justice. Thereafter, when they had to choose a ruler, they no longer obeyed the strongest, but he who was most prudent and most just.

Later, however, they began to appoint their ruler by hereditary succession, not by election, with the immediate result that power was inherited by men who were inferior to their ancestors. They no longer acted virtuously [*lasciando l'opere virtuose*], but thought rulers were simply there to outdo other men in extravagance, lasciviousness, and in every other type of vice. The result was that rulers began to be hated, and, because they were hated, to be afraid. Because they were afraid, they went on the attack, and before long kings had become tyrants. These rulers faced the possibility of being destroyed. The conspiracies and plots hatched against them were not begun by those who were fearful or weak, but by those who surpassed their fellows in generosity, spiritedness, wealth, and nobility, for such men could no longer tolerate the dishonorable lives of their rulers. The masses then followed the lead provided by the elite and armed themselves against their ruler, and, when they had got rid of him, obeyed the elite as their liberators. The new rulers hated the idea of one-man rule and, so, established themselves collectively in power.

At first, remembering the evils of tyranny, they governed according to the laws they had established, putting their own interests second and the public good first. They directed and protected both public and private matters with great care. In due course, this government was inherited by their sons, who had never seen power change hands, had never suffered under evil government, and who were unwilling to continue treating their fellow subjects as their equals. They gave themselves over to avarice, to ambition, to chasing other men's wives. So aristocracy degenerated into an oligarchy in which the norms of civilized life were flouted. In a short time, the oligarchs suffered the same fate as the tyrants, for the masses became fed up with their government and gave their support to anyone who was planning any sort of resistance to their rule. Soon someone, with the assistance of the masses, was able to destroy them. Since they could still clearly remember one-man rule, and the harm it had done them, when they destroyed oligarchy they had no desire to restore monarchy, but instead established popular rule. This they organized in such a manner that neither the elite nor a powerful individual could have any influence whatsoever.

In the beginning, all states can command a certain amount of respect, so popular government survived for a while, but not for long, especially once the generation that had established it had passed away. It quickly degenerated into anarchy, in which neither private individuals nor public officials could command any respect. Each person did as he chose, with the result that every day innumerable crimes were committed. So, compelled by necessity, or advised by some good man, or desperate to escape from anarchy, they established once more the rule of one man. And from monarchy, step by step, they degenerated once again into anarchy, repeating the sequence I have already described.

This is the cycle through which all states revolve, and power is still passed, as it always has been, from hand to hand. But it rarely happens that the same people return to power, for scarcely a single state has survived long enough to travel several times through this cycle without being destroyed. Usually, while a state is torn apart by internal dissent, and as a result

is weakened and deprived of good leadership, it is conquered by a neighboring state better organized than it is. But if this did not happen, then a state could repeat this cycle of constitutions over and over again.

I conclude all these forms of government are pestilential: The three good ones do not last long, and the three bad ones are evil. Those who know how to construct constitutions wisely have identified this problem and have avoided each one of these types of constitution in its pure form, constructing a constitution with elements of each. They have been convinced such a constitution would be more solid and stable, would be preserved by checks and balances, there being present in the one city a monarch, an aristocracy, and a democracy.

Lycurgus is the most admirable of those who have established constitutions of this sort. He constructed the constitution of Sparta so that it gave distinct roles to king, aristocracy, and people, with the result the state survived for eight hundred years, throughout which time his name was revered and the city lived in harmony. Matters turned out differently for Solon, who drew up the constitution of Athens.[14] Because he constructed a democracy, it survived such a short time that before Solon died he saw Athens under the tyranny of Pisistratus. Although forty years later Pisistratus's heirs were driven into exile and freedom was restored, because the Athenians re-established the democratic constitution drawn up by Solon, their freedom lasted no more than a century, despite the fact that in order to preserve it they introduced numerous reforms Solon had not considered. They did their best to control the insolence of the powerful and the license of the masses. Nevertheless, because they did not allow a proper role for one-man rule and for aristocracy, Athens survived, by comparison with Sparta, a very short time.

Let us turn to Rome. Even though Rome did not have a Lycurgus to establish from the beginning a constitution that would enable her to live free for centuries, nevertheless, she underwent so many political crises, because of the conflicts between the people and the senate, that chance eventually brought about something no legislator had been able to accomplish. For if Rome did not have the first type of good fortune, she had the second, and although her first constitution was defective, nevertheless, it did not cause her to turn off the right path that could lead her to perfection.

Romulus and all the other kings of Rome made many excellent laws, ones appropriate for a free state. But their goal was the establishment of a kingdom, not a republic, so when Rome became free she lacked many of the laws free government required, for these they had omitted to decree. And although the kings of Rome lost their power for the reasons and in the way I have outlined, nevertheless, those who threw them out quickly established two consuls who played the same role as the kings, so that they expelled from Rome the name of king but not the authority of kingship. The new republic was ruled by the consuls and the senate, so it was a mixture of only two of the three types of power I have described: of monarchy and aristocracy. It failed to give any authority to the populace.

When the Roman nobility became overbearing, for reasons I will explain later, the people rose up against them, with the result that, in order not to lose all power, the nobles were obliged to concede a share of power to the people. On the other hand, the consuls and the senate retained enough authority to be able to hold on to a share of power in the republic. So the tribunes of the people came to be established, after which the constitution of the republic became more stable, for now all three types of authority had a fair share in power. And fortune was so favorable to Rome that, although she passed from monarchy, to aristocracy, to democracy, going through each of the stages I have described for the reasons I have outlined, nevertheless, the aristocracy never seized all power from the monarchical element; nor did the people ever seize all power from the aristocracy; instead, power was added to power, and the mixture that resulted made for a perfect republic. Rome achieved this perfection because of the conflict between senate and people, as I will show at length in the next two chapters.

BOOK II

Preface

Men always praise the olden days and criticize the present, but they do not always have good reason for doing so. They are so biased in favor of the past that

14. [Solon's reforms began in 595 B.C.]

they do not celebrate only those periods they know about because of the surviving descriptions of them written by men alive at the time; they also, once they have become old, praise the way they remember things having been in their youth. When their praise of the past is mistaken, as it usually is, there are, I think, several reasons why history plays tricks on them.

I believe the first is that we are not told the whole truth about the past. For the most part, people keep quiet about those events it would be shameful to record, while those deeds that will make them seem glorious in the eyes of posterity they portray in the most favorable light possible. Most writers place themselves in the service of victory. In order to make fortune's victories glorious they not only exaggerate the skillful [*virtuosamente*] things the victors did, they even improve on the actions of their enemies, with the result anyone who is born in future ages in either of the territories, either that of the victors or that of the vanquished, has good reason to be amazed at the actions of those men and the character of those times, and has no choice but to praise them to the skies and to love them.

Secondly, men hate things either out of fear or jealousy. But these two powerful motives for hatred cease to apply as time passes, for what is past can no longer hurt you, and you no longer have reason to be jealous of it. The opposite is true of those things you can still touch and see for yourself. Because you know them through and through, and nothing is hidden from you, you recognize their good features, but at the same time there are many aspects of them that displease you. So you conclude things were much better in the past, even when in reality actions in the present are much more deserving of fame and of glory. I am not talking about scientific and artistic activities, for their qualities are so transparent there is little time can do to take away or add to the reputation that they properly deserve. I am talking, rather, about the manners and morals of men, reports of which are much harder to assess.

I ought to admit that although the habit of praising the past and condemning the present is as widespread as I have said, nevertheless, people are not always mistaken when they think the past superior to the present. Sometimes their judgment is bound to be justified. Human affairs are always changing, and when they change it must be either for better or worse. One sees a city or a territory organized for a constitutional government by some one excellent individual; for a while, thanks to the skill [*virtù*] of this founder, the political system will get steadily better and better. Someone who is born in such a state, if he praises the olden times more than his own day, makes a mistake; and he makes this mistake for the reasons I have explained above. But later generations in this same city or territory, born when things have gone into decline, are not mistaken. Thinking about how these things work, I reached the conclusion that the world is always in the same overall condition. There has always been in it as much good as bad, but both the good and the bad are redistributed from territory to territory.

One can see this from what we know about the ancient monarchies. Good and bad were redistributed among them as manners and morals changed, but the overall condition of the world remained the same. There was only this one difference: Where virtue [*virtù*] had at first been resident in Assyria, it later moved to the Kingdom of the Medes, and then to Persia, until eventually it came to Italy, and to Rome. Since the Roman empire, it is true, there has been no lasting empire, and virtue [*virtù*] has not remained concentrated in one place; nevertheless, you can see it was scattered among many nations, each of whom came to live virtuously [*virtuosamente*]: the Kingdoms of France and Turkey; the Sultanate of Egypt; and now the peoples of Germany. Above all, virtue was to be found among the sect of the Saracens, who accomplished so much, occupied so much territory, and were indeed responsible for the destruction of the Roman empire in the east.

In all these territories, then, and in all such sects, virtue [*virtù*] was to be found after the Romans had gone into decline, and still is to be found in some parts of them that still aspire to greatness; there she is deservedly praised. If you are born in one of these virtuous places and praise the olden days more than the present, you may be making a mistake. But if you are born in Italy or in Greece, and if you have not become (if you are Italian) an admirer of the northerners, or (if you are Greek) a supporter of the Turks, then you are right to criticize your own times and praise the past. For in the past, there were plenty of

things that deserved admiration; in the present, there is nothing at all to mitigate unalloyed misery, disgrace, and contempt. Now there is no respect for religion, for the law, or for military service; everything is splattered with filth. These vices are all the more detestable because they are most prevalent among those who hold government office, who order everyone else around, and want to be treated like gods.

But let us get back to our subject. I meant to point out that if men's judgment is unreliable when it comes to judging the relative merits of the present and the distant past in matters where one cannot have such detailed knowledge of the past as one can of the present, this does not explain why old men are poor judges of the relative merits of the times of their youth and their old age, for they have had an equal knowledge and experience of the one and the other. Or at least they would have if men throughout their lives had the same capacity to make judgments and were governed by the same appetites. But men change as they grow older, even if their circumstances do not; so things look different to them, even if they have in fact stayed the same, for men have different appetites, different pleasures, different preoccupations in old age from the ones they had when young. For men, as they grow older, become weaker, but at the same time more prudent and astute in their judgment. So those things that seemed to them tolerable, even excellent, when they were young, as they grow old seem to them intolerable and wretched. Where they ought to blame their own changing judgment, they blame the changing times.

Moreover, there is another reason: Human appetites are insatiable. It is in man's nature to be able to and to want to desire all things; it is in the nature of circumstances that he can only realize a few of his desires. The result is that men are always finding themselves discontented and discovering themselves to be dissatisfied with what they possess. This makes them have a low opinion of the present, praise the past, and put their hope in the future, even though they have no good reason for thinking things were better or will improve.

I do not know, however, if I deserve to be included among those whose judgment is flawed, though I might be thought to praise the ancient Romans too much and criticize our own times too severely in these discourses. Indeed, if the excellence [*virtù*] that was the norm then, and the inadequacy that is to be found everywhere today, were not as plain as day, then I would express myself more cautiously, for fear I might slip into this error for which I criticize others. But the matter is so obvious anyone can recognize the truth, so that I am entitled to speak frankly and express myself bluntly on the differences between our own times and those of the ancient Romans, in the hope any young men who read what I write will be encouraged to reject the world they live in and will want to try to imitate the ancients, should fortune ever give them the opportunity to do so. For it is a worthy undertaking to teach others how to do those admirable things that you, because of corrupt circumstances and hostile fortune, have been unable to perform. If many acquire the ability to do what is needed, then one, if fortune smiles upon him, may be successful.

Having, in the previous book, talked about the decisions the Romans took in matters relating to the internal affairs of the city, in this book we will discuss those things the Roman populace did in order to expand the territory under their control.

Chapter 1

On whether skill [*virtù*] or good fortune was a more significant factor in the Romans' acquisition of an empire.

Many have been of the opinion—among them Plutarch who is an author whose judgment is always to be respected[15]—that the Roman people, in acquiring an empire, benefited more from good fortune than from skill [*virtù*]. One of the various reasons they put forward to support this view is that it is evident, they say, from the actions of the Romans themselves that they attributed all their victories to good luck, for they erected more temples to the goddess Fortune than to any other god. It would seem Livy was more or less of this opinion, for it is rare for him, whenever

15. [Plutarch, *Opera moralia*, 44; *De fortuna Romanorum*.]

he has a Roman speak about skill [*virtù*], not to couple skill with luck.

But I do not want to admit the truth of this opinion under any circumstances, and I do not believe there are good arguments to support it. For if there has never been a republic that has made as extensive gains as Rome did, it is also evident there has never been a republic better organized to make gains than Rome was. It was the skill [*virtù*] of their armies that enabled them to conquer an empire, and it was their way of going about things, which dates back to their first legislator, that enabled them to hold on to what they had conquered, as I will explain at length below, over the course of a number of chapters. Some people say it was good fortune and not skill [*virtù*] that ensured the Roman people never had to face war against two powerful enemies at the same time. Thus, they only found themselves at war with the Latins, when, if they had not really defeated the Samnites, they were at least able to call on their support, for in fighting the Latins they were helping the Samnites. They did not campaign against the Tuscans until they had first conquered the Latins and had almost completely crippled the Samnites. They did not campaign against the Tuscans until they had first conquered the Latins and had almost completely crippled the Samnites by defeating them again and again. If two of these powers had allied when they were fresh and undefeated, then without doubt one could reasonably have predicted they would destroy the Roman republic.

But, however it came about, it is true they never had to fight two extremely powerful enemies at one time. It seems the rise of one always caused the decline of another, or the decline of one made possible the rise of another. This is apparent from the chronology of the wars they fought, for, leaving aside those that took place before Rome was seized by the French, one can see that while they were at war with the Aequi and the Volsci,[16] and so long as those tribes remained powerful, nobody else attacked them. Only after they had been subdued did the war with the Samnites begin,[17] and although the Latin tribes rebelled against the Romans before that war was over,[18] nevertheless, when that rebellion took place the Samnites entered into a league with the Romans and sent their troops to help the Romans punish the Latins for their insolence. Once they were subdued, the war against the Samnites began again.[19] When the Samnites had been beaten in battle after battle, the war with the Tuscans began;[20] and when that had been settled, the Samnites rebelled again as a result of the invasion of Italy by Pyrrhus.[21] When he had been forced to retreat into Greece, they began the first war with the Carthaginians;[22] no sooner was this war over, but all the French, on both sides of the Alps, allied against the Romans, until they were defeated and butchered in large numbers between Popolonia and Pisa, where now stands the tower of St. Vincent.[23]

After this war, there was a period of about twenty years when they were not involved in any major conflicts, for they only fought against the Ligurians[24] and against those remnants of the French who held out in Lombardy. This relative peace lasted until the beginning of the Second Carthaginian War in which Italy was embroiled for sixteen years.[25] Having brought this to a glorious conclusion, they found themselves at war with Macedon,[26] and, after that was over, with Antiochus and with Asia.[27] And after they had been victorious in that war there was not a ruler or a republic in the whole world who, either alone or in alliance with others, could hope to defy the Roman armies.

But anyone who considers the chronology of the wars before this final victory and who studies the policies of the Romans will realize they did not simply rely on fortune. They also employed a quite remark-

able prudence and skill [*virtù*]. For if you ask youself why they were so fortunate the answer will be obvious. It is evident that when a ruler or a people acquire a reputation such that every neighboring prince and people is spontaneously afraid of attacking them and fearful of being attacked by them, then it will always be the case that no state will ever attack them unless it has no alternative.

The result is that the dominant state will have almost a free choice when it comes to deciding with which of its neighbors it wants to fight a war, and will be able, with a little effort, to pacify the others. They, partly out of fear of the dominant power and partly taken in by the techniques it will employ to give them a false sense of security, will be easy to pacify. The other powers who are not immediate neighbors and who do not have dealings with the victim, will regard the whole business as taking place a long way away and think it no concern of theirs. They will keep making this mistake until they are next in line. By which time they have no defense available except to rely on their own troops. But by then their own troops will be inadequate, for the dominant power will have become overwhelmingly strong.

I will not delay to discuss how the Samnites stood by and watched while the Romans defeated the Volsci and the Aequi, and, in order to be brief, I will confine myself to the case of the Carthaginians. They were very powerful and widely respected at the time the Romans were fighting against the Samnites and the Tuscans, for they already controlled the whole of Africa along with Sardinia, and Sicily, and part of Spain. Because they were so powerful, and because their territory was some distance from that of the Romans, it never occurred to them to attack them, or to come to the assistance of the Samnites and the Tuscans. Thus, they behaved as one does if one thinks time is on one's side, allying with the Romans, and trying to win their good will. They did not recognize their mistake until the Romans had conquered all the peoples between themselves and the Carthaginians, and had begun to challenge them for control of Sicily and Spain.

The same thing happened to the French as to the Carthaginians, and the same thing again to Philip, King of Macedon, and to Antiochus. Each one of them believed, while the people of Rome were occupied with one of the others, that Rome's enemies would win, and that there was plenty of time to defend themselves, either through diplomacy or war, against Rome's advancing power. So I am of the view that the good fortune the Romans had in never having to fight against two enemies at the same time is available to any ruler who acts as the Romans did and is as skillful [*virtù*] as they were.

It would be relevant here for us to explain the policies pursued by the Roman people when occupying newly acquired territory if we had not discussed this question at length in our treatise on Princedoms. You will find an extensive discussion of this question there. I will only say this much in passing: The Romans always tried hard when they were acquiring new territory to have the support of an ally who could serve as a ladder over the defenses, or as a gate through the walls, or as an assistant in retaining control once it was acquired. So they used the Capuans to get entry to Samnium,[28] the Camertini to get into Tuscany,[29] the Mamertini helped them in Sicily,[30] the Saguntines in Spain,[31] the Masinissa in Africa,[32] the Aetolians in Greece,[33] the Eumenes and other rulers in Asia,[34] the Massilians and the Aedui in France.[35] They were never short of such allies to assist them in their undertakings and to help them acquire and hold new territories. Governments that systematically follow this policy will find they have less need of good fortune than those who do not.

So that everyone can clearly recognize how much more important skill [*virtù*] was than good fortune in the acquisition of the Roman empire we will discuss in the next chapter the character of the peoples they had to fight against, and will see just how determined they were to defend their liberty.

Chapter 2

On the peoples the Romans had to fight against, and on their determination in defending their liberty.

Nothing made it harder for the Romans to overcome the peoples immediately around them and, indeed, some in more distant territories, than the love many societies in those times had for liberty. They defended their liberty so stubbornly that they could never have been conquered except by a people of quite exceptional strength [*virtù*]. For there are many examples that show the dangers these societies were willing to endure in order to defend or recover their liberty; and show, too, the revenge they sought to exact on those who had taken their freedom from them.

One learns, too, from the study of history the losses both peoples and cities suffered as a result of their enslavement. While at the present time there is only one geographical region where one can say there are free cities to be found,[36] in classical times there were numerous peoples in every region who lived in complete liberty. One sees how, in the times we are discussing at the moment in Italy there were nothing but free peoples from the Appennines, which now mark the boundary between Tuscany and Lombardy, right down to the southern tip: the Tuscans, the Romans, the Samnites, and many other societies which lived in that section of the peninsula. Nor is there any report of there being any kings other than those who ruled in Rome, plus Porsenna, King of Tuscany—history does not record how many successors he had. But it is evident that when the Romans went to war with Veii, Tuscany was free. Indeed, the Tuscans were so enamored of liberty and so hated the title of king, that, when the inhabitants of Veii, who had appointed a king to take charge of their defense, asked them for help in resisting the Romans, they decided, after much debate, not to come to their assistance. They argued that, so long as they obeyed a king, there was no point in defending the freedom of people who had already given their freedom away.

It is easy to understand how a people acquires such a love of political freedom, for we see by experience that city-states have never been successful, either in expanding their territory or in accumulating wealth, except when they have been free. And really one is bound to be astonished if one considers the extraordinary accumulation of power and wealth in the hands of Athens in the hundred years that followed her freeing herself from the tyranny of Pisistratus.[37] But it is even more breathtaking to consider the astonishing success of Rome once she had freed herself from her kings. It is easy to work out why, for cities become great by pursuing, not the interests of private individuals, but the interests of the community as a whole. And there is no doubt the public interest is never a guiding principle except in republics. There, everything that furthers the common good is carried out, even if one or two private individuals suffer by it. The vast majority have interests that coincide with the public interest, and so they are able to pursue it, even in face of the resistance of the small minority who suffer by it. But the opposite occurs when a city is under the rule of one man, for usually what serves his interests hurts the city, and what would benefit the city is contrary to his interests.

The result is that as soon as a tyranny is established in a city where once there has been political freedom, the least bad outcome for the inhabitants is that their city ceases to make progress and stops accumulating either power or wealth; but usually, indeed nearly always, they begin to lose what they have won. If by chance it were a competent [*virtuoso*] tyrant who took power, who had the courage and military strength [*virtù*] to extend the territory under his control, still his society would not benefit at all from his achievements. He would be the only beneficiary. For he would not be able to reward any of his citizens who are strong and good. He must keep such men in servitude for fear they might be a threat to him. Nor can he make the cities he conquers subordinate to his home city or have them pay tribute to it, for if he makes his own city strong he endangers himself. It is in his interest to keep his state divided into distinct territories and to ensure each city and each province

36. [Germany.]

37. [510 B.C.]

answers to him directly. So, naturally, he is the only one who benefits from his conquests, while his homeland is no better off. If you want to see my opinion confirmed and to read numerous arguments in support of it, read the treatise Xenophon wrote *On Tyranny*.

Thus, it is not at all surprising that in classical times peoples hunted down tyrants with such bitterness and were so enamored of political freedom, and that the very idea of liberty was held in such respect among them. See, for example, what happened when Hieronymus, the nephew of Hiero of Syracuse, was killed in the city of Syracuse.[38] News of his death reached his army, which was not far away. At first they began to form a mob, seizing weapons to go to kill his murderers; but, when they heard that in Syracuse people were crying out "Liberty!," the word itself was enough to mesmerize them, and at once they quieted down, put aside their anger against the tyrannicides, and began to ask themselves how one could institutionalize political freedom in their city.

Again, it is not at all surprising that peoples pursued extraordinary vendettas against individuals who had taken their liberty from them. There are plenty of examples of this. I intend to refer only to one case that happened in Corcyra, a Greek city, at the time of the Peloponnesian War.[39] Greece was divided between two alliances, one of which was led by the Athenians, the other by the Spartans. The result was that in many cities where there were already internal divisions one faction allied itself with the Spartans, the other with the Athenians. In Corcyra the nobles got the upper hand and deprived the populace of their liberty. The popular party, thanks to Athenian assistance, took back control and seized all the nobles, locking them up in a prison big enough to hold them all. From there they took them out in groups of eight or ten at a time, pretending they had been sentenced to exile in different places, and tortured them to death in the public view. When those who were still alive realized what was happening, they decided to do their best to escape such an ignominious death. Arming themselves with whatever they could find, they fought with those who wanted to enter the prison, defending the gateway against them. The populace, hearing the noise of the struggle, came running; they wrecked the upper floors of the building and buried their captives under the rubble. Many other similar events, both horrible and remarkable, took place in Greece. They show people go to greater lengths to take revenge on those who have taken their liberty from them than on those who have merely tried to do so.

You may wonder why, in those classical times, peoples were more in love with liberty than they are now. I think the reason is the same as why men in our day are less strong. In my view, both result from the difference between our upbringing and that of classical times, which is rooted in the difference between our religion and theirs. Because our religion has taught us the truth and the right way to salvation, it makes us less concerned with our reputation in this world. The pagans, on the other hand, were much more concerned with reputation and regarded it as the highest good, with the result their deeds were more savage. There are lots of their institutions that could serve as indications of this—one might begin with a comparison between the magnificence of their religious ceremonies and the simplicity of ours. Ours make a show of refinement rather than magnificence and include no actions that require savagery or courage. Their rituals were full of pomp and ceremony, but in addition they sacrificed numerous animals in ceremonies full of blood and savagery. These were cruel rites, and from them the worshipers learned to be cruel men.

Moreover, classical religion only deified men who had already been heaped with worldly glories, men such as generals of armies and rulers of states. Our religion, by contrast, glorifies men who are humble and contemplative, rather than those who do great deeds. In fact, it regards humility, self-abasement, and contempt for worldly goods as the supreme virtues, while classical religion valorized boldness of spirit, strength of body, and all the other qualities that make men redoubtable. It is true our religion requires that you be strong, but it wants you to demonstrate your strength by undergoing suffering without complaint, rather than by overcoming resistance. This set of values, it would seem, has turned the men of our own

38. [Hieronymus was murdered in 215 B.C. after being in power for a year.]

39. [In 427 B.C. Machiavelli's source is Thucydides, bk. 4, chs. 46–48.]

day into weaklings and left them unable to defend themselves against the ravages of the wicked. The wicked have no difficulty in handling their fellow men, for they know the average individual wants rather to endure their blows than to strike back, for he hopes to go to heaven.

Although it seems we have all been made effeminate, and God himself allows injustice to flourish, it is of course the fault of the sinful nature of mankind, which has caused them to interpret the teachings of our religion as suits their lazy temperament and not as brave men would have done [*non secondo la virtù*]. For if they had taken into account the fact that our religion allows us to praise and defend our homeland, they would have realized that if we are religious we ought to love and honor our country and to prepare ourselves to be the sort of people who will be capable of defending it. The upbringing we get, and these false interpretations of our religion, have the consequence that there are not so many republics to be found in the world as there were in classical times; nor, it follows, does one find in the peoples of our day as much love of liberty as there was then.

Another, and perhaps better, explanation is that the strength and military might of the Roman empire destroyed all the republics and all the free cities. And although that empire later collapsed, the cities within it were not able to reconstruct political freedom or rebuild institutions that would foster liberty, except in a very few places. Whatever the real cause, the Romans, no matter where they went, found republics allied together, armed to the teeth, and determined to defend their freedom to the end. Which shows that the Roman people, had they not been of exceptional and extreme strength [*virtù*], would never have been able to defeat them.

I want to give one example among them all and will confine myself to the case of the Samnites. It seems astonishing, but they were so powerful and so effective on the battlefield, that they could, as Livy admits, resist the Romans right down to the time of the consul Papirius Cursor,[40] son of the first Papirius, that is, for a period of forty-six years, despite having been defeated on the battlefield again and again, having had their crops destroyed repeatedly, and having their people massacred in their homes. Especially when one sees that their territory, where there were once so many cities and such a dense population, is now almost uninhabited, while in those days the people were so strong and so well organized it would have been impossible to overcome them, had they not been attacked by troops with the strength [*virtù*] of the Romans.

It is easy to establish where the organization they had then came from, and why we are now disorganized. For it is all the result of the fact that in those days they lived as free men, while now we live as slaves. For all the lands and territories, wherever they may be, that live in freedom experience, as I have already said, immense benefits. There you see denser populations, for men are freer to enter into marriage and keener to do so. People are happy to engender children if they think they will be able to feed them and do not fear their family wealth will be confiscated from them. They are happier if they know they will not only be born free, not slaves, but, if they have the right qualities [*virtù*], they will be able to grow up to share in government. There, people see wealth steadily accumulate, both wealth from agriculture and wealth from industry and commerce. For each person tries hard to build up savings and pile up goods if he believes he will have a chance to enjoy what he has acquired. As a result, men are eager to pursue both private and public benefits, and both types of interest are advanced extraordinarily quickly.

The opposite of all this happens in those countries where the people are enslaved. Then their traditional standard of living diminishes in proportion to the severity of their enslavement. Of all harsh enslavements, the harshest is to be enslaved to a republic: in the first place, because republics are more durable, and you have less hope of escaping from their control; in the second, because the objective of a republic is to weaken and consume all other communities in order to strengthen its own. This is not the objective of an individual ruler who forces you to submit to him, unless he is a barbarian, someone who lays waste the countryside and destroys civilized urban life. Oriental rulers act like this. But if he has normal human sentiments, then in most cases he loves all the cities subjected to him equally and leaves them

40. [298 B.C.]

with their commerce intact and with by far the greater part of their ancient institutions, so that if they cannot advance as they could while they were free, they are not ruined because they are enslaved. Here I am talking about the enslavement cities enter into when they are subjected to a foreign ruler, for I have already discussed above the case of cities subjected to one of their own citizens.

If you think about everything I have said, you will not be astonished at the power the Samnites had when they were free, or at the feeble state they were reduced to when they were enslaved. Livy testifies to this at several points, and particularly in his account of the invasion of Hannibal, where he reports the Samnites were being oppressed by a Roman legion based in Nola. They sent ambassadors to Hannibal to ask him to come to their assistance.[41] During their speech they said they had fought against the Romans for a hundred years, relying on their own soldiers and their own commanders. Many times they had stood firm against two consular armies commanded by both consuls; but now they were reduced to such a low condition they could scarcely defend themselves, even against the insignificant Roman legion that was in Nola.

Chapter 20

On the risks a ruler or a republic runs by using auxiliary or mercenary troops.

If I had not discussed at length in another book of mine how useless mercenary and auxiliary troops are, and how necessary it is to have an army of one's own subjects,[42] I would discuss the matter in more detail in this chapter than I will do. But since I have talked in detail about it elsewhere I will be brief here. I did not think, however, I could completely omit the question, having found so many instances of the use of auxiliary troops in Livy. Let me explain that auxiliary troops are those another ruler or republic lends to you, while he provides their commanding officers and their pay. Turning to the text of Livy, I note that the Romans, on two separate occasions, defeated Samnite armies with their own, which they had sent to help the Capuans.[43] By this assistance they put an end to Samnite aggression against the Capuans. They wanted to withdraw their troops and bring them back to Rome, and were concerned that the Capuans, without an army to defend them, would once again be attacked and defeated by the Samnites. So they left two legions behind in the territory of Capua to defend them. These legions, with time on their hands, began to enjoy living a life of obedience to the senate. It occurred to them that they could take up their arms and seize control of the territory they had already, through their courage and skill [*virtù*], defended. They felt the inhabitants were not worthy to own the property they had been incapable of protecting. Realizing what was happening, Rome took the necessary steps, and in the chapter on conspiracies I will discuss what happened in detail.

For now I want to repeat that, of all the types of soldier, auxiliaries are the greatest liability. For the ruler or the republic who uses them to fight on his side has no control over them. Only the authorities in their homeland can control them. For auxiliary soldiers, as I said, are troops sent to you by another ruler. He supplies their commanders and pays their wages, and it is his standard they fight under. An example is the army we have been discussing that the Romans sent to Capua. Such soldiers, if they win the war, usually plunder impartially those they were fighting for and those they were fighting against; they do so, sometimes because the ruler who has sent them has evil intentions, sometimes because they have their own plans. The Romans had no intention of breaking the alliance and the agreements they had made with the Capuans; nevertheless, the Roman troops thought it would be so easy to crush them they began to think of seizing their land from them and establishing their own government.

One could give plenty of other examples like this; but I want to make do with this one, and with the example of the inhabitants of Rhegium.[44] They had

41. [215 B.C. Livy, bk. 23, ch. 42.]

42. [*The Prince*, ch. twelve.]

43. [Livy, bk. 7, chs. 32–41. The battles were in 443–42 B.C.]

44. [Polybius, bk. 1, ch. 7, in 279 B.C.]

their lives and their land taken from them by a Roman legion that had been sent to protect them. So a ruler (or a republic) ought to do anything rather than resort to bringing auxiliary troops onto his territory to fight in his defense in circumstances where he will be completely dependent on them. Any agreement, any treaty, no matter how harsh, that you can reach with the enemy will be more favorable to you than such a policy. If you study history carefully and analyze contemporary events, you will find that for every occasion on which such a policy has paid off there have been innumerable occasions when it has failed. A monarchy or a republic that is keen to expand cannot hope for a better opportunity to occupy a city or a region than to receive a request to send one of its armies to defend it. While someone who is so keen to acquire new territory that he calls on such assistance, not merely to defend himself, but to attack someone else, is trying to acquire territory he cannot hope to hold, that can easily be taken from him by the ally that acquires it for him.

Yet men are so eaten up with ambition that in their eagerness to get something they want here and now, they do not pause to think about the evil consequences they are storing up for themselves in the not-too-distant future. Neither do they pay attention to the examples provided by ancient history on this subject and on the others discussed in this book; for if they paid attention they would see that the more generous a state appears to be towards its neighbors, and the more it seems to have no interest at all in gobbling them up, the more likely it is to be successful in taking them over, as I will point out below in discussing the case of the Capuans.

Chapter 29

On how fortune blinds men's minds when she does not want them to thwart her plans.

If you will think sensibly about how people's lives are shaped, you will see that often events and accidents occur against which the heavens were determined we should have no protection. Seeing this sort of thing happened to the Romans, who were so skillful [*virtù*], pious, and well-organized, it is not surprising that it happens much more often to cities or regions who lack these advantages. Because this subject is a rather good one if one wants to show the influence of the heavens in human affairs, Livy discusses it at length and most eloquently.[45]

He says that, because the heavens had some reason for wanting the Romans to recognize their power, they first made those Fabii who had been sent as ambassadors to the French make mistakes, with the result that their efforts served to incite the French to make war against the Romans, and then they ensured the Romans fell way below their normal standards when it came to making preparations for war. Fate had ensured that Camillus, who would have been able to handle such a difficult situation single-handedly, but for whose abilities there was no substitute, had been banished to Ardea. When the French began to march on Rome, the Romans, who had often appointed a dictator when faced with attacks by the Volsci and other hostile neighbors, failed to appoint one to deal with the French. Moreover, when it came to choosing soldiers, they chose poorly and without making any real effort. They were so slow to muster that they were only just in time to block the French advance where it had to cross the river Allia, a mere ten miles from Rome. There the tribunes pitched camp without taking any of the normal precautions. They did not reconnoiter the site, nor did they surround the camp with a ditch and palisade. In fact, they did not employ any precautions, either natural or supernatural. When it came to drawing up the battle lines they spread the ranks out so they were thin and weak. Neither soldiers nor officers lived up to the standards of the Roman army. The battle itself was bloodless, for the Romans fled before they were attacked, the bulk of the army making for Veii, while the rest withdrew to Rome.[46] When they arrived in Rome they did not even stop by their houses but made straight for the Capitol, with the result the senate did not give any thought to defending the city, did not even bother to close the gates, but some of them fled, and others went with the rest into the

45. [Livy, bk. 5, chs. 37–38.]
46. [390 B.C.]

Capitol. However, when it came to defending the Capitol, they finally began to get organized. They did not hamper the defense by admitting people who would be useless, while they stockpiled all the grain they could collect so they could withstand a siege. Of the vast numbers of those who were useless—the old, women, and children—the majority fled into the surrounding countryside, while the rest remained in Rome at the mercy of the French.

Anyone who read about all the Romans had achieved over the preceding years and then came to read about these events, would be quite incapable of believing these were the same people. When Livy has described this whole series of errors, he concludes with the remark: "So one can see the extent to which fortune will blind men's minds when she does not want them to deflect her onward momentum."[47] This conclusion is as true as could be. It follows that men who regularly encounter extreme adversity or have the habit of success deserve less praise or less blame than one might think. For usually you will find they have been led to either tragedy or triumph because the heavens have pushed them decisively either one way or the other, either making it easy or virtually impossible for them to be able to act effectively [*virtuosamente*].

One thing fortune does is select someone, when she wants him to accomplish great things, who will be sufficeintly bold and skillful [*virtù*] to recognize the opportunites she makes for him. In the same way, when she wants to bring about someone's destruction, she chooses a man who will help bring about his own undoing. If there is someone around who might get in her way, then she kills him, or deprives him of all the resources he would need to do any good. You can see this clearly in Livy's account. Fortune, in order to make Rome all the greater and build her up to the power she eventually attained, judged it necessary to give her a nasty shock (I will describe all that happened at length at the beginning of the next book), but did not want, at this point, to destroy her completely. That is why she had Camillus banished, but not killed; had Rome seized by the enemy, but not the Capitol; determined that the Romans did nothing right when it came to defending Rome, but did everything right when it came to defending the Capitol. So that Rome would fall to the enemy, she ensured the bulk of the forces that had been defeated at the Allia would make for Veii, thus destroying any opportunity of defending the city. But in bringing this about she also laid the ground for Rome's liberation. A complete Roman army stood ready at Veii, and Camillus was nearby at Ardea. So they were able to make a determined effort to liberate their homeland under the command of a general whose reputation was not tarnished by defeat but was unblemished.

Perhaps I should add, in support of what I have said, an example from modern history; but I do not think it necessary, for this one example should be sufficient to satisfy anyone, and so I will move on. But I want to repeat that this is absolutely true, and all history testifies to it. Men can help fortune along, but they cannot resist it; they can swim with the tide, but they can never make headway against it. Of course, they should never give up, for they can never know what fortune has in mind. Her path is often crooked, her route obscure. So there is always reason to hope, and if one has hope one will never give up, no matter how hostile fortune may be, no matter how dreadful the situation in which one finds oneself.

BOOK III

Chapter 1[48]

On how, if you want a [political or religious] movement or a state to survive for long you must repeatedly bring it back to its founding principles.

It is certainly true that everything in the world has a natural life expectancy. But usually creatures live out the full cycle the heavens have determined for them only if they do not abuse their bodies, but keep them in such good shape they either remain unchanged, or if they change it is to get healthier, not weaker. Now my subject is collective bodies, such as republics,

47. [Livy, bk. 5, ch. 37.]

48. [This chapter serves as preface to Book Three.]

political parties, and religious sects, and my claim is that those changes are healthy that bring them back to their founding principles. Consequently, the best constructed organizations, those that will live longest, are those that are organized in such a way they can be frequently reformed; it amounts to the same thing if, for some external reason independent of their structure, reform is thrust upon them. It is clearer than daylight that if organizations are not reformed they cannot survive.

The way to reform an organization is, as I just said, to bring it back to its founding principles. For all political and religious movements, all republics and monarchies must have some good in them at the start. Otherwise, they would not be able to start out with a favorable reputation, nor would they be able to make progress in the early days. But as time goes by, that original goodness becomes corrupted, and, unless something happens that brings them back to first principles, corruption inevitably destroys the organization. Medical doctors say, speaking of the human body, "Everyday it takes in something that, in the end, requires treatment."

This return to founding principles, in the case of states, occurs either through some external accident or through domestic wisdom. As for the first, you can see it was necessary for Rome to fall to the French[49] if she was to have a hope of being reborn; being reborn, she acquired new strength and new skill [*virtù*], committing herself once again to respect for religion and justice, which, in the old Rome, had begun to be corrupted. This is very evident in Livy's history, when he points out that when they marched out with an army against the French and when they created tribunes with consular authority they did not perform any religious ceremonies. Even more strikingly, not only did they not punish the three Fabii who, contrary to the law of nations, had attacked the French, but they appointed them tribunes. One can reasonably presume the other sound laws that had been introduced by Romulus and by Rome's other wise rulers were increasingly treated with less respect than was reasonable and, indeed, necessary if Rome was to preserve political freedom.

Then this shock came from the outside so that all the institutions of the city could be renewed. It was made evident to the people that it was not only necessary to uphold religion and justice, but also to have respect for good citizens and to place more value on their judgment [*virtù*] than on the interests they felt they would have to sacrifice if they adopted their policies. And this is, indeed, exactly what happened, for as soon as Rome recovered, they renewed all her old religious ordinances; punished the Fabii for beginning a conflict contrary to the law of nations; and moreover held the judgment [*virtù*] and goodness of Camillus in such esteem the senate and everyone else put their jealousy to one side and entrusted to him the leadership of the republic.

So it is necessary, as I have said, that men who live together in any sort of institution regularly take stock of themselves, either as a result of external shocks or of internal factors. As far as this second type of reform is concerned, it best arises either as a result of a legal requirement that the members of an institution frequently take stock, or because one good man appears among them and, by his own example and his skillful [*virtuose*] policies, has the same effect as such a law. So this improvement takes place in a state, either because of the skill [*virtù*] of a man, or because of the effect [*virtù*] of a law.

As far as legal authorities are concerned, the institutions that drew the Roman republic back to its first principles were the tribunes of the people, the censors, together with all those laws that were a barrier to the ambition and the insolence of men. Such laws and institutions have to be given life through the will power [*virtù*] of an individual citizen who determinedly sets out to enforce the laws despite the powerful opposition of those who seek to ignore them. Among such cases of the laws' being enforced, prior to the sack of Rome by the French, one may note the death of the sons of Brutus, the death of the ten citizens, and that of Maelius the corn dealer.[50] After the sack of Rome, there is the death of Manlius Capitolinus, the death of the son of Manlius Torquatus, the prosecution brought by Papirius Cursor against Fabius, his commander of cavalry, and the charges

49. [In 390 B.C.]

50. [Respectively 509 B.C.; 449 B.C. (in fact the Ten were only exiled); 440 B.C.]

brought against the Scipios.[51] These cases involved going to extremes and caught people's attention. Whenever such a case occurred, it made men take stock; and as they became less common there was more opportunity for men to become corrupt, and reform became accompanied by ever greater danger and ever increasing conflict. For between two such dramatic legal decisions no more than ten years ought to go by. If the gap is longer men begin to develop bad habits and to break the laws; and if nothing happens to remind them of the penalties and to reawaken their sense of fear, there are soon so many lawbreakers springing up all over the place that it is no longer possible to punish them without endangering stability.

Those who were in charge of the Florentine state from 1434 to 1494[52] used to say, when discussing this subject, that it was necessary to retake power every five years, otherwise power would slip away from them. What they meant by "retaking power" was inspiring the same fear and terror in their subjects they had inspired when they first came to power, when they had set out to crush those who had acted badly by the standards of the new system of government. But as the memory of that clampdown faded, people began to be emboldened to attempt innovations and to speak ill of their rulers. So it was necessary to provide a remedy by bringing matters back to first principles.

This reform of governments according to their first principles is sometimes the result of the simple virtue [*virtù*] of one man, without being based on any law that inspires him to act rigorously; such men are so respected and admired that good men want to imitate them, and bad men are ashamed to live according to principles at odds with theirs. The individuals in Roman history who are notable for having had such good effects are Horatius Cocles, Scaevola, Fabricius, the two Decii, Regulus Attilius, along with a few others. By their remarkable and virtuous [*virtuosi*] examples they had almost the same effects on their fellow citizens as good laws and good institutions had. If the individual instances of law enforcement I have mentioned, together with the examples provided by admirable individuals, had occurred at least every ten years in Rome, then it would certainly have been the case that Rome would never have become corrupt. But as both punishments and role models became less frequent, corruption began to spread. After Marcus Regulus there is not a single exemplary individual to be found. It is true the two Catos came along later, but there was such a long gap between Regulus and the first Cato, and then between the first and the second, and they were such isolated instances, that they could not by their own good example have any good effects.[53] This is particularly true of the second Cato, who found the city very generally corrupted and could not by his own example improve the behavior of his fellow citizens. This is all I need to say about republics.

But we should consider movements. We can see similar reforms are necessary if we take the example of our own religion. If this had not been brought back to first principles by St. Francis and St. Dominic it would have completely died away.[54] They, by living lives of poverty and imitating the life of Christ, renewed religion in the minds of men at a time when they had lost all commitment to it. The new orders they founded were so effective that it is only because of them that the dishonesty of the prelates and of the hierarchy does not destroy the church, for the friars continue to live in poverty and have such influence with the people as a result of hearing confession and preaching that they persuade them it is wrong to criticize evil, and it is right quietly to obey the church authorities, and, if they make mistakes, to leave their punishment to God. And so the clergy do as much harm as they can, for they do not fear a punishment they do not see and in which they do not believe. Thus, this reform movement preserved, and continues to preserve, the Christian religion.

Kingdoms, too, need to renew themselves and to reform their laws so they accord with their original principles. One can see what a good effect this policy has in the Kingdom of France. That kingdom lives

51. [Respectively 384 B.C.; 340 B.C.; 326 B.C.; and 189 B.C., the two being Scipio Africanus and his brother Lucius.]

52. [The Medici.]

53. [Regulus died in 250 B.C., Cato the Elder in 149 B.C., Cato the Younger in 46 B.C.]

54. [St. Francis founded the Franciscans in 1210; St. Dominic the Dominicans in 1216.]

according to its laws and respects its institutions more than any other kingdom. These laws and institutions are upheld by the *parlements*, and especially the *Parlement* of Paris. They give them new life every time they enforce them against a prince of the kingdom or condemn the king in one of their judgments. So far, the *parlements* have maintained their role by being determined enforcers of the laws whenever the nobility break them; but should they ever leave first one and then more and more noblemen unpunished, the result would certainly be that they would either have to put things right by provoking a major crisis, or the whole system of government would break down.

One can therefore conclude that there is nothing more essential in any form of communal life, whether of a movement, a kingdom, or a republic, than to restore to it the reputation it had when it was first founded, and to strive to ensure there are either good institutions or good men who can bring this about, so that one is not dependent on having some external intervention before reform can occur. For although an external intervention is sometimes the best remedy, as it proved for Rome, it is so dangerous there are no circumstances in which one should hope for it.

In order to show you how the deeds of individuals made Rome great and had numerous good consequences for that city, I will turn to an account of individual leaders and a commentary on their actions. This third and final section of my commentary on the first ten books of Livy will deal with this subject. And although the kings of Rome did great and remarkable things, nevertheless, since history discusses them at length, I will leave them to one side and will say nothing more about them, except for mentioning one or two things they did in pursuit of their own private interests. I will begin, instead, by talking about Brutus, the father of Roman liberty.

Chapter 9

On how you have to change with the times, if you want always to have good fortune.

I have pointed out several times that whether men have good or bad fortune depends on whether they adjust their style of behavior to suit the times. It is evident that some men set about doing what they want impetuously, while others act cautiously and carefully. Both styles are mistaken, for in both one behaves inappropriately, and deviates from the best path. But, as I have said, the mistake is less important and you will still encounter good fortune if the times are suited to your style and if you always act as nature urges you.

Everyone knows how Fabius Maximus proceeded cautiously and carefully, keeping his army out of battle and avoiding any display of Roman audacity.[55] It was his good fortune that his style corresponded well to the needs of the time. For Hannibal was a young man when he marched into Italy, things were going his way, and he had already defeated the Roman armies twice. Since Rome had lost most of her best soldiers and was demoralized, she was extremely lucky to acquire a general whose delay and caution slowed the enemy down. Nor could Fabius have found himself in circumstances better suited to his style, with the result that he was covered in glory. It is evident Fabius acted in this way because it came naturally to him, not because he had made a conscious choice. For when Scipio wanted to invade Africa with the Roman armies in order to bring the war to an end, Fabius was strongly opposed to his plan.[56] He could not break with his past habits and adopt a different style. If it had been left to him, Hannibal would still be in Italy, for he could not recognize that circumstances had changed, and he needed to change his style of warfare. If Fabius had been King of Rome he might well have lost the war, for he would not have known to change his style of behavior as the times changed. But he was born in a republic, where numerous citizens, all with different temperaments, had a say. So, just as they had Fabius to lead them when he was the best man to avoid defeat, so they had Scipio when he was the best man to ensure victory.

One can see a republic should survive longer and should more frequently have fortune on its side, than a monarchy, for a republic can adapt itself more easily to changing circumstances because it can call on citizens of differing characters. Someone who is used

55. [After the defeat at Lake Trasimene in 217 B.C.]
56. [In 205 B.C.]

to proceeding in a particular way will never change, as I have already pointed out, so it is inevitable that when the times change and become unsuitable for his particular style, he will be ruined.

Piero Soderini, as I have already mentioned on several occasions, always proceeded with kindness and patience. Both he and his country did well while the times favored his style of behavior; but when the circumstances were such that he needed to stop being patient and kind, he did not know how to do it; and he and his country were destroyed. Julius II, during the whole time he was pope, proceeded impatiently and always acted in the heat of the moment; and, since the times suited such behavior, he succeeded in all his undertakings. But in other circumstances, when different policies were needed, he would inevitably have brought about his own downfall, for he would not have changed his style of behavior or pursued different policies.

There are two reasons why we are unable to change when we need to: In the first place, we cannot help being what nature has made us; in the second, if one style of behavior has worked well for us in the past, we cannot be persuaded we would be better off acting differently. The consequence is that one's fortune changes, for the times change, and one's behavior does not. Another consequence is that cities are destroyed, for the institutions of a republic are never modified to suit changing circumstances, as I have pointed out at length already. Change comes too late because it is too difficult to accomplish. In order to bring it about the whole society must feel endangered; it is not enough for just one individual to change his methods.

Since I have mentioned Fabius Maximus, who kept Hannibal at bay, I think I will discuss in the next chapter whether a general who is determined to engage the enemy in battle can be prevented from doing so by his opposite number.

THOMAS HOBBES

Thomas Hobbes (1588–1679) was born in Malmesbury on April 5, 1588, the son of a poor minor clergyman who abandoned his family when Hobbes was sixteen. According to Hobbes, his mother went into labor when she heard that the Spanish Armada was approaching, so that, as he put it, "fear and I were born twins together." This familiar tale indicates how Hobbes himself appreciated the central conjunction of mortal fear and human nature in his own thinking and in his life as well.

After excelling in classical languages and poetry as a youngster and studying at Oxford, Hobbes took a position in the household of William Lord Cavendish, the Earl of Devonshire. There and in similar positions throughout his life he served as secretary, tutor, and advisor. This was a common vocation for intellectuals in seventeenth-century England; John Locke was to play a similar role later in the century. From 1610 to 1615, Hobbes accompanied the Lord's son on the Grand Tour of Europe; he returned to the Continent in 1634–36 with Cavendish's grandson. On the early tour, Hobbes visited Venice and became acquainted with the tradition of classical rhetoric; later he would draw on this background as he considered the role of rhetoric in political argument. On the latter tour, he met the leading philosophers of the day, from Galileo to Pierre Gassendi and Marin Mersenne, who put him in touch with René Descartes, then in the Netherlands. By then Hobbes had already been captivated by the rigor of geometry, to which he added a fascination with the new science. During this period, then, Hobbes's interests turned from classical literature to contemporary science and its applications, especially optics and ballistics. In 1629 he had produced his first publication, a translation of Thucydides, whom he revered for his sense of prudence and his sensitivity to the dangers of democracy. By the end of 1640 his scientific thinking had matured and joined with his political interests, resulting in a draft of a large, systematic work which he called the *Elements of Law, Natural and Political*. Among other things, the *Elements* is a work that grounded politics in a conception of natural law derived in part from the Dutch political theorist Hugo Grotius, whose great work *The Laws of War and Peace* had been published in 1625.

In 1640 Charles I was forced to call two Parliaments, and events occurred that eventually would lead to the English Civil War. Hobbes's associations were with the King and his ministers, and hence, as tensions escalated, he feared for his life. In November he fled to France and remained there until 1651–52. In 1642 Hobbes published in Latin a reworked version of the political section of the *Elements* under the title *De Cive* (*Of the Citizen*), a work that was issued in England in an unauthorized translation in 1651, at about the same time that his first English and most famous work, *Leviathan*, appeared. The earlier sections of the *Elements*, *De Corpore* (*Of Matter*) and *De Homine* (*Of Man*), were not published until 1655 and 1658, respectively.

Leviathan has been influential far beyond the historical context of its writing and publication. In its first two parts Hobbes sketches his physics and psychology, outlines his famous account of the state of nature and its laws, develops his version of the social contract, and argues for an undivided sovereignty with all its functions, agencies, and prerogatives. These parts constitute one of the founding texts of modern moral and political theory.

But *Leviathan* does not end here. In parts three and four, Hobbes turns to issues of immediate historical concern. He attacks Roman Catholicism, Aristotelianism in the universities and in general intellectual culture, and the Anglican Church, while defending Erastianism, the doctrine of the political control of religion, and religious Independency, the movement that advocated the independence and control of individual congregations against the claims of a strong, central episcopacy. At the same time, Hobbes's materialism, exhibited especially in part four, seemed to many to imply atheism. It is no wonder that, with the publication of

Leviathan, Hobbes gained the reputation of a materialist and atheist and came to be known as the "beast of Malmesbury."

With *Leviathan*'s publication in 1651, Hobbes returned to England and once again to the service of the Earl of Devonshire. For the remainder of his long life he played the role of a prominent intellectual and controversialist. In the 1650s he confronted John Wallis, an important Presbyterian and mathematician, on a variety of religious and scientific matters, and in the 1660s he debated Robert Boyle on issues of physics and experimentation. During the Restoration, moreover, Hobbes was the subject of severe criticism for his defense of Independency and his abandonment of the Anglicanism renewed under Charles II. His final years, the decades of the 1660s and 1670s, were years of threat and fear, as his religious opponents massed against him. But before they could overtake him, illness did; Hobbes died on December 3, 1679, having found, as he said, a hole whereby to leave the world.

A Review, and Conclusion

The text of *Leviathan* reprinted here features modernized spelling and punctuation. Reprinted by arrangement with InteLex, Inc.

To My Most Honor'd Friend Mr. Francis Godolphin, Of Godolphin

Honor'd Sir,

Your most worthy brother, Mr. *Sidney Godolphin*, when he lived, was pleased to think my studies something, and otherwise to oblige me, as you

know, with real testimonies of his good opinion, great in themselves, and the greater for the worthiness of his person. For there is not any virtue that disposeth a man, either to the service of God or to the service of his country, to civil society or private friendship, that did not manifestly appear in his conversation, not as acquired by necessity or affected upon occasion, but inherent, and shining in a generous constitution of his nature. Therefore, in honour and gratitude to him, and with devotion to yourself, I humbly dedicate unto you this my discourse of Commonwealth.

I know not how the world will receive it, nor how it may reflect on those that shall seem to favour it. For in a way beset with those that contend, on one side for too great liberty, and on the other side for too much authority, 'tis hard to pass between the points of both unwounded. But yet, methinks, the endeavour to advance the civil power, should not be by the civil power condemned; nor private men, by reprehending it, declare they think that power too great. Besides, I speak not of the men, but (in the abstract) of the seat of power (like to those simple and unpartial creatures in the Roman Capitol, that with their noise defended those within it, not because they were they, but there), offending none, I think, but those without, or such within (if there be any such) as favour them.

That which perhaps may most offend are certain texts of Holy Scripture, alleged by me to other purpose than ordinarily they use to be by others. But I have done it with due submission, and also (in order to my subject) necessarily; for they are the outworks of the enemy, from whence they impugn the civil power. If notwithstanding this, you find my labour generally decried, you may be pleased to excuse yourself, and say, I am a man that love my own opinions, and think all true I say, that I honoured your brother, and honour you, and have presumed on that, to assume the title (without your knowledge) of being, as I am,

SIR,
Your most humble, and most obedient Servant,
THOMAS HOBBES.
Paris, April 15⁄25, 1651.

THE INTRODUCTION

Nature (the art whereby God hath made and governs the world) is by the *art* of man, as in many other things, so in this also imitated, that it can make an artificial animal. For seeing life is but a motion of limbs, the beginning whereof is in some principal part within; why may we not say, that all *automata* (engines that move themselves by springs and wheels as doth a watch) have an artificial life? For what is the *heart*, but a *spring*; and the *nerves*, but so many *strings*; and the *joints*, but so many *wheels*, giving motion to the whole body, such as was intended by the artificer? *Art* goes yet further, imitating that rational and most excellent work of nature, *man*. For by art is created that great LEVIATHAN called a COMMONWEALTH, or STATE, (in Latin CIVITAS) which is but an artificial man; though of greater stature and strength than the natural, for whose protection and defence it was intended; and in which, the *sovereignty* is an artificial *soul*, as giving life and motion to the whole body; the *magistrates*, and other *officers* of judicature and execution, artificial *joints*; *reward* and *punishment* (by which fastened to the seat of the sovereignty every joint and member is moved to perform his duty) are the *nerves*, that do the same in the body natural; the *wealth* and *riches* of all the particular members, are the *strength; salus populi* (the *people's safety*) its *business*; *counsellors*, by whom all things needful for it to know are suggested unto it, are the *memory*; *equity*, and *laws*, an artificial *reason* and *will; concord*, *health; sedition*, *sickness;* and *civil war*, *death*. Lastly, the *pacts* and *covenants*, by which the parts of this body politic were at first made, set together, and united, resemble that *fiat*, or the *let us make man*, pronounced by God in the creation.

To describe the nature of this artificial man, I will consider

First, the *matter* thereof, and the *artificer;* both which is *man*.

Secondly, *how*, and by what *covenants* it is made; what are the *rights* and just *power* or *authority* of a sovereign; and what it is that *preserveth* and *dissolveth* it.

Thirdly, what is a *Christian commonwealth*.

Lastly, what is the *kingdom of darkness*.

Concerning the first, there is a saying much usurped of late, that *wisdom* is acquired, not by reading of *books*, but of *men*. Consequently whereunto, those persons, that for the most part can give no other proof of being wise, take great delight to show what they think they have read in men, by uncharitable censures of one another behind their backs. But there is another saying not of late understood, by which they might learn truly to read one another, if they would take the pains; and that is, *nosce teipsum*, *read thyself*: which was not meant, as it is now used, to countenance, either the barbarous state of men in power, towards their inferiors; or to encourage men of low degree, to a saucy behaviour towards their betters; but to teach us, that for the similitude of the thoughts and passions of one man, to the thoughts and passions of another, whosoever looketh into himself, and considereth what he doth, when he does *think*, *opine*, *reason*, *hope*, *fear*, &c. and upon what grounds; he shall thereby read and know, what are the thoughts and passions of all other men upon the like occasions. I say the similitude of passions, which are the same in all men, *desire*, *fear*, *hope*, &c; not the similitude of the objects of the passions, which are the things *desired*, *feared*, *hoped*, &c: for these the constitution individual, and particular education, do so vary, and they are so easy to be kept from our knowledge, that the characters of man's heart, blotted and confounded as they are with dissembling, lying, counterfeiting, and erroneous doctrines, are legible only to him that searcheth hearts. And though by men's actions we do discover their design sometimes; yet to do it without comparing them with our own, and distinguishing all circumstances, by which the case may come to be altered, is to decypher without a key, and be for the most part deceived, by too much trust, or by too much diffidence; as he that reads, is himself a good or evil man.

But let one man read another by his actions never so perfectly, it serves him only with his acquaintance, which are but few. He that is to govern a whole nation, must read in himself, not this or that particular man; but mankind: which though it be hard to do, harder than to learn any language or science; yet when I shall have set down my own reading orderly, and perspicuously, the pains left another, will be only to consider, if he also find not the same in himself. For this kind of doctrine admitteth no other demonstration.

PART 1
OF MAN

Chapter 1

Of Sense

Concerning the thoughts of man, I will consider them first *singly*, and afterwards in *train*, or dependence upon one another. *Singly*, they are every one a *representation* or *appearance*, of some quality, or other accident of a body without us; which is commonly called an *object*. Which object worketh on the eyes, ears, and other parts of a man's body; and by diversity of working, produceth diversity of appearances.

The original of them all, is that which we call SENSE; (For there is no conception in a man's mind, which hath not at first, totally, or by parts, been begotten upon the organs of sense.) The rest are derived from that original.

To know the natural cause of sense, is not very necessary to the business now in hand; and I have elsewhere written of the same at large. Nevertheless, to fill each part of my present method, I will briefly deliver the same in this place.

The cause of sense, is the external body, or object, which presseth the organ proper to each sense, either immediately, as in the taste and touch; or mediately, as in seeing, hearing, and smelling: which pressure, by the mediation of nerves, and other strings and membranes of the body, continued inwards to the brain and heart, causeth there a resistance, or counter-pressure, or endeavour of the heart, to deliver it self: which endeavour, because *outward*, seemeth to be some matter without. And this *seeming*, or, *fancy*, is that which men call *sense*; and consisteth, as to the eye, in a *light*, or *colour figured*; to the ear, in a *sound*; to the nostril, in an *odour*; to the tongue and palate, in a *savour*; and to the rest of the body, in *heat*, *cold*, *hardness*, *softness*, and such other qualities as we discern by *feeling*. All which qualities called *sensible*, are in the object, that causeth them, but so many

several motions of the matter, by which it presseth our organs diversely. Neither in us that are pressed, are they any thing else, but divers motions; (for motion produceth nothing but motion.) But their appearance to us is fancy, the same waking, that dreaming. And as pressing, rubbing, or striking the eye, makes us fancy a light; and pressing the ear, produceth a din; so do the bodies also we see, or hear, produce the same by their strong, though unobserved action. For if those colours and sounds were in the bodies, or objects that cause them, they could not be severed from them, as by glasses, and in echoes by reflection, we see they are; where we know the thing we see, is in one place; the appearance in another. And though at some certain distance, the real and very object seem invested with the fancy it begets in us; yet still the object is one thing, the image or fancy is another. So that sense in all cases, is nothing else but original fancy, caused (as I have said) by the pressure, that is, by the motion, of external things upon our eyes, ears, and other organs thereunto ordained.

But the philosophy-schools, through all the universities of Christendom, grounded upon certain texts of *Aristotle*, teach another doctrine; and say, for the cause of *vision*, that the thing seen, sendeth forth on every side a *visible species* (in English) a *visible show*, *apparition*, or *aspect*, or *a being seen*; the receiving whereof into the eye, is *seeing*. And for the cause of *hearing*, that the thing heard, sendeth forth an *audible species*, that is, an *audible aspect*, or *audible being seen*; which entering at the ear, maketh *hearing*. Nay for the cause of *understanding* also, they say the thing understood, sendeth forth *intelligible species*, that is, an *intelligible being seen*; which coming into the understanding, makes us understand. I say not this, as disapproving the use of universities: but because I am to speak hereafter of their office in a commonwealth, I must let you see on all occasions by the way, what things would be amended in them; amongst which the frequency of insignificant speech is one.

Chapter 2

Of Imagination

That when a thing lies still, unless somewhat else stir it, it will lie still for ever, is a truth that no man doubts of. But that when a thing is in motion, it will eternally be in motion, unless somewhat else stay it, though the reason be the same, (namely, that nothing can change it self,) is not so easily assented to. For men measure, not only other men, but all other things, by themselves: and because they find themselves subject after motion to pain, and lassitude, think every thing else grows weary of motion, and seeks repose of its own accord; little considering, whether it be not some other motion, wherein that desire of rest they find in themselves, consisteth. From hence it is, that the schools say, heavy bodies fall downwards, out of an appetite to rest, and to conserve their nature in that place which is most proper for them; ascribing appetite and knowledge of what is good for their conservation, (which is more than man has) to things inanimate, absurdly.

When a body is once in motion, it moveth (unless something else hinder it) eternally; and whatsoever hindreth it, cannot in an instant, but in time, and by degrees quite extinguish it: And as we see in the water, though the wind cease, the waves give not over rolling for a long time after; so also it happeneth in that motion, which is made in the internal parts of a man, then, when he sees, dreams, &c. For after the object is removed, or the eye shut, we still retain an image of the thing seen, though more obscure than when we see it. And this is it, the Latins call *imagination*, from the image made in seeing; and apply the same, though improperly, to all the other senses. But the Greeks call it *fancy*; which signifies *appearance*, and is as proper to one sense, as to another. IMAGINATION therefore is nothing but *decaying sense*; and is found in men, and many other living creatures, as well sleeping, as waking.

The decay of sense in men waking, is not the decay of the motion made in sense; but an obscuring of it, in such manner as the light of the sun obscureth the light of the stars; which stars do no less exercise their virtue, by which they are visible, in the day, than in the night. But because amongst many strokes, which our eyes, ears, and other organs receive from external bodies, the predominant only is sensible; therefore the light of the sun being predominant, we are not affected with the action of the stars. And any object being removed from our eyes, though the impression it made in us remain; yet other objects more present succeeding, and working on us, the imagination of

the past is obscured, and made weak, as the voice of a man is in the noise of the day. From whence it followeth, that the longer the time is, after the sight or sense of any object, the weaker is the imagination. For the continual change of man's body destroys in time the parts which in sense were moved: so that distance of time, and of place, hath one and the same effect in us. For as at a great distance of place, that which we look at appears dim, and without distinction of the smaller parts; and as voices grow weak, and inarticulate: so also, after great distance of time, our imagination of the past is weak; and we lose (for example) of cities we have seen, many particular streets, and of actions, many particular circumstances. This *decaying sense*, when we would express the thing it self, (I mean *fancy* itself,) we call *imagination*, as I said before: but when we would express the *decay*, and signify that the sense is fading, old, and past, it is called *memory*. So that *imagination* and *memory* are but one thing, which for divers considerations hath divers names.

Much memory, or memory of many things, is called *experience*. Again, imagination being only of those things which have been formerly perceived by sense, either all at once, or by parts at several times; the former, (which is the imagining the whole object, as it was presented to the sense) is *simple imagination*; as when one imagineth a man, or horse, which he hath seen before. The other is *compounded*; as when from the sight of a man at one time, and of a horse at another, we conceive in our mind a Centaur. So when a man compoundeth the image of his own person, with the image of the actions of another man; as when a man imagines himself a *Hercules* or an *Alexander*, (which happeneth often to them that are much taken with reading of romances) it is a compound imagination, and properly but a fiction of the mind. There be also other imaginations that rise in men, (though waking) from the great impression made in sense: as from gazing upon the sun, the impression leaves an image of the sun before our eyes a long time after; and from being long and vehemently attent upon geometrical figures, a man shall in the dark, (though awake) have the images of lines and angles before his eyes: which kind of fancy hath no particular name; as being a thing that doth not commonly fall into men's discourse.

The imaginations of them that sleep are those we call *dreams*. And these also (as all other imaginations) have been before, either totally or by parcels in the sense. And because in sense, the brain and nerves, which are the necessary organs of sense, are so benumbed in sleep, as not easily to be moved by the action of external objects, there can happen in sleep no imagination; and therefore no dream, but what proceeds from the agitation of the inward parts of man's body; which inward parts, for the connexion they have with the brain, and other organs, when they be distempered, do keep the same in motion; whereby the imaginations there formerly made, appear as if a man were waking; saving that the organs of sense being now benumbed, so as there is no new object, which can master and obscure them with a more vigorous impression, a dream must needs be more clear, in this silence of sense, than are our waking thoughts. And hence it cometh to pass, that it is a hard matter, and by many thought impossible to distinguish exactly between sense and dreaming. For my part, when I consider that in dreams, I do not often, nor constantly think of the same persons, places, objects, and actions that I do waking; nor remember so long a train of coherent thoughts, dreaming, as at other times; and because waking I often observe the absurdity of dreams, but never dream of the absurdities of my waking thoughts; I am well satisfied, that being awake, I know I dream not; though when I dream I think myself awake.

And seeing dreams are caused by the distemper of some of the inward parts of the body; divers distempers must needs cause different dreams. And hence it is, that lying cold breedeth dreams of fear, and raiseth the thought and image of some fearful object (the motion from the brain to the inner parts, and from the inner parts to the brain being reciprocal;) and that as anger causeth heat in some parts of the body, when we are awake; so when we sleep the over heating of the same parts causeth anger, and raiseth up in the brain the imagination of an enemy. In the same manner, as natural kindness, when we are awake, causeth desire; and desire makes heat in certain other parts of the body; so also, too much heat in those parts, while we sleep, raiseth in the brain an imagination of some kindness shown. In sum, our dreams are the reverse of our waking imaginations; the motion when

we are awake, beginning at one end; and when we dream, at another.

The most difficult discerning of a man's dream, from his waking thoughts, is then, when by some accident we observe not that we have slept: which is easy to happen to a man full of fearful thoughts; and whose conscience is much troubled; and that sleepeth, without the circumstances, of going to bed, or putting off his clothes, as one that noddeth in a chair. For he that taketh pains, and industriously lays himself to sleep, in case any uncouth and exorbitant fancy come unto him, cannot easily think it other than a dream. We read of *Marcus Brutus*, (one that had his life given him by *Julius Caesar*, and was also his favourite, and notwithstanding murdered him), how at *Philippi*, the night before he gave battle to *Augustus Caesar*, he saw a fearful apparition, which is commonly related by historians as a vision; but considering the circumstances, one may easily judge to have been but a short dream. For sitting in his tent, pensive and troubled with the horror of his rash act, it was not hard for him, slumbering in the cold, to dream of that which most affrighted him; which fear, as by degrees it made him wake; so also it must needs make the apparition by degrees to vanish; and having no assurance that he slept, he could have no cause to think it a dream, or any thing but a vision. And this is no very rare accident; for even they that be perfectly awake, if they be timorous, and superstitious, possessed with fearful tales, and alone in the dark, are subject to the like fancies; and believe they see spirits and dead men's ghosts walking in churchyards; whereas it is either their fancy only, or else the knavery of such persons, as make use of such superstitious fear, to pass disguised in the night, to places they would not be known to haunt.

From this ignorance of how to distinguish dreams, and other strong fancies, from vision and sense, did arise the greatest part of the religion of the Gentiles in time past, that worshipped satyrs, fawns, nymphs, and the like; and now-a-days the opinion that rude people have of fairies, ghosts, and goblins, and of the power of witches. For as for witches, I think not that their witchcraft is any real power; but yet that they are justly punished, for the false belief they have, that they can do such mischief, joined with their purpose to do it if they can: their trade being nearer to a new religion than to a craft or science. And for fairies, and walking ghosts, the opinion of them has I think been on purpose, either taught, or not confuted, to keep in credit the use of exorcism, of crosses, of holy water, and other such inventions of ghostly men. Nevertheless, there is no doubt, but God can make unnatural apparitions: But that he does it so often, as men need to fear such things, more than they fear the stay, or change, of the course of nature, which he also can stay, and change, is no point of Christian faith. But evil men under pretext that God can do any thing, are so bold as to say any thing when it serves their turn, though they think it untrue; it is the part of a wise man, to believe them no further, than right reason makes that which they say, appear credible. If this superstitious fear of spirits were taken away, and with it, prognostics from dreams, false prophecies, and many other things depending thereon, by which, crafty ambitious persons abuse the simple people, men would be much more fitted than they are for civil obedience.

And this ought to be the work of the schools: but they rather nourish such doctrine. For (not knowing what imagination, or the senses are), what they receive, they teach: some saying, that imaginations rise of themselves, and have no cause; others, that they rise most commonly from the will; and that good thoughts are blown (inspired) into a man by God, and evil thoughts by the Devil; or that good thoughts are poured (infused) into a man by God, and evil ones by the Devil. Some say the senses receive the species of things, and deliver them to the common sense; and the common sense delivers them over to the fancy, and the fancy to the memory, and the memory to the judgment, like handing of things from one to another, with many words making nothing understood.

The imagination that is raised in man (or any other creature indued with the faculty of imagining) by words, or other voluntary signs, is that we generally call *understanding*; and is common to man and beast. For a dog by custom will understand the call, or the rating of his master; and so will many other beasts. That understanding which is peculiar to man, is the understanding not only his will, but his conceptions and thoughts, by the sequel and contexture of the names of things into affirmations, negations, and

other forms of speech; and of this kind of understanding I shall speak hereafter.

Chapter 3

Of the Consequence or Train of Imaginations

By *Consequence*, or TRAIN of thoughts, I understand that succession of one thought to another, which is called (to distinguish it from discourse in words) *mental discourse*.

When a man thinketh on any thing whatsoever, his next thought after, is not altogether so casual as it seems to be. Not every thought to every thought succeeds indifferently. But as we have no imagination, whereof we have not formerly had sense, in whole, or in parts; so we have no transition from one imagination to another, whereof we never had the like before in our senses. The reason whereof is this. All fancies are motions within us, relics of those made in the sense: and those motions that immediately succeeded one another in the sense, continue also together after sense: insomuch as the former coming again to take place, and be predominant, the latter followeth, by coherence of the matter moved, in such manner, as water upon a plain table is drawn which way any one part of it is guided by the finger. But because in sense, to one and the same thing perceived, sometimes one thing, sometimes another succeedeth, it comes to pass in time, that in the imagining of any thing, there is no certainty what we shall imagine next; only this is certain, it shall be something that succeeded the same before, at one time or another.

This train of thoughts, or mental discourse, is of two sorts. The first is *unguided, without design*, and inconstant; wherein there is no passionate thought, to govern and direct those that follow, to it self, as the end and scope of some desire, or other passion: in which case the thoughts are said to wander, and seem impertinent one to another, as in a dream. Such are commonly the thoughts of men, that are not only without company, but also without care of any thing; though even then their thoughts are as busy as at other times, but without harmony; as the sound which a lute out of tune would yield to any man; or in tune, to one that could not play. And yet in this wild ranging of the mind, a man may oft-times perceive the way of it, and the dependance of one thought upon another. For in a discourse of our present civil war, what could seem more impertinent, than to ask (as one did) what was the value of a Roman penny? Yet the coherence to me was manifest enough. For the thought of the war, introduced the thought of the delivering up the king to his enemies; the thought of that, brought in the thought of the delivering up of Christ; and that again the thought of the 30 pence, which was the price of that treason; and thence easily followed that malicious question, and all this in a moment of time; for thought is quick.

The second is more constant; as being *regulated* by some desire, and design. For the impression made by such things as we desire, or fear, is strong, and permanent, or, (if it cease for a time,) of quick return: so strong it is sometimes, as to hinder and break our sleep. From desire, ariseth the thought of some means we have seen produce the like of that which we aim at; and from the thought of that, the thought of means to that mean; and so continually, till we come to some beginning within our own power. And because the end, by the greatness of the impression, comes often to mind, in case our thoughts begin to wander, they are quickly again reduced into the way: which observed by one of the seven wise men, made him give men this precept, which is now worn out, *Respice finem*; that is to say, in all your actions, look often upon what you would have, as the thing that directs all your thoughts in the way to attain it.

The train of regulated thoughts is of two kinds; one, when of an effect imagined, we seek the causes, or means that produce it: and this is common to man and beast. The other is, when imagining any thing whatsoever, we seek all the possible effects, that can by it be produced; that is to say, we imagine what we can do with it, when we have it. Of which I have not at any time seen any sign, but in man only; for this is a curiosity hardly incident to the nature of any living creature that has no other passion but sensual, such as are hunger, thirst, lust, and anger. In sum, the discourse of the mind, when it is governed by design, is nothing but *seeking*, or the faculty of invention, which the Latins called *sagacitas*, and *solertia*; a hunting out of the causes, of some effect, present

or past; or of the effects, of some present or past cause. Sometimes a man seeks what he hath lost; and from that place, and time, wherein he misses it, his mind runs back, from place to place, and time to time, to find where, and when he had it; that is to say, to find some certain, and limited time and place, in which to begin a method of seeking. Again, from thence, his thoughts run over the same places and times, to find what action, or other occasion might make him lose it. This we call *remembrance*, or calling to mind: the Latins call it *reminiscentia*, as it were a *re-conning* of our former actions.

Sometimes a man knows a place determinate, within the compass whereof he is to seek; and then his thoughts run over all the parts thereof, in the same manner as one would sweep a room, to find a jewel; or as a spaniel ranges the field, till he find a scent; or as a man should run over the alphabet, to start a rhyme.

Sometime a man desires to know the event of an action; and then he thinketh of some like action past, and the events thereof one after another; supposing like events will follow like actions. As he that foresees what will become of a criminal, recons what he has seen follow on the like crime before; having this order of thoughts, the crime, the officer, the prison, the judge, and the gallows. Which kind of thoughts, is called *foresight*, and *prudence*, or *providence*; and sometimes *wisdom*; though such conjecture, through the difficulty of observing all circumstances, be very fallacious. But this is certain; by how much one man has more experience of things past, than another; by so much also he is more prudent, and his expectations the seldomer fail him. The *present* only has a being in nature; things *past* have a being in the memory only, but things *to come* have no being at all; the *future* being but a fiction of the mind, applying the sequels of actions past, to the actions that are present; which with most certainty is done by him that has most experience; but not with certainty enough. And though it be called prudence, when the event answereth our expectation; yet in its own nature, it is but presumption. For the foresight of things to come, which is providence, belongs only to him by whose will they are to come. From him only, and supernaturally, proceeds prophecy. The best prophet naturally is the best guesser; and the best guesser, he that is most versed and studied in the matters he guesses at: for he hath most *signs* to guess by.

A *sign* is the event antecedent of the consequent; and contrarily, the consequent of the antecedent, when the like consequences have been observed, before: and the oftener they have been observed, the less uncertain is the sign. And therefore he that has most experience in any kind of business, has most signs, whereby to guess at the future time; and consequently is the most prudent: and so much more prudent than he that is new in that kind of business, as not to be equalled by any advantage of natural and extemporary wit: though perhaps many young men think the contrary.

Nevertheless it is not prudence that distinguisheth man from beast. There be beasts, that at a year old observe more, and pursue that which is for their good, more prudently, than a child can do at ten.

As prudence is a *presumption* of the *future*, contracted from the *experience* of time *past:* so there is a presumption of things past taken from other things (not future but) past also. For he that hath seen by what courses and degrees, a flourishing state hath first come into civil war, and then to ruin; upon the sight of the ruins of any other state, will guess, the like war, and the like courses have been there also. But this conjecture, has the same uncertainty almost with the conjecture of the future; both being grounded only upon experience.

There is no other act of man's mind, that I can remember, naturally planted in him, so as to need no other thing, to the exercise of it, but to be born a man, and live with the use of his five senses. Those other faculties, of which I shall speak by and by, and which seem proper to man only, are acquired, and increased by study and industry; and of most men learned by instruction, and discipline; and proceed all from the invention of words, and speech. For besides sense, and thoughts, and the train of thoughts, the mind of man has no other motion; though by the help of speech, and method, the same faculties may be improved to such a height, as to distinguish men from all other living creatures.

Whatsoever we imagine is *finite*. Therefore there is no idea, or conception of any thing we call *infinite*. No man can have in his mind an image of infinite magnitude; nor conceive infinite swiftness, infinite

time, or infinite force, or infinite power. When we say any thing is infinite, we signify only, that we are not able to conceive the ends, and bounds of the things named; having no conception of the thing, but of our own inability. And therefore the name of God is used, not to make us conceive him; (for he is *incomprehensible*; and his greatness, and power are unconceivable;) but that we may honour him. Also because whatsoever (as I said before,) we conceive, has been perceived first by sense, either all at once, or by parts; a man can have no thought, representing any thing, not subject to sense. No man therefore can conceive any thing, but he must conceive it in some place; and indued with some determinate magnitude; and which may be divided into parts; nor that any thing is all in this place, and all in another place at the same time; nor that two, or more things can be in one, and the same place at once: for none of these things ever have, or can be incident to sense; but are absurd speeches, taken upon credit (without any signification at all,) from deceived philosophers, and deceived, or deceiving schoolmen.

Chapter 4

Of Speech

The invention of *printing*, though ingenious, compared with the invention of *letters*, is no great matter. But who was the first that found the use of letters, is not known. He that first brought them into *Greece*, men say was *Cadmus*, the son of *Agenor*, king of Phoenicia. A profitable invention for continuing the memory of time past, and the conjunction of mankind, dispersed into so many, and distant regions of the earth; and withal difficult, as proceeding from a watchful observation of the divers motions of the tongue, palate, lips, and other organs of speech; whereby to make as many differences of characters, to remember them. But the most noble and profitable invention of all other, was that of SPEECH, consisting of *names* or *appellations*, and their connexion; whereby men register their thoughts; recall them when they are past; and also declare them one to another for mutual utility and conversation; without which, there had been amongst men, neither commonwealth, nor society, nor contract, nor peace, no more than amongst lions, bears, and wolves. The first author of speech was God himself, that instructed Adam how to name such creatures as he presented to his sight; for the Scripture goeth no further in this matter. But this was sufficient to direct him to add more names, as the experience and use of the creatures should give him occasion; and to join them in such manner by degrees, as to make himself understood; and so by succession of time, so much language might be gotten, as he had found use for; though not so copious, as an orator or philosopher has need of. For I do not find any thing in the Scripture, out of which, directly or by consequence can be gathered, that *Adam* was taught the names of all figures, numbers, measures, colours, sounds, fancies, relations; much less the names of words and speech, as *general*, *special*, *affirmative*, *negative*, *interrogative*, *optative*, *infinitive*, all which are useful; and least of all, of *entity*, *intentionality*, *quiddity*, and other insignificant words of the school.

But all this language gotten, and augmented by *Adam* and his posterity, was again lost at the tower of *Babel*, when, by the hand of God, every man was stricken, for his rebellion, with an oblivion of his former language. And being hereby forced to disperse themselves into several parts of the world, it must needs be, that the diversity of tongues that now is, proceeded by degrees from them, in such manner as need (the mother of all inventions) taught them; and in tract of time grew every where more copious.

The general use of speech, is to transfer our mental discourse, into verbal; or the train of our thoughts, into a train of words; and that for two commodities, whereof one is the registering of the consequences of our thoughts; which being apt to slip out of our memory, and put us to a new labour, may again be recalled, by such words as they were marked by. So that the first use of names is to serve for *marks*, or *notes* of remembrance. Another is, when many use the same words, to signify (by their connexion and order,) one to another, what they conceive, or think of each matter; and also what they desire, fear, or have any other passion for. And for this use they are called *signs*. Special uses of speech are these; first, to register, what by cogitation, we find to be the cause of any thing, present or past; and what we find things

present or past may produce, or effect: which in sum, is acquiring of arts. Secondly, to show to others that knowledge which we have attained; which is, to counsel and teach one another. Thirdly, to make known to others our wills, and purposes, that we may have the mutual help of one another. Fourthly, to please and delight ourselves and others, by playing with our words, for pleasure or ornament, innocently.

To these uses, there are also four correspondent abuses. First, when men register their thoughts wrong, by the inconstancy of the signification of their words; by which they register for their conceptions, that which they never conceived, and so deceive themselves. Secondly, when they use words metaphorically; that is, in other sense than that they are ordained for; and thereby deceive others. Thirdly, when by words they declare that to be their will, which is not. Fourthly, when they use them to grieve one another: for seeing nature hath armed living creatures, some with teeth, some with horns, and some with hands, to grieve an enemy, it is but an abuse of speech, to grieve him with the tongue, unless it be one whom we are obliged to govern; and then it is not to grieve, but to correct and amend.

The manner how speech serveth to the remembrance of the consequence of causes and effects, consisteth in the imposing of *names*, and the *connexion* of them.

Of names, some are *proper*, and singular to one only thing, as *Peter*, *John*, *this man*, *this tree*: and some are *common* to many things, as *man*, *horse*, *tree*; every of which though but one name, is nevertheless the name of divers particular things; in respect of all which together, it is called an *universal*; there being nothing in the world universal but names; for the things named, are every one of them individual and singular.

One universal name is imposed on many things, for their similitude in some quality, or other accident; and whereas a proper name bringeth to mind one thing only, universals recall any one of those many.

And of names universal, some are of more, and some of less extent; the larger comprehending the less large: and some again of equal extent, comprehending each other reciprocally. As for example, the name *body* is of larger signification than the word *man*, and comprehendeth it; and the names *man* and *rational*, are of equal extent, comprehending mutually one another. But here we must take notice, that by a name is not always understood, as in grammar, one only word; but sometimes by circumlocution many words together. For all these words, *he that in his actions observeth the laws of his country*, make but one name, equivalent to this one word, *just*.

By this imposition of names, some of larger, some of stricter signification, we turn the reckoning of the consequences of things imagined in the mind, into a reckoning of the consequences of appellations. For example, a man that hath no use of speech at all, (such as is born and remains perfectly deaf and dumb,) if he set before his eyes a triangle, and by it two right angles, (such as are the corners of a square figure,) he may by meditation compare and find, that the three angles of that triangle, are equal to those two right angles that stand by it. But if another triangle be shown him, different in shape from the former, he cannot know without a new labour, whether the three angles of that also be equal to the same. But he that hath the use of words, when he observes, that such equality was consequent, not to the length of the sides, nor to any other particular thing in his triangle; but only to this, that the sides were straight, and the angles three; and that that was all, for which he named it a triangle; will boldly conclude universally, that such equality of angles is in all triangles whatsoever; and register his invention in these general terms, *every triangle hath its three angles equal to two right angles*. And thus the consequence found in one particular, comes to be registered and remembered, as an universal rule, and discharges our mental reckoning, of time and place, and delivers us from all labour of the mind, saving the first, and makes that which was found true *here*, and *now*, to be true in *all times* and *places*.

But the use of words in registering our thoughts is in nothing so evident as in numbering. A natural fool that could never learn by heart the order of numeral words, as *one*, *two*, and *three*, may observe every stroke of the clock, and nod to it, or say *one*, *one*, *one*, but can never know what hour it strikes. And it seems, there was a time when those names of number were not in use; and men were fain to apply their fingers of one or both hands, to those things they desired to keep account of; and that thence it proceeded, that

now our numeral words are but ten, in any nation, and in some but five, and then they begin again. And he that can tell ten, if he recite them out of order, will lose himself, and not know when he has done. Much less will he be able to add, and subtract, and perform all other operations of arithmetic. So that without words there is no possibility of reckoning of numbers; much less of magnitudes, of swiftness, of force, and other things, the reckonings whereof are necessary to the being, or well-being of mankind.

When two names are joined together into a consequence, or affirmation, as thus, *a man is a living creature*; or thus, *if he be a man, he is a living creature*, if the latter name *living creature*, signify all that the former name *man* signifieth, then the affirmation, or consequence is *true*; otherwise *false*. For *true* and *false* are attributes of speech, not of things. And where speech is not, there is neither *truth* nor *falsehood*. *Error* there may be, as when we expect that which shall not be, or suspect what has not been: but in neither case can a man be charged with untruth.

Seeing then that *truth* consisteth in the right ordering of names in our affirmations, a man that seeketh precise *truth* had need to remember what every name he uses stands for, and to place it accordingly; or else he will find himself entangled in words, as a bird in lime twigs, the more he struggles the more belimed. And therefore in geometry, (which is the only science that it hath pleased God hitherto to bestow on mankind,) men begin at settling the significations of their words; which settling of significations they call *definitions*, and place them in the beginning of their reckoning.

By this it appears how necessary it is for any man that aspires to true knowledge, to examine the definitions of former authors; and either to correct them, where they are negligently set down, or to make them himself. For the errors of definitions multiply themselves according as the reckoning proceeds, and lead men into absurdities, which at last they see, but cannot avoid, without reckoning anew from the beginning, in which lies the foundation of their errors. From whence it happens, that they which trust to books do as they that cast up many little sums into a greater, without considering whether those little sums were rightly cast up or not; and at last finding the error visible, and not mistrusting their first grounds, know not which way to clear themselves, but spend time in fluttering over their books; as birds that entering by the chimney, and finding themselves enclosed in a chamber, flutter at the false light of a glass window, for want of wit to consider which way they came in. So that in the right definition of names lies the first use of speech; which is the acquisition of science: and in wrong, or no definitions, lies the first abuse; from which proceed all false and senseless tenets; which make those men that take their instruction from the authority of books, and not from their own meditation, to be as much below the condition of ignorant men, as men endued with true science are above it. For between true science and erroneous doctrines, ignorance is in the middle. Natural sense and imagination are not subject to absurdity. Nature itself cannot err; and as men abound in copiousness of language, so they become more wise, or more mad than ordinary. Nor is it possible without letters for any man to become either excellently wise, or (unless his memory be hurt by disease or ill constitution of organs) excellently foolish. For words are wise men's counters, they do but reckon by them; but they are the money of fools, that value them by the authority of an *Aristotle*, a *Cicero*, or a *Thomas*, or any other doctor whatsoever, if but a man.

Subject to names, is whatsoever can enter into or be considered in an account, and be added one to another to make a sum, or subtracted one from another and leave a remainder. The Latins called accounts of money *rationes*, and accounting *ratiocinatio*; and that which we in bills or books of account call *items*, they call *nomina*, that is *names*; and thence it seems to proceed, that they extended the word *ratio* to the faculty of reckoning in all other things. The Greeks have but one word, λόγος, for both *speech* and *reason*; not that they thought there was no speech without reason, but no reasoning without speech: and the act of reasoning they called *syllogism*, which signifieth summing up of the consequences of one saying to another. And because the same things may enter into account for divers accidents, their names are (to show that diversity) diversly wrested and diversified. This diversity of names may be reduced to four general heads.

First, a thing may enter into account for *matter* or *body*; as *living*, *sensible*, *rational*, *hot*, *cold*, *moved*,

quiet; with all which names the word *matter*, or *body*, is understood; all such being names of matter.

Secondly, it may enter into account, or be considered, for some accident or quality, which we conceive to be in it; as for *being moved*, for *being so long*, for *being hot*, &c.; and then, of the name of the thing it self, by a little change or wresting, we make a name for that accident, which we consider; and for *living* put into the account *life*; for *moved*, *motion*; for *hot*, *heat*; for *long*, *length*, and the like: and all such names are the names of the accidents and properties by which one matter and body is distinguished from another. These are called *names abstract*, because severed (not from matter, but) from the account of matter.

Thirdly, we bring into account the properties of our own bodies, whereby we make such distinction; as when any thing is *seen* by us, we reckon not the thing it self, but the *sight*, the *colour*, the *idea* of it in the fancy: and when any thing is *heard*, we reckon it not, but the *hearing* or *sound* only, which is our fancy or conception of it by the ear; and such are names of fancies.

Fourthly, we bring into account, consider, and give names, to *names* themselves, and to *speeches:* For *general*, *universal*, *special*, *equivocal*, are names of names. And *affirmation*, *interrogation*, *commandment*, *narration*, *syllogism*, *sermon*, *oration*, and many other such, are names of speeches. And this is all the variety of names *positive;* which are put to mark somewhat which is in nature, or may be feigned by the mind of man, as bodies that are, or may be conceived to be; or of bodies, the properties that are, or may be feigned to be; or words and speech.

There be also other names, called *negative*, which are notes to signify that a word is not the name of the thing in question; as these words *nothing*, *no man*, *infinite*, *indocible*, *three want four*, and the like; which are nevertheless of use in reckoning, or in correcting of reckoning, and call to mind our past cogitations, though they be not names of any thing, because they make us refuse to admit of names not rightly used.

All other names are but insignificant sounds; and those of two sorts. One when they are new, and yet their meaning not explained by definition; whereof there have been abundance coined by schoolmen, and puzzled philosophers.

Another, when men make a name of two names, whose significations are contradictory and inconsistent; as this name, an *incorporeal body*, or (which is all one) an *incorporeal substance*, and a great number more. For whensoever any affirmation is false, the two names of which it is composed, put together and made one, signify nothing at all. For example, if it be a false affirmation to say *a quadrangle is round*, the word *round quadrangle* signifies nothing, but is a mere sound. So likewise, if it be false to say that virtue can be poured, or blown up and down, the words *in-poured virtue*, *in-blown virtue*, are as absurd and insignificant as a *round quadrangle*. And therefore you shall hardly meet with a senseless and insignificant word, that is not made up of some Latin or Greek names. A Frenchman seldom hears our Saviour called by the name of *parole*, but by the name of *verbe* often; yet *verbe* and *parole* differ no more, but that one is Latin, the other French.

When a man, upon the hearing of any speech, hath those thoughts which the words of that speech, and their connexion, were ordained and constituted to signify, then he is said to understand it; *understanding* being nothing else but conception caused by speech. And therefore if speech be peculiar to man (as for aught I know it is,) then is understanding peculiar to him also. And therefore of absurd and false affirmations, in case they be universal, there can be no understanding; though many think they understand then, when they do but repeat the words softly, or con them in their mind.

What kinds of speeches signify the appetites, aversions, and passions of man's mind; and of their use and abuse, I shall speak when I have spoken of the passions.

The names of such things as affect us, that is, which please and displease us, because all men be not alike affected with the same thing, nor the same man at all times, are in the common discourses of men of *inconstant* signification. For seeing all names are imposed to signify our conceptions, and all our affections are but conceptions, when we conceive the same things differently, we can hardly avoid different naming of them. For though the nature of that we conceive, be the same; yet the diversity of our reception of it, in respect of different constitutions of body, and prejudices of opinion, gives every thing a tincture of

our different passions. And therefore in reasoning a man must take heed of words; which besides the signification of what we imagine of their nature, have a signification also of the nature, disposition, and interest of the speaker; such as are the names of virtues and vices; for one man calleth *wisdom*, what another calleth *fear*; and one *cruelty*, what another *justice*; one *prodigality*, what another *magnanimity*; and one *gravity*, what another *stupidity*, &c. And therefore such names can never be true grounds of any ratiocination. No more can metaphors, and tropes of speech; but these are less dangerous, because they profess their inconstancy; which the other do not.

Chapter 5

Of Reason and Science

When a man *reasoneth*, he does nothing else but conceive a sum total, from *addition* of parcels; or conceive a remainder, from *subtraction* of one sum from another; which (if it be done by words,) is conceiving of the consequence of the names of all the parts, to the name of the whole; or from the names of the whole and one part, to the name of the other part. And though in some things, (as in numbers,) besides *adding* and *subtracting*, men name other operations, as *multiplying* and *dividing*, yet they are the same; for multiplication, is but adding together of things equal; and division, but subtracting of one thing, as often as we can. These operations are not incident to numbers only, but to all manner of things that can be added together, and taken one out of another. For as arithmeticians teach to add and subtract in *numbers*; so the geometricians teach the same in *lines*, *figures* (solid and superficial,) *angles*, *proportions*, *times*, *degrees of swiftness*, *force*, *power*, and the like; the logicians teach the same in *consequences of words*; adding together *two names* to make an *affirmation*, and *two affirmations* to make a *syllogism*; and *many syllogisms* to make a *demonstration*; and from the *sum*, or *conclusion* of a *syllogism*, they subtract one *proposition* to find the other. Writers of politics add together *pactions* to find men's *duties*; and lawyers, *laws* and *facts*, to find what is *right* and *wrong* in the actions of private men. In sum, in what matter soever there is place for *addition* and *subtraction*, there also is place for *reason*; and where these have no place, there *reason* has nothing at all to do.

Out of all which we may define, (that is to say determine,) what that is, which is meant by this word *reason*, when we reckon it amongst the faculties of the mind. For REASON, in this sense, is nothing but *reckoning* (that is, adding and subtracting) of the consequences of general names agreed upon for the *marking* and *signifying* of our thoughts; I say *marking* them when we reckon by ourselves, and *signifying*, when we demonstrate or approve our reckonings to other men.

And as in arithmetic, unpractised men must, and professors themselves may often err, and cast up false; so also in any other subject of reasoning, the ablest, most attentive, and most practised men may deceive themselves, and infer false conclusions; not but that reason itself is always right reason, as well as arithmetic is a certain and infallible art: but no one man's reason, nor the reason of any one number of men, makes the certainty; no more than an account is therefore well cast up, because a great many men have unanimously approved it. And therefore, as when there is a controversy in an account, the parties must by their own accord, set up for right reason, the reason of some arbitrator, or judge, to whose sentence they will both stand, or their controversy must either come to blows, or be undecided, for want of a right reason constituted by nature; so is it also in all debates of what kind soever. And when men that think themselves wiser than all others, clamour and demand right reason for judge, yet seek no more, but that things should be determined, by no other men's reason but their own, it is as intolerable in the society of men, as it is in play after trump is turned, to use for trump on every occasion, that suite whereof they have most in their hand. For they do nothing else, that will have every of their passions, as it comes to bear sway in them, to be taken for right reason, and that in their own controversies: bewraying their want of right reason, by the claim they lay to it.

The use and end of reason, is not the finding of the sum and truth of one, or a few consequences, remote from the first definitions, and settled significations of names, but to begin at these, and proceed

from one consequence to another. For there can be no certainty of the last conclusion, without a certainty of all those affirmations and negations, on which it was grounded and inferred. As when a master of a family, in taking an account, casteth up the sums of all the bills of expense into one sum, and not regarding how each bill is summed up, by those that give them in account; nor what it is he pays for; he advantages himself no more, than if he allowed the account in gross, trusting to every of the accountants' skill and honesty: so also in reasoning of all other things, he that takes up conclusions on the trust of authors, and doth not fetch them from the first items in every reckoning, (which are the significations of names settled by definitions,) loses his labour; and does not know any thing, but only believeth.

When a man reckons without the use of words, which may be done in particular things, (as when upon the sight of any one thing, we conjecture what was likely to have preceded, or is likely to follow upon it;) if that which he thought likely to follow, follows not, or that which he thought likely to have preceded it, hath not preceded it, this is called *error*; to which even the most prudent men are subject. But when we reason in words of general signification, and fall upon a general inference which is false, though it be commonly called error, it is indeed an *absurdity*, or senseless speech. For error is but a deception, in presuming that somewhat is past, or to come; of which, though it were not past, or not to come, yet there was no impossibility discoverable. But when we make a general assertion, unless it be a true one, the possibility of it is inconceivable. And words whereby we conceive nothing but the sound, are those we call *absurd*, *insignificant*, and *nonsense*. And therefore if a man should talk to me of a *round quadrangle*; or, *accidents of bread in cheese*; or *immaterial substances*; or of *a free subject*; *a free will*; or any *free*, but free from being hindered by opposition, I should not say he were in an error, but that his words were without meaning, that is to say, absurd.

I have said before, (in the second chapter,) that a man did excel all other animals in this faculty, that when he conceived any thing whatsoever, he was apt to inquire the consequences of it, and what effects he could do with it. And now I add this other degree of the same excellence, that he can by words reduce the consequences he finds to general rules, called *theorems*, or *aphorisms*; that is, he can reason, or reckon, not only in number, but in all other things, whereof one may be added unto, or subtracted from another.

But this privilege is allayed by another; and that is, by the privilege of absurdity; to which no living creature is subject, but man only. And of men, those are of all most subject to it, that profess philosophy. For it is most true that Cicero saith of them somewhere; that there can be nothing so absurd, but may be found in the books of philosophers. And the reason is manifest. For there is not one of them that begins his ratiocination from the definitions, or explications of the names they are to use; which is a method that hath been used only in geometry; whose conclusions have thereby been made indisputable.

I. The first cause of absurd conclusions I ascribe to the want of method; in that they begin not their ratiocination from definitions; that is, from settled significations of their words: as if they could cast account, without knowing the value of the numeral words, *one*, *two*, and *three*.

And whereas all bodies enter into account upon divers considerations, (which I have mentioned in the precedent chapter;) these considerations being diversely named, divers absurdities proceed from the confusion, and unfit connexion of their names into assertions. And therefore,

II. The second cause of absurd assertions, I ascribe to the giving of names of *bodies* to *accidents*; or of *accidents* to *bodies*; as they do, that say, *faith is infused*, or *inspired*; when nothing can be *poured*, or *breathed* into any thing, but body; and that, *extension* is *body*; that *phantasms* are *spirits*, &c.

III. The third I ascribe to the giving of the names of the *accidents* of *bodies without us*, to the *accidents* of our *own bodies*; as they do that say, the *colour is in the body*; *the sound is in the air*, &c.

IV. The fourth, to the giving of the names of *bodies* to *names*, or *speeches*; as they do that say, that *there be things universal*; that *a living creature is genus*, or *a general thing*, &c.

V. The fifth, to the giving of the names of *accidents* to *names* and *speeches*; as they do that say, *the nature of a thing is its definition*; *a man's command is his will*; and the like.

VI. The sixth, to the use of metaphors, tropes, and other rhetorical figures, instead of words proper. For though it be lawful to say, (for example) in common speech, *the way goeth, or leadeth hither, or thither; the proverb says this or that* (whereas ways cannot go, nor proverbs speak;) yet in reckoning, and seeking of truth, such speeches are not to be admitted.

VII. The seventh, to names that signify nothing; but are taken up, and learned by rote from the schools, as *hypostatical, transubstantiate, consubstantiate, eternal-now,* and the like canting of schoolmen.

To him that can avoid these things it is not easy to fall into any absurdity, unless it be by the length of an account; wherein he may perhaps forget what went before. For all men by nature reason alike, and well, when they have good principles. For who is so stupid, as both to mistake in geometry, and also to persist in it, when another detects his error to him?

By this it appears that reason is not, as sense and memory, born with us; nor gotten by experience only, as prudence is; but attained by industry; first in apt imposing of names; and secondly by getting a good and orderly method in proceeding from the elements, which are names, to assertions made by connexion of one of them to another; and so to syllogisms, which are the connexions of one assertion to another, till we come to a knowledge of all the consequences of names appertaining to the subject in hand; and that is it, men call SCIENCE. And whereas sense and memory are but knowledge of fact, which is a thing past, and irrevocable; *Science* is the knowledge of consequences, and dependance of one fact upon another: by which, out of that we can presently do, we know how to do something else when we will, or the like, another time; because when we see how any thing comes about, upon what causes, and by what manner; when the like causes come into our power, we see how to make it produce the like effects.

Children therefore are not endued with reason at all, till they have attained the use of speech; but are called reasonable creatures, for the possibility apparent of having the use of reason in time to come. And the most part of men, though they have the use of reasoning a little way, as in numbering to some degree; yet it serves them to little use in common life; in which they govern themselves, some better, some worse, according to their differences of experience, quickness of memory, and inclinations to several ends; but specially according to good or evil fortune, and the errors of one another. For as for *science*, or certain rules of their actions, they are so far from it, that they know not what it is. Geometry they have thought conjuring: but for other sciences, they who have not been taught the beginnings and some progress in them, that they may see how they be acquired and generated, are in this point like children, that having no thought of generation, are made believe by the women that their brothers and sisters are not born, but found in the garden.

But yet they that have no *science*, are in better, and nobler condition, with their natural prudence; than men, that by mis-reasoning, or by trusting them that reason wrong, fall upon false and absurd general rules. For ignorance of causes, and of rules, does not set men so far out of their way, as relying on false rules, and taking for causes of what they aspire to, those that are not so, but rather causes of the contrary.

To conclude, the light of human minds is perspicuous words, but by exact definitions first snuffed, and purged from ambiguity; *reason* is the *pace*; increase of *science*, the *way*; and the benefit of mankind, the *end*. And on the contrary, metaphors, and senseless and ambiguous words, are like *ignes fatui*; and reasoning upon them is wandering amongst innumerable absurdities; and their end, contention and sedition, or contempt.

As much experience, is *prudence*; so, is much science *sapience*. For though we usually have one name of wisdom for them both, yet the Latins did always distinguish between *prudentia* and *sapientia*; ascribing the former to experience, the latter to science. But to make their difference appear more clearly, let us suppose one man endued with an excellent natural use and dexterity in handling his arms; and another to have added to that dexterity, an acquired science, of where he can offend, or be offended by his adversary, in every possible posture or guard: the ability of the former, would be to the ability of the latter, as prudence to sapience; both useful; but the latter infallible. But they that trusting only to the authority of books, follow the blind blindly, are like him that, trusting to the false rules of a master of fence, ventures presumptuously upon an adversary, that either kills or disgraces him.

The signs of science are some, certain and infallible; some, uncertain. Certain, when he that pretendeth the science of any thing, can teach the same, that is to say, demonstrate the truth thereof perspicuously to another; uncertain, when only some particular events answer to his pretence, and upon many occasions prove so as he says they must. Signs of prudence are all uncertain; because to observe by experience, and remember all circumstances that may alter the success, is impossible. But in any business, whereof a man has not infallible science to proceed by; to forsake his own natural judgment, and be guided by general sentences read in authors, and subject to many exceptions, is a sign of folly, and generally scorned by the name of pedantry. And even of those men themselves, that in councils of the commonwealth love to show their reading of politics and history, very few do it in their domestic affairs, where their particular interest is concerned; having prudence enough for their private affairs: but in public they study more the reputation of their own wit, than the success of another's business.

Chapter 6

Of the Interior Beginnings of Voluntary Motions; Commonly Called the Passions; and the Speeches by Which They Are Expressed

There be in animals, two sorts of *motions* peculiar to them: one called *vital*; begun in generation, and continued without interruption through their whole life; such as are the *course* of the *blood*, the *pulse*, the *breathing*, the *concoction*, *nutrition*, *excretion*, &c; to which motions there needs no help of imagination: the other is *animal motion*, otherwise called *voluntary motion*; as to *go*, to *speak*, to *move* any of our limbs, in such manner as is first fancied in our minds. That sense is motion in the organs and interior parts of man's body, caused by the action of the things we see, hear, &c.; and that fancy is but the relics of the same motion, remaining after sense, has been already said in the first and second chapters. And because *going*, *speaking*, and the like voluntary motions, depend always upon a precedent thought of *whither*, *which way*, and *what*; it is evident, that the imagination is the first internal beginning of all voluntary motion. And although unstudied men do not conceive any motion at all to be there, where the thing moved is invisible; or the space it is moved in, is (for the shortness of it) insensible; yet that doth not hinder, but that such motions are. For let a space be never so little, that which is moved over a greater space, whereof that little one is part, must first be moved over that. These small beginnings of motion, within the body of man, before they appear in walking, speaking, striking, and other visible actions, are commonly called ENDEAVOUR.

This endeavour, when it is toward something which causes it, is called APPETITE, or DESIRE; the latter, being the general name; and the other, oftentimes restrained to signify the desire of food, namely *hunger* and *thirst*. And when the endeavour is fromward something, it is generally called AVERSION. These words, *appetite* and *aversion*, we have from the *Latins*; and they both of them signify the motions, one of approaching, the other of retiring. So also do the Greek words for the same, which are ὁρμὴ and ἀφορμὴ. For nature itself does often press upon men those truths, which afterwards, when they look for somewhat beyond nature, they stumble at. For the Schools find in mere appetite to go, or move, no actual motion at all: but because some motion they must acknowledge, they call it metaphorical motion; which is but an absurd speech: for though words may be called metaphorical; bodies and motions cannot.

That which men desire, they are also said to LOVE: and to HATE those things for which they have aversion. So that desire and love are the same thing; save that by desire, we always signify the absence of the object; by love, most commonly the presence of the same. So also by aversion, we signify the absence; and by hate, the presence of the object.

Of appetites and aversions, some are born with men; as appetite of food, appetite of excretion, and exoneration, (which may also and more properly be called aversions, from somewhat they feel in their bodies;) and some other appetites, not many. The rest, which are appetites of particular things, proceed from experience, and trial of their effects upon themselves or other men. For of things we know not at all, or believe not to be, we can have no further desire,

than to taste and try. But aversion we have for things, not only which we know have hurt us, but also that we do not know whether they will hurt us, or not.

Those things which we neither desire, nor hate, we are said to *contemn*; CONTEMPT being nothing else but an immobility, or contumacy of the heart, in resisting the action of certain things; and proceeding from that the heart is already moved otherwise, by other more potent objects; or from want of experience of them.

And because the constitution of a man's body is in continual mutation, it is impossible that all the same things should always cause in him the same appetites, and aversions: much less can all men consent, in the desire of almost any one and the same object.

But whatsoever is the object of any man's appetite or desire, that is it which he for his part calleth *good:* and the object of his hate and aversion, *evil*; and of his contempt, *vile* and *inconsiderable*. For these words of good, evil, and contemptible, are ever used with relation to the person that useth them: there being nothing simply and absolutely so; nor any common rule of good and evil, to be taken from the nature of the objects themselves; but from the person of the man (where there is no commonwealth;) or, (in a commonwealth,) from the person that representeth it; or from an arbitrator or judge, whom men disagreeing shall by consent set up, and make his sentence the rule thereof.

The Latin tongue has two words, whose significations approach to those of good and evil; but are not precisely the same; and those are *pulchrum* and *turpe*. Whereof the former signifies that, which by some apparent signs promiseth good; and the latter, that which promiseth evil. But in our tongue we have not so general names to express them by. But for *pulchrum* we say in some things, *fair*; in others, *beautiful*, or *handsome*, or *gallant*, or *honourable*, or *comely*, or *amiable*; and for *turpe*, *foul*, *deformed*, *ugly*, *base*, *nauseous*, and the like, as the subject shall require; all which words, in their proper places, signify nothing else but the *mine*, or countenance, that promiseth good and evil. So that of good there be three kinds; good in the promise, that is *pulchrum*; good in effect, as the end desired, which is called *jucundum*, *delightful*; and good as the means, which is called *utile*, *profitable*; and as many of evil: for *evil* in promise, is that they call *turpe*; evil in effect, and end, is *molestum*, *unpleasant*, *troublesome*; and evil in the means, *inutile*, *unprofitable*, *hurtful*.

As, in sense, that which is really within us, is, (as I have said before,) only motion, caused by the action of external objects, but in apparence; to the sight, light and colour; to the ear, sound; to the nostril, odour, &c.: so, when the action of the same object is continued from the eyes, ears, and other organs to the heart, the real effect there is nothing but motion, or endeavour; which consisteth in appetite, or aversion, to or from the object moving. But the apparence, or sense of that motion, is that we either call *delight*, or *trouble of mind*.

This motion, which is called appetite, and for the apparence of it *delight*, and *pleasure*, seemeth to be a corroboration of vital motion, and a help thereunto; and therefore such things as caused delight, were not improperly called *jucunda*, *(a juvando,)* from helping or fortifying; and the contrary, *molesta*, *offensive*, from hindering, and troubling the motion vital.

Pleasure therefore, (or *delight*,) is the apparence, or sense of good; and *molestation* or *displeasure*, the apparence, or sense of evil. And consequently all appetite, desire, and love, is accompanied with some delight more or less; and all hatred and aversion, with more or less displeasure and offence.

Of pleasures or delights, some arise from the sense of an object present; and those may be called *pleasures of sense*, (the word *sensual*, as it is used by those only that condemn them, having no place till there be laws.) Of this kind are all onerations and exonerations of the body; as also all that is pleasant, in the *sight*, *hearing*, *smell*, *taste*, *or touch*. Others arise from the expectation, that proceeds from foresight of the end, or consequence of things; whether those things in the sense please or displease. And these are *pleasures of the mind* of him that draweth those consequences, and are generally called JOY. In the like manner, displeasures are some in the sense, and called PAIN; others in the expectation of consequences, and are called GRIEF.

These simple passions called *appetite*, *desire*, *love*, *aversion*, *hate*, *joy*, and *grief*, have their names for divers considerations diversified. As first, when they one succeed another, they are diversely called from

the opinion men have of the likelihood of attaining what they desire. Secondly, from the object loved or hated. Thirdly, from the consideration of many of them together. Fourthly, from the alteration or succession itself.

For *appetite*, with an opinion of attaining, is called HOPE.

The same, without such opinion, DESPAIR.

Aversion, with opinion of *hurt* from the object, FEAR.

The same, with hope of avoiding that hurt by resistance, COURAGE.

Sudden *courage*, ANGER.

Constant *hope*, CONFIDENCE of ourselves.

Constant *despair*, DIFFIDENCE of ourselves.

Anger for great hurt done to another, when we conceive the same to be done by injury, INDIGNATION.

Desire of good to another, BENEVOLENCE, GOOD WILL, CHARITY. If to man generally, GOOD NATURE.

Desire of riches, COVETOUSNESS: a name used always in signification of blame; because men contending for them, are displeased with one another's attaining them; though the desire in itself, be to be blamed, or allowed, according to the means by which those riches are sought.

Desire of office, or precedence, AMBITION: a name used also in the worse sense, for the reason before mentioned.

Desire of things that conduce but a little to our ends, and fear of things that are but of little hindrance, PUSILLANIMITY.

Contempt of little helps and hindrances, MAGNANIMITY.

Magnanimity, in danger of death or wounds, VALOUR, FORTITUDE.

Magnanimity, in the use of riches, LIBERALITY.

Pusillanimity, in the same, WRETCHEDNESS, MISERABLENESS, or PARSIMONY; as it is liked or disliked.

Love of persons for society, KINDNESS.

Love of persons for pleasing the sense only, NATURAL LUST.

Love of the same, acquired from rumination, that is, imagination of pleasure past, LUXURY.

Love of one singularly, with desire to be singularly beloved, THE PASSION OF LOVE. The same, with fear that the love is not mutual, JEALOUSY.

Desire, by doing hurt to another, to make him condemn some fact of his own, REVENGEFULNESS.

Desire to know why, and how, CURIOSITY; such as is in no living creature but *man:* so that man is distinguished, not only by his reason, but also by this singular passion from other *animals*; in whom the appetite of food, and other pleasures of sense, by predominance, take away the care of knowing causes; which is a lust of the mind, that by a perseverance of delight in the continual and indefatigable generation of knowledge, exceedeth the short vehemence of any carnal pleasure.

Fear of power invisible, feigned by the mind, or imagined from tales publicly allowed, RELIGION; not allowed, SUPERSTITION. And when the power imagined, is truly such as we imagine, TRUE RELIGION.

Fear, without the apprehension of why, or what, PANIC TERROR, called so from the fables, that make *Pan* the author of them; whereas in truth, there is always in him that so feareth, first, some apprehension of the cause, though the rest run away by example, every one supposing his fellow to know why. And therefore this passion happens to none but in a throng, or multitude of people.

Joy, from apprehension of novelty, ADMIRATION; proper to man, because it excites the appetite of knowing the cause.

Joy, arising from imagination of a man's own power and ability, is that exultation of the mind which is called GLORYING: which if grounded upon the experience of his own former actions, is the same with *confidence:* but if grounded on the flattery of others; or only supposed by himself, for delight in the consequences of it, is called VAINGLORY: which name is properly given; because a well grounded *confidence* begetteth attempt; whereas the supposing of power does not, and is therefore rightly called *vain.*

Grief, from opinion of want of power, is called DEJECTION of mind.

The *vain-glory* which consisteth in the feigning or supposing of abilities in ourselves, which we know are not, is most incident to young men, and nourished

by the histories, or fictions of gallant persons; and is corrected oftentimes by age, and employment.

Sudden glory, is the passion which maketh those *grimaces* called LAUGHTER; and is caused either by some sudden act of their own, that pleaseth them; or by the apprehension of some deformed thing in another, by comparison whereof they suddenly applaud themselves. And it is incident most to them, that are conscious of the fewest abilities in themselves; who are forced to keep themselves in their own favour, by observing the imperfections of other men. And therefore much laughter at the defects of others, is a sign of pusillanimity. For of great minds, one of the proper works is, to help and free others from scorn; and compare themselves only with the most able.

On the contrary, *sudden dejection*, is the passion that causeth WEEPING; and is caused by such accidents, as suddenly take away some vehement hope, or some prop of their power: and they are most subject to it, that rely principally on helps external, such as are women, and children. Therefore some weep for the loss of friends; others for their unkindness; others for the sudden stop made to their thoughts of revenge, by reconciliation. But in all cases, both laughter, and weeping, are sudden motions; custom taking them both away. For no man laughs at old jests; or weeps for an old calamity.

Grief, for the discovery of some defect of ability, is SHAME, or the passion that discovereth itself in BLUSHING; and consisteth in the apprehension of some thing dishonourable; and in young men, is a sign of the love of good reputation, and commendable: in old men it is a sign of the same; but because it comes too late, not commendable.

The *contempt* of good reputation is called IMPUDENCE.

Grief, for the calamity of another, is PITY; and ariseth from the imagination that the like calamity may befall himself; and therefore is called also COMPASSION, and in the phrase of this present time a FELLOW-FEELING: and therefore for calamity arriving from great wickedness, the best men have the least pity; and for the same calamity, those have least pity, that think themselves least obnoxious to the same.

Contempt, or little sense of the calamity of others, is that which men call CRUELTY; proceeding from security of their own fortune. For, that any man should take pleasure in other men's great harms, without other end of his own, I do not conceive it possible.

Grief, for the success of a competitor in wealth, honour, or other good, if it be joined with endeavour to enforce our own abilities to equal or exceed him, is called EMULATION: but joined with endeavour to supplant, or hinder a competitor, ENVY.

When in the mind of man, appetites, and aversions, hopes, and fears, concerning one and the same thing, arise alternately; and divers good and evil consequences of the doing, or omitting the thing propounded, come successively into our thoughts; so that sometimes we have an appetite to it; sometimes an aversion from it; sometimes hope to be able to do it; sometimes despair, or fear to attempt it; the whole sum of desires, aversions, hopes and fears continued till the thing be either done, or thought impossible, is that we call DELIBERATION.

Therefore of things past, there is no *deliberation*; because manifestly impossible to be changed: nor of things known to be impossible, or thought so; because men know, or think such deliberation vain. But of things impossible, which we think possible, we may deliberate; not knowing it is in vain. And it is called *deliberation*; because it is a putting an end to the *liberty* we had of doing, or omitting, according to our own appetite, or aversion.

This alternate succession of appetites, aversions, hopes and fears, is no less in other living creatures than in man: and therefore beasts also deliberate.

Every *deliberation* is then said to *end*, when that whereof they deliberate, is either done, or thought impossible; because till then we retain the liberty of doing, or omitting, according to our appetite, or aversion.

In *deliberation*, the last appetite, or aversion, immediately adhering to the action, or to the omission thereof, is that we call the WILL; the act, (not the faculty,) of *willing*. And beasts that have *deliberation*, must necessarily also have *will*. The definition of the *will*, given commonly by the Schools, that it is a *rational appetite*, is not good. For if it were, then could there be no voluntary act against reason. For a *voluntary act* is that, which proceedeth from the *will*, and no other. But if instead of a rational appetite, we shall say an appetite resulting from a precedent

deliberation, then the definition is the same that I have given here. *Will* therefore *is the last appetite in deliberating.* And though we say in common discourse, a man had a will once to do a thing, that nevertheless he forbore to do; yet that is properly but an inclination, which makes no action voluntary; because the action depends not of it, but of the last inclination, or appetite. For if the intervenient appetites, make any action voluntary; then by the same reason all intervenient aversions, should make the same action involuntary; and so one and the same action, should be both voluntary and involuntary.

By this it is manifest, that not only actions that have their beginning from covetousness, ambition, lust, or other appetites to the thing propounded; but also those that have their beginning from aversion, or fear of those consequences that follow the omission, are *voluntary actions.*

The forms of speech by which the passions are expressed, are partly the same, and partly different from those, by which we express our thoughts. And first, generally all passions may be expressed *indicatively*; as *I love, I fear, I joy, I deliberate, I will, I command:* but some of them have particular expressions by themselves, which nevertheless are not affirmations, unless it be when they serve to make other inferences, besides that of the passion they proceed from. Deliberation is expressed *subjunctively*; which is a speech proper to signify suppositions, with their consequences; as, *if this be done, then this will follow*; and differs not from the language of reasoning, save that reasoning is in general words; but deliberation for the most part is of particulars. The language of desire, and aversion, is *imperative*; as *do this, forbear that*; which when the party is obliged to do, or forbear, is *command*; otherwise *prayer*; or else *counsel.* The language of vain-glory, of indignation, pity and revengefulness, *optative:* but of the desire to know, there is a peculiar expression, called *interrogative*; as, *what is it, when shall it, how is it done,* and *why so?* other language of the passions I find none: for cursing, swearing, reviling, and the like, do not signify as speech; but as the actions of a tongue accustomed.

These forms of speech, I say, are expressions, or voluntary significations of our passions: but certain signs they be not; because they may be used arbitrarily, whether they that use them, have such passions or not. The best signs of passions present, are either in the countenance, motions of the body, actions, and ends, or aims, which we otherwise know the man to have.

And because in deliberation, the appetites, and aversions, are raised by foresight of the good and evil consequences, and sequels of the action whereof we deliberate; the good or evil effect thereof dependeth on the foresight of a long chain of consequences, of which very seldom any man is able to see to the end. But for so far as a man seeth, if the good in those consequences be greater than the evil, the whole chain is that which writers call *apparent*, or *seeming good.* And contrarily, when the evil exceedeth the good, the whole is *apparent*, or *seeming evil:* so that he who hath by experience, or reason, the greatest and surest prospect of consequences, deliberates best himself; and is able when he will, to give the best counsel unto others.

Continual success in obtaining those things which a man from time to time desireth, that is to say, continual prospering, is that men call FELICITY; I mean the felicity of this life. For there is no such thing as perpetual tranquillity of mind, while we live here; because life itself is but motion, and can never be without desire, nor without fear, no more than without sense. What kind of felicity God hath ordained to them that devoutly honour Him, a man shall no sooner know, than enjoy; being joys, that now are as incomprehensible, as the word of schoolmen *beatifical vision* is unintelligible.

The form of speech whereby men signify their opinion of the goodness of any thing, is PRAISE. That whereby they signify the power and greatness of any thing, is MAGNIFYING. And that whereby they signify the opinion they have of a man's felicity, is by the Greeks called μακαρισμός, for which we have no name in our tongue. And thus much is sufficient for the present purpose, to have been said of the PASSIONS.

Chapter 7

Of the Ends, or Resolutions of Discourse

Of all *discourse*, governed by desire of knowledge, there is at last an *end*, either by attaining, or by giving

over. And in the chain of discourse, wheresoever it be interrupted, there is an end for that time.

If the discourse be merely mental, it consisteth of thoughts that the thing will be, and will not be, or that it has been, and has not been, alternately. So that wheresoever you break off the chain of a man's discourse, you leave him in a presumption of *it will be*, or, *it will not be*; or *it has been*, or, *has not been*. All which is *opinion*. And that which is alternate appetite, in deliberating concerning good and evil; the same is alternate opinion, in the enquiry of the truth of *past*, and *future*. And as the last appetite in deliberation, is called the *will*; so the last opinion in search of the truth of past, and future, is called the JUDGMENT, or *resolute* and *final sentence* of him that *discourseth*. And as the whole chain of appetites alternate, in the question of good, or bad, is called *deliberation*; so the whole chain of opinions alternate, in the question of true, or false, is called DOUBT.

No discourse whatsoever, can end in absolute knowledge of fact, past, or to come. For, as for the knowledge of fact, it is originally, sense; and ever after, memory. And for the knowledge of consequence, which I have said before is called science, it is not absolute, but conditional. No man can know by discourse, that this, or that, is, has been, or will be; which is to know absolutely: but only, that if this be, that is; if this has been, that has been; if this shall be, that shall be: which is to know conditionally; and that not the consequence of one thing to another; but of one name of a thing, to another name of the same thing.

And therefore, when the discourse is put into speech, and begins with the definitions of words, and proceeds by connexion of the same into general affirmations, and of these again into syllogisms; the end or last sum is called the conclusion; and the thought of the mind by it signified, is that conditional knowledge, or knowledge of the consequence of words, which is commonly called SCIENCE. But if the first ground of such discourse, be not definitions; or if the definitions be not rightly joined together into syllogisms, then the end or conclusion, is again OPINION, namely of the truth of somewhat said, though sometimes in absurd and senseless words, without possibility of being understood. When two, or more men, know of one and the same fact, they are said to be CONSCIOUS of it one to another; which is as much as to know it together. And because such are fittest witnesses of the facts of one another, or of a third; it was, and ever will be reputed a very evil act, for any man to speak against his *conscience*: or to corrupt or force another so to do: insomuch that the plea of conscience, has been always hearkened unto very diligently in all times. Afterwards, men made use of the same word metaphorically, for the knowledge of their own secret facts, and secret thoughts; and therefore it is rhetorically said, that the conscience is a thousand witnesses. And last of all, men, vehemently in love with their own new opinions, (though never so absurd,) and obstinately bent to maintain them, gave those their opinions also that reverenced name of conscience, as if they would have it seem unlawful, to change or speak against them; and so pretend to know they are true, when they know at most, but that they think so.

When a man's discourse beginneth not at definitions, it beginneth either at some other contemplation of his own, and then it is still called opinion; or it beginneth at some saying of another, of whose ability to know the truth, and of whose honesty in not deceiving, he doubteth not; and then the discourse is not so much concerning the thing, as the person; and the resolution is called BELIEF, and FAITH: *faith*, *in* the man; *belief*, both *of* the man, and *of* the truth of what he says. So that in belief are two opinions; one of the saying of the man; the other of his virtue. To *have faith in*, or *trust to*, or *believe a man*, signify the same thing; namely, an opinion of the veracity of the man: but to *believe what is said*, signifieth only an opinion of the truth of the saying. But we are to observe that this phrase, *I believe in*; as also the Latin, *credo in*; and the Greek, πιστέυω ἔις, are never used but in the writings of divines. Instead of them, in other writings are put, *I believe him*; *I trust him*; *I have faith in him*; *I rely on him*; and in Latin, *credo illi: fido illi*: and in Greek, πιστέυω αὐτῲ: and that this singularity of the ecclesiastic use of the word hath raised many disputes about the right object of the Christian faith.

But by *believing in*, as it is in the creed, is meant, not trust in the person; but confession and acknowledgment of the doctrine. For not only Christians, but all manner of men do so believe in God, as to hold

all for truth they hear him say, whether they understand it, or not; which is all the faith and trust can possibly be had in any person whatsoever: but they do not all believe the doctrine of the creed.

From whence we may infer, that when we believe any saying whatsoever it be, to be true, from arguments taken, not from the thing it self, or from the principles of natural reason, but from the authority, and good opinion we have, of him that hath said it; then is the speaker, or person we believe in, or trust in, and whose word we take, the object of our faith; and the honour done in believing, is done to him only. And consequently, when we believe that the Scriptures are the word of God, having no immediate revelation from God himself, our belief, faith, and trust is in the church; whose word we take, and acquiesce therein. And they that believe that which a prophet relates unto them in the name of God, take the word of the prophet, do honour to him, and in him trust, and believe, touching the truth of what he relateth, whether he be a true, or a false prophet. And so it is also with all other history. For if I should not believe all that is written by historians, of the glorious acts of *Alexander*, or *Caesar*; I do not think the ghost of *Alexander*, or *Caesar*, had any just cause to be offended; or any body else, but the historian. If *Livy* say the Gods made once a cow speak, and we believe it not; we distrust not God therein, but *Livy*. So that it is evident, that whatsoever we believe, upon no other reason, than what is drawn from authority of men only, and their writings; whether they be sent from God or not, is faith in men only.

Chapter 8

Of the Virtues Commonly Called Intellectual; and Their Contrary Defects

Virtue generally, in all sorts of subjects, is somewhat that is valued for eminence; and consisteth in comparison. For if all things were equally in all men, nothing would be prized. And by *virtues* INTELLECTUAL, are always understood such abilities of the mind, as men praise, value, and desire should be in themselves; and go commonly under the name of a *good wit*; though the same word *wit*, be used also, to distinguish one certain ability from the rest.

These *virtues* are of two sorts; *natural*, and *acquired*. By natural, I mean not, that which a man hath from his birth: for that is nothing else but sense; wherein men differ so little one from another, and from brute beasts, as it is not to be reckoned amongst virtues. But I mean, that *wit*, which is gotten by use only, and experience; without method, culture, or instruction. This NATURAL WIT, consisteth principally in two things; *celerity of imagining*, (that is, swift succession of one thought to another;) and *steady direction* to some approved end. On the contrary a slow imagination, maketh that defect, or fault of the mind, which is commonly called DULLNESS, *stupidity*, and sometimes by other names that signify slowness of motion, or difficulty to be moved.

And this difference of quickness, is caused by the difference of men's passions; that love and dislike, some one thing, some another: and therefore some men's thoughts run one way, some another; and are held to, and observe differently the things that pass through their imagination. And whereas in this succession of men's thoughts, there is nothing to observe in the things they think on, but either in what they be *like one another*, or in what they be *unlike*, or *what they serve for*, or *how they serve to such a purpose*; those that observe their similitudes, in case they be such as are but rarely observed by others, are said to have a *good wit*; by which, in this occasion, is meant a *good fancy*. But they that observe their differences, and dissimilitudes; which is called *distinguishing*, and *discerning*, and *judging* between thing and thing; in case, such discerning be not easy, are said to have a *good judgment*: and particularly in matter of conversation and business; wherein, times, places, and persons are to be discerned, this virtue is called DISCRETION. The former, that is, fancy, without the help of judgment, is not commended as a virtue: but the latter which is judgment, and discretion, is commended for it self, without the help of fancy. Besides the discretion of times, places, and persons, necessary to a good fancy, there is required also an often application of his thoughts to their end; that is to say, to some use to be made of them. This done; he that hath this virtue, will be easily fitted with similitudes, that will please, not only by illustration of his dis-

course, and adorning it with new and apt metaphors; but also, by the rarity of their invention. But without steadiness, and direction to some end, a great fancy is one kind of madness; such as they have, that entering into any discourse, are snatched from their purpose, by every thing that comes in their thought, into so many, and so long digressions, and parentheses, that they utterly lose themselves: which kind of folly, I know no particular name for: but the cause of it is, sometimes want of experience; whereby that seemeth to a man new and rare, which doth not so to others: sometimes pusillanimity; by which that seems great to him, which other men think a trifle: and whatsoever is new, or great, and therefore thought fit to be told, withdraws a man by degrees from the intended way of his discourse.

In a good poem, whether it be *epic*, or *dramatic*; as also in *sonnets*, *epigrams*, and other pieces, both judgment and fancy are required: but the fancy must be more eminent; because they please for the extravagancy; but ought not to displease by indiscretion.

In a good history, the judgment must be eminent; because the goodness consisteth, in the method, in the truth, and in the choice of the actions that are most profitable to be known. Fancy has no place, but only in adorning the style.

In orations of praise, and in invectives, the fancy is predominant; because the design is not truth, but to honour or dishonour; which is done by noble, or by vile comparisons. The judgment does but suggest what circumstances make an action laudable, or culpable.

In hortatives, and pleadings, as truth, or disguise serveth best to the design in hand; so is the judgment, or the fancy most required.

In demonstration, in counsel, and all rigorous search of truth, judgment does all; except sometimes the understanding have need to be opened by some apt similitude; and then there is so much use of fancy. But for metaphors, they are in this case utterly excluded. For seeing they openly profess deceit; to admit them into counsel, or reasoning, were manifest folly.

And in any discourse whatsoever, if the defect of discretion be apparent, how extravagant soever the fancy be, the whole discourse will be taken for a sign of want of wit; and so will it never when the discretion is manifest, though the fancy be never so ordinary.

The secret thoughts of a man run over all things, holy, profane, clean, obscene, grave, and light, without shame, or blame; which verbal discourse cannot do, farther than the judgment shall approve of the time, place, and persons. An anatomist, or a physician may speak, or write his judgment of unclean things; because it is not to please, but profit: but for another man to write his extravagant, and pleasant fancies of the same, is as if a man, from being tumbled into the dirt, should come and present himself before good company. And it is the want of discretion that makes the difference. Again, in professed remissness of mind, and familiar company, a man may play with the sounds, and equivocal significations of words; and that many times with encounters of extraordinary fancy: but in a sermon, or in public, or before persons unknown, or whom we ought to reverence; there is no gingling of words that will not be accounted folly: and the difference is only in the want of discretion. So that where wit is wanting, it is not fancy that is wanting, but discretion. Judgment therefore without fancy is wit, but fancy without judgment, not.

When the thoughts of a man, that has a design in hand, running over a multitude of things, observes how they conduce to that design; or what design they may conduce unto; if his observations be such as are not easy, or usual, this wit of his is called PRUDENCE; and dependeth on much experience, and memory of the like things, and their consequences heretofore. In which there is not so much difference of men, as there is in their fancies and judgments; because the experience of men equal in age, is not much unequal, as to the quantity; but lies in different occasions; every one having his private designs. To govern well a family, and a kingdom, are not different degrees of prudence; but different sorts of business; no more than to draw a picture in little, or as great, or greater than the life, are different degrees of art. A plain husbandman is more prudent in affairs of his own house, than a privy councillor in the affairs of another man.

To prudence, if you add the use of unjust, or dishonest means, such as usually are prompted to men by fear, or want; you have that crooked wisdom, which is called CRAFT; which is a sign of pusillanimity.

For magnanimity is contempt of unjust, or dishonest helps. And that which the Latins call *versutia*, (translated into English, *shifting*,) and is a putting off of a present danger or incommodity, by engaging into a greater, as when a man robs one to pay another, is but a shorter sighted craft, called *versutia*, from *versura*, which signifies taking money at usury for the present payment of interest.

As for *acquired wit*, (I mean acquired by method and instruction,) there is none but reason; which is grounded on the right use of speech, and produceth the sciences. But of reason and science, I have already spoken in the fifth and sixth chapters.

The causes of this difference of wits, are in the passions; and the difference of passions proceedeth, partly from the different constitution of the body, and partly from different education. For if the difference proceeded from the temper of the brain, and the organs of sense, either exterior or interior, there would be no less difference of men in their sight, hearing, or other senses, than in their fancies and discretions. It proceeds therefore from the passions; which are different, not only from the difference of mens' complexions; but also from their difference of customs, and education.

The passions that most of all cause the differences of wit, are principally, the more or less desire of power, of riches, of knowledge, and of honour. All which may be reduced to the first, that is, desire of power. For riches, knowledge, and honour are but several sorts of power.

And therefore, a man who has no great passion for any of these things; but is as men term it indifferent; though he may be so far a good man, as to be free from giving offence; yet he cannot possibly have either a great fancy, or much judgment. For the thoughts are to the desires, as scouts, and spies, to range abroad, and find the way to the things desired: all steadiness of the mind's motion and all quickness of the same, proceeding from thence: for as to have no desire, is to be dead: so to have weak passions, is dullness; and to have passions indifferently for every thing, GIDDINESS, and *distraction*; and to have stronger and more vehement passions for any thing, than is ordinarily seen in others, is that which men call MADNESS.

Whereof there be almost as many kinds, as of the passions themselves. Sometimes the extraordinary and extravagant passion, proceedeth from the evil constitution of the organs of the body, or harm done them; and sometimes the hurt, and indisposition of the organs, is caused by the vehemence, or long continuance of the passion. But in both cases the madness is of one and the same nature.

The passion, whose violence, or continuance, maketh madness, is either great *vain-glory*; which is commonly called *pride*, and *self-conceit*; or great *dejection* of mind.

Pride, subjecteth a man to anger, the excess whereof, is the madness called RAGE and FURY. And thus it comes to pass that excessive desire of revenge, when it becomes habitual, hurteth the organs, and becomes rage: that excessive love, with jealousy, becomes also rage: excessive opinion of a man's own self, for divine inspiration, for wisdom, learning, form and the like, becomes distraction and giddiness: the same, joined with envy, rage: vehement opinion of the truth of any thing, contradicted by others, rage.

Dejection subjects a man to causeless fears; which is a madness commonly called MELANCHOLY, apparent also in divers manners; as in haunting of solitudes and graves; in superstitious behaviour; and in fearing some one, some another particular thing. In sum, all passions that produce strange and unusual behaviour, are called by the general name of madness. But of the several kinds of madness, he that would take the pains, might enrol a legion. And if the excesses be madness, there is no doubt but the passions themselves, when they tend to evil, are degrees of the same.

(For example,) though the effect of folly, in them that are possessed of an opinion of being inspired, be not visible always in one man, by any very extravagant action, that proceedeth from such passion; yet when many of them conspire together, the rage of the whole multitude is visible enough. For what argument of madness can there be greater, than to clamour, strike, and throw stones at our best friends? Yet this is somewhat less than such a multitude will do. For they will clamour, fight against, and destroy those, by whom all their lifetime before, they have been protected, and secured from injury. And if this be madness in the multitude, it is the same in every particular man. For as in the midst of the sea, though a man perceive

no sound of that part of the water next him; yet he is well assured, that part contributes as much to the roaring of the sea, as any other part of the same quantity; so also, though we perceive no great unquietness in one or two men, yet we may be well assured, that their singular passions, are parts of the seditious roaring of a troubled nation. And if there were nothing else that bewrayed their madness; yet that very arrogating such inspiration to themselves, is argument enough. If some man in Bedlam should entertain you with sober discourse; and you desire in taking leave, to know what he were, that you might another time requite his civility; and he should tell you, he were God the Father; I think you need expect no extravagant action for argument of his madness.

This opinion of inspiration, called commonly, private spirit, begins very often, from some lucky finding of an error generally held by others; and not knowing, or not remembering, by what conduct of reason, they came to so singular a truth, (as they think it, though it be many times an untruth they light on,) they presently admire themselves, as being in the special grace of God Almighty, who hath revealed the same to them supernaturally, by his Spirit.

Again, that madness is nothing else, but too much appearing passion, may be gathered out of the effects of wine, which are the same with those of the evil disposition of the organs. For the variety of behaviour in men that have drunk too much, is the same with that of madmen: some of them raging, others loving, others laughing, all extravagantly, but according to their several domineering passions: for the effect of the wine, does but remove dissimulation, and take from them the sight of the deformity of their passions. For, (I believe) the most sober men, when they walk alone without care and employment of the mind, would be unwilling the vanity and extravagance of their thoughts at that time should be publicly seen; which is a confession, that passions unguided, are for the most part mere madness.

The opinions of the world, both in ancient and later ages, concerning the cause of madness, have been two. Some deriving them from the passions; some, from demons, or spirits, either good or bad, which they thought might enter into a man, possess him, and move his organs in such strange and uncouth manner, as madmen use to do. The former sort therefore, called such men, madmen: but the latter, called them sometimes *demoniacs*, (that is, possessed with spirits;) sometimes *enurgumeni*, (that is, agitated or moved with spirits;) and now in *Italy* they are called not only *pazzi*, madmen; but also *spiritati*, men possessed.

There was once a great conflux of people in *Abdera*, a city of the Greeks, at the acting of the tragedy of *Andromeda*, upon an extreme hot day; whereupon, a great many of the spectators falling into fevers, had this accident from the heat, and from the tragedy together, that they did nothing but pronounce iambics, with the names of *Perseus* and *Andromeda*; which, together with the fever, was cured by the coming on of winter; and this madness was thought to proceed from the passion imprinted by the tragedy. Likewise there reigned a fit of madness in another Grecian city, which seized only the young maidens; and caused many of them to hang themselves. This was by most then thought an act of the Devil. But one that suspected, that contempt of life in them, might proceed from some passion of the mind, and supposing they did not contemn also their honour, gave counsel to the magistrates, to strip such as so hanged themselves, and let them hang out naked. This, the story says, cured that madness. But on the other side, the same Grecians, did often ascribe madness to the operation of the Eumenides, or Furies; and sometimes of *Ceres*, *Phoebus*, and other gods; so much did men attribute to phantasms, as to think them aereal living bodies; and generally to call them spirits. And as the Romans in this, held the same opinion with the Greeks, so also did the Jews; for they called madmen prophets, or (according as they thought the spirits good or bad) demoniacs; and some of them called both prophets and demoniacs, madmen; and some called the same man both demoniac, and madman. But for the Gentiles it is no wonder, because diseases and health, vices and virtues, and many natural accidents, were with them termed, and worshipped as demons. So that a man was to understand by demon, as well, (sometimes) an ague, as a devil. But for the Jews to have such opinion, is somewhat strange. For neither *Moses* nor *Abraham* pretended to prophecy by possession of a spirit; but from the voice of God; or by a vision or dream: nor is there any thing in his law, moral or ceremonial, by which

they were taught, there was any such enthusiasm, or any possession. When God is said, *Numb.* 11. 25. to take from the spirit that was in *Moses*, and give to the 70 elders, the Spirit of God (taking it for the substance of God) is not divided. The Scriptures, by the Spirit of God in man, mean a man's spirit, inclined to godliness. And where it is said, *Exod.* 28. 3. *whom I have filled with the spirit of wisdom to make garments for Aaron*, is not meant a spirit put into them, that can make garments; but the wisdom of their own spirits in that kind of work. In the like sense, the spirit of man, when it produceth unclean actions, is ordinarily called an unclean spirit, and so other spirits, though not always, yet as often as the virtue or vice so styled, is extraordinary, and eminent. Neither did the other prophets of the old Testament pretend enthusiasm; or, that God spake in them; but to them, by voice, vision, or dream; and the *burthen of the Lord* was not possession, but command. How then could the Jews fall into this opinion of possession? I can imagine no reason, but that which is common to all men; namely, the want of curiosity to search natural causes; and their placing felicity in the acquisition of the gross pleasures of the senses, and the things that most immediately conduce thereto. For they that see any strange, and unusual ability, or defect in a man's mind; unless they see withal, from what cause it may probably proceed, can hardly think it natural; and if not natural, they must needs think it supernatural, and then what can it be, but that either God or the Devil is in him? And hence it came to pass, when our Saviour (*Mark* 3. 21.) was compassed about with the multitude, those of the house doubted he was mad, and went out to hold him: but the Scribes said he had *Beelzebub*, and that was it, by which he cast out devils; as if the greater madman had awed the lesser. And that (*John* 10. 20.) some said, *he hath a devil, and is mad*; whereas others holding him for a prophet, said, *these are not the words of one that hath a devil.* So in the old Testament he that came to anoint *Jehu*, 2 *Kings* 9. 11. was a prophet; but some of the company asked *Jehu*, *what came that madman for?* So that in sum, it is manifest, that whosoever behaved himself in extraordinary manner, was thought by the Jews to be possessed either with a good, or evil spirit; except by the Sadducees, who erred so far on the other hand, as not to believe there were at all any spirits, (which is very near to direct atheism;) and thereby perhaps the more provoked others, to term such men demoniacs, rather than madmen.

But why then does our Saviour proceed in the curing of them, as if they were possessed; and not as if they were mad? To which I can give no other kind of answer, but that which is given to those that urge the Scripture in like manner against the opinion of the motion of the earth. The Scripture was written to shew unto men the kingdom of God, and to prepare their minds to become his obedient subjects; leaving the world, and the philosophy thereof, to the disputation of men, for the exercising of their natural reason. Whether the earth's, or sun's motion make the day, and night; or whether the exorbitant actions of men, proceed from passion, or from the devil, (so we worship him not) it is all one, as to our obedience, and subjection to God Almighty; which is the thing for which the Scripture was written. As for that our Saviour speaketh to the disease, as to a person; it is the usual phrase of all that cure by words only, as Christ did, (and enchanters pretend to do, whether they speak to a devil or not.) For is not Christ also said (*Matt.* 8. 26.) to have rebuked the winds? Is not he said also (*Luke* 4. 39.) to rebuke a fever? Yet this does not argue that a fever is a devil. And whereas many of those devils are said to confess Christ; it is not necessary to interpret those places otherwise, than that those madmen confessed him. And whereas our Saviour (*Matt.* 12. 43.) speaketh of an unclean spirit, that having gone out of a man, wandereth through dry places, seeking rest, and finding none, and returning into the same man, with seven other spirits worse than himself; it is manifestly a parable, alluding to a man, that after a little endeavour to quit his lusts, is vanquished by the strength of them; and becomes seven times worse than he was. So that I see nothing at all in the Scripture, that requireth a belief, that demoniacs were any other thing but madmen.

There is yet another fault in the discourses of some men; which may also be numbered amongst the sorts of madness; namely, that abuse of words, whereof I have spoken before in the fifth chapter, by the name of absurdity. And that is, when men speak such words, as put together, have in them no signification at all; but are fallen upon by some, through misunderstand-

ing of the words they have received, and repeat by rote; by others from intention to deceive by obscurity. And this is incident to none but those, that converse in questions of matters incomprehensible, as the School-men; or in questions of abstruse philosophy. The common sort of men seldom speak insignificantly, and are therefore, by those other egregious persons counted idiots. But to be assured their words are without any thing correspondent to them in the mind, there would need some examples; which if any man require, let him take a School-man into his hands and see if he can translate any one chapter concerning any difficult point, as the Trinity; the Deity; the nature of Christ; transubstantiation; free-will, &c. into any of the modern tongues, so as to make the same intelligible; or into any tolerable Latin, such as they were acquainted withal, that lived when the Latin tongue was vulgar. What is the meaning of these words. *The first cause does not necessarily inflow any thing into the second, by force of the essential subordination of the second causes, by which it may help it to work?* They are the translation of the title of the sixth chapter of *Suarez*' first book, *Of the Concourse, Motion, and Help of God.* When men write whole volumes of such stuff, are they not mad, or intend to make others so? And particularly, in the question of transubstantiation; where after certain words spoken, they that say, the white*ness*, round*ness*, magni*tude*, quali*ty*, corruptibili*ty*, all which are incorporeal, &c. go out of the wafer, into the body of our blessed Saviour, do they not make those *nesses*, *tudes*, and *ties*, to be so many spirits possessing his body? For by spirits, they mean always things, that being incorporeal, are nevertheless moveable from one place to another. So that this kind of absurdity, may rightly be numbered amongst the many sorts of madness; and all the time that guided by clear thoughts of their worldly lust, they forbear disputing, or writing thus, but lucid intervals. And thus much of the virtues and defects intellectual.

Chapter 9

Of the Several Subjects of Knowledge

There are of KNOWLEDGE two kinds; whereof one is *knowledge of fact:* the other *knowledge of the consequence of one affirmation to another.* The former is nothing else, but sense and memory, and is *absolute knowledge*; as when we see a fact doing, or remember it done: and this is the knowledge required in a witness. The latter is called *science;* and is *conditional;* as when we know, that, *if the figure shown be a circle, then any straight line through the center shall divide it into two equal parts.* And this is the knowledge required in a philosopher; that is to say, of him that pretends to reasoning.

The register of *knowledge of fact* is called *history.* Whereof there be two sorts: one called *natural history*; which is the history of such facts, or effects of nature, as have no dependence on man's *will*; such as are the histories of *metals*, *plants*, *animals*, *regions*, and the like. The other, is *civil history*; which is the history of the voluntary actions of men in commonwealths.

The registers of science, are such *books* as contain the *demonstrations* of consequences of one affirmation, to another; and are commonly called *books of philosophy*; whereof the sorts are many, according to the diversity of the matter; and may be divided in such manner as I have divided them in the following table.

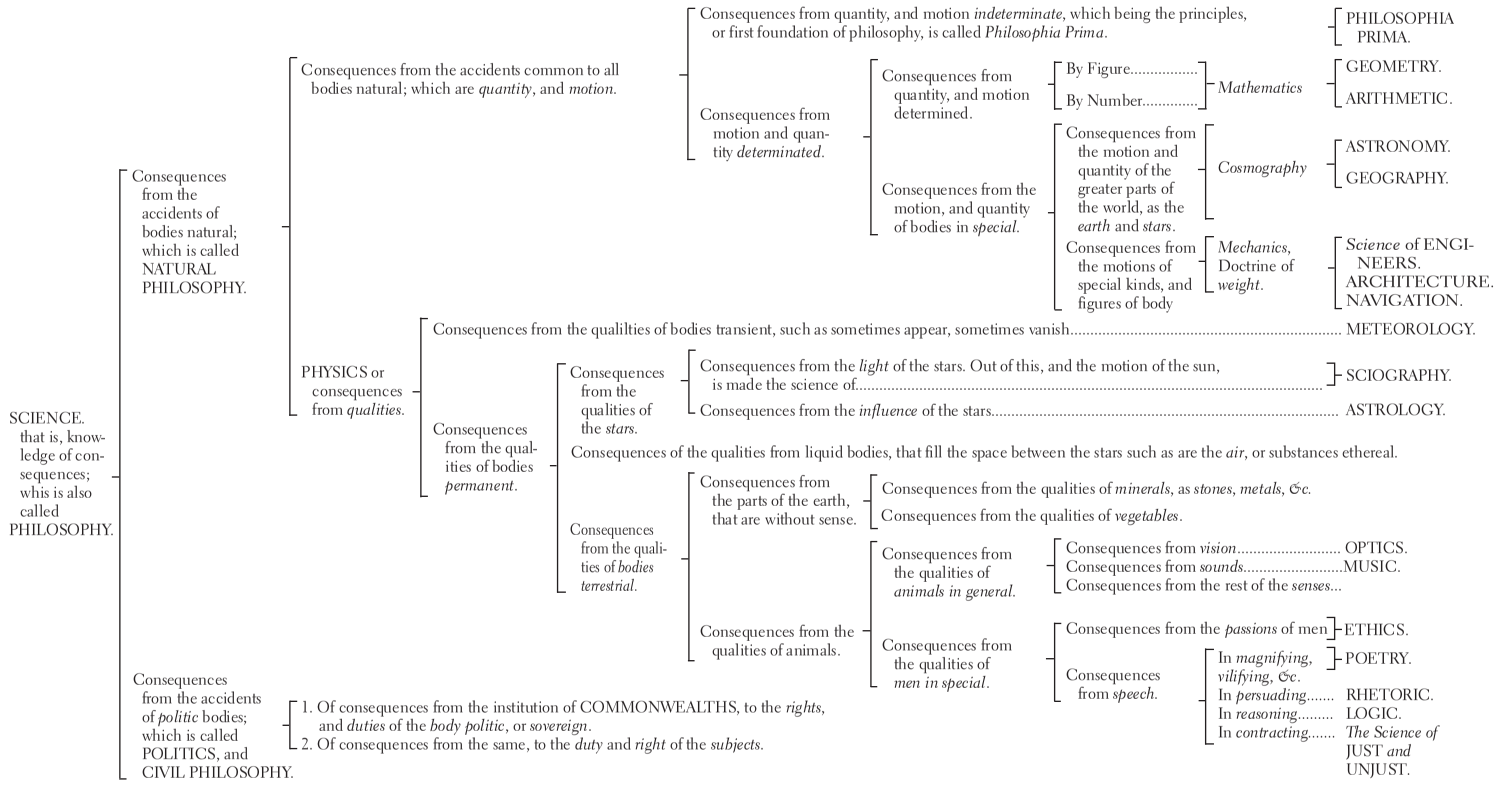
Chapter 10

Of Power, Worth, Dignity, Honour, and Worthiness

The power *of a man*, (to take it universally,) is his present means, to obtain some future apparent good; and is either *original* or *instrumental.*

Natural power, is the eminence of the faculties of body, or mind: as extraordinary strength, form, prudence, arts, eloquence, liberality, nobility. *Instrumental* are those powers, which acquired by these, or by fortune, are means and instruments to acquire more: as riches, reputation, friends, and the secret working of God, which men call good luck. For the nature of power, is in this point, like to fame, increasing as it proceeds; or like the motion of heavy bodies, which the further they go, make still the more haste.

The greatest of human powers, is that which is compounded of the powers of most men, united by consent, in one person, natural, or civil, that has the use of all their powers depending on his will; such as is the power of a common-wealth: or depending



SCIENCE. that is, knowledge of consequences; whis is also called PHILOSOPHY.
Consequences from the accidents of bodies natural; which is called NATURAL PHILOSOPHY.
Consequences from the accidents common to all bodies natural; which are *quantity*, and *motion*.
Consequences from quantity, and motion *indeterminate*, which being the principles, or first foundation of philosophy, is called *Philosophia Prima*.
PHILOSOPHIA PRIMA.
Consequences from motion and quantity *determinated*.
Consequences from quantity, and motion determined.
By Figure.....
By Number.....
Mathematics
GEOMETRY.
ARITHMETIC.
Consequences from the motion, and quantity of bodies in *special*.
Consequences from the motion and quantity of the greater parts of the world, as the *earth* and *stars*.
Cosmography
ASTRONOMY.
GEOGRAPHY.
Consequences from the motions of special kinds, and figures of body
Mechanics, Doctrine of *weight*.
Science of ENGINEERS.
ARCHITECTURE.
NAVIGATION.
PHYSICS or consequences from *qualities*.
Consequences from the qualilties of bodies transient, such as sometimes appear, sometimes vanish..... METEOROLOGY.
Consequences from the qualities of bodies *permanent*.
Consequences from the qualities of the *stars*.
Consequences from the *light* of the stars. Out of this, and the motion of the sun, is made the science of.....
SCIOGRAPHY.
Consequences from the *influence* of the stars..... ASTROLOGY.
Consequences of the qualities from liquid bodies, that fill the space between the stars such as are the *air*, or substances ethereal.
Consequences from the qualities of *bodies terrestrial*.
Consequences from the parts of the earth, that are without sense.
Consequences from the qualities of *minerals*, as *stones*, *metals*, *&c.*
Consequences from the qualities of *vegetables*.
Consequences from the qualities of animals.
Consequences from the qualities of *animals in general*.
Consequences from *vision*..... OPTICS.
Consequences from *sounds*.....MUSIC.
Consequences from the rest of the *senses*...
Consequences from the qualities of *men in special*.
Consequences from the *passions* of men
ETHICS.
Consequences from *speech*.
In *magnifying*, *vilifying*, *&c.*
POETRY.
In *persuading*..... RHETORIC.
In *reasoning*..... LOGIC.
In *contracting*..... *The Science of* JUST *and* UNJUST.
Consequences from the accidents of *politic* bodies; which is called POLITICS, and CIVIL PHILOSOPHY.
1. Of consequences from the institution of COMMONWEALTHS, to the *rights*, and *duties* of the *body politic*, or *sovereign*.
2. Of consequences from the same, to the *duty* and *right* of the *subjects*.

on the wills of each particular; such as is the power of a faction or of divers factions leagued. Therefore to have servants, is power; to have friends, is power: for they are strengths united.

Also riches joined with liberality, is power; because it procureth friends, and servants: without liberality, not so; because in this case they defend not; but expose men to envy, as a prey.

Reputation of power, is power; because it draweth with it the adherence of those that need protection.

So is reputation of love of a man's country, (called popularity,) for the same reason.

Also, what quality soever maketh a man beloved, or feared of many; or the reputation of such quality, is power; because it is a means to have the assistance, and service of many.

Good success is power; because it maketh reputation of wisdom, or good fortune; which makes men either fear him, or rely on him.

Affability of men already in power, is increase of power; because it gaineth love.

Reputation of prudence in the conduct of peace or war, is power; because to prudent men, we commit the government of ourselves, more willingly than to others.

Nobility is power, not in all places, but only in those commonwealths, where it has privileges: for in such privileges consisteth their power.

Eloquence is power, because it is seeming prudence.

Form is power; because being a promise of good, it recommendeth men to the favour of women and strangers.

The sciences, are small power; because not eminent; and therefore, not acknowledged in any man; nor are at all, but in a few, and in them, but of a few things. For science is of that nature, as none can understand it to be, but such as in a good measure have attained it.

Arts of public use, as fortification, making of engines, and other instruments of war; because they confer to defence, and victory, are power: and though the true mother of them, be science, namely the mathematics; yet, because they are brought into the light, by the hand of the artificer, they be esteemed (the midwife passing with the vulgar for the mother,) as his issue.

The *value*, or WORTH of a man, is as of all other things, his price; that is to say, so much as would be given for the use of his power: and therefore is not absolute; but a thing dependant on the need and judgment of another. An able conductor of soldiers, is of great price in time of war present, or imminent; but in peace not so. A learned and uncorrupt judge, is much worth in time of peace; but not so much in war. And as in other things, so in men, not the seller, but the buyer determines the price. For let a man (as most men do,) rate themselves at the highest value they can; yet their true value is no more than it is esteemed by others.

The manifestation of the value we set on one another, is that which is commonly called honouring, and dishonouring. To value a man at a high rate, is to *honour* him; at a low rate, is to *dishonour* him. But high, and low, in this case, is to be understood by comparison to the rate that each man setteth on himself.

The public worth of a man, which is the value set on him by the commonwealth, is that which men commonly call DIGNITY. And this value of him by the commonwealth, is understood, by offices of command, judicature, public employment; or by names and titles, introduced for distinction of such value.

To pray to another, for aid of any kind, is to HONOUR; because a sign we have an opinion he has power to help; and the more difficult the aid is, the more is the honour.

To obey, is to honour, because no man obeys them, whom they think have no power to help, or hurt them. And consequently to disobey, is to *dishonour*.

To give great gifts to a man, is to honour him; because it is buying of protection, and acknowledging of power. To give little gifts, is to dishonour; because it is but alms, and signifies an opinion of the need of small helps.

To be sedulous in promoting another's good; also to flatter, is to honour; as a sign we seek his protection or aid. To neglect, is to dishonour.

To give way, or place to another, in any commodity, is to honour; being a confession of greater power. To arrogate, is to dishonour.

To show any sign of love, or fear of another, is to honour; for both to love, and to fear, is to value. To

contemn, or less to love or fear, than he expects, is to dishonour; for it is undervaluing.

To praise, magnify, or call happy, is to honour; because nothing but goodness, power, and felicity is valued. To revile, mock, or pity, is to dishonour.

To speak to another with consideration, to appear before him with decency, and humility, is to honour him; as signs of fear to offend. To speak to him rashly, to do any thing before him obscenely, slovenly, impudently, is to dishonour.

To believe, to trust, to rely on another, is to honour him; sign of opinion of his virtue and power. To distrust, or not believe, is to dishonour.

To hearken to a man's counsel, or discourse of what kind soever, is to honour; as a sign we think him wise, or eloquent, or witty. To sleep, or go forth, or talk the while, is to dishonour.

To do those things to another, which he takes for signs of honour, or which the law or custom makes so, is to honour; because in approving the honour done by others, he acknowledgeth the power which others acknowledge. To refuse to do them, is to dishonour.

To agree with in opinion, is to honour; as being a sign of approving his judgment, and wisdom. To dissent, is dishonour, and an upbraiding of error; and (if the dissent be in many things) of folly.

To imitate, is to honour; for it is vehemently to approve. To imitate one's enemy, is to dishonour.

To honour those another honours, is to honour him; as a sign of approbation of his judgment. To honour his enemies, is to dishonour him.

To employ in counsel, or in actions of difficulty, is to honour; as a sign of opinion of his wisdom, or other power. To deny employment in the same cases, to those that seek it, is to dishonour.

All these ways of honouring, are natural; and as well within, as without commonwealths. But in commonwealths, where he, or they that have the supreme authority, can make whatsoever they please, to stand for signs of honour, there be other honours.

A sovereign doth honour a subject, with whatsoever title, or office, or employment, or action, that he himself will have taken for a sign of his will to honour him.

The king of *Persia*, honoured *Mordecai*, when he appointed he should be conducted through the streets in the king's garment, upon one of the king's horses, with a crown on his head, and a prince before him, proclaiming, *thus shall it be done to him that the king will honour*. And yet another king of *Persia*, or the same another time, to one that demanded for some great service, to wear one of the king's robes, gave him leave so to do; but with this addition, that he should wear it as the king's fool; and then it was dishonour. So that of civil honour, the fountain is in the person of the commonwealth, and dependeth on the will of the sovereign; and is therefore temporary, and called *civil honour*; such as are magistracy, offices, titles; and in some places coats and scutcheons painted: and men honour such as have them, as having so many signs of favour in the commonwealth; which favour is power.

Honourable is whatsoever possession, action, or quality, is an argument and sign of power.

And therefore to be honoured, loved, or feared of many, is honourable; as arguments of power. To be honoured of few or none, *dishonourable*.

Dominion, and victory is honourable; because acquired by power; and servitude, for need, or fear, is dishonourable.

Good fortune (if lasting,) honourable, as a sign of the favour of God. Ill fortune, and losses, dishonourable. Riches, are honourable; for they are power. Poverty, dishonourable. Magnanimity, liberality, hope, courage, confidence, are honourable; for they proceed from the conscience of power. Pusillanimity, parsimony, fear, diffidence, are dishonourable.

Timely resolution, or determination of what a man is to do, is honourable; as being the contempt of small difficulties, and dangers. And irresolution, dishonourable; as a sign of too much valuing of little impediments, and little advantages: for when a man has weighed things as long as the time permits, and resolves not, the difference of weight is but little; and therefore if he resolve not, he overvalues little things, which is pusillanimity.

All actions, and speeches, that proceed, or seem to proceed from much experience, science, discretion, or wit, are honourable; for all these are powers. Actions, or words that proceed from error, ignorance, or folly, dishonourable.

Gravity, as far forth as it seems to proceed from a mind employed on something else, is honourable; because employment is a sign of power. But if it

seem to proceed from a purpose to appear grave, it is dishonourable. For the gravity of the former, is like the steadiness of a ship laden with merchandise; but of the latter, like the steadiness of a ship ballasted with sand, and other trash.

To be conspicuous, that is to say, to be known, for wealth, office, great actions, or any eminent good, is honourable; as a sign of the power for which he is conspicuous. On the contrary, obscurity, is dishonourable.

To be descended from conspicuous parents, is honourable; because they the more easily attain the aids, and friends of their ancestors. On the contrary, to be descended from obscure parentage, is dishonourable.

Actions proceeding from equity, joined with loss, are honourable; as signs of magnanimity: for magnanimity is a sign of power. On the contrary, craft, shifting, neglect of equity, is dishonourable.

Covetousness of great riches, and ambition of great honours, are honourable; as signs of power to obtain them. Covetousness, and ambition, of little gains, or preferments, is dishonourable.

Nor does it alter the case of honour, whether an action (so it be great and difficult, and consequently a sign of much power,) be just or unjust: for honour consisteth only in the opinion of power. Therefore the ancient heathen did not think they dishonoured, but greatly honoured the Gods, when they introduced them in their poems, committing rapes, thefts, and other great, but unjust, or unclean acts: insomuch as nothing is so much celebrated in *Jupiter*, as his adulteries; nor in *Mercury*, as his frauds, and thefts: of whose praises, in a hymn of *Homer*, the greatest is this, that being born in the morning, he had invented music at noon, and before night, stolen away the cattle of *Apollo*, from his herdsmen.

Also amongst men, till there were constituted great commonwealths, it was thought no dishonour to be a pirate, or a highway thief; but rather a lawful trade, not only amongst the Greeks, but also amongst all other nations; as is manifest by the histories of ancient time. And at this day, in this part of the world, private duels are, and always will be honourable, though unlawful, till such time as there shall be honour ordained for them that refuse, and ignominy for them that make the challenge. For duels also are many times effects of courage; and the ground of courage is always strength or skill, which are power; though for the most part they be effects of rash speaking, and of the fear of dishonour, in one, or both the combatants; who engaged by rashness, are driven into the lists to avoid disgrace.

Scutcheons, and coats of arms hereditary, where they have any eminent privileges, are honourable; otherwise not: for their power consisteth either in such privileges, or in riches, or some such thing as is equally honoured in other men. This kind of honour, commonly called gentry, has been derived from the ancient Germans. For there never was any such thing known, where the German customs were unknown. Nor is it now any where in use where the Germans have not inhabited. The ancient Greek commanders, when they went to war, had their shields painted with such devices as they pleased; insomuch as an unpainted buckler was a sign of poverty, and of a common soldier; but they transmitted not the inheritance of them. The Romans transmitted the marks of their families: but they were the images, not the devices of their ancestors. Amongst the people of *Asia*, *Africa*, and *America*, there is not, nor was ever, any such thing. The Germans only had that custom; from whom it has been derived into *England*, *France*, *Spain*, and *Italy*, when in great numbers they either aided the Romans, or made their own conquests in these western parts of the world.

For *Germany*, being anciently, as all other countries, in their beginnings, divided amongst an infinite number of little lords, or masters of families, that continually had wars one with another; those masters, or lords, principally to the end they might, when they were covered with arms, be known by their followers; and partly for ornament, both painted their armour, or their scutcheon, or coat, with the picture of some beast, or other thing; and also put some eminent and visible mark upon the crest of their helmets. And this ornament both of the arms, and crest, descended by inheritance to their children; to the eldest pure, and to the rest with some note of diversity, such as the old master, that is to say in Dutch, the *Here-alt* thought fit. But when many such families, joined together, made a greater monarchy, this duty of the Herealt, to distinguish scutcheons, was made a private office apart. And the issue of these lords, is the great and ancient gentry; which for the most part bear living creatures,

noted for courage, and rapine; or castles, battlements, belts, weapons, bars, palisadoes, and other notes of war; nothing being then in honour, but virtue military. Afterwards, not only kings, but popular commonwealths, gave divers manners of scutcheons, to such as went forth to the war, or returned from it, for encouragement, or recompense to their service. All which, by an observing reader, may be found in such ancient histories, Greek and Latin, as make mention of the German nation and manners, in their times.

Titles of *honour*, such as are duke, count, marquis, and baron, are honourable; as signifying the value set upon them by the sovereign power of the commonwealth: which titles, were in old time titles of office, and command, derived some from the Romans, some from the Germans and French. Dukes, in Latin *duces*, being generals in war: counts, *comites*, such as bare the general company out of friendship, and were left to govern and defend places conquered, and pacified: marquises, *marchiones*, were counts that governed the marches, or bounds of the empire. Which titles of duke, count, and marquis, came into the empire, about the time of *Constantine* the Great, from the customs of the German *militia*. But baron, seems to have been a title of the Gauls, and signifies a great man; such as were the king's, or prince's men, whom they employed in war about their persons; and seems to be derived from *vir*, to *ber*, and *bar*, that signified the same in the language of the Gauls, that *vir* in Latin; and thence to *bero*, and *baro:* so that such men were called *berones*, and after barones; and (in Spanish) *varones*. But he that would know more particularly the original of titles of honour, may find it, as I have done this, in Mr. Selden's most excellent treatise of that subject. In process of time these offices of honour, by occasion of trouble, and for reasons of good and peaceable government, were turned into mere titles; serving for the most part, to distinguish the precedence, place, and order of subjects in the commonwealth: and men were made dukes, counts, marquises, and barons of places, wherein they had neither possession, nor command: and other titles also, were devised to the same end.

WORTHINESS, is a thing different from the worth, or value of a man; and also from his merit, or desert; and consisteth in a particular power, or ability for that, whereof he is said to be worthy: which particular ability, is usually named FITNESS, or *aptitude*.

For he is worthiest to be a commander, to be a judge, or to have any other charge, that is best fitted, with the qualities required to the well discharging of it; and worthiest of riches, that has the qualities most requisite for the well using of them: any of which qualities being absent, one may nevertheless be a worthy man, and valuable for something else. Again, a man may be worthy of riches, office, and employment, that nevertheless, can plead no right to have it before another; and therefore cannot be said to merit or deserve it. For merit presupposeth a right, and that the thing deserved is due by promise: of which I shall say more hereafter, when I shall speak of contracts.

Chapter 11

Of the Difference of Manners

By manners, I mean not here, decency of behaviour; as how one man should salute another, or how a man should wash his mouth, or pick his teeth before company, and such other points of the *small morals;* but those qualities of mankind, that concern their living together in peace, and unity. To which end we are to consider, that the felicity of this life, consisteth not in the repose of a mind satisfied. For there is no such *finis ultimus*, (utmost aim,) nor *summum bonum*, (greatest good,) as is spoken of in the books of the old moral philosophers. Nor can a man any more live, whose desires are at an end, than he, whose senses and imaginations are at a stand. Felicity is a continual progress of the desire, from one object to another; the attaining of the former, being still but the way to the latter. The cause whereof is, that the object of man's desire, is not to enjoy once only, and for one instant of time; but to assure for ever, the way of his future desire. And therefore the voluntary actions, and inclinations of all men, tend, not only to the procuring, but also to the assuring of a contented life; and differ only in the way: which ariseth partly from the diversity of passions, in divers men;

and partly from the difference of the knowledge, or opinion each one has of the causes, which produce the effect desired.

So that in the first place, I put for a general inclination of all mankind, a perpetual and restless desire of power after power, that ceaseth only in death. And the cause of this, is not always that a man hopes for a more intensive delight, than he has already attained to; or that he cannot be content with a moderate power: but because he cannot assure the power and means to live well, which he hath present, without the acquisition of more. And from hence it is, that kings, whose power is greatest, turn their endeavours to the assuring it at home by laws, or abroad by wars: and when that is done, there succeedeth a new desire; in some, of fame from new conquest; in others, of ease and sensual pleasure; in others, of admiration, or being flattered for excellence in some art, or other ability of the mind.

Competition of riches, honour, command, or other power, inclineth to contention, enmity, and war: because the way of one competitor, to the attaining of his desire, is to kill, subdue, supplant, or repel the other. Particularly, competition of praise, inclineth to a reverence of antiquity. For men contend with the living, not with the dead; to these ascribing more than due, that they may obscure the glory of the other.

Desire of ease, and sensual delight, disposeth men to obey a common power: because by such desires, a man doth abandon the protection might be hoped for from his own industry, and labour. Fear of death, and wounds, disposeth to the same; and for the same reason. On the contrary, needy men, and hardy, not contented with their present condition; as also, all men that are ambitious of military command, are inclined to continue the causes of war; and to stir up trouble and sedition: for there is no honour military but by war; nor any such hope to mend an ill game, as by causing a new shuffle.

Desire of knowledge, and arts of peace, inclineth men to obey a common power: For such desire, containeth a desire of leisure; and consequently protection from some other power than their own.

Desire of praise, disposeth to laudable actions, such as please them whose judgment they value; for of those men whom we contemn, we contemn also the praises. Desire of fame after death does the same. And though after death, there be no sense of the praise given us on earth, as being joys, that are either swallowed up in the unspeakable joys of Heaven, or extinguished in the extreme torments of hell: yet is not such fame vain; because men have a present delight therein, from the foresight of it, and of the benefit that may redound thereby to their posterity: which though they now see not, yet they imagine; and any thing that is pleasure in the sense, the same also is pleasure in the imagination.

To have received from one, to whom we think ourselves equal, greater benefits than there is hope to requite, disposeth to counterfeit love; but really secret hatred; and puts a man into the estate of a desperate debtor, that in declining the sight of his creditor, tacitly wishes him there, where he might never see him more. For benefits oblige, and obligation is thraldom; and unrequitable obligation, perpetual thraldom; which is to one's equal, hateful. But to have received benefits from one, whom we acknowledge for superior, inclines to love; because the obligation is no new depression: and cheerful acceptation, (which men call *gratitude*,) is such an honour done to the obliger, as is taken generally for retribution. Also to receive benefits, though from an equal, or inferior, as long as there is hope of requital, disposeth to love: for in the intention of the receiver, the obligation is of aid, and service mutual; from whence proceedeth an emulation of who shall exceed in benefiting; the most noble and profitable contention possible; wherein the victor is pleased with his victory, and the other revenged by confessing it.

To have done more hurt to a man, than he can, or is willing to expiate, inclineth the doer to hate the sufferer. For he must expect revenge, or forgiveness; both which are hateful.

Fear of oppression, disposeth a man to anticipate, or to seek aid by society: for there is no other way by which a man can secure his life and liberty.

Men that distrust their own subtlety, are in tumult and sedition, better disposed for victory, than they that suppose themselves wise, or crafty. For these love to consult, the other (fearing to be circumvented,) to strike first. And in sedition, men being always in the precincts of battle, to hold together, and use all advantages of force, is a better stratagem, than any that can proceed from subtlety of wit.

Vain-glorious men, such as without being conscious to themselves of great sufficiency, delight in supposing themselves gallant men, are inclined only to ostentation; but not to attempt: because when danger or difficulty appears, they look for nothing but to have their insufficiency discovered.

Vain-glorious men, such as estimate their sufficiency by the flattery of other men, or the fortune of some precedent action, without assured ground of hope from the true knowledge of themselves, are inclined to rash engaging; and in the approach of danger, or difficulty, to retire if they can: because not seeing the way of safety, they will rather hazard their honour, which may be salved with an excuse; than their lives, for which no salve is sufficient.

Men that have a strong opinion of their own wisdom in matter of government, are disposed to ambition. Because without public employment in council or magistracy, the honour of their wisdom is lost. And therefore eloquent speakers are inclined to ambition; for eloquence seemeth wisdom, both to themselves and others.

Pusillanimity disposeth men to irresolution, and consequently to lose the occasions, and fittest opportunities of action. For after men have been in deliberation till the time of action approach, if it be not then manifest what is best to be done, it is a sign, the difference of motives, the one way and the other, are not great: therefore not to resolve then, is to lose the occasion by weighing of trifles; which is pusillanimity.

Frugality, (though in poor men a virtue,) maketh a man unapt to achieve such actions, as require the strength of many men at once: for it weakeneth their endeavour, which is to be nourished and kept in vigour by reward.

Eloquence, with flattery, disposeth men to confide in them that have it; because the former is seeming wisdom, the latter seeming kindness. Add to them military reputation, and it disposeth men to adhere, and subject themselves to those men that have them. The two former, having given them caution against danger from him; the latter gives them caution against danger from others.

Want of science, that is, ignorance of causes, disposeth, or rather constraineth a man to rely on the advice, and authority of others. For all men whom the truth concerns, if they rely not on their own, must rely on the opinion of some other, whom they think wiser than themselves, and see not why he should deceive them.

Ignorance of the signification of words, which is want of understanding, disposeth men to take on trust, not only the truth they know not; but also the errors; and which is more, the non-sense of them they trust: for neither error nor non-sense, can without a perfect understanding of words, be detected.

From the same it proceedeth, that men give different names, to one and the same thing, from the difference of their own passions: as they that approve a private opinion, call it opinion; but they that mislike it, heresy: and yet heresy signifies no more than private opinion; but has only a greater tincture of choler.

From the same also it proceedeth, that men cannot distinguish, without study and great understanding, between the one action of many men, and many actions of one multitude; as for example, between one action of all the senators of *Rome* in killing *Cataline*, and the many actions of a number of senators in killing *Caesar*; and therefore are disposed to take for the action of the people, that which is a multitude of actions done by a multitude of men, led perhaps by the persuasion of one.

Ignorance of the causes, and original constitution of right, equity, law, and justice, disposeth a man to make custom and example the rule of his actions; in such manner, as to think that unjust which it hath been the custom to punish; and that just, of the impunity and approbation whereof they can produce an example, or (as the lawyers which only use this false measure of justice barbarously call it) a precedent; like little children, that have no other rule of good and evil manners, but the correction they receive from their parents and masters; save that children are constant to their rule, whereas, men are not so; because grown strong, and stubborn, they appeal from custom to reason, and from reason to custom, as it serves their turn; receding from custom when their interest requires it, and setting themselves against reason, as oft as reason is against them: which is the cause, that the doctrine of right and wrong, is perpetually disputed, both by the pen and the sword: whereas the doctrine of lines, and figures, is not so; because men care not, in that subject, what be truth, as a thing that crosses no man's ambition, profit or

lust. For I doubt not, but if it had been a thing contrary to any man's right of dominion, or to the interest of men that have dominion, *that the three angles of a triangle, should be equal to two angles of a square*; that doctrine should have been, if not disputed, yet by the burning of all books of geometry, suppressed, as far as he whom it concerned was able.

Ignorance of remote causes, disposeth men to attribute all events, to the causes immediate, and instrumental: for these are all the causes they perceive. And hence it comes to pass, that in all places, men that are grieved with payments to the public, discharge their anger upon the publicans, that is to say, farmers, collectors, and other officers of the public revenue; and adhere to such as find fault with the public government; and thereby, when they have engaged themselves beyond hope of justification, fall also upon the supreme authority, for fear of punishment, or shame of receiving pardon.

Ignorance of natural causes disposeth a man to credulity, so as to believe many times impossibilities: for such know nothing to the contrary, but that they may be true; being unable to detect the impossibility. And credulity, because men love to be hearkened unto in company, disposeth them to lying: so that ignorance it self without malice, is able to make a man both to believe lies, and tell them; and sometimes also to invent them.

Anxiety for the future time, disposeth men to inquire into the causes of things: because the knowledge of them, maketh men the better able to order the present to their best advantage.

Curiosity, or love of the knowledge of causes, draws a man from consideration of the effect, to seek the cause; and again, the cause of that cause; till of necessity he must come to this thought at last, that there is some cause, whereof there is no former cause, but is eternal; which is it men call God. So that it is impossible to make any profound inquiry into natural causes, without being inclined thereby to believe there is one God eternal; though they cannot have any idea of him in their mind, answerable to his nature. For as a man that is born blind, hearing men talk of warming themselves by the fire, and being brought to warm himself by the same, may easily conceive, and assure himself, there is somewhat there, which men call *fire*, and is the cause of the heat he feels; but cannot imagine what it is like; nor have an idea of it in his mind, such as they have that see it: so also, by the visible things of this world, and their admirable order, a man may conceive there is a cause of them, which men call God; and yet not have an idea, or image of him in his mind.

And they that make little, or no inquiry into the natural causes of things, yet from the fear that proceeds from the ignorance it self, of what it is that hath the power to do them much good or harm, are inclined to suppose, and feign unto themselves, several kinds of powers invisible; and to stand in awe of their own imaginations; and in time of distress to invoke them; as also in the time of an expected good success, to give them thanks; making the creatures of their own fancy, their gods. By which means it hath come to pass, that from the innumerable variety of fancy, men have created in the world innumerable sorts of gods. And this fear of things invisible, is the natural seed of that, which every one in himself calleth religion; and in them that worship, or fear that power otherwise than they do, superstition.

And this seed of religion, having been observed by many; some of those that have observed it, have been inclined thereby to nourish, dress, and form it into laws; and to add to it of their own invention, any opinion of the causes of future events, by which they thought they should be best able to govern others, and make unto themselves the greatest use of their powers.

Chapter 12

Of Religion

Seeing there are no signs, nor fruit of *religion*, but in man only; there is no cause to doubt, but that the seed of *religion*, is also only in man; and consisteth in some peculiar quality, or at least in some eminent degree thereof, not to be found in other living creatures.

And first, it is peculiar to the nature of man, to be inquisitive into the causes of the events they see, some more, some less; but all men so much, as to be curious in the search of the causes of their own good and evil fortune.

Secondly, upon the sight of any thing that hath a beginning, to think also it had a cause, which determined the same to begin, then when it did, rather than sooner or later.

Thirdly, whereas there is no other felicity of beasts, but the enjoying of their quotidian food, ease, and lusts; as having little or no foresight of the time to come, for want of observation, and memory of the order, consequence, and dependence of the things they see; man observeth how one event hath been produced by another; and remembereth in them antecedence and consequence; and when he cannot assure himself of the true causes of things, (for the causes of good and evil fortune for the most part are invisible,) he supposes causes of them, either such as his own fancy suggesteth; or trusteth to the authority of other men, such as he thinks to be his friends, and wiser than himself.

The two first, make anxiety. For being assured that there be causes of all things that have arrived hitherto, or shall arrive hereafter; it is impossible for a man, who continually endeavoureth to secure himself against the evil he fears, and procure the good he desireth, not to be in a perpetual solicitude of the time to come; so that every man, especially those that are over provident, are in an estate like to that of *Prometheus*. For as *Prometheus*, (which interpreted, is, *the prudent man*,) was bound to the hill *Caucasus*, a place of large prospect, where, an eagle feeding on his liver, devoured in the day, as much as was repaired in the night: so that man, which looks too far before him, in the care of future time, hath his heart all the day long, gnawed on by fear of death, poverty, or other calamity; and has no repose, nor pause of his anxiety, but in sleep.

This perpetual fear, always accompanying mankind in the ignorance of causes, as it were in the dark, must needs have for object something. And therefore when there is nothing to be seen, there is nothing to accuse, either of their good, or evil fortune, but some *power*, or agent *invisible*: in which sense perhaps it was, that some of the old poets said, that the gods were at first created by human fear: which spoken of the gods, (that is to say, of the many gods of the Gentiles) is very true. But the acknowledging of one God, eternal, infinite, and omnipotent, may more easily be derived, from the desire men have to know the causes of natural bodies, and their several virtues, and operations; than from the fear of what was to befall them in time to come. For he that from any effect he seeth come to pass, should reason to the next and immediate cause thereof, and from thence to the cause of that cause, and plunge himself profoundly in the pursuit of causes; shall at last come to this, that there must be (as even the heathen philosophers confessed) one first mover; that is, a first, and an eternal cause of all things; which is that which men mean by the name of God: and all this without thought of their fortune; the solicitude whereof, both inclines to fear, and hinders them from the search of the causes of other things; and thereby gives occasion of feigning of as many gods, as there be men that feign them.

And for the matter, or substance of the invisible agents, so fancied; they could not by natural cogitation, fall upon any other conceit, but that it was the same with that of the soul of man; and that the soul of man, was of the same substance, with that which appeareth in a dream, to one that sleepeth; or in a looking-glass, to one that is awake; which, men not knowing that such apparitions are nothing else but creatures of the fancy, think to be real, and external substances; and therefore call them ghosts; as the Latins called them *imagines*, and *umbrae*, and thought them spirits, that is, thin aerial bodies; and those invisible agents, which they feared, to be like them; save that they appear, and vanish when they please. But the opinion that such spirits were incorporeal, or immaterial, could never enter into the mind of any man by nature; because, though men may put together words of contradictory signification, as *spirit*, and *incorporeal*; yet they can never have the imagination of any thing answering to them: and therefore, men that by their own meditation, arrive to the acknowledgment of one infinite, omnipotent, and eternal God, choose rather to confess he is incomprehensible, and above their understanding, than to define his nature by *spirit incorporeal*, and then confess their definition to be unintelligible: or if they give him such a title, it is not *dogmatically*, with intention to make the divine nature understood; but *piously*, to honour him with attributes, of significations, as remote as they can from the grossness of bodies visible.

Then, for the way by which they think these invisi-

ble agents wrought their effects; that is to say, what immediate causes they used, in bringing things to pass, men that know not what it is that we call *causing*, (that is, almost all men) have no other rule to guess by, but by observing, and remembering what they have seen to precede the like effect at some other time, or times before, without seeing between the antecedent and subsequent event, any dependence or connexion at all: and therefore from the like things past, they expect the like things to come; and hope for good or evil luck, superstitiously, from things that have no part at all in the causing of it: as the Athenians did for their war at *Lepanto*, demand another *Phormio;* the Pompeian faction for their war in *Africa*, another *Scipio;* and others have done in divers other occasions since. In like manner they attribute their fortune to a stander by, to a lucky or unlucky place, to words spoken, especially if the name of God be amongst them; as charming and conjuring (the liturgy of witches;) insomuch as to believe, they have power to turn a stone into bread, bread into a man, or any thing into any thing.

Thirdly, for the worship which naturally men exhibit to powers invisible, it can be no other, but such expressions of their reverence, as they would use towards men; gifts, petitions, thanks, submission of body, considerate addresses, sober behaviour, premeditated words, swearing (that is, assuring one another of their promises,) by invoking them. Beyond that reason suggesteth nothing; but leaves them either to rest there; or for further ceremonies, to rely on those they believe to be wiser than themselves.

Lastly, concerning how these invisible powers declare to men the things which shall hereafter come to pass, especially concerning their good or evil fortune in general, or good or ill success in any particular undertaking, men are naturally at a stand; save that using to conjecture of the time to come, by the time past, they are very apt, not only to take casual things, after one or two encounters, for prognostics of the like encounter ever after, but also to believe the like prognostics from other men, of whom they have once conceived a good opinion.

And in these four things, opinion of ghosts, ignorance of second causes, devotion towards what men fear, and taking of things casual for prognostics, consisteth the natural seed of *religion;* which by reason of the different fancies, judgments, and passions of several men, hath grown up into ceremonies so different, that those which are used by one man, are for the most part ridiculous to another.

For these seeds have received culture from two sorts of men. One sort have been they, that have nourished, and ordered them, according to their own invention. The other have done it, by God's commandment, and direction: but both sorts have done it, with a purpose to make those men that relied on them, the more apt to obedience, laws, peace, charity, and civil society. So that the religion of the former sort, is a part of human politics; and teacheth part of the duty which earthly kings require of their subjects. And the religion of the latter sort is divine politics; and containeth precepts to those that have yielded themselves subjects in the kingdom of God. Of the former sort, were all the founders of commonwealths, and the lawgivers of the Gentiles: of the latter sort, were *Abraham*, *Moses*, and our *blessed Saviour*; by whom have been derived unto us the laws of the kingdom of God.

And for that part of religion, which consisteth in opinions concerning the nature of powers invisible, there is almost nothing that has a name, that has not been esteemed amongst the Gentiles, in one place or another, a god, or devil; or by their poets feigned to be inanimated, inhabited, or possessed by some spirit or other.

The unformed matter of the world, was a god, by the name of *Chaos*.

The heaven, the ocean, the planets, the fire, the earth, the winds, were so many gods.

Men, women, a bird, a crocodile, a calf, a dog, a snake, an onion, a leek, deified. Besides that, they filled almost all places, with spirits called *demons:* the plains, with *Pan*, and *Panises*, or Satyrs; the woods, with Fawns, and Nymphs; the sea, with Tritons, and other Nymphs; every river, and fountain, with a ghost of his name, and with Nymphs; every house with its *Lares*, or familiars; every man with his *Genius;* hell with ghosts, and spiritual officers, as *Charon*, *Cerberus*, and the *Furies;* and in the night time, all places with *larvae*, *lemures*, ghosts of men deceased, and a whole kingdom of fairies and bugbears. They have also ascribed divinity, and built temples to meer accidents, and qualities; such as are time, night, day,

peace, concord, love, contention, virtue, honour, health, rust, fever, and the like; which when they prayed for, or against, they prayed to, as if there were ghosts of those names hanging over their heads, and letting fall, or withholding that good, or evil, for, or against which they prayed. They invoked also their own wit, by the name of *Muses;* their own ignorance, by the name of *Fortune;* their own lust, by the name of *Cupid;* their own rage, by the name *Furies;* their own privy members, by the name of *Priapus,* and attributed their pollutions, to *Incubi,* and *Succubae:* insomuch as there was nothing, which a poet could introduce as a person in his poem, which they did not make either a *god,* or a *devil.*

The same authors of the religion of the Gentiles, observing the second ground for religion, which is men's ignorance of causes; and thereby their aptness to attribute their fortune to causes, on which there was no dependence at all apparent, took occasion to obtrude on their ignorance, instead of second causes, a kind of second and ministerial gods; ascribing the cause of fecundity, to *Venus;* the cause of arts, to *Apollo;* of subtlety and craft, to *Mercury;* of tempests and storms, to *Aeolus;* and of other effects, to other gods; insomuch as there was amongst the heathen almost as great variety of gods, as of business.

And to the worship, which naturally men conceived fit to be used towards their gods, namely, oblations, prayers, thanks, and the rest formerly named; the same legislators of the Gentiles have added their images, both in picture, and sculpture; that the more ignorant sort (that is to say, the most part or generality of the people,) thinking the gods for whose representation they were made, were really included, and as it were housed within them, might so much the more stand in fear of them: and endowed them with lands, and houses, and officers, and revenues, set apart from all other human uses; that is, consecrated, and made holy to those their idols; as caverns, groves, woods, mountains, and whole islands; and have attributed to them, not only the shapes, some of men, some of beasts, some of monsters; but also the faculties, and passions of men and beasts; as sense, speech, sex, lust, generation, (and this not only by mixing one with another, to propagate the kind of gods; but also by mixing with men, and women, to beget mongrel gods, and but inmates of heaven, as *Bacchus, Hercules,* and others;) besides anger, revenge, and other passions of living creatures, and the actions proceeding from them, as fraud, theft, adultery, sodomy, and any vice that may be taken for an effect of power, or a cause of pleasure; and all such vices, as amongst men are taken to be against law, rather than against honour.

Lastly, to the prognostics of time to come; which are naturally, but conjectures upon the experience of time past; and supernaturally, divine revelation; the same authors of the religion of the Gentiles, partly upon pretended experience, partly upon pretended revelation, have added innumerable other superstitious ways of divination; and made men believe they should find their fortunes, sometimes in the ambiguous or senseless answers of the priests at *Delphi, Delos, Ammon,* and other famous oracles; which answers, were made ambiguous by design, to own the event both ways; or absurd, by the intoxicating vapour of the place, which is very frequent in sulphurous caverns: sometimes in the leaves of the Sybils; of whose prophecies (like those perhaps of *Nostradamus*; for the fragments now extant seem to be the invention of later times) there were some books in reputation in the time of the Roman republic: sometimes in the insignificant speeches of madmen, supposed to be possessed with a divine spirit, which possession they called enthusiasm; and these kinds of foretelling events, were accounted theomancy, or prophecy: sometimes in the aspect of the stars at their nativity; which was called horoscopy, and esteemed a part of judiciary astrology: sometimes in their own hopes and fears, called thumomancy, or presage: sometimes in the prediction of witches, that pretended conference with the dead; which is called necromancy, conjuring, and witchcraft; and is but juggling and confederate knavery: sometimes in the casual flight, or feeding of birds; called augury: sometimes in the entrails of a sacrificed beast; which was *aruspicina:* sometimes in dreams: sometimes in croaking of ravens, or chattering of birds: sometimes in the lineaments of the face; which was called metoposcopy; or by palmistry in the lines of the hand; in casual words, called *omina:* sometimes in monsters, or unusual accidents; as eclipses, comets, rare meteors, earthquakes, inundations, uncouth births, and the like, which they called *portenta,* and *ostenta,* because they thought them to portend, or foreshow some great calamity to come;

sometimes, in mere lottery, as cross and pile; counting holes in a sieve; dipping of verses in *Homer*, and *Virgil*; and innumerable other such vain conceits. So easy are men to be drawn to believe any thing, from such men as have gotten credit with them; and can with gentleness, and dexterity, take hold of their fear, and ignorance.

And therefore the first founders, and legislators of commonwealths among the Gentiles, whose ends were only to keep the people in obedience, and peace, have in all places taken care; first, to imprint in their minds a belief, that those precepts which they gave concerning religion, might not be thought to proceed from their own device, but from the dictates of some god, or other spirit; or else that they themselves were of a higher nature than mere mortals, that their laws might the more easily be received: so *Numa Pompilius* pretended to receive the ceremonies he instituted amongst the Romans, from the nymph *Egeria:* and the first king and founder of the kingdom of *Peru*, pretended himself and his wife to be the children of the Sun: and *Mahomet*, to set up his new religion, pretended to have conferences with the Holy Ghost, in form of a dove. Secondly, they have had a care, to make it believed, that the same things were displeasing to the gods, which were forbidden by the laws. Thirdly, to prescribe ceremonies, supplications, sacrifices, and festivals, by which they were to believe, the anger of the gods might be appeased; and that ill success in war, great contagions of sickness, earthquakes, and each man's private misery, came from the anger of the gods, and their anger from the neglect of their worship, or the forgetting, or mistaking some point of the ceremonies required. And though amongst the ancient Romans, men were not forbidden to deny, that which in the poets is written of the pains, and pleasures after this life; which divers of great authority, and gravity in that state have in their *harangues* openly derided; yet that belief was always more cherished, than the contrary.

And by these, and such other institutions, they obtained in order to their end, (which was the peace of the commonwealth,) that the common people in their misfortunes, laying the fault on neglect, or error in their ceremonies, or on their own disobedience to the laws, were the less apt to mutiny against their governors. And being entertained with the pomp, and pastime of festivals, and public games, made in honour of the gods, needed nothing else but bread to keep them from discontent, murmuring, and commotion against the state. And therefore the Romans, that had conquered the greatest part of the then known world, made no scruple of tolerating any religion whatsoever in the city of *Rome* itself, unless it had something in it, that could not consist with their civil government; nor do we read, that any religion was there forbidden, but that of the Jews; who (being the peculiar kingdom of God) thought it unlawful to acknowledge subjection to any mortal king or state whatsoever. And thus you see how the religion of the Gentiles was a part of their policy.

But where God himself, by supernatural revelation, planted religion; there he also made to himself a peculiar kingdom; and gave laws, not only of behaviour towards himself, but also towards one another; and thereby in the kingdom of God, the policy, and laws civil, are a part of religion; and therefore the distinction of temporal, and spiritual domination, hath there no place. It is true, that God is king of all the earth: yet may he be king of a peculiar, and chosen nation. For there is no more incongruity therein, than that he that hath the general command of the whole army, should have withal a peculiar regiment, or company of his own. God is king of all the earth by his power: but of his chosen people, he is king by covenant. But to speak more largely of the kingdom of God, both by nature, and covenant, I have in the following discourse assigned another place.

From the propagation of religion, it is not hard to understand the causes of the resolution of the same into its first seeds, or principles; which are only an opinion of a deity, and powers invisible, and supernatural; that can never be so abolished out of human nature, but that new religions may again be made to spring out of them, by the culture of such men, as for such purpose are in reputation.

For seeing all formed religion, is founded at first, upon the faith which a multitude hath in some one person, whom they believe not only to be a wise man, and to labour to procure their happiness, but also to be a holy man, to whom God himself vouchsafeth to declare his will supernaturally; it followeth necessarily, when they that have the government of religion, shall come to have either the wisdom of those men,

their sincerity, or their love suspected; or that they shall be unable to show any probable token of divine revelation; that the religion which they desire to uphold, must be suspected likewise; and (without the fear of the civil sword) contradicted and rejected.

That which taketh away the reputation of wisdom, in him that formeth a religion, or addeth to it when it is already formed, is the enjoining of a belief of contradictories: for both parts of a contradiction cannot possibly be true: and therefore to enjoin the belief of them, is an argument of ignorance; which detects the author in that; and discredits him in all things else he shall propound as from revelation supernatural: which revelation a man may indeed have of many things above, but of nothing against natural reason.

That which taketh away the reputation of sincerity, is the doing or saying of such things, as appear to be signs, that what they require other men to believe, is not believed by themselves; all which doings, or sayings are therefore called scandalous, because they be stumbling blocks, that make men to fall in the way of religion: as injustice, cruelty, profaneness, avarice, and luxury. For who can believe, that he that doth ordinarily such actions as proceed from any of these roots, believeth there is any such invisible power to be feared, as he affrighteth other men withal, for lesser faults?

That which taketh away the reputation of love, is the being detected of private ends: as when the belief they require of others, conduceth or seemeth to conduce to the acquiring of dominion, riches, dignity, or secure pleasure, to themselves only, or specially. For that which men reap benefit by to themselves, they are thought to do for their own sakes, and not for love of others.

Lastly, the testimony that men can render of divine calling, can be no other, than the operation of miracles; or true prophecy, (which also is a miracle;) or extraordinary felicity. And therefore, to those points of religion, which have been received from them that did such miracles; those that are added by such, as approve not their calling by some miracle, obtain no greater belief, than what the custom and laws of the places, in which they be educated, have wrought into them. For as in natural things, men of judgment require natural signs, and arguments; so in supernatural things, they require signs supernatural, (which are miracles,) before they consent inwardly, and from their hearts.

All which causes of the weakening of men's faith, do manifestly appear in the examples following. First, we have the example of the children of Israel; who when *Moses*, that had approved his calling to them by miracles, and by the happy conduct of them out of *Egypt*, was absent but 40 days, revolted from the worship of the true God, recommended to them by him; and setting up (*Exod.* 32. 1, 2.) a golden calf for their god, relapsed into the idolatry of the Egyptians; from whom they had been so lately delivered. And again, after *Moses*, *Aaron*, *Joshua*, and that generation which had seen the great works of God in Israel, (*Judges* 2. 11.) were dead; another generation arose, and served *Baal*. So that miracles failing, faith also failed.

Again, when the sons of *Samuel*, (1 *Sam.* 8. 3.) being constituted by their father judges in *Bersabee*, received bribes, and judged unjustly, the people of Israel refused any more to have God to be their king, in other manner than he was king of other people; and therefore cried out to Samuel, to choose them a king after the manner of the nations. So that justice failing, faith also failed: insomuch, as they deposed their God, from reigning over them.

And whereas in the planting of Christian religion, the oracles ceased in all parts of the Roman empire, and the number of Christians increased wonderfully every day, and in every place, by the preaching of the Apostles, and Evangelists; a great part of that success, may reasonably be attributed, to the contempt, into which the priests of the Gentiles of that time, had brought themselves, by their uncleanness, avarice, and juggling between princes. Also the religion of the church of *Rome*, was partly, for the same cause abolished in *England*, and many other parts of Christendom; insomuch, as the failing of virtue in the pastors, maketh faith fail in the people: and partly from bringing of the philosophy, and doctrine of *Aristotle* into religion, by the Schoolmen; from whence there arose so many contradictions, and absurdities, as brought the clergy into a reputation both of ignorance, and of fraudulent intention; and inclined people to revolt from them, either against the will of their own princes, as in *France* and *Holland*; or with their will, as in *England*.

Lastly, amongst the points by the church of *Rome* declared necessary for salvation, there be so many, manifestly to the advantage of the Pope, and of his spiritual subjects, residing in the territories of other Christian princes, that were it not for the mutual emulation of those princes, they might without war, or trouble, exclude all foreign authority, as easily as it has been excluded in *England*. For who is there that does not see, to whose benefit it conduceth, to have it believed, that a king hath not his authority from Christ, unless a bishop crown him? That a king, if he be a priest, cannot marry? That whether a prince be born in lawful marriage, or not, must be judged by authority from *Rome*? That subjects may be freed from their allegiance, if by the court of *Rome*, the king be judged an heretic? That a king (as *Chilperic* of *France*) may be deposed by a pope (as Pope *Zachary*) for no cause; and his kingdom given to one of his subjects? That the clergy and regulars, in what country soever, shall be exempt from the jurisdiction of their king, in cases criminal? Or who does not see, to whose profit redound the fees of private masses, and vales of purgatory; with other signs of private interest, enough to mortify the most lively faith, if (as I said) the civil magistrate, and custom did not more sustain it, than any opinion they have of the sanctity, wisdom, or probity of their teachers? So that I may attribute all the changes of religion in the world, to one and the same cause; and that is, unpleasing priests; and those not only amongst Catholics, but even in that church that hath presumed most of reformation.

Chapter 13

Of the Natural Condition of Mankind as Concerning Their Felicity, and Misery

Nature hath made men so equal, in the faculties of body, and mind; as that though there be found one man sometimes manifestly stronger in body, or of quicker mind than another; yet when all is reckoned together, the difference between man, and man, is not so considerable, as that one man can thereupon claim to himself any benefit, to which another may not pretend, as well as he. For as to the strength of body, the weakest has strength enough to kill the strongest, either by secret machination, or by confederacy with others, that are in the same danger with himself.

And as to the faculties of the mind, (setting aside the arts grounded upon words, and especially that skill of proceeding upon general, and infallible rules, called science; which very few have, and but in few things; as being not a native faculty, born with us; nor attained, (as prudence,) while we look after somewhat else,) I find yet a greater equality amongst men, than that of strength. For prudence, is but experience; which equal time, equally bestows on all men, in those things they equally apply themselves unto. That which may perhaps make such equality incredible, is but a vain conceit of one's own wisdom, which almost all men think they have in a greater degree, than the vulgar; that is, than all men but themselves, and a few others, whom by fame, or for concurring with themselves, they approve. For such is the nature of men, that howsoever they may acknowledge many others to be more witty, or more eloquent, or more learned; yet they will hardly believe there be many so wise as themselves: For they see their own wit at hand, and other men's at a distance. But this proveth rather that men are in that point equal, than unequal. For there is not ordinarily a greater sign of the equal distribution of any thing, than that every man is contented with his share.

From this equality of ability, ariseth equality of hope in the attaining of our ends. And therefore if any two men desire the same thing, which nevertheless they cannot both enjoy, they become enemies; and in the way to their end, (which is principally their own conservation, and sometimes their delectation only,) endeavour to destroy, or subdue one another. And from hence it comes to pass, that where an invader hath no more to fear, than another man's single power; if one plant, sow, build, or possess a convenient seat, others may probably be expected to come prepared with forces united, to dispossess, and deprive him, not only of the fruit of his labour, but also of his life, or liberty. And the invader again is in the like danger of another.

And from this diffidence of one another, there is no way for any man to secure himself, so reasonable,

as anticipation; that is, by force, or wiles, to master the persons of all men he can, so long, till he see no other power great enough to endanger him: and this is no more than his own conservation requireth, and is generally allowed. Also because there be some, that taking pleasure in contemplating their own power in the acts of conquest, which they pursue farther than their security requires; if others, that otherwise would be glad to be at ease within modest bounds, should not by invasion increase their power, they would not be able, long time, by standing only on their defence, to subsist. And by consequence, such augmentation of dominion over men, being necessary to a man's conservation, it ought to be allowed him.

Again, men have no pleasure, (but on the contrary a great deal of grief) in keeping company, where there is no power able to over-awe them all. For every man looketh that his companion should value him, at the same rate he sets upon himself: and upon all signs of contempt, or undervaluing, naturally endeavours, as far as he dares (which amongst them that have no common power to keep them in quiet, is far enough to make them destroy each other), to extort a greater value from his contemners, by damage; and from others, by the example.

So that in the nature of man, we find three principal causes of quarrel. First, competition; secondly, diffidence; thirdly, glory.

The first, maketh men invade for gain; the second, for safety; and the third, for reputation. The first use violence, to make themselves masters of other men's persons, wives, children, and cattle; the second, to defend them; the third, for trifles, as a word, a smile, a different opinion, and any other sign of undervalue, either direct in their persons, or by reflection in their kindred, their friends, their nation, their profession, or their name.

Hereby it is manifest, that during the time men live without a common power to keep them all in awe, they are in that condition which is called war; and such a war, as is of every man, against every man. For WAR, consisteth not in battle only, or the act of fighting; but in a tract of time, wherein the will to contend by battle is sufficiently known: and therefore the notion of *time*, is to be considered in the nature of war; as it is in the nature of weather. For as the nature of foul weather, lieth not in a shower or two of rain; but in an inclination thereto of many days together: so the nature of war, consisteth not in actual fighting; but in the known disposition thereto, during all the time there is no assurance to the contrary. All other time is PEACE.

Whatsoever therefore is consequent to a time of war, where every man is enemy to every man; the same is consequent to the time, wherein men live without other security, than what their own strength, and their own invention shall furnish them withal. In such condition, there is no place for industry; because the fruit thereof is uncertain: and consequently no culture of the earth; no navigation, nor use of the commodities that may be imported by sea; no commodious building; no instruments of moving, and removing such things as require much force; no knowledge of the face of the earth; no account of time; no arts; no letters; no society; and which is worst of all, continual fear, and danger of violent death; and the life of man, solitary, poor, nasty, brutish, and short.

It may seem strange to some man, that has not well weighed these things; that nature should thus dissociate, and render men apt to invade, and destroy one another: and he may therefore, not trusting to this inference, made from the passions, desire perhaps to have the same confirmed by experience. Let him therefore consider with himself, when taking a journey, he arms himself, and seeks to go well accompanied; when going to sleep, he locks his doors; when even in his house he locks his chests; and this when he knows there be laws, and public officers, armed, to revenge all injuries shall be done him; what opinion he has of his fellow subjects, when he rides armed; of his fellow citizens, when he locks his doors; and of his children, and servants, when he locks his chests. Does he not there as much accuse mankind by his actions, as I do by my words? But neither of us accuse man's nature in it. The desires, and other passions of man, are in themselves no sin. No more are the actions, that proceed from those passions, till they know a law that forbids them: which till laws be made they cannot know: nor can any law be made, till they have agreed upon the person that shall make it.

It may peradventure be thought, there was never

such a time, nor condition of war as this; and I believe it was never generally so, over all the world: but there are many places, where they live so now. For the savage people in many places of *America*, except the government of small families, the concord whereof dependeth on natural lust, have no government at all; and live at this day in that brutish manner, as I said before. Howsoever, it may be perceived what manner of life there would be, where there were no common power to fear; by the manner of life, which men that have formerly lived under a peacefull government, use to degenerate into, in a civil war.

But though there had never been any time, wherein particular men were in a condition of war one against another; yet in all times, kings, and persons of sovereign authority, because of their independency, are in continual jealousies, and in the state and posture of gladiators; having their weapons pointing, and their eyes fixed on one another; that is, their forts, garrisons, and guns upon the frontiers of their kingdoms; and continual spies upon their neighbours; which is a posture of war. But because they uphold thereby, the industry of their subjects; there does not follow from it, that misery, which accompanies the liberty of particular men.

To this war of every man against every man, this also is consequent; that nothing can be unjust. The notions of right and wrong, justice and injustice have there no place. Where there is no common power, there is no law: where no law, no injustice. Force, and fraud, are in war the two cardinal virtues. Justice, and injustice are none of the faculties neither of the body, nor mind. If they were, they might be in a man that were alone in the world, as well as his senses, and passions. They are qualities, that relate to men in society, not in solitude. It is consequent also to the same condition, that there be no propriety, no dominion, no *mine* and *thine* distinct; but only that to be every man's, that he can get; and for so long, as he can keep it. And thus much for the ill condition, which man by mere nature is actually placed in; though with a possibility to come out of it, consisting partly in the passions, partly in his reason.

The passions that incline men to peace, are fear of death; desire of such things as are necessary to commodious living; and a hope by their industry to obtain them. And reason suggesteth convenient articles of peace, upon which men may be drawn to agreement. These articles, are they, which otherwise are called the Laws of Nature: whereof I shall speak more particularly, in the two following chapters.

Chapter 14

Of the First and Second Natural Laws, and of Contracts

The RIGHT OF NATURE, which writers commonly call *jus naturale*, is the liberty each man hath, to use his own power, as he will himself, for the preservation of his own nature; that is to say, of his own life; and consequently, of doing any thing, which in his own judgment, and reason, he shall conceive to be the aptest means thereunto.

By LIBERTY, is understood, according to the proper signification of the word, the absence of external impediments: which impediments, may oft take away part of a man's power to do what he would; but cannot hinder him from using the power left him, according as his judgment, and reason shall dictate to him.

A LAW OF NATURE, (*lex naturalis,*) is a precept, or general rule, found out by reason, by which a man is forbidden to do that, which is destructive of his life, or taketh away the means of preserving the same; and to omit that, by which he thinketh it may be best preserved. For though they that speak of this subject, use to confound *jus*, and *lex*, *right* and *law*; yet they ought to be distinguished; because RIGHT, consisteth in liberty to do, or to forbear; whereas LAW, determineth, and bindeth to one of them: so that law, and right, differ as much, as obligation, and liberty; which in one and the same matter are inconsistent.

And because the condition of man, (as hath been declared in the precedent chapter) is a condition of war of every one against every one; in which case every one is governed by his own reason; and there is nothing he can make use of, that may not be a help unto him, in preserving his life against his enemies; it followeth, that in such a condition, every man has a right to every thing; even to one another's body. And

therefore, as long as this natural right of every man to every thing endureth, there can be no security to any man, (how strong or wise soever he be,) of living out the time, which nature ordinarily alloweth men to live. And consequently it is a precept, or general rule of reason, *that every man, ought to endeavour peace, as far as he has hope of obtaining it; and when he cannot obtain it, that he may seek, and use, all helps, and advantages of war.* The first branch of which rule, containeth the first, and fundamental law of nature; which is, *to seek peace, and follow it.* The second, the sum of the right of nature; which is, *by all means we can, to defend ourselves.*

From this fundamental law of nature, by which men are commanded to endeavour peace, is derived this second law; *that a man be willing, when others are so too, as far-forth, as for peace, and defence of himself he shall think it necessary, to lay down this right to all things; and be contented with so much liberty against other men, as he would allow other men against himself.* For as long as every man holdeth this right, of doing any thing he liketh; so long are all men in the condition of war. But if other men will not lay down their right, as well as he; then there is no reason for any one, to divest himself of his: for that were to expose himself to prey, (which no man is bound to) rather than to dispose himself to peace. This is that law of the Gospel; *whatsoever you require that others should do to you, that do ye to them.* And that law of all men, *quod tibi fieri non vis, alteri ne feceris.*

To *lay down* a man's *right* to any thing, is to *divest* himself of the *liberty*, of hindering another of the benefit of his own right to the same. For he that renounceth, or passeth away his right, giveth not to any other man a right which he had not before; because there is nothing to which every man had not right by nature: but only standeth out of his way, that he may enjoy his own original right, without hindrance from him; not without hindrance from another. So that the effect which redoundeth to one man, by another man's defect of right, is but so much diminution of impediments to the use of his own right original.

Right is laid aside, either by simply renouncing it; or by transferring it to another. By *simply* RENOUNCING; when he cares not to whom the benefit thereof redoundeth. By TRANSFERRING; when he intendeth the benefit thereof to some certain person, or persons. And when a man hath in either manner abandoned, or granted away his right; then is he said to be OBLIGED, or BOUND, not to hinder those, to whom such right is granted, or abandoned, from the benefit of it: and that he *ought*, and it is his DUTY, not to make void that voluntary act of his own: and that such hindrance is INJUSTICE, and INJURY, as being *sine jure*; the right being before renounced, or transferred. So that *injury*, or *injustice*, in the controversies of the world, is somewhat like to that, which in the disputations of scholars is called *absurdity*. For as it is there called an absurdity, to contradict what one maintained in the beginning: so in the world, it is called injustice, and injury, voluntarily to undo that, which from the beginning he had voluntarily done. The way by which a man either simply renounceth, or transferreth his right, is a declaration, or signification, by some voluntary and sufficient sign, or signs, that he doth so renounce, or transfer; or hath so renounced, or transferred the same, to him that accepteth it. And these signs are either words only, or actions only; or (as it happeneth most often) both words, and actions. And the same are the BONDS, by which men are bound, and obliged: bonds, that have their strength, not from their own nature, (for nothing is more easily broken than a man's word,) but from fear of some evil consequence upon the rupture.

Whensoever a man transferreth his right, or renounceth it; it is either in consideration of some right reciprocally transferred to himself; or for some other good he hopeth for thereby. For it is a voluntary act: and of the voluntary acts of every man, the object is some *good to himself*. And therefore there be some rights, which no man can be understood by any words, or other signs, to have abandoned, or transferred. As first a man cannot lay down the right of resisting them, that assault him by force, to take away his life; because he cannot be understood to aim thereby, at any good to himself. The same may be said of wounds, and chains, and imprisonment; both because there is no benefit consequent to such patience; as there is to the patience of suffering another to be wounded, or imprisoned: as also because a man cannot tell, when he seeth men proceed against him by violence,

whether they intend his death or not. And lastly the motive, and end for which this renouncing, and transferring of right is introduced, is nothing else but the security of a man's person, in his life, and in the means of so preserving life, as not to be weary of it. And therefore if a man by words, or other signs, seem to despoil himself of the end, for which those signs were intended; he is not to be understood as if he meant it, or that it was his will; but that he was ignorant of how such words and actions were to be interpreted.

The mutual transferring of right, is that which men call CONTRACT.

There is difference between transferring of right to the thing; and transferring, or tradition, that is, delivery of the thing it self. For the thing may be delivered together with the translation of the right; as in buying and selling with ready money; or exchange of goods, or lands: and it may be delivered some time after.

Again, one of the contractors, may deliver the thing contracted for on his part, and leave the other to perform his part at some determinate time after, and in the mean time be trusted; and then the contract on his part, is called PACT, or COVENANT: or both parts may contract now, to perform hereafter: in which cases, he that is to perform in time to come, being trusted, his performance is called *keeping of promise*, or faith; and the failing of performance (if it be voluntary) *violation of faith*.

When the transferring of right, is not mutual; but one of the parties transferreth, in hope to gain thereby friendship, or service from another, or from his friends; or in hope to gain the reputation of charity, or magnanimity; or to deliver his mind from the pain of compassion; or in hope of reward in heaven; this is not contract, but GIFT, FREE-GIFT, GRACE: which words signify one and the same thing.

Signs of contract, are either *express*, or *by inference*. Express, are words spoken with understanding of what they signify: and such words are either of the time *present*, or *past*; as, *I give*, *I grant*, *I have given*, *I have granted*, *I will that this be yours*: or of the future; as, *I will give*, *I will grant*: which words of the future are called PROMISE.

Signs by inference, are sometimes the consequence of words; sometimes the consequence of silence; sometimes the consequence of actions; sometimes the consequence of forbearing an action: and generally a sign by inference, of any contract, is whatsoever sufficiently argues the will of the contractor.

Words alone, if they be of the time to come, and contain a bare promise, are an insufficient sign of a free-gift and therefore not obligatory. For if they be of the time to come, as, *tomorrow I will give*, they are a sign I have not given yet, and consequently that my right is not transferred, but remaineth till I transfer it by some other act. But if the words be of the time present, or past, as, *I have given*, *or do give to be delivered tomorrow*, then is my tomorrow's right given away to day; and that by the virtue of the words, though there were no other argument of my will. And there is a great difference in the signification of these words, *volo hoc tuum esse cras*, and *cras dabo*; that is, between *I will that this be thine tomorrow*, and, *I will give it thee tomorrow*: for the word *I will*, in the former manner of speech, signifies an act of the will present; but in the latter, it signifies a promise of an act of the will to come: and therefore the former words, being of the present, transfer a future right; the latter, that be of the future, transfer nothing. But if there be other signs of the will to transfer a right, besides words; then, though the gift be free, yet may the right be understood to pass by words of the future: as if a man propound a prize to him that comes first to the end of a race, the gift is free; and though the words be of the future, yet the right passeth: for if he would not have his words so be understood, he should not have let them run.

In contracts, the right passeth, not only where the words are of the time present, or past, but also where they are of the future: because all contract is mutual translation, or change of right; and therefore he that promiseth only, because he hath already received the benefit for which he promiseth, is to be understood as if he intended the right should pass: for unless he had been content to have his words so understood, the other would not have performed his part first. And for that cause, in buying, and selling, and other acts of contract, a promise is equivalent to a covenant; and therefore obligatory.

He that performeth first in the case of a contract, is said to MERIT that which he is to receive by the performance of the other; and he hath it as *due*. Also when a prize is propounded to many, which is to be

given to him only that winneth; or money is thrown amongst many, to be enjoyed by them that catch it; though this be a free gift; yet so to win, or so to catch, is to *merit*, and to have it as DUE. For the right is transferred in the propounding of the prize, and in throwing down the money; though it be not determined to whom, but by the event of the contention. But there is between these two sorts of merit, this difference, that in contract, I merit by virtue of my own power, and the contractor's need; but in this case of free gift, I am enabled to merit only by the benignity of the giver: in contract, I merit at the contractor's hand that he should depart with his right; in this case of gift, I merit not that the giver should part with his right; but that when he has parted with it, it should be mine, rather than another's. And this I think to be the meaning of that distinction of the Schools, between *meritum congrui*, and *meritum condigni*. For God Almighty, having promised Paradise to those men (hoodwinked with carnal desires,) that can walk through this world according to the precepts, and limits prescribed by him; they say, he that shall so walk, shall merit Paradise *ex congruo*. But because no man can demand a right to it, by his own righteousness, or any other power in himself, but by the free grace of God only; they say, no man can merit Paradise *ex condigno*. This I say, I think is the meaning of that distinction; but because disputers do not agree upon the signification of their own terms of art, longer than it serves their turn; I will not affirm any thing of their meaning: only this I say; when a gift is given indefinitely, as a prize to be contended for, he that winneth meriteth, and may claim the prize as due.

If a covenant be made, wherein neither of the parties perform presently, but trust one another; in the condition of mere nature, (which is a condition of war of every man against every man,) upon any reasonable suspicion, it is void: but if there be a common power set over them both, with right and force sufficient to compel performance, it is not void. For he that performeth first, has no assurance the other will perform after; because the bonds of words are too weak to bridle men's ambition, avarice, anger, and other passions, without the fear of some coercive power; which in the condition of mere nature, where all men are equal, and judges of the justness of their own fears, cannot possibly be supposed. And therefore he which performeth first, does but betray himself to his enemy; contrary to the right (he can never abandon) of defending his life, and means of living.

But in a civil estate, where there is a power set up to constrain those that would otherwise violate their faith, that fear is no more reasonable; and for that cause, he which by the covenant is to perform first, is obliged so to do.

The cause of fear, which maketh such a covenant invalid, must be always something arising after the covenant made; as some new fact, or other sign of the will not to perform: else it cannot make the covenant void. For that which could not hinder a man from promising, ought not to be admitted as a hindrance of performing.

He that transferreth any right, transferreth the means of enjoying it, as far as lieth in his power. As he that selleth land, is understood to transfer the herbage, and whatsoever grows upon it; nor can he that sells a mill turn away the stream that drives it. And they that give to a man the right of government in sovereignty, are understood to give him the right of levying money to maintain soldiers; and of appointing magistrates for the administration of justice.

To make covenants with brute beasts, is impossible; because not understanding our speech, they understand not, nor accept of any translation of right; nor can translate any right to another: and without mutual acceptation, there is no covenant.

To make covenant with God, is impossible, but by mediation of such as God speaketh to, either by revelation supernatural, or by his lieutenants that govern under him, and in his name: for otherwise we know not whether our covenants be accepted, or not. And therefore they that vow any thing contrary to any law of nature, vow in vain; as being a thing unjust to pay such vow. And if it be a thing commanded by the law of nature, it is not the vow, but the law that binds them.

The matter, or subject of a covenant, is always something that falleth under deliberation; (for to covenant, is an act of the will; that is to say an act, and the last act, of deliberation;) and is therefore always understood to be something to come; and which is judged possible for him that covenanteth, to perform.

And therefore, to promise that which is known to be impossible, is no covenant. But if that prove impossible afterwards, which before was thought pos-

sible, the covenant is valid, and bindeth, (though not to the thing it self,) yet to the value; or, if that also be impossible, to the unfeigned endeavour of performing as much as is possible: for to more no man can be obliged.

Men are freed of their covenants two ways; by performing; or by being forgiven. For performance, is the natural end of obligation; and forgiveness, the restitution of liberty; as being a retransferring of that right, in which the obligation consisted.

Covenants entered into by fear, in the condition of mere nature, are obligatory. For example, if I covenant to pay a ransom, or service for my life, to an enemy; I am bound by it. For it is a contract, wherein one receiveth the benefit of life; the other is to receive money, or service for it; and consequently, where no other law (as in the condition, of mere nature) forbiddeth the performance, the covenant is valid. Therefore prisoners of war, if trusted with the payment of their ransom, are obliged to pay it: and if a weaker prince, make a disadvantageous peace with a stronger, for fear; he is bound to keep it; unless (as hath been said before) there ariseth some new, and just cause of fear, to renew the war. And even in commonwealths, if I be forced to redeem myself from a thief by promising him money, I am bound to pay it, till the civil law discharge me. For whatsoever I may lawfully do without obligation, the same I may lawfully covenant to do through fear: and what I lawfully covenant, I cannot lawfully break.

A former covenant, makes void a later. For a man that hath passed away his right to one man today, hath it not to pass tomorrow to another: and therefore the later promise passeth no right, but is null.

A covenant not to defend myself from force, by force, is always void. For (as I have showed before) no man can transfer, or lay down his right to save himself from death, wounds, and imprisonment, (the avoiding whereof is the only end of laying down any right, and therefore the promise of not resisting force, in no covenant transferreth any right; nor is obliging. For though a man may covenant thus, *unless I do so, or so, kill me;* he cannot covenant thus, *unless I do so, or so, I will not resist you, when you come to kill me*. For man by nature chooseth the lesser evil, which is danger of death in resisting; rather than the greater, which is certain and present death in not resisting. And this is granted to be true by all men, in that they lead criminals to execution, and prison, with armed men, notwithstanding that such criminals have consented to the law, by which they are condemned.

A covenant to accuse one self, without assurance of pardon, is likewise invalid. For in the condition of nature, where every man is judge, there is no place for accusation: and in the civil state, the accusation is followed with punishment; which being force, a man is not obliged not to resist. The same is also true, of the accusation of those, by whose condemnation a man falls into misery; as of a father, wife, or benefactor. For the testimony of such an accuser, if it be not willingly given, is presumed to be corrupted by nature; and therefore not to be received: and where a man's testimony is not to be credited, he is not bound to give it. Also accusations upon torture, are not to be reputed as testimonies. For torture is to be used but as means of conjecture, and light, in the further examination, and search of truth: and what is in that case confessed, tendeth to the ease of him that is tortured, not to the informing of the torturers: and therefore ought not to have the credit of a sufficient testimony: for whether he deliver himself by true, or false accusation, he does it by the right of preserving his own life.

The force of words, being (as I have formerly noted) too weak to hold men to the performance of their covenants; there are in man's nature, but two imaginable helps to strengthen it. And those are either a fear of the consequence of breaking their word; or a glory, or pride in appearing not to need to break it. This latter is a generosity too rarely found to be presumed on, especially in the pursuers of wealth, command, or sensual pleasure; which are the greatest part of mankind. The passion to be reckoned upon, is fear; whereof there be two very general objects: one, the power of spirits invisible; the other, the power of those men they shall therein offend. Of these two, though the former be the greater power, yet the fear of the latter is commonly the greater fear. The fear of the former is in every man, his own religion: which hath place in the nature of man before civil society. The latter hath not so; at least not place enough, to keep men to their promises; because in the condition of mere nature, the inequality of power is not discerned, but by the event of battle. So that before the time of civil society, or in the interruption thereof by

war, there is nothing can strengthen a covenant of peace agreed on, against the temptations of avarice, ambition, lust, or other strong desire, but the fear of that invisible power, which they every one worship as God; and fear as a revenger of their perfidy. All therefore that can be done between two men not subject to civil power, is to put one another to swear by the God he feareth: which *swearing*, or OATH, is a *form of speech, added to a promise; by which he that promiseth, signifieth, that unless he perform, he renounceth the mercy of his God, or calleth to him for vengeance on himself.* Such was the heathen form, *Let* Jupiter *kill me else, as I kill this beast.* So is our form, *I shall do thus, and thus, so help me God.* And this, with the rites and ceremonies, which every one useth in his own religion, that the fear of breaking faith might be the greater.

By this it appears, that an oath taken according to any other form, or rite, than his, that sweareth, is in vain; and no oath: and that there is no swearing by any thing which the swearer thinks not God. For though men have sometimes used to swear by their kings, for fear, or flattery; yet they would have it thereby understood, they attributed to them divine honour. And that swearing unnecessarily by God, is but prophaning of his name: and swearing by other things, as men do in common discourse, is not swearing, but an impious custom, gotten by too much vehemence of talking.

It appears also, that the oath adds nothing to the obligation. For a covenant, if lawful, binds in the sight of God, without the oath, as much as with it: if unlawful, bindeth not at all; though it be confirmed with an oath.

Chapter 15

Of Other Laws of Nature

From that law of nature, by which we are obliged to transfer to another, such rights, as being retained, hinder the peace of mankind, there followeth a third; which is this, *that men perform their covenants made:* without which, covenants are in vain, and but empty words; and the right of all men to all things remaining, we are still in the condition of war.

And in this law of nature, consisteth the fountain and original of JUSTICE. For where no covenant hath preceded, there hath no right been transferred, and every man has right to every thing; and consequently, no action can be unjust. But when a covenant is made, then to break it is *unjust:* and the definition of INJUSTICE, is no other than *the not performance of covenant.* And whatsoever is not unjust, is *just.*

But because covenants of mutual trust, where there is a fear of not performance on either part, (as hath been said in the former chapter,) are invalid; though the original of justice be the making of covenants; yet injustice actually there can be none, till the cause of such fear be taken away; which while men are in the natural condition of war, cannot be done. Therefore before the names of just, and unjust can have place, there must be some coercive power, to compel men equally to the performance of their covenants, by the terror of some punishment, greater than the benefit they expect by the breach of their covenant; and to make good that propriety, which by mutual contract men acquire, in recompense of the universal right they abandon: and such power there is none before the erection of a commonwealth. And this is also to be gathered out of the ordinary definition of justice in the Schools: for they say, that *justice is the constant will of giving to every man his own.* And therefore where there is no *own*, that is, no propriety, there is no injustice; and where there is no coercive power erected, that is, where there is no commonwealth, there is no propriety; all men having right to all things: therefore where there is no commonwealth, there nothing is unjust. So that the nature of justice, consisteth in keeping of valid covenants: but the validity of covenants begins not but with the constitution of a civil power, sufficient to compel men to keep them: and then it is also that propriety begins.

The fool hath said in his heart, there is no such thing as justice; and sometimes also with his tongue; seriously alleging, that every man's conservation, and contentment, being committed to his own care, there could be no reason, why every man might not do what he thought conduced thereunto: and therefore also to make, or not make; keep, or not keep covenants, was not against reason, when it conduced to one's benefit. He does not therein deny, that there

be covenants; and that they are sometimes broken, sometimes kept; and that such breach of them may be called injustice, and the observance of them justice: but he questioneth, whether injustice, taking away the fear of God, (for the same fool hath said in his heart there is no God,) may not sometimes stand with that reason, which dictateth to every man his own good; and particularly then, when it conduceth to such a benefit, as shall put a man in a condition, to neglect not only the dispraise, and revilings, but also the power of other men. The kingdom of God is gotten by violence: but what if it could be gotten by unjust violence? were it against reason so to get it, when it is impossible to receive hurt by it? and if it be not against reason, it is not against justice; or else justice is not to be approved for good. From such reasoning as this, successful wickedness hath obtained the name of virtue: and some that in all other things have disallowed the violation of faith; yet have allowed it, when it is for the getting of a kingdom. And the heathen that believed, that *Saturn* was deposed by his son *Jupiter*, believed nevertheless the same *Jupiter* to be the avenger of injustice: somewhat like to a piece of law in *Coke's Commentaries on Littleton*; where he says, if the right heir of the crown be attainted of treason; yet the crown shall descend to him, and *eo instante* the attainder be void: from which instances a man will be very prone to infer; that when the heir apparent of a kingdom, shall kill him that is in possession, though his father; you may call it injustice, or by what other name you will; yet it can never be against reason, seeing all the voluntary actions of men tend to the benefit of themselves; and those actions are most reasonable, that conduce most to their ends. This specious reasoning is nevertheless false.

For the question is not of promises mutual, where there is no security of performance on either side; as when there is no civil power erected over the parties promising; for such promises are no covenants: but either where one of the parties has performed already; or where there is a power to make him perform; there is the question whether it be against reason, that is, against the benefit of the other to perform, or not. And I say it is not against reason. For the manifestation whereof, we are to consider; first, that when a man doth a thing, which notwithstanding any thing can be foreseen, and reckoned on, tendeth to his own destruction, howsoever some accident which he could not expect, arriving may turn it to his benefit; yet such events do not make it reasonably or wisely done. Secondly, that in a condition of war, wherein every man to every man, for want of a common power to keep them all in awe, is an enemy, there is no man can hope by his own strength, or wit, to defend himself from destruction, without the help of confederates; where every one expects the same defence by the confederation, that any one else does: and therefore he which declares he thinks it reason to deceive those that help him, can in reason expect no other means of safety, than what can be had from his own single power. He therefore that breaketh his covenant, and consequently declareth that he thinks he may with reason do so, cannot be received into any society, that unite themselves for peace and defence, but by the error of them that receive him; nor when he is received, be retained in it, without seeing the danger of their error; which errors a man cannot reasonably reckon upon as the means of his security: and therefore if he be left, or cast out of society, he perisheth; and if he live in society, it is by the errors of other men, which he could not foresee, nor reckon upon; and consequently against the reason of his preservation; and so, as all men that contribute not to his destruction, forbear him only out of ignorance of what is good for themselves.

As for the instance of gaining the secure and perpetual felicity of heaven, by any way; it is frivolous: there being but one way imaginable; and that is not breaking, but keeping of covenant.

And for the other instance of attaining sovereignty by rebellion; it is manifest, that though the event follow, yet because it cannot reasonably be expected, but rather the contrary; and because by gaining it so, others are taught to gain the same in like manner, the attempt thereof is against reason. Justice therefore, that is to say, keeping of covenant, is a rule of reason, by which we are forbidden to do any thing destructive to our life; and consequently a law of nature.

There be some that proceed further; and will not have the law of nature, to be those rules which conduce to the preservation of man's life on earth; but to the attaining of an eternal felicity after death; to

which they think the breach of covenant may conduce; and consequently be just and reasonable; (such are they that think it a work of merit to kill, or depose, or rebel against, the sovereign power constituted over them by their own consent.) But because there is no natural knowledge of man's estate after death; much less of the reward that is then to be given to breach of faith; but only a belief grounded upon other men's saying, that they know it supernaturally, or that they know those, that knew them, that knew others, that knew it supernaturally; breach of faith cannot be called a precept of reason, or nature.

Others, that allow for a law of nature, the keeping of faith, do nevertheless make exception of certain persons; as heretics, and such as use not to perform their covenant to others: and this also is against reason. For if any fault of a man, be sufficient to discharge our covenant made; the same ought in reason to have been sufficient to have hindered the making of it.

The names of just, and injust, when they are attributed to men, signify one thing; and when they are attributed to actions, another. When they are attributed to men, they signify conformity, or inconformity of manners, to reason. But when they are attributed to actions, they signify the conformity, or inconformity to reason, not of manners, or manner of life, but of particular actions. A just man therefore, is he that taketh all the care he can, that his actions may be all just: and an unjust man, is he that neglecteth it. And such men are more often in our language styled by the names of righteous, and unrighteous; than just, and unjust; though the meaning be the same. Therefore a righteous man, does not lose that title, by one, or a few unjust actions, that proceed from sudden passion, or mistake of things, or persons: nor does an unrighteous man, lose his character, for such actions, as he does, or forbears to do, for fear: because his will is not framed by the justice, but by the apparent benefit of what he is to do. That which gives to human actions the relish of justice, is a certain nobleness or gallantness of courage, (rarely found,) by which a man scorns to be beholding for the contentment of his life, to fraud, or breach of promise. This justice of the manners, is that which is meant, where justice is called a virtue; and injustice a vice.

But the justice of actions denominates men, not just, but *guiltless:* and the injustice of the same, (which is also called injury,) gives them but the name of *guilty*.

Again, the injustice of manners, is the disposition, or aptitude to do injury; and is injustice before it proceed to act; and without supposing any individual person injured. But the injustice of an action, (that is to say injury,) supposeth an individual person injured; namely him, to whom the covenant was made: and therefore many times the injury is received by one man, when the damage redoundeth to another. As when the master commandeth his servant to give money to a stranger; if it be not done, the injury is done to the master, whom he had before covenanted to obey; but the damage redoundeth to the stranger, to whom he had no obligation; and therefore could not injure him. And so also in commonwealths, private men may remit to one another their debts; but not robberies or other violences, whereby they are endamaged; because the detaining of debt, is an injury to themselves; but robbery and violence, are injuries to the person of the commonwealth.

Whatsoever is done to a man, conformable to his own will signified to the doer, is no injury to him. For if he that doeth it, hath not passed away his original right to do what he please, by some antecedent covenant, there is no breach of covenant; and therefore no injury done him. And if he have; then his will to have it done being signified, is a release of that covenant: and so again there is no injury done him.

Justice of actions, is by writers divided into *commutative*, and *distributive:* and the former they say consisteth in proportion arithmetical; the latter in proportion geometrical. Commutative therefore, they place in the equality of value of the things contracted for; and distributive, in the distribution of equal benefit, to men of equal merit. As if it were injustice to sell dearer than we buy; or to give more to a man than he merits. The value of all things contracted for, is measured by the appetite of the contractors: and therefore the just value, is that which they be contented to give. And merit, (besides that which is by covenant, where the performance on one part, meriteth the performance of the other part, and falls under justice commutative, not distributive,) is not due by justice; but is rewarded of grace only. And therefore this distinction, in the sense wherein it useth

to be expounded, is not right. To speak properly, commutative justice, is the justice of a contractor; that is, a performance of covenant, in buying, and selling; hiring, and letting to hire; lending, and borrowing; exchanging, bartering, and other acts of contract.

And distributive justice, the justice of an arbitrator; that is to say, the act of defining what is just. Wherein, (being trusted by them that make him arbitrator,) if he perform his trust, he is said to distribute to every man his own: and this is indeed just distribution, and may be called, (though improperly,) distributive justice; but more properly equity; which also is a law of nature, as shall be shown in due place.

As justice dependeth on antecedent covenant; so does GRATITUDE depend on antecedent grace; that is to say, antecedent free-gift: and is the fourth law of nature; which may be conceived in this form, *that a man which receiveth benefit from another of mere grace, endeavour that he which giveth it, have no reasonable cause to repent him of his good will.* For no man giveth, but with intention of good to himself; because gift is voluntary; and of all voluntary acts, the object is to every man his own good; of which if men see they shall be frustrated, there will be no beginning of benevolence, or trust; nor consequently of mutual help; nor of reconciliation of one man to another; and therefore they are to remain still in the condition of *war*; which is contrary to the first and fundamental law of nature, which commandeth men to *seek peace*. The breach of this law, is called *ingratitude*; and hath the same relation to grace, that injustice hath to obligation by covenant.

A fifth law of nature, is COMPLAISANCE; that is to say, *that every man strive to accommodate himself to the rest.* For the understanding whereof, we may consider, that there is in men's aptness to society, a diversity of nature, rising from their diversity of affections; not unlike to that we see in stones brought together for building of an edifice. For as that stone which by the asperity, and irregularity of figure, takes more room from others, than itself fills; and for the hardness, cannot be easily made plain, and thereby hindereth the building, is by the builders cast away as unprofitable, and troublesome: so also, a man that by asperity of nature, will strive to retain those things which to himself are superfluous, and to others necessary; and for the stubbornness of his passions, cannot be corrected, is to be left, or cast out of society, as cumbersome thereunto. For seeing every man, not only by right, but also by necessity of nature, is supposed to endeavour all he can, to obtain that which is necessary for his conservation; he that shall oppose himself against it, for things superfluous, is guilty of the war that thereupon is to follow; and therefore doth that, which is contrary to the fundamental law of nature, which commandeth *to seek peace*. The observers of this law, may be called SOCIABLE, (the Latins call them *commodi*;) the contrary, *stubborn, insociable, froward, intractable.*

A sixth law of nature, is this, *that upon caution of the future time, a man ought to pardon the offences past of them that repenting, desire it.* For PARDON, is nothing but granting of peace; which though granted to them that persevere in their hostility, be not peace, but fear; yet not granted to them that give caution of the future time, is sign of an aversion to peace; and therefore contrary to the law of nature.

A seventh is, *that in revenges,* (that is, retribution of evil for evil,) *men look not at the greatness of the evil past, but the greatness of the good to follow.* Whereby we are forbidden to inflict punishment with any other design, than for correction of the offender, or direction of others. For this law is consequent to the next before it, that commandeth pardon, upon security of the future time. Besides, revenge without respect to the example, and profit to come, is a triumph, or glorying in the hurt of another, tending to no end; (for the end is always somewhat to come;) and glorying to no end, is vain-glory, and contrary to reason; and to hurt without reason, tendeth to the introduction of war; which is against the law of nature; and is commonly styled by the name of *cruelty*.

And because all signs of hatred, or contempt, provoke to fight; insomuch as most men choose rather to hazard their life, than not to be revenged; we may in the eighth place, for a law of nature, set down this precept, *that no man by deed, word, countenance, or gesture, declare hatred, or contempt of another.* The breach of which law, is commonly called *contumely*.

The question who is the better man, has no place in the condition of mere nature; where, (as has been shewn before,) all men are equal. The inequality that now is, has been introduced by the laws civil. I know that *Aristotle* in the first book of his *Politics*, for a

foundation of his doctrine, maketh men by nature, some more worthy to command, meaning the wiser sort, (such as he thought himself to be for his philosophy;) others to serve, (meaning those that had strong bodies, but were not philosophers as he;) as if master and servant were not introduced by consent of men, but by difference of wit: which is not only against reason; but also against experience. For there are very few so foolish, that had not rather govern themselves, than be governed by others: nor when the wise in their own conceit, contend by force, with them who distrust their own wisdom, do they always, or often, or almost at any time, get the victory. If nature therefore have made men equal, that equality is to be acknowledged: or if nature have made men unequal; yet because men that think themselves equal, will not enter into conditions of peace, but upon equal terms, such equality must be admitted. And therefore for the ninth law of nature, I put this, *that every man acknowledge other for his equal by nature.* The breach of this precept is *pride.*

On this law, dependeth another, *that at the entrance into conditions of peace, no man require to reserve to himself any right, which he is not content should be reserved to every one of the rest.* As it is necessary for all men that seek peace, to lay down certain rights of nature; that is to say, not to have liberty to do all they list: so is it necessary for man's life, to retain some; as right to govern their own bodies; enjoy air, water, motion, ways to go from place to place; and all things else without which a man cannot live, or not live well. If in this case, at the making of peace, men require for themselves, that which they would not have to be granted to others, they do contrary to the precedent law, that commandeth the acknowledgment of natural equality, and therefore also against the law of nature. The observers of this law, are those we call *modest*, and the breakers *arrogant* men. The Greeks call the violation of this law πλεονεξια; that is, a desire of more than their share.

Also if *a man be trusted to judge between man and man*, it is a precept of the law of nature, *that he deal equally between them.* For without that, the controversies of men cannot be determined but by war. He therefore that is partial in judgment, doth what in him lies, to deter men from the use of judges, and arbitrators; and consequently, (against the fundamental law of nature,) is the cause of war.

The observance of this law, from the equal distribution to each man, of that which in reason belongeth to him, is called EQUITY, and (as I have said before) distributive justice: the violation, *acception of persons*, προσωπολημψία.

And from this followeth another law, *that such things as cannot be divided, be enjoyed in common, if it can be; and if the quantity of the thing permit, without stint; otherwise proportionably to the number of them that have right.* For otherwise the distribution is unequal, and contrary to equity.

But some things there be, that can neither be divided, nor enjoyed in common. Then, the law of nature, which prescribeth equity, requireth, *that the entire right; or else, (making the use alternate,) the first possession, be determined by lot.* For equal distribution, is of the law of nature; and other means of equal distribution cannot be imagined.

Of *lots* there be two sorts, *arbitrary*, and *natural.* Arbitrary, is that which is agreed on by the competitors: natural, is either *primogeniture*, (which the Greek calls κληρονομία, which signifies, *given by lot*;) or *first seizure.*

And therefore those things which cannot be enjoyed in common, nor divided, ought to be adjudged to the first possessor; and in some cases to the firstborn, as acquired by lot.

It is also a law of nature, *that all men that mediate peace, be allowed safe conduct.* For the law that commandeth peace, as the *end*, commandeth intercession, as the *means;* and to intercession the means is safe conduct.

And because, though men be never so willing to observe these laws, there may nevertheless arise questions concerning a man's action; first, whether it were done, or not done; secondly, (if done,) whether against the law, or not against the law; the former whereof, is called a question *of fact;* the latter a question *of right;* therefore unless the parties to the question, covenant mutually to stand to the sentence of another, they are as far from peace as ever. This other, to whose sentence they submit, is called an ARBITRATOR. And therefore it is of the law of nature, *that they that are at controversy, submit their right to the judgment of an arbitrator.*

And seeing every man is presumed to do all things in order to his own benefit, no man is a fit arbitrator in his own cause: and if he were never so fit; yet equity allowing to each party equal benefit, if one be admitted to be judge, the other is to be admitted also; and so the controversy, that is, the cause of war, remains, against the law of nature.

For the same reason no man in any cause ought to be received for arbitrator, to whom greater profit, or honour, or pleasure apparently ariseth out of the victory of one party, than of the other: for he hath taken (though an unavoidable bribe, yet) a bribe; and no man can be obliged to trust him. And thus also the controversy, and the condition of war remaineth, contrary to the law of nature.

And in a controversy of *fact*, the judge being to give no more credit to one, than to the other, (if there be no other arguments,) must give credit to a third; or to a third and fourth; or more: for else the question is undecided, and left to force, contrary to the law of nature.

These are the laws of nature, dictating peace, for a means of the conservation of men in multitudes; and which only concern the doctrine of civil society. There be other things tending to the destruction of particular men; as drunkenness, and all other parts of intemperance; which may therefore also be reckoned amongst those things which the law of nature hath forbidden; but are not necessary to be mentioned, nor are pertinent enough to this place.

And though this may seem too subtle a deduction of the laws of nature, to be taken notice of by all men; whereof the most part are too busy in getting food, and the rest too negligent to understand; yet to leave all men inexcusable, they have been contracted into one easy sum, intelligible, even to the meanest capacity; and that is, *Do not that to another, which thou wouldest not have done to thyself*; which sheweth him, that he has no more to do in learning the laws of nature, but, when weighing the actions of other men with his own, they seem too heavy, to put them into the other part of the balance, and his own into their place, that his own passions, and self-love, may add nothing to the weight; and then there is none of these laws of nature that will not appear unto him very reasonable.

The laws of nature oblige *in foro interno*; that is to say, they bind to a desire they should take place: but *in foro externo;* that is, to the putting them in act, not always. For he that should be modest, and tractable, and perform all he promises, in such time, and place, where no man else should do so, should but make himself a prey to others, and procure his own certain ruin, contrary to the ground of all laws of nature, which tend to nature's preservation. And again, he that having sufficient security, that others shall observe the same laws towards him, observes them not himself, seeketh not peace, but war; and consequently the destruction of his nature by violence.

And whatsoever laws bind *in foro interno*, may be broken, not only by a fact contrary to the law, but also by a fact according to it, in case a man think it contrary. For though his action in this case, be according to the law; yet his purpose was against the law; which, where the obligation is *in foro interno*, is a breach.

The laws of nature are immutable and eternal; for injustice, ingratitude, arrogance, pride, iniquity, acception of persons, and the rest, can never be made lawful. For it can never be that war shall preserve life, and peace destroy it.

The same laws, because they oblige only to a desire, and endeavour, I mean an unfeigned and constant endeavour, are easy to be observed. For in that they require nothing but endeavour; he that endeavoureth their performance, fulfilleth them; and he that fulfilleth the law, is just.

And the science of them, is the true and only moral philosophy. For moral philosophy is nothing else but the science of what is *good*, and *evil*, in the conversation, and society of mankind. *Good*, and *evil*, are names that signify our appetites, and aversions; which in different tempers, customs, and doctrines of men, are different: and divers men, differ not only in their judgment, on the senses of what is pleasant, and unpleasant to the taste, smell, hearing, touch, and sight; but also of what is conformable, or disagreeable to reason, in the actions of common life. Nay, the same man, in divers times, differs from himself; and one time praiseth, that is, calleth good, what another time he dispraiseth, and calleth evil: from whence arise disputes, controversies, and at last war. And therefore so long a man is in the condition of mere

nature, (which is a condition of war,) as private appetite is the measure of good, and evil: and consequently all men agree on this, that peace is good, and therefore also the way, or means of peace, which, (as I have shewed before) are *justice*, *gratitude*, *modesty*, *equity*, *mercy*, and the rest of the laws of nature, are good; that is to say, *moral virtues;* and their contrary *vices*, evil. Now the science of virtue and vice, is moral philosophy; and therefore the true doctrine of the laws of nature, is the true moral philosophy. But the writers of moral philosophy, though they acknowledge the same virtues and vices; yet not seeing wherein consisted their goodness; nor that they come to be praised, as the means of peaceable, sociable, and comfortable living; place them in a mediocrity of passions: as if not the cause, but the degree of daring, made fortitude; or not the cause, but the quantity of a gift, made liberality.

These dictates of reason, men use to call by the name of laws; but improperly: for they are but conclusions, or theorems concerning what conduceth to the conservation and defence of themselves; whereas law, properly, is the word of him, that by right hath command over others. But yet if we consider the same theorems, as delivered in the word of God, that by right commandeth all things; then are they properly called laws.

Chapter 16

Of Persons, Authors, and Things Personated

A person, is he, *whose words or actions are considered, either as his own, or as representing the words or actions of another man, or of any other thing to whom they are attributed, whether truly or by fiction.*

When they are considered as his own, then is he called a *natural person:* and when they are considered as representing the words and actions of another, then is he a *feigned* or *artificial person.*

The word person is Latin: instead whereof the Greeks have πρόσωπον, which signifies the *face*, as *persona* in Latin signifies the *disguise*, or *outward appearance* of a man, counterfeited on the stage; and sometimes more particularly that part of it, which disguiseth the face, as a mask or vizard: and from the stage, hath been translated to any representer of speech and action, as well in tribunals, as theatres. So that a *person*, is the same that an *actor* is, both on the stage and in common conversation; and to *personate*, is to *act*, or *represent* himself, or another; and he that acteth another, is said to bear his person, or act in his name; (in which sense Cicero useth it where he says, *Unus sustineo tres personas; mei, adversarii, et judicis*, I bear three persons; my own, my adversary's, and the judge's;) and is called in divers occasions, diversly; as a *representer*, or *representative*, a *lieutenant*, a *vicar*, an *attorney*, a *deputy*, a *procurator*, an *actor*, and the like.

Of persons artificial, some have their words and actions *owned* by those whom they represent. And then the person is the *actor*; and he that owneth his words and actions, is the AUTHOR: in which case the actor acteth by authority. For that which in speaking of goods and possessions, is called an *owner*, and in Latin *dominus*, in Greek κύριος; speaking of actions, is called author. And as the right of possession, is called dominion; so the right of doing any action, is called AUTHORITY. So that by authority, is always understood a right of doing any act: and *done by authority*, done by commission, or licence from him whose right it is.

From hence it followeth, that when the actor maketh a covenant by authority, he bindeth thereby the author, no less than if he had made it himself; and no less subjecteth him to all the consequences of the same. And therefore all that hath been said formerly, (*chap.* 14) of the nature of covenants between man and man in their natural capacity, is true also when they are made by their actors, representers, or procurators, that have authority from them, so far forth as is in their commission, but no farther.

And therefore he that maketh a covenant with the actor, or representer, not knowing the authority he hath, doth it at his own peril. For no man is obliged by a covenant, whereof he is not author; nor consequently by a covenant made against, or beside the authority he gave.

When the actor doth any thing against the law of nature by command of the author, if he be obliged by former covenant to obey him, not he, but the author breaketh the law of nature: for though the

action be against the law of nature; yet it is not his: but contrarily, to refuse to do it, is against the law of nature, that forbiddeth breach of covenant.

And he that maketh a covenant with the author, by mediation of the actor, not knowing what authority he hath, but only takes his word; in case such authority be not made manifest unto him upon demand, is no longer obliged: for the covenant made with the author, is not valid, without his counter-assurance. But if he that so covenanteth, knew beforehand he was to expect no other assurance, than the actor's word; then is the covenant valid; because the actor in this case maketh himself the author. And therefore, as when the authority is evident, the covenant obligeth the author, not the actor; so when the authority is feigned, it obligeth the actor only; there being no author but himself.

There are few things, that are incapable of being represented by fiction. Inanimate things, as a church, an hospital, a bridge, may be personated by a rector, master, or overseer. But things inanimate, cannot be authors, nor therefore give authority to their actors: yet the actors may have authority to procure their maintenance, given them by those that are owners, or governors of those things. And therefore, such things cannot be personated, before there be some state of civil government.

Likewise children, fools, and madmen that have no use of reason, may be personated by guardians, or curators; but can be no authors, (during that time) of any action done by them, longer than (when they shall recover the use of reason) they shall judge the same reasonable. Yet during the folly, he that hath right of governing them, may give authority to the guardian. But this again has no place but in a state civil, because before such estate, there is no dominion of persons.

An idol, or mere figment of the brain, may be personated; as were the gods of the heathen; which by such officers as the state appointed, were personated, and held possessions, and other goods, and rights, which men from time to time dedicated, and consecrated unto them. But idols cannot be authors: for an idol is nothing. The authority proceeded from the state: and therefore before introduction of civil government, the gods of the heathen could not be personated.

The true God may be personated. As he was; first, by Moses; who governed the Israelites, (that were not his, but God's people,) not in his own name, with *hoc dicit Moses;* but in God's name, with *hoc dicit Dominus*. Secondly, by the Son of man, his own Son, our blessed Saviour Jesus Christ, that came to reduce the Jews, and induce all nations into the kingdom of his father; not as of himself, but as sent from his father. And thirdly, by the Holy Ghost, or Comforter, speaking, and working in the Apostles: which Holy Ghost, was a Comforter that came not of himself; but was sent, and proceeded from them both.

A multitude of men, are made *one* person, when they are by one man, or one person, represented; so that it be done with the consent of every one of that multitude in particular. For it is the *unity* of the representer, not the *unity* of the represented, that maketh the person *one*. And it is the representer that beareth the person, and but one person: and *unity*, cannot otherwise be understood in multitude.

And because the multitude naturally is not *one*, but *many;* they cannot be understood for one; but many authors, of every thing their representative saith, or doth in their name; every man giving their common representer, authority from himself in particular; and owning all the actions the representer doth, in case they give him authority without stint: otherwise, when they limit him in what, and how far he shall represent them, none of them owneth more, than they gave him commission to act.

And if the representative consist of many men, the voice of the greater number, must be considered as the voice of them all. For if the lesser number pronounce (for example) in the affirmative, and the greater in the negative, there will be negatives more than enough to destroy the affirmatives; and thereby the excess of negatives, standing uncontradicted, are the only voice the representative hath.

And a representative of even number, especially when the number is not great, whereby the contradictory voices are oftentimes equal, is therefore oftentimes mute, and incapable of action. Yet in some cases contradictory voices equal in number, may determine a question; as in condemning, or absolving, equality of votes, even in that they condemn not, do absolve; but not on the contrary condemn, in that they absolve not. For when a cause is heard; not to

condemn, is to absolve: but on the contrary, to say that not absolving, is condemning, is not true. The like it is in a deliberation of executing presently, or deferring till another time: for when the voices are equal, the not decreeing execution, is a decree of dilation.

Or if the number be odd, as three, or more, (men, or assemblies;) whereof every one has by a negative voice, authority to take away the effect of all the affirmative voices of the rest, this number is no representative; because by the diversity of opinions, and interests of men, it becomes oftentimes, and in cases of the greatest consequence, a mute person, and unapt, as for many things else, so for the government of a multitude, especially in time of war.

Of authors there be two sorts. The first simply so called; which I have before defined to be him, that owneth the action of another simply. The second is he, that owneth an action, or covenant of another conditionally; that is to say, he undertaketh to do it, if the other doth it not, at, or before a certain time. And these authors conditional, are generally called SURETIES, in Latin *fidejussores*, and *sponsores;* and particularly for debt, *praedes;* and for appearance before a judge, or magistrate, *vades*.

PART 2
OF COMMONWEALTH

Chapter 17

Of the Causes, Generation, and Definition of a Commonwealth

The final cause, end, or design of men, (who naturally love liberty, and dominion over others,) in the introduction of that restraint upon themselves, (in which we see them live in commonwealths,) is the foresight of their own preservation, and of a more contented life thereby; that is to say, of getting themselves out from that miserable condition of war, which is necessarily consequent (as hath been shown), to, the natural passions of men, when there is no visible power to keep them in awe, and tie them by fear of punishment to the performance of their covenants, and observation of those laws of nature set down in the fourteenth and fifteenth chapters.

For the laws of nature (as *justice*, *equity*, *modesty*, *mercy*, and (in sum) *doing to others, as we would be done to*,) of themselves, without the terror of some power, to cause them to be observed, are contrary to our natural passions, that carry us to partiality, pride, revenge, and the like. And covenants, without the sword, are but words, and of no strength to secure a man at all. Therefore notwithstanding the laws of nature, (which every one hath then kept, when he has the will to keep them, when he can do it safely,) if there be no power erected, or not great enough for our security; every man will, and may lawfully rely on his own strength and art, for caution against all other men. And in all places, where men have lived by small families, to rob and spoil one another, has been a trade, and so far from being reputed against the law of nature, that the greater spoils they gained, the greater was their honour; and men observed no other laws therein, but the laws of honour; that is, to abstain from cruelty, leaving to men their lives, and instruments of husbandry. And as small families did then; so now do cities and kingdoms which are but greater families (for their own security) enlarge their dominions, upon all pretences of danger, and fear of invasion, or assistance that may be given to invaders, endeavour as much as they can, to subdue, or weaken their neighbours, by open force, and secret arts, for want of other caution, justly; and are remembered for it in after ages with honour.

Nor is it the joining together of a small number of men, that gives them this security; because in small numbers, small additions on the one side or the other, make the advantage of strength so great, as is sufficient to carry the victory; and therefore gives encouragement to an invasion. The multitude sufficient to confide in for our security, is not determined by any certain number, but by comparison with the enemy we fear; and is then sufficient, when the odds of the enemy is not of so visible and conspicuous moment, to determine the event of war, as to move him to attempt.

And be there never so great a multitude; yet if their actions be directed according to their particular judgments, and particular appetites, they can expect thereby no defence, nor protection, neither against a common enemy, nor against the injuries of one an-

other. For being distracted in opinions concerning the best use and application of their strength, they do not help, but hinder one another; and reduce their strength by mutual opposition to nothing: whereby they are easily, not only subdued by a very few that agree together; but also when there is no common enemy, they make war upon each other, for their particular interests. For if we could suppose a great multitude of men to consent in the observation of justice, and other laws of nature, without a common power to keep them all in awe; we might as well suppose all mankind to do the same; and then there neither would be, nor need to be any civil government, or commonwealth at all; because there would be peace without subjection.

Nor is it enough for the security, which men desire should last all the time of their life, that they be governed, and directed by one judgment, for a limited time; as in one battle, or one war. For though they obtain a victory by their unanimous endeavour against a foreign enemy; yet afterwards, when either they have no common enemy, or he that by one part is held for an enemy, is by another part held for a friend, they must needs by the difference of their interests dissolve, and fall again into a war amongst themselves.

It is true, that certain living creatures, as bees, and ants, live sociably one with another, (which are therefore by *Aristotle* numbered amongst political creatures;) and yet have no other direction, than their particular judgments and appetites; nor speech, whereby one of them can signify to another, what he thinks expedient for the common benefit: and therefore some man may perhaps desire to know, why mankind cannot do the same. To which I answer,

First, that men are continually in competition for honour and dignity, which these creatures are not; and consequently amongst men there ariseth on that ground, envy and hatred, and finally war; but amongst these not so.

Secondly, that amongst these creatures, the common good differeth not from the private; and being by nature inclined to their private, they procure thereby the common benefit. But man, whose joy consisteth in comparing himself with other men, can relish nothing but what is eminent.

Thirdly, that these creatures, having not, (as man) the use of reason, do not see, nor think they see any fault, in the administration of their common business; whereas amongst men, there are very many, that think themselves wiser, and abler to govern the public, better than the rest; and these strive to reform and innovate, one this way, another that way; and thereby bring it into distraction and civil war.

Fourthly, that these creatures, though they have some use of voice, in making known to one another their desires, and other affections; yet they want that art of words, by which some men can represent to others, that which is good, in the likeness of evil; and evil, in the likeness of good; and augment, or diminish the apparent greatness of good and evil; discontenting men, and troubling their peace at their pleasure.

Fifthly, irrational creatures cannot distinguish between *injury*, and *damage*; and therefore as long as they be at ease, they are not offended with their fellows: whereas man is then most troublesome, when he is most at ease: for then it is that he loves to shew his wisdom, and control the actions of them that govern the commonwealth.

Lastly, the agreement of these creatures is natural; that of men, is by covenant only, which is artificial: and therefore it is no wonder if there be somewhat else required (besides covenant) to make their agreement constant and lasting; which is a common power, to keep them in awe, and to direct their actions to the common benefit.

The only way to erect such a common power, as may be able to defend them from the invasion of foreigners, and the injuries of one another, and thereby to secure them in such sort, as that by their own industry, and by the fruits of the earth, they may nourish themselves and live contentedly; is, to confer all their power and strength upon one man, or upon one assembly of men, that may reduce all their wills, by plurality of voices, unto one will: which is as much as to say, to appoint one man, or assembly of men, to bear their person; and every one to own, and acknowledge himself to be author of whatsoever he that so beareth their person, shall act, or cause to be acted, in those things which concern the common peace and safety; and therein to submit their wills, every one to his will, and their judgments, to his judgment. This is more than consent, or concord; it is a real unity of them all, in one and the same person, made by covenant of every man with every man, in such

manner, as if every man should say to every man, *I authorise and give up my right of governing myself, to this man, or to this assembly of men, on this condition, that thou give up thy right to him, and authorize all his actions in like manner.* This done, the multitude so united in one person, is called a COMMONWEALTH, in Latin CIVITAS. This is the generation of that great LEVIATHAN, or rather (to speak more reverently) of that *mortal god*, to which we owe under the *immortal God*, our peace and defence. For by this authority, given him by every particular man in the commonwealth, he hath the use of so much power and strength conferred on him, that by terror thereof, he is enabled to form the wills of them all, to peace at home, and mutual aid against their enemies abroad. And in him consisteth the essence of the commonwealth; which (to define it,) is *one person, of whose acts a great multitude, by mutual covenants one with another, have made themselves every one the author, to the end he may use the strength and means of them all, as he shall think expedient, for their peace and common defence.*

And he that carrieth this person, is called SOVEREIGN, and said to have sovereign power; and every one besides, his SUBJECT.

The attaining to this sovereign power, is by two ways. One, by natural force; as when a man maketh his children, to submit themselves, and their children to his government, as being able to destroy them if they refuse; or by war subdueth his enemies to his will, giving them their lives on that condition. The other, is when men agree amongst themselves, to submit to some man, or assembly of men, voluntarily, on confidence to be protected by him against all others. This latter, may be called a political commonwealth, or commonwealth by *institution;* and the former, a commonwealth by *acquisition.* And first, I shall speak of a commonwealth by institution.

Chapter 18

Of the Rights of Sovereigns by Institution

A *commonwealth* is said to be *instituted*, when a *multitude* of men do agree, and *covenant, every one, with every one*, that to whatsoever *man*, or *assembly of men*, shall be given by the major part, the *right* to *present* the person of them all, (that is to say, to be their *representative*;) every one, as well he that *voted for it*, as he that *voted against it*, shall *authorize* all the actions and judgments, of that man, or assembly of men, in the same manner, as if they were his own, to the end, to live peaceably amongst themselves, and be protected against other men.

From this institution of a commonwealth are derived all the *rights*, and *faculties* of him, or them, on whom the sovereign power is conferred by the consent of the people assembled.

First, because they covenant, it is to be understood, they are not obliged by former covenant to any thing repugnant hereunto. And consequently they that have already instituted a commonwealth, being thereby bound by covenant, to own the actions, and judgments of one, cannot lawfully make a new covenant, amongst themselves, to be obedient to any other, in any thing whatsoever, without his permission. And therefore, they that are subjects to a monarch, cannot without his leave cast off monarchy, and return to the confusion of a disunited multitude; nor transfer their person from him that beareth it, to another man, or other assembly of men: for they are bound, every man to every man, to own, and be reputed author of all, that he that already is their sovereign, shall do, and judge fit to be done: so that any one man dissenting, all the rest should break their covenant made to that man, which is injustice: and they have also every man given the sovereignty to him that beareth their person; and therefore if they depose him, they take from him that which is his own, and so again it is injustice. Besides, if he that attempteth to depose his sovereign, be killed, or punished by him for such attempt, he is author of his own punishment, as being by the institution, author of all his sovereign shall do: and because it is injustice for a man to do any thing, for which he may be punished by his own authority, he is also upon that title, unjust. And whereas some men have pretended for their disobedience to their sovereign, a new covenant, made, not with men, but with God; this also is unjust: for there is no covenant with God, but by mediation of somebody

that representeth God's person; which none doth but God's lieutenant, who hath the sovereignty under God. But this pretence of covenant with God, is so evident a lie, even in the pretenders' own consciences, that it is not only an act of an unjust, but also of a vile, and unmanly disposition.

Secondly, because the right of bearing the person of them all, is given to him they make sovereign, by covenant only of one to another, and not of him to any of them; there can happen no breach of covenant on the part of the sovereign; and consequently none of his subjects, by any pretence of forfeiture, can be freed from his subjection. That he which is made sovereign maketh no covenant with his subjects beforehand, is manifest; because either he must make it with the whole multitude, as one party to the covenant; or he must make a several covenant with every man. With the whole, as one party, it is impossible; because as yet they are not one person: and if he make so many several covenants as there be men, those covenants after he hath the sovereignty are void, because what act soever can be pretended by any one of them for breach thereof, is the act both of himself, and of all the rest, because done in the person, and by the right of every one of them in particular. Besides, if any one, or more of them, pretend a breach of the covenant made by the sovereign at his institution; and others, or one other of his subjects, or himself alone, pretend there was no such breach, there is in this case, no judge to decide the controversy; it returns therefore to the sword again; and every man recovereth the right of protecting himself by his own strength, contrary to the design they had in the institution. It is therefore in vain to grant sovereignty by way of precedent covenant. The opinion that any monarch receiveth his power by covenant, that is to say, on condition, proceedeth from want of understanding this easy truth, that covenants being but words and breath, have no force to oblige, contain, constrain, or protect any man, but what it has from the public sword; that is, from the untied hands of that man, or assembly of men that hath the sovereignty, and whose actions are avouched by them all, and performed by the strength of them all, in him united. But when an assembly of men is made sovereign; then no man imagineth any such covenant to have passed in the institution; for no man is so dull as to say, for example, the people of Rome made a covenant with the Romans, to hold the sovereignty on such or such conditions; which not performed, the Romans might lawfully depose the Roman people. That men see not the reason to be alike in a monarchy, and in a popular government, proceedeth from the ambition of some, that are kinder to the government of an assembly, whereof they may hope to participate, than of monarchy, which they despair to enjoy.

Thirdly, because the major part hath by consenting voices declared a sovereign; he that dissented must now consent with the rest; that is, be contented to avow all the actions he shall do, or else justly be destroyed by the rest. For if he voluntarily entered into the congregation of them that were assembled, he sufficiently declared thereby his will, (and therefore tacitly covenanted) to stand to what the major part should ordain: and therefore if he refuse to stand thereto, or make protestation against any of their decrees, he does contrary to his covenant, and therefore unjustly. And whether he be of the congregation, or not; and whether his consent be asked, or not, he must either submit to their decrees, or be left in the condition of war he was in before; wherein he might without injustice be destroyed by any man whatsoever.

Fourthly, because every subject is by this institution author of all the actions, and judgments of the sovereign instituted; it follows, that whatsoever he doth, it can be no injury to any of his subjects; nor ought he to be by any of them accused of injustice. For he that doth any thing by authority from another, doth therein no injury to him by whose authority he acteth: but by this institution of a commonwealth, every particular man is author of all the sovereign doth; and consequently he that complaineth of injury from his sovereign, complaineth of that whereof he himself is author; and therefore ought not to accuse any man but himself; no nor himself of injury; because to do injury to one's self, is impossible. It is true that they that have sovereign power, may commit iniquity; but not injustice, or injury in the proper signification.

Fifthly, and consequently to that which was said last, no man that hath sovereign power can justly

be put to death, or otherwise in any manner by his subjects punished. For seeing every subject is author of the actions of his sovereign; he punisheth another, for the actions committed by himself.

And because the end of this institution, is the peace and defence of them all; and whosoever has right to the end, has right to the means; it belongeth of right, to whatsoever man, or assembly that hath the sovereignty, to be judge both of the means of peace and defence; and also of the hindrances, and disturbances of the same; and to do whatsoever he shall think necessary to be done, both beforehand, for the preserving of peace and security, by prevention of discord at home, and hostility from abroad; and, when peace and security are lost, for the recovery of the same. And therefore,

Sixthly, it is annexed to the sovereignty, to be judge of what opinions and doctrines are averse, and what conducing to peace; and consequently, on what occasions, how far, and what, men are to be trusted withal, in speaking to multitudes of people; and who shall examine the doctrines of all books before they be published. For the actions of men proceed from their opinions; and in the well-governing of opinions, consisteth the well-governing of men's actions, in order to their peace, and concord. And though in matter of doctrine, nothing ought to be regarded but the truth; yet this is not repugnant to regulating of the same by peace. For doctrine repugnant to peace, can no more be true, than peace and concord can be against the law of nature. It is true, that in a commonwealth, where by the negligence, or unskilfulness of governors, and teachers, false doctrines are by time generally received; the contrary truths may be generally offensive: Yet the most sudden, and rough busling in of a new truth, that can be, does never break the peace, but only sometimes awake the war. For those men that are so remissly governed, that they dare take up arms, to defend, or introduce an opinion, are still in war; and their condition not peace, but only a cessation of arms for fear of one another; and they live as it were, in the precincts of battle continually. It belongeth therefore to him that hath the sovereign power, to be judge, or constitute all judges of opinions and doctrines, as a thing necessary to peace; thereby to prevent discord and civil war.

Seventhly, is annexed to the sovereignty, the whole power of prescribing the rules, whereby every man may know, what goods he may enjoy, and what actions he may do, without being molested by any of his fellow-subjects; and this is it men call *propriety*. For before constitution of sovereign power (as hath already been shown) all men had right to all things; which necessarily causeth war: and therefore this propriety, being necessary to peace, and depending on sovereign power, is the act of that power, in order to the public peace. These rules of propriety (or *meum* and *tuum*) and of *good*, *evil*, *lawful*, and *unlawful* in the actions of subjects, are the civil laws; that is to say, the laws of each commonwealth in particular; though the name of civil law be now restrained to the ancient civil laws of the city of *Rome*; which being the head of a great part of the world, her laws at that time were in these parts the civil law.

Eighthly, is annexed to the sovereignty, the right of judicature; that is to say, of hearing and deciding all controversies, which may arise concerning law, either civil, or natural; or concerning fact. For without the decision of controversies, there is no protection of one subject, against the injuries of another; the laws concerning *meum* and *tuum* are in vain; and to every man remaineth, from the natural and necessary appetite of his own conservation, the right of protecting himself by his private strength, which is the condition of war; and contrary to the end for which every commonwealth is instituted.

Ninthly, is annexed to the sovereignty, the right of making war and peace with other nations, and commonwealths; that is to say, of judging when it is for the public good, and how great forces are to be assembled, armed, and paid for that end; and to levy money upon the subjects, to defray the expenses thereof. For the power by which the people are to be defended, consisteth in their armies; and the strength of an army, in the union of their strength under one command; which command the sovereign instituted, therefore hath; because the command of the *militia*, without other institution, maketh him that hath it sovereign. And therefore whosoever is made general of an army, he that hath the sovereign power is always generalissimo.

Tenthly, is annexed to the sovereignty, the choos-

ing of all counsellors, ministers, magistrates, and officers, both in peace, and war. For seeing the sovereign is charged with the end, which is the common peace and defence, he is understood to have power to use such means, as he shall think most fit for his discharge.

Eleventhly, to the sovereign is committed the power of rewarding with riches, or honour; and of punishing with corporal, or pecuniary punishment, or with ignominy every subject according to the law he hath formerly made; or if there be no law made, according as he shall judge most to conduce to the encouraging of men to serve the commonwealth, or deterring of them from doing disservice to the same.

Lastly, considering what values men are naturally apt to set upon themselves; what respect they look for from others; and how little they value other men; from whence continually arise amongst them, emulation, quarrels, factions, and at last war, to the destroying of one another, and diminution of their strength against a common enemy; it is necessary that there be laws of honour, and a public rate of the worth of such men as have deserved, or are able to deserve well of the commonwealth; and that there be force in the hands of some or other, to put those laws in execution. But it hath already been shown, that not only the whole *militia*, or forces of the commonwealth; but also the judicature of all controversies, is annexed to the sovereignty. To the sovereign therefore it belongeth also to give titles of honour; and to appoint what order of place, and dignity, each man shall hold; and what signs of respect, in public or private meetings, they shall give to one another.

These are the rights, which make the essence of sovereignty; and which are the marks, whereby a man may discern in what man, or assembly of men, the sovereign power is placed, and resideth. For these are incommunicable, and inseparable. The power to coin money; to dispose of the estate and persons of infant heirs; to have praeemption in markets; and all other statute prerogatives, may be transferred by the sovereign; and yet the power to protect his subjects be retained. But if he transfer the *militia*, he retains the judicature in vain, for want of execution of the laws: or if he grant away the power of raising money; the *militia* is in vain: or if he give away the government of doctrines, men will be frighted into rebellion with the fear of spirits. And so if we consider any one of the said rights, we shall presently see, that the holding of all the rest will produce no effect, in the conservation of peace and justice, the end for which all commonwealths are instituted. And this division is it, whereof it is said, *a kingdom divided in itself cannot stand:* for unless this division precede, division into opposite armies can never happen. If there had not first been an opinion received of the greatest part of England, that these powers were divided between the King, and the Lords, and the House of Commons, the people had never been divided and fallen into this civil war; first between those that disagreed in politics; and after between the dissenters about the liberty of religion; which have so instructed men in this point of sovereign right, that there be few now (in *England*,) that do not see, that these rights are inseparable, and will be so generally acknowledged at the next return of peace; and so continue, till their miseries are forgotten; and no longer, except the vulgar be better taught than they have hitherto been.

And because they are essential and inseparable rights, it follows necessarily, that in whatsoever words any of them seem to be granted away, yet if the sovereign power itself be not in direct terms renounced, and the name of sovereign no more given by the grantees to him that grants them, the grant is void: for when he has granted all he can, if we grant back the sovereignty, all is restored, as inseparably annexed thereunto.

This great authority being indivisible, and inseparably annexed to the sovereignty, there is little ground for the opinion of them, that say of sovereign kings, though they be *singulis majores*, of greater power than every one of their subjects, yet they be *universis minores*, of less power than them all together. For if by *all together*, they mean not the collective body as one person, then *all together*, and *every one*, signify the same; and the speech is absurd. But if by *all together*, they understand them as one person, (which person the sovereign bears,) then the power of all together, is the same with the sovereign's power; and so again the speech is absurd: which absurdity they see

well enough, when the sovereignty is in an assembly of the people; but in a monarch they see it not; and yet the power of sovereignty is the same in whomsoever it be placed.

And as the power, so also the honour of the sovereign, ought to be greater, than that of any, or all the subjects. For in the sovereignty is the fountain of honour. The dignities of lord, earl, duke, and prince are his creatures. As in the presence of the master, the servants are equal, and without any honour at all; so are the subjects, in the presence of the sovereign. And though they shine some more, some less, when they are out of his sight; yet in his presence, they shine no more than the stars in presence of the sun.

But a man may here object, that the condition of subjects is very miserable; as being obnoxious to the lusts, and other irregular passions of him, or them that have so unlimited a power in their hands. And commonly they that live under a monarch, think it the fault of monarchy; and they that live under the government of democracy, or other sovereign assembly, attribute all the inconvenience to that form of commonwealth; whereas the power in all forms, if they be perfect enough to protect them, is the same; not considering that the estate of man can never be without some incommodity or other; and that the greatest, that in any form of government can possibly happen to the people in general, is scarce sensible, in respect of the miseries, and horrible calamities, that accompany a civil war, or that dissolute condition of masterless men, without subjection to laws, and a coercive power to tie their hands from rapine and revenge: nor considering that the greatest pressure of sovereign governors, proceedeth not from any delight, or profit they can expect in the damage or weakening of their subjects, in whose vigour, consisteth their own strength and glory; but in the restiveness of themselves, that unwillingly contributing to their own defence, make it necessary for their governors to draw from them what they can in time of peace, that they may have means on any emergent occasion, or sudden need, to resist, or take advantage on their enemies. For all men are by nature provided of notable multiplying glasses, (that is their passions and self-love,) through which, every little payment appeareth a great grievance; but are destitute of those prospective glasses, (namely moral and civil science,) to see afar off the miseries that hang over them, and cannot without such payments be avoided.

Chapter 19

Of the Several Kinds of Commonwealth by Institution, and of Succession to the Sovereign Power

The difference of commonwealths, consisteth in the difference of the sovereign, or the person representative of all and every one of the multitude. And because the sovereignty is either in one man, or in an assembly of more than one; and into that assembly either every man hath right to enter, or not every one, but certain men distinguished from the rest; it is manifest, there can be but three kinds of commonwealth. For the representative must needs be one man, or more: and if more, then it is the assembly of all, or but of a part. When the representative is one man, then is the commonwealth a MONARCHY: when an assembly of all that will come together, then it is a DEMOCRACY, or popular commonwealth: when an assembly of a part only, then it is called an ARISTOCRACY. Other kind of commonwealth there can be none: for either one, or more, or all, must have the sovereign power (which I have shown to be indivisible) entire.

There be other names of government, in the histories, and books of policy; as *tyranny*, and *oligarchy*: But they are not the names of other forms of government, but of the same forms misliked. For they that are discontented under *monarchy*, call it *tyranny*; and they that are displeased with *aristocracy*, call it *oligarchy*: so also, they which find themselves grieved under a *democracy*, call it *anarchy*, (which signifies want of government;) and yet I think no man believes, that want of government, is any new kind of government: nor by the same reason ought they to believe, that the government is of one kind, when they like it, and another, when they mislike it, or are oppressed by the governors.

It is manifest, that men who are in absolute liberty, may, if they please, give authority to one man, to represent them every one; as well as give such authority to any assembly of men whatsoever; and consequently may subject themselves, if they think good,

to a monarch, as absolutely, as to any other representative. Therefore, where there is already erected a sovereign power, there can be no other representative of the same people, but only to certain particular ends, by the sovereign limited. For that were to erect two sovereigns; and every man to have his person represented by two actors, that by opposing one another, must needs divide that power, which (if men will live in peace) is indivisible; and thereby reduce the multitude into the condition of war, contrary to the end for which all sovereignty is instituted. And therefore as it is absurd, to think that a sovereign assembly, inviting the people of their dominion, to send up their deputies, with power to make known their advice, or desires, should therefore hold such deputies, rather than themselves, for the absolute representative of the people: so it is absurd also, to think the same in a monarchy. And I know not how this so manifest a truth, should of late be so little observed; that in a monarchy, he that had the sovereignty from a descent of 600 years, was alone called sovereign, had the title of Majesty from every one of his subjects, and was unquestionably taken by them for their king, was notwithstanding never considered as their representative; that name without contradiction passing for the title of those men, which at his command were sent up by the people to carry their petitions, and give him (if he permitted it) their advice. Which may serve as an admonition, for those that are the true, and absolute representative of a people, to instruct men in the nature of that office, and to take heed how they admit of any other general representation upon any occasion whatsoever, if they mean to discharge the trust committed to them.

The difference between these three kinds of commonwealth, consisteth not in the difference of power; but in the difference of convenience, or aptitude to produce the peace, and security of the people; for which end they were instituted. And to compare monarchy with the other two, we may observe; first, that whosoever beareth the person of the people, or is one of that assembly that bears it, beareth also his own natural person. And though he be careful in his politic person to procure the common interest; yet he is more, or no less careful to procure the private good of himself, his family, kindred and friends; and for the most part, if the public interest chance to cross the private, he prefers the private: for the passions of men, are commonly more potent than their reason. From whence it follows, that where the public and private interest are most closely united, there is the public most advanced. Now in monarchy, the private interest is the same with the public. The riches, power, and honour of a monarch arise only from the riches, strength and reputation of his subjects. For no king can be rich, nor glorious, nor secure, whose subjects are either poor, or contemptible, or too weak through want, or dissention, to maintain a war against their enemies: whereas in a democracy, or aristocracy, the public prosperity confers not so much to the private fortune of one that is corrupt, or ambitious, as doth many times a perfidious advice, a treacherous action, or a civil war.

Secondly, that a monarch receiveth counsel of whom, when, and where he pleaseth; and consequently may hear the opinion of men versed in the matter about which he deliberates, of what rank or quality soever, and as long before the time of action, and with as much secrecy, as he will. But when a sovereign assembly has need of counsel, none are admitted but such as have a right thereto from the beginning; which for the most part are of those who have been versed more in the acquisition of wealth than of knowledge; and are to give their advice in long discourses, which may, and do commonly excite men to action, but not govern them in it. For the *understanding* is by the flame of the passions, never enlightened, but dazzled: Nor is there any place, or time, wherein an assembly can receive counsel with secrecy, because of their own multitude.

Thirdly, that the resolutions of a monarch, are subject to no other inconstancy, than that of human nature; but in assemblies, besides that of nature, there ariseth an inconstancy from the number. For the absence of a few, that would have the resolution once taken, continue firm, (which may happen by security, negligence, or private impediments,) or the diligent appearance of a few of the contrary opinion, undoes to day, all that was concluded yesterday.

Fourthly, that a monarch cannot disagree with himself, out of envy, or interest; but an assembly may; and that to such a height, as may produce a civil war.

Fifthly, that in monarchy there is this inconvenience; that any subject, by the power of one man,

for the enriching of a favourite or flatterer, may be deprived of all he possesseth; which I confess is a great and inevitable inconvenience. But the same may as well happen, where the sovereign power is in an assembly: for their power is the same; and they are as subject to evil counsel, and to be seduced by orators, as a monarch by flatterers; and becoming one another's flatterers, serve one another's covetousness and ambition by turns. And whereas the favourites of monarchs, are few, and they have none else to advance but their own kindred; the favourites of an assembly, are many; and the kindred much more numerous, than of any monarch. Besides, there is no favourite of a monarch, which cannot as well succour his friends, as hurt his enemies: but orators, that is to say, favourites of sovereign assemblies, though they have great power to hurt, have little to save. For to accuse, requires less eloquence (such is man's nature) than to excuse; and condemnation, than absolution more resembles justice.

Sixthly, that it is an inconvenience in monarchy, that the sovereignty may descend upon an infant, or one that cannot discern between good and evil: and consisteth in this, that the use of his power, must be in the hand of another man, or of some assembly of men, which are to govern by his right, and in his name; as curators, and protectors of his person, and authority. But to say there is inconvenience, in putting the use of the sovereign power, into the hand of a man, or an assembly of men; is to say that all government is more inconvenient, than confusion, and civil war. And therefore all the danger that can be pretended, must arise from the contention of those, that for an office of so great honour, and profit, may become competitors. To make it appear, that this inconvenience, proceedeth not from that form of government we call monarchy, we are to consider, that the precedent monarch, hath appointed who shall have the tuition of his infant successor, either expressly by testament, or tacitly, by not controlling the custom in that case received: and then such inconvenience, (if it happen) is to be attributed, not to the monarchy, but to the ambition, and injustice of the subjects; which in all kinds of government, where the people are not well instructed in their duty, and the rights of sovereignty, is the same. Or else the precedent monarch hath not at all taken order for such tuition; and then the law of nature hath provided this sufficient rule, that the tuition shall be in him, that hath by nature most interest in the preservation of the authority of the infant, and to whom least benefit can accrue by his death, or diminution. For seeing every man by nature seeketh his own benefit, and promotion; to put an infant into the power of those, that can promote themselves by his destruction, or damage, is not tuition, but treachery. So that sufficient provision being taken, against all just quarrel, about the government under a child, if any contention arise to the disturbance of the public peace, it is not to be attributed to the form of monarchy, but to the ambition of subjects, and ignorance of their duty. On the other side, there is no great commonwealth, the sovereignty whereof is in a great assembly, which is not, as to consultations of peace, and war, and making of laws, in the same condition, as if the government were in a child. For as a child wants the judgment to dissent from counsel given him, and is thereby necessitated to take the advice of them, or him, to whom he is committed: so an assembly wanteth the liberty, to dissent from the counsel of the major part, be it good, or bad. And as a child has need of a tutor, or protector, to preserve his person and authority: so also (in great commonwealths,) the sovereign assembly, in all great dangers and troubles, have need of *custodes libertatis*; that is of dictators, or protectors of their authority; which are as much as temporary monarchs; to whom for a time, they may commit the entire exercise of their power; and have (at the end of that time) been oftener deprived thereof, than infant kings, by their protectors, regents, or any other tutors.

Though the kinds of sovereignty be, as I have now shown, but three; that is to say, monarchy, where one man has it; or democracy, where the general assembly of subjects hath it; or aristocracy, where it is in an assembly of certain persons nominated, or otherwise distinguished from the rest: yet he that shall consider the particular commonwealths that have been, and are in the world, will not perhaps easily reduce them to three, and may thereby be inclined to think there be other forms, arising from these mingled together. As for example, elective kingdoms; where kings have the sovereign power put into their hands for a time; or kingdoms, wherein the king hath a power limited: which governments, are nevertheless by most writers

called monarchy. Likewise if a popular, or aristocratical commonwealth, subdue an enemy's country, and govern the same, by a president, procurator, or other magistrate; this may seem perhaps at first sight, to be a democratical, or aristocratical government. But it is not so. For elective kings, are not sovereigns, but ministers of the sovereign; nor limited kings sovereigns, but ministers of them that have the sovereign power: nor are those provinces which are in subjection to a democracy, or aristocracy of another commonwealth, democratically, or aristocratically governed, but monarchically.

And first, concerning an elective king, whose power is limited to his life, as it is in many places of Christendom at this day; or to certain years or months, as the dictator's power amongst the Romans; if he have right to appoint his successor, he is no more elective but hereditary. But if he have no power to elect his successor, then there is some other man, or assembly known, which after his decease may elect anew, or else the commonwealth dieth, and dissolveth with him, and returneth to the condition of war. If it be known who have the power to give the sovereignty after his death, it is known also that the sovereignty was in them before: for none have right to give that which they have not right to possess, and keep to themselves, if they think good. But if there be none that can give the sovereignty, after the decease of him that was first elected; then has he power, nay he is obliged by the law of nature, to provide, by establishing his successor, to keep those that had trusted him with the government, from relapsing into the miserable condition of civil war. And consequently he was, when elected, a sovereign absolute.

Secondly, that king whose power is limited, is not superior to him, or them that have the power to limit it; and he that is not superior, is not supreme; that is to say not sovereign. The sovereignty therefore was always in that assembly which had the right to limit him; and by consequence the government not monarchy, but either democracy, or aristocracy; as of old time in *Sparta;* where the kings had a privilege to lead their armies; but the sovereignty was in the *Ephori.*

Thirdly, whereas heretofore the Roman people governed the land of *Judea* (for example) by a president; yet was not *Judea* therefore a democracy; because they were not governed by any assembly, into the which, any of them, had right to enter; nor by an aristocracy; because they were not governed by any assembly, into which, any man could enter by their election: but they were governed by one person, which though as to the people of *Rome* was an assembly of the people, or democracy; yet as to people of *Judea*, which had no right at all of participating in the government, was a monarch. For though where the people are governed by an assembly, chosen by themselves out of their own number, the government is called a democracy, or aristocracy; yet when they are governed by an assembly, not of their own choosing, it is a monarchy; not of *one* man, over another man; but of one people, over another people.

Of all these forms of government, the matter being mortal, so that not only monarchs, but also whole assemblies die, it is necessary for the conservation of the peace of men, that as there was order taken for an artificial man, so there be order also taken, for an artificial eternity of life; without which, men that are governed by an assembly, should return into the condition of war in every age; and they that are governed by one man, as soon as their governor dieth. This artificial eternity, is that which men call the right of *succession*.

There is no perfect form of government, where the disposing of the succession is not in the present sovereign. For if it be in any other particular man, or private assembly, it is in a person subject, and may be assumed by the sovereign at his pleasure; and consequently the right is in himself. And if it be in no particular man, but left to a new choice; then is the commonwealth dissolved; and the right is in him that can get it; contrary to the intention of them that did institute the commonwealth, for their perpetual, and not temporary security.

In a democracy, the whole assembly cannot fail, unless the multitude that are to be governed fail. And therefore questions of the right of succession, have in that form of government no place at all.

In an aristocracy, when any of the assembly dieth, the election of another into his room belongeth to the assembly, as the sovereign, to whom belongeth the choosing of all counsellors and officers. For that which the representative doth, as actor, every one of the subjects doth, as author. And though the sovereign assembly may give power to others,

to elect new men, for supply of their court; yet it is still by their authority, that the election is made; and by the same it may (when the public shall require it) be recalled.

The greatest difficulty about the right of succession, is in monarchy: and the difficulty ariseth from this, that at first sight, it is not manifest who is to appoint the successor; nor many times, who it is whom he hath appointed. For in both these cases, there is required a more exact ratiocination, than every man is accustomed to use. As to the question, who shall appoint the successor, of a monarch that hath the sovereign authority; that is to say, who shall determine of the right of inheritance, (for elective kings and princes have not the sovereign power in propriety, but in use only,) we are to consider, that either he that is in possession, has right to dispose of the succession, or else that right is again in the dissolved multitude. For the death of him that hath the sovereign power in propriety, leaves the multitude without any sovereign at all; that is, without any representative in whom they should be united, and be capable of doing any one action at all: and therefore they are incapable of election of any new monarch; every man having equal right to submit himself to such as he thinks best able to protect him; or if he can, protect himself by his own sword, which is a return to confusion, and to the condition of a war of every man against every man, contrary to the end for which monarchy had its first institution. Therefore it is manifest, that by the institution of monarchy, the disposing of the successor, is always left to the judgment and will of the present possessor.

And for the question (which may arise sometimes) who it is that the monarch in possession, hath designed to the succession and inheritance of his power; it is determined by his express words, and testament; or by other tacit signs sufficient.

By express words, or testament, when it is declared by him in his lifetime, *viva voce*, or by writing; as the first emperors of *Rome* declared who should be their heirs. For the word heir does not of itself imply the children, or nearest kindred of a man; but whomsoever a man shall any way declare, he would have to succeed him in his estate. If therefore a monarch declare expressly, that such a man shall be his heir, either by word or writing, then is that man immediately after the decease of his predecessor, invested in the right of being monarch.

But where testament, and express words are wanting, other natural signs of the will are to be followed: whereof the one is custom. And therefore where the custom is, that the next of kindred absolutely succeedeth, there also the next of kindred hath right to the succession; for that, if the will of him that was in possession had been otherwise, he might easily have declared the same in his life time. And likewise where the custom is, that the next of the male kindred succeedeth, there also the right of succession is in the next of the kindred male, for the same reason. And so it is if the custom were to advance the female. For whatsoever custom a man may by a word control, and does not, it is a natural sign he would have that custom stand.

But where neither custom, nor testament hath preceded, there it is to be understood, first, that a monarch's will is, that the government remain monarchical; because he hath approved that government in himself. Secondly, that a child of his own, male, or female, be preferred before any other; because men are presumed to be more inclined by nature, to advance their own children, than the children of other men; and of their own, rather a male than a female; because men, are naturally fitter than women, for actions of labour and danger. Thirdly, where his own issue faileth, rather a brother than a stranger; and so still the nearer in blood, rather than the more remote; because it is always presumed that the nearer of kin, is the nearer in affection; and it is evident that a man receives always, by reflection, the most honour from the greatness of his nearest kindred.

But if it be lawful for a monarch to dispose of the succession by words of contract, or testament, men may perhaps object a great inconvenience: for he may sell, or give his right of governing to a stranger; which, because strangers (that is, men not used to live under the same government, nor speaking the same language) do commonly undervalue one another, may turn to the oppression of his subjects; which is indeed a great inconvenience: but it proceedeth not necessarily from the subjection to a stranger's government, but from the unskilfulness of the governors, ignorant of the true rules of politics. And therefore the Romans when they had subdued

many nations, to make their government digestible, were wont to take away that grievance, as much as they thought necessary, by giving sometimes to whole nations, and sometimes to principal men of every nation they conquered, not only the privileges, but also the name of Romans; and took many of them into the senate, and offices of charge, even in the Roman city. And this was it our most wise king, king *James*, aimed at, in endeavouring the union of his two realms of *England* and *Scotland*. Which if he could have obtained, had in all likelihood prevented the civil wars, which make both those kingdoms, at this present, miserable. It is not therefore any injury to the people, for a monarch to dispose of the succession by will; though by the fault of many princes, it hath been sometimes found inconvenient. Of the lawfulness of it, this also is an argument, that whatsoever inconvenience can arrive by giving a kingdom to a stranger, may arrive also by so marrying with strangers, as the right of succession may descend upon them: yet this by all men is accounted lawful.

Chapter 20

Of Dominion Paternal, and Despotical

A *commonwealth by acquisition*, is that, where the sovereign power is acquired by force; and it is acquired by force, when men singly, or many together by plurality of voices, for fear of death, or bonds, do authorize all the actions of that man, or assembly, that hath their lives and liberty in his power.

And this kind of dominion, or sovereignty, differeth from sovereignty by institution, only in this, that men who choose their sovereign, do it for fear of one another, and not of him whom they institute: but in this case, they subject themselves, to him they are afraid of. In both cases they do it for fear: which is to be noted by them, that hold all such covenants, as proceed from fear of death, or violence, void: which if it were true, no man, in any kind of commonwealth, could be obliged to obedience. It is true, that in a commonwealth once instituted, or acquired, promises proceeding from fear of death or violence, are no covenants, nor obliging, when the thing promised is contrary to the laws; but the reason is not, because it was made upon fear, but because he that promiseth, hath no right in the thing promised. Also, when he may lawfully perform, and doth not, it is not the invalidity of the covenant, that absolveth him, but the sentence of the sovereign. Otherwise, whensoever a man lawfully promiseth, he unlawfully breaketh: but when the sovereign, who is the actor, acquitteth him, then he is acquitted by him that extorted the promise, as by the author of such absolution.

But the rights, and consequences of sovereignty, are the same in both. His power cannot, without his consent, be transferred to another: he cannot forfeit it: he cannot be accused by any of his subjects, of injury: he cannot be punished by them: he is judge of what is necessary for peace; and judge of doctrines: he is sole legislator; and supreme judge of controversies; and of the times, and occasions of war, and peace: to him it belongeth to choose magistrates, counsellors, commanders, and all other officers, and ministers; and to determine of rewards, and punishments, honour, and order. The reasons whereof, are the same which are alleged in the precedent chapter, for the same rights, and consequences of sovereignty by institution.

Dominion is acquired two ways; by generation, and by conquest. The right of dominion by generation, is that, which the parent hath over his children; and is called PATERNAL. And is not so derived from the generation, as if therefore the parent had dominion over his child because he begat him; but from the child's consent, either express, or by other sufficient arguments declared. For as to the generation, God hath ordained to man a helper; and there be always two that are equally parents: the dominion therefore over the child, should belong equally to both; and he be equally subject to both, which is impossible; for no man can obey two masters. And whereas some have attributed the dominion to the man only, as being of the more excellent sex; they misreckon in it. For there is not always that difference of strength, or prudence between the man and the woman, as that the right can be determined without war. In commonwealths, this controversy is decided by the civil law: and for the most part, (but not always) the sentence is in favour of the father; because for the most part commonwealths have been erected by the fathers, not by the mothers of families. But the

question lieth now in the state of mere nature; where there are supposed no laws of matrimony; no laws for the education of children; but the law of nature, and the natural inclination of the sexes, one to another, and to their children. In this condition of mere nature, either the parents between themselves dispose of the dominion over the child by contract; or do not dispose thereof at all. If they dispose thereof, the right passeth according to the contract. We find in history that the *Amazons* contracted with the men of the neighbouring countries, to whom they had recourse for issue, that the issue male should be sent back, but the female remain with themselves: so that the dominion of the females was in the mother.

If there be no contract, the dominion is in the mother. For in the condition of mere nature, where there are no matrimonial laws, it cannot be known who is the father, unless it be declared by the mother: and therefore the right of dominion over the child dependeth on her will, and is consequently hers. Again, seeing the infant is first in the power of the mother, so as she may either nourish, or expose it; if she nourish it, it oweth its life to the mother; and is therefore obliged to obey her, rather than any other; and by consequence the dominion over it is hers. But if she expose it, and another find and nourish it, the dominion is in him that nourisheth it. For it ought to obey him by whom it is preserved; because preservation of life being the end, for which one man becomes subject to another, every man is supposed to promise obedience, to him, in whose power it is to save, or destroy him.

If the mother be the father's subject, the child, is in the father's power: and if the father be the mother's subject, (as when a sovereign queen marrieth one of her subjects,) the child is subject to the mother; because the father also is her subject.

If a man and woman, monarchs of two several kingdoms, have a child, and contract concerning who shall have the dominion of him, the right of the dominion passeth by the contract. If they contract not, the dominion followeth the dominion of the place of his residence. For the sovereign of each country hath dominion over all that reside therein.

He that hath the dominion over the child, hath dominion also over the children of the child; and over their children's children. For he that hath dominion over the person of a man, hath dominion over all that is his; without which, dominion were but a title, without the effect.

The right of succession to paternal dominion, proceedeth in the same manner, as doth the right of succession to monarchy; of which I have already sufficiently spoken in the precedent chapter.

Dominion acquired by conquest, or victory in war, is that which some writers call DESPOTICAL, from Δεσπόηθ, which signifieth a *lord*, or *master*; and is the dominion of the master over his servant. And this dominion is then acquired to the victor, when the vanquished, to avoid the present stroke of death, covenanteth either in express words, or by other sufficient signs of the will, that so long as his life, and the liberty of his body is allowed him, the victor shall have the use thereof, at his pleasure. And after such covenant made, the vanquished is a SERVANT, and not before: for by the word *servant*, (whether it be derived from *servire*, to serve, or from *servare*, to save, which I leave to grammarians to dispute) is not meant a captive, which is kept in prison, or bonds, till the owner of him that took him, or bought him of one that did, shall consider what to do with him: (for such men, (commonly called slaves,) have no obligation at all; but may break their bonds, or the prison; and kill, or carry away captive their master, justly:) but one, that being taken, hath corporal liberty allowed him; and upon promise not to run away, nor to do violence to his master, is trusted by him.

It is not therefore the victory, that giveth the right of dominion over the vanquished, but his own covenant. Nor is he obliged because he is conquered; that is to say, beaten, and taken, or put to flight; but because he cometh in, and submitteth to the victor; nor is the victor obliged by an enemy's rendering himself, (without promise of life,) to spare him for this his yielding to discretion; which obliges not the victor longer, than in his own discretion he shall think fit.

And that which men do, when they demand (as it is now called) *quarter*, (which the Greeks called Ζωγρία, *taking alive*,) is to evade the present fury of the victor, by submission, and to compound for their life, with ransom, or service: and therefore he that hath quarter, hath not his life given, but deferred till farther deliberation; for it is not an yielding on condition of life, but to discretion. And then only is

his life in security, and his service due, when the victor hath trusted him with his corporal liberty. For slaves that work in prisons, or fetters, do it not of duty, but to avoid the cruelty of their task-masters.

The master of the servant, is master also of all he hath; and may exact the use thereof; that is to say, of his goods, of his labour, of his servants, and of his children, as often as he shall think fit. For he holdeth his life of his master, by the covenant of obedience; that is, of owning, and authorizing whatsoever the master shall do. And in case the master, if he refuse, kill him, or cast him into bonds, or otherwise punish him for his disobedience, he is himself the author of the same; and cannot accuse him of injury.

In sum, the rights and consequences of both *paternal* and *despotical* dominion, are the very same with those of a sovereign by institution; and for the same reasons: which reasons are set down in the precedent chapter. So that for a man that is monarch of divers nations, whereof he hath, in one the sovereignty by institution of the people assembled, and in another by conquest, that is by the submission of each particular, to avoid death or bonds; to demand of one nation more than of the other, from the title of conquest, as being a conquered nation, is an act of ignorance of the rights of sovereignty. For the sovereign is absolute over both alike; or else there is no sovereignty at all; and so every man may lawfully protect himself, if he can, with his own sword, which is the condition of war.

By this it appears; that a great family if it be not part of some commonwealth, is of itself, as to the rights of sovereignty, a little monarchy; whether that family consist of a man and his children; or of a man and his servants; or of a man, and his children, and servants together: wherein the father or master is the sovereign. But yet a family is not properly a commonwealth; unless it be of that power by its own number, or by other opportunities, as not to be subdued without the hazard of war. For where a number of men are manifestly too weak to defend themselves united, every one may use his own reason in time of danger, to save his own life, either by flight, or by submission to the enemy, as he shall think best; in the same manner as a very small company of soldiers, surprised by an army, may cast down their arms, and demand quarter, or run away, rather than be put to the sword. And thus much shall suffice; concerning what I find by speculation, and deduction, of sovereign rights, from the nature, need, and designs of men, in erecting of commonwealths, and putting themselves under monarchs, or assemblies, entrusted with power enough for their protection.

Let us now consider what the Scripture teacheth in the same point. To Moses, the children of *Israel* say thus: *Speak thou to us, and we will hear thee; but let not God speak to us, lest we die.* (*Exod.* 20. 19.) This is absolute obedience to Moses. Concerning the right of kings, God himself by the mouth of Samuel, saith, (1 *Sam.* 8. 11, 12, &c.) *This shall be the right of the king you will have to reign over you. He shall take your sons, and set them to drive his chariots, and to be his horsemen, and to run before his chariots; and gather in his harvest; and to make his engines of war, and instruments of his chariots; and shall take your daughters to make perfumes, to be his cooks, and bakers. He shall take your fields, your vine-yards, and your olive-yards, and give them to his servants. He shall take the tithe of your corn and wine, and give it to the men of his chamber, and to his other servants. He shall take your man-servants, and your maid-servants, and the choice of your youth, and employ them in his business. He shall take the tithe of your flocks; and you shall be his servants.* This is absolute power, and summed up in the last words, *you shall be his servants.* Again, when the people heard what power their king was to have, yet they consented thereto, and say thus, (*verse* 19) *we will be as all other nations, and our king shall judge our causes, and go before us, to conduct our wars.* Here is confirmed the right that sovereigns have, both to the *militia*, and to all *judicature;* in which is contained as absolute power, as one man can possibly transfer to another. Again, the prayer of king Solomon to God, was this (1 *Kings*, 3. 9): *Give to thy servant understanding, to judge thy people, and to discern between good and evil.* It belongeth therefore to the sovereign to be judge, and to prescribe the rules of *discerning good* and *evil:* which rules are laws; and therefore in him is the legislative power. Saul sought the life of *David;* yet when it was in his power to slay *Saul*, and his servants would have done it, *David* forbad them, saying, (1 *Sam.* 24. 9) *God forbid I should do such an act against my Lord, the anointed of God.* For obedience of servants St. *Paul* saith; (*Col.*

3. 20) *Servants obey your masters in all things*; and, (*Verse* 22) *children obey your parents in all things*. There is simple obedience in those that are subject to paternal, or despotical dominion. Again, (*Matt.* 23. 2, 3) *The Scribes and Pharisees sit in Moses' chair, and therefore all that they shall bid you observe, that observe and do*. There again is simple obedience. And St. *Paul*, (*Titus* 3. 2) *Warn them that they subject themselves to princes, and to those that are in authority, and obey them*. This obedience is also simple. Lastly, our Saviour himself acknowledges, that men ought to pay such taxes as are by kings imposed, where he says, *Give to Caesar that which is Caesar's*; and paid such taxes himself. And that the king's word, is sufficient to take any thing from any subject, when there is need; and that the king is judge of that need: for he himself, as king of the Jews, commanded his disciples to take the ass, and ass's colt to carry him into Jerusalem, saying, (*Matth.* 21. 2, 3) *Go into the village over against you, and you shall find a she ass tied, and her colt with her, untie them, and bring them to me. And if any man ask you, what you mean by it, say the Lord hath need of them: and they will let them go*. They will not ask whether his necessity be a sufficient title; nor whether he be judge of that necessity; but acquiesce in the will of the Lord.

To these places may be added also that of *Genesis*, (*Genesis* 3. 5) *Ye shall be as gods, knowing good and evil*. And *verse* 11. *Who told thee that thou wast naked? hast thou eaten of the tree, of which I commanded thee thou shouldest not eat?* For the cognizance or judicature of good and evil, being forbidden by the name of the fruit of the tree of knowledge, as a trial of *Adam's* obedience; the devil to inflame the ambition of the woman, to whom that fruit already seemed beautiful, told her that by tasting it, they should be as gods, knowing *good* and *evil*. Whereupon having both eaten, they did indeed take upon them God's office, which is judicature of good and evil; but acquired no new ability to distinguish between them aright. And whereas it is said, that having eaten, they saw they were naked; no man hath so interpreted that place, as if they had been formerly blind, and saw not their own skins: the meaning is plain, that it was then they first judged their nakedness (wherein it was God's will to create them) to be uncomely; and by being ashamed, did tacitly censure God himself. And thereupon God saith, *Hast thou eaten, &c.* as if he should say, doest thou that owest me obedience, take upon thee to judge of my commandments? Whereby it is clearly, (though allegorically,) signified, that the commands of them that have the right to command, are not by their subjects to be censured, nor disputed.

So that it appeareth plainly, to my understanding, both from reason, and Scripture, that the sovereign power, whether placed in one man, as in monarchy, or in one assembly of men, as in popular, and aristocratical commonwealths, is as great, as possibly men can be imagined to make it. And though of so unlimited a power, men may fancy many evil consequences, yet the consequences of the want of it, which is perpetual war of every man against his neighbour, are much worse. The condition of man in this life shall never be without inconveniences; but there happeneth in no commonwealth any great inconvenience, but what proceeds from the subject's disobedience, and breach of those covenants, from which the commonwealth hath its being. And whosoever thinking sovereign power too great, will seek to make it less, must subject himself, to the power, that can limit it; that is to say, to a greater.

The greatest objection is, that of the practice; when men ask, where, and when, such power has by subjects been acknowledged. But one may ask them again, when, or where has there been a kingdom long free from sedition and civil war. In those nations, whose commonwealths have been long-lived, and not been destroyed but by foreign war, the subjects never did dispute of the sovereign power. But howsoever, an argument from the practice of men, that have not sifted to the bottom, and with exact reason weighed the causes, and nature of commonwealths, and suffer daily those miseries, that proceed from the ignorance thereof, is invalid. For though in all places of the world, men should lay the foundation of their houses on the sand, it could not thence be inferred, that so it ought to be. The skill of making, and maintaining commonwealths, consisteth in certain rules, as doth arithmetic and geometry; not (as tennis-play) on practice only: which rules, neither poor men have the leisure, nor men that have had the leisure,

have hitherto had the curiosity, or the method to find out.

Chapter 21

Of the Liberty of Subjects

LIBERTY, or FREEDOM, signifieth (properly) the absence of opposition; (by opposition, I mean external impediments of motion;) and may be applied no less to irrational, and inanimate creatures, than to rational. For whatsoever is so tied, or environed, as it cannot move, but within a certain space, which space is determined by the opposition of some external body, we say it hath not liberty to go further. And so of all living creatures, whilst they are imprisoned, or restrained, with walls, or chains; and of the water whilst it is kept in by banks, or vessels, that otherwise would spread itself into a larger space, we use to say, they are not at liberty, to move in such manner, as without those external impediments they would. But when the impediment of motion, is in the constitution of the thing itself, we use not to say, it wants the liberty; but the power to move; as when a stone lieth still, or a man is fastened to his bed by sickness.

And according to this proper, and generally received meaning of the word, *a* FREEMAN, *is he, that in those things, which by his strength and wit he is able to do, is not hindered to do what he has a will to.* But when the words *free*, and *liberty*, are applied to any thing but *bodies*, they are abused; for that which is not subject to motion, is not subject to impediment: and therefore, when it is said (for example) the way is free, no liberty of the way is signified, but of those that walk in it without stop. And when we say a gift is free, there is not meant any liberty of the gift, but of the giver, that was not bound by any law, or covenant to give it. So when we *speak freely*, it is not the liberty of voice, or pronunciation, but of the man, whom no law hath obliged to speak otherwise than he did. Lastly, from the use of the word *free-will*, no liberty can be inferred of the will, desire, or inclination, but the liberty of the man; which consisteth in this, that he finds no stop, in doing what he has the will, desire, or inclination to do.

Fear, and liberty are consistent; as when a man throweth his goods into the sea for *fear* the ship should sink, he doth it nevertheless very willingly, and may refuse to do it if he will: it is therefore the action of one that was *free*: so a man sometimes pays his debt, only for *fear* of imprisonment, which because nobody hindered him from detaining, was the action of a man at *liberty*. And generally all actions which men do in commonwealths, for *fear* of the law, are actions, which the doers had *liberty* to omit.

Liberty, and *necessity* are consistent: as in the water, that hath not only *liberty*, but a *necessity* of descending by the channel; so likewise in the actions which men voluntarily do: which, because they proceed from their will, proceed from *liberty*; and yet, because every act of man's will, and every desire, and inclination proceedeth from some cause, and that from another cause, in a continual chain, (whose first link is in the hand of God the first of all causes,) they proceed from *necessity*. So that to him that could see the connexion of those causes, the *necessity* of all men's voluntary actions, would appear manifest. And therefore God, that seeth, and disposeth all things, seeth also that the *liberty* of man in doing what he will, is accompanied with the *necessity* of doing that which God will, and no more, nor less. For though men may do many things, which God does not command, nor is therefore author of them; yet they can have no passion, nor appetite to any thing, of which appetite God's will is not the cause. And did not his will assure the *necessity* of man's will, and consequently of all that on man's will dependeth, the *liberty* of men would be a contradiction, and impediment to the omnipotence and *liberty* of God. And this shall suffice, (as to the matter in hand) of that natural *liberty*, which only is properly called *liberty*.

But as men, for the attaining of peace, and conservation of themselves thereby, have made an artificial man, which we call a commonwealth; so also have they made artificial chains, called *civil laws*, which they themselves, by mutual covenants, have fastened at one end, to the lips of that man, or assembly, to whom they have given the sovereign power; and at the other end to their own ears. These bonds in their own nature but weak, may nevertheless be made to hold, by the danger, though not by the difficulty of breaking them.

In relation to these bonds only it is, that I am to speak now, of the *liberty* of *subjects*. For seeing there is no commonwealth in the world, wherein there be rules enough set down, for the regulating of all the actions, and words of men, (as being a thing impossible:) it followeth necessarily, that in all kinds of actions, by the laws praetermitted, men have the liberty, of doing what their own reasons shall suggest, for the most profitable to themselves. For if we take liberty in the proper sense, for corporal liberty; that is to say, freedom from chains, and prison, it were very absurd for men to clamour as they do, for the liberty they so manifestly enjoy. Again, if we take liberty, for an exemption from laws, it is no less absurd, for men to demand as they do, that liberty, by which all other men may be masters of their lives. And yet as absurd as it is, this is it they demand; not knowing that the laws are of no power to protect them, without a sword in the hands of a man, or men, to cause those laws to be put in execution. The liberty of a subject, lieth therefore only in those things, which in regulating their actions, the sovereign hath praetermitted: such as is the liberty to buy, and sell, and otherwise contract with one another; to choose their own abode, their own diet, their own trade of life, and institute their children as they themselves think fit; and the like.

Nevertheless we are not to understand, that by such liberty, the sovereign power of life and death, is either abolished, or limited. For it has been already shown, that nothing the sovereign representative can do to a subject, on what pretence soever, can properly be called injustice, or injury; because every subject is author of every act the sovereign doth; so that he never wanteth right to any thing, otherwise, than as he himself is the subject of God, and bound thereby to observe the laws of nature. And therefore it may, and doth often happen in commonwealths, that a subject may be put to death, by the command of the sovereign power; and yet neither do the other wrong: as when *Jephtha* caused his daughter to be sacrificed: in which, and the like cases, he that so dieth, had liberty to do the action, for which he is nevertheless, without injury put to death. And the same holdeth also in a sovereign prince, that putteth to death an innocent subject. For though the action be against the law of nature, as being contrary to equity, (as was the killing of *Uriah*, by *David*;) yet it was not an injury to *Uriah*; but to *God*. Not to *Uriah*, because the right to do what he pleased, was given him by *Uriah* himself: and yet to *God*, because *David* was *God's* subject; and prohibited all iniquity by the law of nature. Which distinction, *David* himself, when he repented the fact, evidently confirmed, saying, *To thee only have I sinned*. In the same manner, the people of *Athens*, when they banished the most potent of their commonwealth for ten years, thought they committed no injustice; and yet they never questioned what crime he had done; but what hurt he would do: nay they commanded the banishment of they knew not whom; and every citizen bringing his oystershell into the market place, written with the name of him he desired should be banished, without actual accusing him, sometimes banished an *Aristides*, for his reputation of justice; and sometimes a scurrilous jester, as *Hyperbolus*, to make a jest of it. And yet a man cannot say, the sovereign people of *Athens* wanted right to banish them; or an *Athenian* the liberty to jest, or to be just.

The liberty, whereof there is so frequent and honourable mention, in the histories, and philosophy of the ancient Greeks, and Romans, and in the writings, and discourse of those that from them have received all their learning in the politics, is not the liberty of particular men; but the liberty of the commonwealth: which is the same with that, which every man then should have, if there were no civil laws, nor commonwealth at all. And the effects of it also be the same. For as amongst masterless men, there is perpetual war, of every man against his neighbour; no inheritance, to transmit to the son, nor to expect from the father; no propriety of goods, or lands; no security; but a full and absolute liberty in every particular man: so in states, and commonwealths not dependent on one another, every commonwealth, (not every man) has an absolute liberty, to do what it shall judge (that is to say, what that man, or assembly that representeth it, shall judge) most conducing to their benefit. But withal, they live in the condition of a perpetual war, and upon the confines of battle, with their frontiers armed, and cannons planted against their neighbours round about. The *Athenians*, and *Romans* were free; that is, free commonwealths: not that any particular men had the liberty to resist their own representative; but that their representative had the liberty to resist,

or invade other people. There is written on the turrets of the city of *Lucca* in great characters at this day, the word *LIBERTAS*; yet no man can thence infer, that a particular man has more liberty, or immunity from the service of the commonwealth there, than in *Constantinople*. Whether a commonwealth be monarchical, or popular, the freedom is still the same.

But it is an easy thing, for men to be deceived, by the specious name of *liberty*, and for want of judgment to distinguish, mistake that for their private inheritance, and birth right, which is the right of the public only. And when the same error is confirmed by the authority of men in reputation for their writings in this subject, it is no wonder if it produce sedition, and change of government. In these western parts of the world, we are made to receive our opinions concerning the institution, and rights of commonwealths, from *Aristotle*, *Cicero*, and other men, Greeks and Romans, that living under popular states, derived those rights, not from the principles of nature, but transcribed them into their books, out of the practice of their own commonwealths, which were popular; as the grammarians describe the rules of language, out of the practice of the time; or the rules of poetry, out of the poems of *Homer* and *Virgil*. And because the Athenians were taught, (to keep them from desire of changing their government,) that they were freemen, and all that lived under monarchy were slaves; therefore Aristotle puts it down in his *Politics*, *(lib.* 6. *cap.* 2.*) In democracy*, Liberty *is to be supposed: for it is commonly held, that no man is* Free *in any other government*. And as Aristotle; so Cicero, and other writers have grounded their civil doctrine, on the opinions of the Romans, who were taught to hate monarchy, at first, by them that having deposed their sovereign, shared amongst them the sovereignty of *Rome*; and afterwards by their successors. And by reading of these Greek, and Latin authors, men from their childhood have gotten a habit (under a false show of liberty,) of favouring tumults, and of licentious controlling the actions of their sovereigns; and again of controlling those controllers, with the effusion of so much blood; as I think I may truly say, there was never any thing so dearly bought, as these western parts have bought the learning of the Greek and Latin tongues.

To come now to the particulars of the true liberty of a subject; that is to say, what are the things, which though commanded by the sovereign, he may nevertheless, without injustice, refuse to do; we are to consider, what rights we pass away, when we make a commonwealth; or (which is all one,) what liberty we deny ourselves, by owning all the actions (without exception) of the man, or assembly we make our sovereign. For in the act of our *submission*, consisteth both our *obligation*, and our *liberty*; which must therefore be inferred by arguments taken from thence; there being no obligation on any man, which ariseth not from some act of his own; for all men equally, are by nature free. And because such arguments, must either be drawn from the express words, *I authorise all his actions*, or from the intention of him that submitteth himself to his power, (which intention is to be understood by the end for which he so submitteth;) the obligation, and liberty of the subject, is to be derived, either from those words, (or others equivalent;) or else from the end of the institution of sovereignty, namely, the peace of the subjects within themselves, and their defence against a common enemy.

First therefore, seeing sovereignty by institution, is by covenant of every one to every one; and sovereignty by acquisition, by covenants of the vanquished to the victor, or child to the parent; it is manifest, that every subject has liberty in all those things, the right whereof cannot by covenant be transferred. I have shewn before in the 14th chapter, that covenants, not to defend a man's own body, are void. Therefore,

If the sovereign command a man (though justly condemned,) to kill, wound, or maim himself; or not to resist those that assault him; or to abstain from the use of food, air, medicine, or any other thing, without which he cannot live; yet hath that man the liberty to disobey.

If a man be interrogated by the sovereign, or his authority, concerning a crime done by himself, he is not bound (without assurance of pardon) to confess it; because no man (as I have shown in the same chapter) can be obliged by covenant to accuse himself.

Again, the consent of a subject to sovereign power, is contained in these words, *I authorize, or take upon me, all his actions*; in which there is no restriction at all, of his own former natural liberty: for by allowing

him to *kill me*, I am not bound to kill myself when he commands me. It is one thing to say, *kill me, or my fellow, if you please*; another thing to say, *I will kill myself, or my fellow*. It followeth therefore, that

No man is bound by the words themselves, either to kill himself, or any other man; and consequently, that the obligation a man may sometimes have, upon the command of the sovereign to execute any dangerous, or dishonourable office, dependeth not on the words of our submission; but on the intention, which is to be understood by the end thereof. When therefore our refusal to obey, frustrates the end for which the sovereignty was ordained; then there is no liberty to refuse: otherwise there is.

Upon this ground, a man that is commanded as a soldier to fight against the enemy, though his sovereign have right enough to punish his refusal with death, may nevertheless in many cases refuse, without injustice; as when he substituteth a sufficient soldier in his place: for in this case he deserteth not the service of the commonwealth. And there is allowance to be made for natural timorousness; not only to women, (of whom no such dangerous duty is expected,) but also to men of feminine courage. When armies fight, there is on one side, or both, a running away; yet when they do it not out of treachery, but fear, they are not esteemed to do it unjustly, but dishonourably. For the same reason, to avoid battle, is not injustice, but cowardice. But he that inrolleth himself a soldier, or taketh imprest money, taketh away the excuse of a timorous nature; and is obliged, not only to go to the battle, but also not to run from it, without his captain's leave. And when the defence of the commonwealth, requireth at once the help of all that are able to bear arms, every one is obliged; because otherwise the institution of the commonwealth, which they have not the purpose, or courage to preserve, was in vain.

To resist the sword of the commonwealth, in defence of another man, guilty, or innocent, no man hath liberty; because such liberty, takes away from the sovereign, the means of protecting us; and is therefore destructive of the very essence of government. But in case a great many men together, have already resisted the sovereign power unjustly, or committed some capital crime, for which every one of them expecteth death, whether have they not the liberty then to join together, and assist, and defend one another? Certainly they have: for they but defend their lives, which the guilty man may as well do, as the innocent. There was indeed injustice in the first breach of their duty; their bearing of arms subsequent to it, though it be to maintain what they have done, is no new unjust act. And if it be only to defend their persons, it is not unjust at all. But the offer of pardon taketh from them, to whom it is offered, the plea of self-defence, and maketh their perseverance in assisting, or defending the rest, unlawful.

As for other liberties, they depend on the silence of the law. In cases where the sovereign has prescribed no rule, there the subject hath the liberty to do, or forbear, according to his own discretion. And therefore such liberty is in some places more, and in some less; and in some times more, in other times less, according as they that have the sovereignty shall think most convenient. As for example, there was a time, when in *England* a man might enter into his own land, (and dispossess such as wrongfully possessed it,) by force. But in aftertimes, that liberty of forcible entry, was taken away by a statute made (by the king,) in parliament. And in some places of the world, men have the liberty of many wives: in other places, such liberty is not allowed.

If a subject have a controversy with his sovereign, of debt, or of right of possession of lands or goods, or concerning any service required at his hands, or concerning any penalty, corporal, or pecuniary, grounded on a precedent law; he hath the same liberty to sue for his right, as if it were against a subject; and before such judges, as are appointed by the sovereign. For seeing the sovereign demandeth by force of a former law, and not by virtue of his power; he declareth thereby, that he requireth no more, than shall appear to be due by that law. The suit therefore is not contrary to the will of the sovereign; and consequently the subject hath the liberty to demand the hearing of his cause; and sentence, according to that law. But if he demand, or take any thing by pretence of his power; there lieth, in that case, no action of law: for all that is done by him in virtue of his power, is done by the authority of every subject, and consequently, he that brings an action against the sovereign, brings it against himself.

If a monarch, or sovereign assembly, grant a liberty

to all, or any of his subjects, which grant standing, he is disabled to provide for their safety, the grant is void; unless he directly renounce, or transfer the sovereignty to another. For in that he might openly, (if it had been his will,) and in plain terms, have renounced, or transferred it, and did not; it is to be understood it was not his will; but that the grant proceeded from ignorance of the repugnancy between such a liberty and the sovereign power: and therefore the sovereignty is still retained; and consequently all those powers, which are necessary to the exercising thereof; such as are the power of war, and peace, of judicature, of appointing officers, and councillors, of levying money, and the rest named in the 18th chapter.

The obligation of subjects to the sovereign, is understood to last as long, and no longer, than the power lasteth, by which he is able to protect them. For the right men have by nature to protect themselves, when none else can protect them, can by no covenant be relinquished. The sovereignty is the soul of the commonwealth; which once departed from the body, the members do no more receive their motion from it. The end of obedience is protection; which, wheresoever a man seeth it, either in his own, or in another's sword, nature applieth his obedience to it, and his endeavour to maintain it. And though sovereignty, in the intention of them that make it, be immortal; yet is it in its own nature, not only subject to violent death, by foreign war; but also through the ignorance, and passions of men, it hath in it, from the very institution, many seeds of a natural mortality, by intestine discord.

If a subject be taken prisoner in war; or his person, or his means of life be within the guards of the enemy, and hath his life and corporal liberty given him, on condition to be subject to the victor, he hath liberty to accept the condition; and having accepted it, is the subject of him that took him; because he had no other way to preserve himself. The case is the same, if he be detained on the same terms, in a foreign country. But if a man be held in prison, or bonds, or is not trusted with the liberty of his body; he cannot be understood to be bound by covenant to subjection; and therefore may, if he can, make his escape by any means whatsoever.

If a monarch shall relinquish the sovereignty, both for himself, and his heirs; his subjects return to the absolute liberty of nature; because, though nature may declare who are his sons, and who are the nearest of his kin; yet it dependeth on his own will, (as hath been said in the precedent chapter,) who shall be his heir. If therefore he will have no heir, there is no sovereignty, nor subjection. The case is the same, if he die without known kindred, and without declaration of his heir. For then there can no heir be known, and consequently no subjection be due.

If the sovereign banish his subject; during the banishment, he is not subject. But he that is sent on a message, or hath leave to travel, is still subject; but it is, by contract between sovereigns, not by virtue of the covenant of subjection. For whosoever entereth into another's dominion, is subject to all the laws thereof; unless he have a privilege by the amity of the sovereigns, or by special licence.

If a monarch subdued by war, render himself subject to the victor; his subjects are delivered from their former obligation, and become obliged to the victor. But if he be held prisoner, or have not the liberty of his own body; he is not understood to have given away the right of sovereignty; and therefore his subjects are obliged to yield obedience to the magistrates formerly placed, governing not in their own name, but in his. For, his right remaining, the question is only of the administration; that is to say, of the magistrates and officers; which, if he have not means to name, he is supposed to approve those, which he himself had formerly appointed.

Chapter 22

Of Systems Subject, Political, and Private

Having spoken of the generation, form, and power of a commonwealth, I am in order to speak next of the parts thereof. And first of systems, which resemble the similar parts, or muscles of a body natural. By SYSTEMS, I understand any numbers of men joined in one interest, or one business. Of which, some are *regular*, and some *irregular*. *Regular* are those, where one man, or assembly of men, is constituted representative of the whole number. All other are *irregular*.

Of regular, some are *absolute*, and *independent*, subject to none but their own representative: such are only commonwealths; of which I have spoken already in the 5 last precedent chapters. Others are dependent; that is to say, subordinate to some sovereign power, to which every one, as also their representative is *subject*.

Of systems subordinate, some are *political*, and some *private*. *Political*, (otherwise called *bodies politic*, and *persons in law*,) are those, which are made by authority from the sovereign power of the commonwealth. *Private*, are those, which are constituted by subjects amongst themselves, or by authority from a stranger. For no authority derived from foreign power, within the dominion of another, is public there, but private.

And of private systems, some are *lawful*; some *unlawful*. *Lawful*, are those which are allowed by the commonwealth: all other are *unlawful*. *Irregular* systems, are those which having no representative, consist only in concourse of people; which if not forbidden by the commonwealth, nor made on evil design, (such as are conflux of people to markets, or shows, or any other harmless end,) are lawful. But when the intention is evil, or (if the number be considerable), unknown, they are unlawful.

In bodies politic, the power of the representative is always limited: and that which prescribeth the limits thereof, is the power sovereign. For power unlimited, is absolute sovereignty. And the sovereign, in every commonwealth, is the absolute representative of all the subjects; and therefore no other, can be representative of any part of them, but so far forth, as he shall give leave. And to give leave to a body politic of subjects, to have an absolute representative to all intents and purposes, were to abandon the government of so much of the commonwealth, and to divide the dominion, contrary to their peace and defence, which the sovereign cannot be understood to do, by any grant, that does not plainly, and directly discharge them of their subjection. For consequences of words, are not the signs of his will, when other consequences are signs of the contrary; but rather signs of error, and misreckoning; to which all mankind is too prone.

The bounds of that power, which is given to the representative of a body politic, are to be taken notice of, from two things. One is their writ, or letters from the sovereign: the other is the law of the commonwealth.

For though in the institution or acquisition of a commonwealth, which is independent, there needs no writing, because the power of the representative has there no other bounds, but such as are set out by the unwritten law of nature; yet in subordinate bodies, there are such diversities of limitation necessary, concerning their businesses, times, and places, as can neither be remembered without letters, nor taken notice of, unless such letters be patent, that they may be read to them, and withal sealed, or testified, with the seals, or other permanent signs of the authority sovereign.

And because such limitation is not always easy, or perhaps possible to be described in writing; the ordinary laws, common to all subjects, must determine, what the representative may lawfully do, in all cases, where the letters themselves are silent. And therefore

In a body politic, if the representative be one man, whatsoever he does in the person of the body, which is not warranted in his letters, nor by the laws, is his own act, and not the act of the body, nor of any other member thereof besides himself: because further than his letters, or the laws limit, he representeth no man's person, but his own. But what he does according to these, is the act of every one: for of the act of the sovereign every one is author, because he is their representative unlimited; and the act of him that recedes not from the letters of the sovereign, is the act of the sovereign, and therefore every member of the body is author of it.

But if the representative be an assembly; whatsoever that assembly shall decree, not warranted by their letters, or the laws, is the act of the assembly, or body politic, and the act of every one by whose vote the decree was made; but not the act of any man that being present voted to the contrary; nor of any man absent, unless he voted it by procuration. It is the act of the assembly, because voted by the major part; and if it be a crime, the assembly may be punished, as far forth as it is capable, as by dissolution, or forfeiture of their letters (which is to such artificial, and fictitious bodies, capital) or (if the assembly have a common stock, wherein none of the innocent members have propriety,) by pecuniary mulct. For from corporal

penalties nature hath exempted all bodies politic. But they that gave not their vote, are therefore innocent, because the assembly cannot represent any man in things unwarranted by their letters, and consequently are not involved in their votes.

If the person of the body politic being in one man, borrow money of a stranger, that is, of one that is not of the same body, (for no letters need limit borrowing, seeing it is left to men's own inclinations to limit lending), the debt is the representative's. For if he should have authority from his letters, to make the members pay what he borroweth, he should have by consequence the sovereignty of them; and therefore the grant were either void, as proceeding from error, commonly incident to human nature, and an insufficient sign of the will of the granter; or if it be avowed by him, then is the representer sovereign, and falleth not under the present question, which is only of bodies subordinate. No member therefore is obliged to pay the debt so borrowed, but the representative himself: because he that lendeth it, being a stranger to the letters, and to the qualification of the body, understandeth those only for his debtors, that are engaged: and seeing the representer can engage himself, and none else, has him only for debtor; who must therefore pay him, out of the common stock (if there be any), or (if there be none) out of his own estate.

If he come into debt by contract, or mulct, the case is the same.

But when the representative is an assembly, and the debt to a stranger; all they, and only they are responsible for the debt, that gave their votes to the borrowing of it, or to the contract that made it due, or to the fact for which the mulct was imposed; because every one of those in voting did engage himself for the payment: for he that is author of the borrowing, is obliged to the payment, even of the whole debt, though when paid by any one, he be discharged.

But if the debt be to one of the assembly, the assembly only is obliged to the payment, out of their common stock (if they have any:) for having liberty of vote, if he vote the money, shall be borrowed, he votes it shall be paid; if he vote it shall not be borrowed, or be absent, yet because in lending, he voteth the borrowing, he contradicteth his former vote, and is obliged by the latter, and becomes both borrower and lender, and consequently cannot demand payment from any particular man, but from the common treasure only; which failing he hath no remedy, nor complaint, but against himself, that being privy to the acts of the assembly, and to their means to pay, and not being enforced, did nevertheless through his own folly lend his money.

It is manifest by this, that in bodies politic subordinate, and subject to a sovereign power, it is sometimes not only lawful, but expedient, for a particular man to make open protestation against the decrees of the representative assembly, and cause their dissent to be registered, or to take witness of it; because otherwise they may be obliged to pay debts contracted, and be responsible for crimes committed by other men. But in a sovereign assembly, that liberty is taken away, both because he that protesteth there, denies their sovereignty; and also because whatsoever is commanded by the sovereign power, is as to the subject (though not so always in the sight of God) justified by the command; for of such command every subject is the author.

The variety of bodies politic, is almost infinite: for they are not only distinguished by the several affairs, for which they are constituted, wherein there is an unspeakable diversity; but also by the times, places, and numbers, subject to many limitations. And as to their affairs, some are ordained for government; as first, the government of a province may be committed to an assembly of men, wherein all resolutions shall depend on the votes of the major part; and then this assembly is a body politic, and their power limited by commission. This word province signifies a charge, or care of business, which he whose business it is, committeth to another man, to be administered for, and under him; and therefore when in one commonwealth there be divers countries, that have their laws distinct one from another, or are far distant in place, the administration of the government being committed to divers persons, those countries where the sovereign is not resident, but governs by commission, are called provinces. But of the government of a province, by an assembly residing in the province itself, there be few examples. The Romans who had the sovereignty of many provinces; yet governed them always by presidents, and praetors; and not by assemblies, as they governed the city of *Rome*, and territories adjacent. In like manner, when there were colonies sent

from *England*, to plant *Virginia*, and *Sommer-islands*; though the government of them here, were committed to assemblies in *London*, yet did those assemblies never commit the government under them to any assembly there; but did to each plantation send one governor. For though every man, where he can be present by nature, desires to participate of government; yet where they cannot be present, they are by nature also inclined, to commit the government of their common interest rather to a monarchical, than a popular form of government: which is also evident in those men that have great private estates; who when they are unwilling to take the pains of administering the business that belongs to them, choose rather to trust one servant, than an assembly either of their friends or servants. But howsoever it be in fact, yet we may suppose the government of a province, or colony committed to an assembly: and when it is, that which in this place I have to say, is this; that whatsoever debt is by that assembly contracted; or whatsoever unlawful act is decreed, is the act only of those that assented, and not of any that dissented, or were absent, for the reasons before alleged. Also that an assembly residing out of the bounds of that colony whereof they have the government, cannot execute any power over the persons, or goods of any of the colony, to seize on them for debt, or other duty, in any place without the colony itself, as having no jurisdiction, nor authority elsewhere, but are left to the remedy, which the law of the place alloweth them. And though the assembly have right, to impose a mulct upon any of their members, that shall break the laws they make; yet out of the colony itself, they have no right to execute the same. And that which is said here, of the rights of an assembly, for the government of a province, or a colony, is appliable also to an assembly for the government of a town, an university, or a college, or a church, or for any other government over the persons of men.

And generally, in all bodies politic, if any particular member conceive himself injured by the body itself, the cognizance of his cause belongeth to the sovereign, and those the sovereign hath ordained for judges in such causes, or shall ordain for that particular cause; and not to the body itself. For the whole body is in this case his fellow subject, which in a sovereign assembly, is otherwise: for there, if the sovereign be not judge, though in his own cause, there can be no judge at all.

In a body politic, for the well ordering of foreign traffic, the most commodious representative is an assembly of all the members; that is to say, such a one, as every one that adventureth his money, may be present at all the deliberations, and resolutions of the body, if they will themselves. For proof whereof, we are to consider the end, for which men that are merchants, and may buy and sell, export, and import their merchandise according to their own discretions, do nevertheless bind themselves up in one corporation. It is true, there be few merchants, that with the merchandise they buy at home, can freight a ship, to export it; or with that they buy abroad, to bring it home; and have therefore need to join together in one society; where every man may either participate of the gain, according to the proportion of his adventure; or take his own, and sell what he transports, or imports, at such prices as he thinks fit. But this is no body politic, there being no common representative to oblige them to any other law, than that which is common to all other subjects. The end of their incorporating, is to make their gain the greater; which is done two ways; by sole buying, and sole selling, both at home, and abroad. So that to grant to a company of merchants to be a corporation, or body politic, is to grant them a double monopoly, whereof one is to be sole buyers; another to be sole sellers. For when there is a company incorporate for any particular foreign country, they only export the commodities vendible in that country; which is sole buying at home, and sole selling abroad. For at home there is but one buyer, and abroad but one that selleth: both which is gainful to the merchant, because thereby they buy at home at lower, and sell abroad at higher rates: and abroad there is but one buyer of foreign merchandise, and but one that sells them at home; both which again are gainful to the adventurers.

Of this double monopoly one part is disadvantageous to the people at home, the other to foreigners. For at home by their sole exportation they set what price they please on the husbandry, and handy-works of the people; and by the sole importation, what price they please on all foreign commodities the people have need of; both which are ill for the people. On the contrary, by the sole selling of the native commodities

abroad, and sole buying the foreign commodities upon the place, they raise the price of those, and abate the price of these, to the disadvantage of the foreigner: for where but one selleth, the merchandise is the dearer; and where but one buyeth the cheaper. Such corporations therefore are no other than monopolies; though they would be very profitable for a commonwealth, if being bound up into one body in foreign markets they were at liberty at home, every man to buy, and sell at what price he could.

The end then of these bodies of merchants, being not a common benefit to the whole body, (which have in this case no common stock, but what is deducted out of the particular adventures, for building, buying, victualling and manning of ships,) but the particular gain of every adventurer, it is reason that every one be acquainted with the employment of his own; that is, that every one be of the assembly, that shall have the power to order the same; and be acquainted with their accounts. And therefore the representative of such a body must be an assembly, where every member of the body may be present at the consultations, if he will.

If a body politic of merchants, contract a debt to a stranger by the act of their representative assembly, every member is liable by himself for the whole. For a stranger can take no notice of their private laws, but considereth them as so many particular men, obliged every one to the whole payment, till payment made by one dischargeth all the rest: but if the debt be to one of the company, the creditor is debtor for the whole to himself, and cannot therefore demand his debt, but only from the common stock, if there be any.

If the commonwealth impose a tax upon the body, it is understood to be laid upon every member proportionably to his particular adventure in the company. For there is in this case no other common stock, but what is made of their particular adventures.

If a mulct be laid upon the body for some unlawful act, they only are liable by whose votes the act was decreed, or by whose assistance it was executed; for in none of the rest is there any other crime but being of the body; which if a crime, (because the body was ordained by the authority of the commonwealth,) is not his.

If one of the members be indebted to the body, he may be sued by the body; but his goods cannot be taken, nor his person imprisoned by the authority of the body; but only by authority of the commonwealth: for if they can do it by their own authority, they can by their own authority give judgment that the debt is due; which is as much as to be judge in their own cause.

These bodies made for the government of men, or of traffic, be either perpetual, or for a time prescribed by writing. But there be bodies also whose times are limited, and that only by the nature of their business. For example, if a sovereign monarch, or a sovereign assembly, shall think fit to give command to the towns, and other several parts of their territory, to send to him their deputies, to inform him of the condition, and necessities of the subjects, or to advise with him for the making of good laws, or for any other cause, as with one person representing the whole country, such deputies, having a place and time of meeting assigned them, are there, and at that time, a body politic, representing every subject of that dominion; but it is only for such matters as shall be propounded unto them by that man, or assembly, that by the sovereign authority sent for them; and when it shall be declared that nothing more shall be propounded, nor debated by them, the body is dissolved. For if they were the absolute representative of the people, then were it the sovereign assembly; and so there would be two sovereign assemblies, or two sovereigns, over the same people; which cannot consist with their peace. And therefore where there is once a sovereignty, there can be no absolute representation of the people, but by it. And for the limits of how far such a body shall represent the whole people, they are set forth in the writing by which they were sent for. For the people cannot choose their deputies to other intent, than is in the writing directed to them from their sovereign expressed.

Private bodies regular, and lawful, are those that are constituted without letters, or other written authority, saving the laws common to all other subjects. And because they be united in one person representative, they are held for regular; such as are all families, in which the father, or master ordereth the whole family. For he obligeth his children, and servants, as far as the law permitteth, though not further, because none of them are bound to obedience in those actions,

which the law hath forbidden to be done. In all other actions, during the time they are under domestic government, they are subject to their fathers, and masters, as to their immediate sovereigns. For the father, and master, being before the institution of commonwealth, absolute sovereigns in their own families, they lose afterward no more of their authority, than the law of the commonwealth taketh from them.

Private bodies regular, but unlawful, are those that unite themselves into one person representative, without any public authority at all; such as are the corporations of beggars, thieves and gipsies, the better to order their trade of begging, and stealing; and the corporations of men, that by authority from any foreign person, unite themselves in another's dominion, for the easier propagation of doctrines, and for making a party, against the power of the commonwealth.

Irregular systems, in their nature, but leagues, or sometimes mere concourse of people, without union to any particular design, not by obligation of one to another, but proceeding only from a similitude of wills and inclinations, become lawful, or unlawful, according to the lawfulness, or unlawfulness of every particular man's design therein: and his design is to be understood by the occasion.

The leagues of subjects, (because leagues are commonly made for mutual defence,) are in a commonwealth (which is no more than a league of all the subjects together) for the most part unnecessary, and savour of unlawful design; and are for that cause unlawful, and go commonly by the name of factions, or conspiracies. For a league being a connexion of men by covenants, if there be no power given to any one man, or assembly (as in the condition of mere nature) to compel them to performance, is so long only valid, as there ariseth no just cause of distrust: and therefore leagues between commonwealths, over whom there is no human power established, to keep them all in awe, are not only lawful, but also profitable for the time they last. But leagues of the subjects of one and the same commonwealth, where every one may obtain his right by means of the sovereign power, are unnecessary to the maintaining of peace and justice, and (in case the design of them be evil, or unknown to the commonwealth) unlawful. For all uniting of strength by private men, is, if for evil intent, unjust; if for intent unknown, dangerous to the public, and unjustly concealed.

If the sovereign power be in a great assembly, and a number of men, part of the assembly, without authority, consult apart, to contrive the guidance of the rest; this is a faction, or conspiracy unlawful, as being a fraudulent seducing of the assembly for their particular interest. But if he, whose private interest is to be debated and judged in the assembly, make as many friends as he can; in him it is no injustice; because in this case he is no part of the assembly. And though he hire such friends with money, (unless there be an express law against it,) yet it is not injustice. For sometimes, (as men's manners are,) justice cannot be had without money; and every man may think his own cause just, till it be heard, and judged.

In all commonwealths, if a private man entertain more servants, than the government of his estate, and lawful employment he has for them requires, it is faction, and unlawful. For having the protection of the commonwealth, he needeth not the defence of private force. And whereas in nations not thoroughly civilized, several numerous families have lived in continual hostility, and invaded one another with private force; yet it is evident enough, that they have done unjustly; or else that they had no commonwealth.

And as factions for kindred, so also factions for government of religion, as of Papists, Protestants, &c. or of state, as patricians, and plebeians of old time in *Rome*, and of aristocraticals and democraticals of old time in *Greece*, are unjust, as being contrary to the peace and safety of the people, and a taking of the sword out of the hand of the sovereign.

Concourse of people, is an irregular system, the lawfulness, or unlawfulness, whereof dependeth on the occasion, and on the number of them that are assembled. If the occasion be lawful, and manifest, the concourse is lawful; as the usual meeting of men at church, or at a public show, in usual numbers: for if the numbers be extraordinarily great, the occasion is not evident; and consequently he that cannot render a particular and good account of his being amongst them, is to be judged conscious of an unlawful, and tumultuous design. It may be lawful for a thousand men, to join in a petition to be delivered to a judge, or magistrate; yet if a thousand men come to present

it, it is a tumultuous assembly; because there needs but one or two for that purpose. But in such cases as these, it is not a set number that makes the assembly unlawful, but such a number, as the present officers are not able to suppress, and bring to justice.

When an unusual number of men, assemble against a man whom they accuse; the assembly is an unlawful tumult; because they may deliver their accusation to the magistrate by a few, or by one man. Such was the case of St. *Paul* at *Ephesus*; where *Demetrius*, and a great number of other men, brought two of *Paul's* companions before the magistrate, saying with one voice, *Great is Diana of the Ephesians*; which was their way of demanding justice against them for teaching the people such doctrine, as was against their religion, and trade. The occasion here, considering the laws of that people, was just; yet was their assembly judged unlawful, and the magistrate reprehended them for it, in these words (*Acts* 19. 40.) *If Demetrius and the other workmen can accuse any man, of any thing, there be pleas, and deputies, let them accuse one another. And if you have any other thing to demand, your case may be judged in an assembly lawfully called. For we are in danger to be accused for this day's sedition; because, there is no cause by which any man can render any reason of this concourse of people.* Where he calleth an assembly, whereof men can give no just account, a sedition, and such as they could not answer for. And this is all I shall say concerning *systems*, and assemblies of people, which may be compared (as I said,) to the similar parts of man's body; such as be lawful, to the muscles; such as are unlawful, to wens, biles, and apostems, engendered by the unnatural conflux of evil humours.

Chapter 23

Of the Public Ministers of Sovereign Power

In the last chapter I have spoken of the similar parts of a commonwealth: in this I shall speak of the parts organical, which are public ministers.

A PUBLIC MINISTER, is he, that by the sovereign, (whether a monarch, or an assembly,) is employed in any affairs, with authority to represent in that employment, the person of the commonwealth. And whereas every man, or assembly that hath sovereignty, representeth two persons, or (as the more common phrase is) has two capacities, one natural, and another politic, (as a monarch, hath the person not only of the commonwealth, but also of a man; and a sovereign assembly hath the person not only of the commonwealth, but also of the assembly); they that be servants to them in their natural capacity, are not public ministers; but those only that serve them in the administration of the public business. And therefore neither ushers, nor sergeants, nor other officers that wait on the assembly, for no other purpose, but for the commodity of the men assembled, in an aristocracy, or democracy; nor stewards, chamberlains, cofferers, or any other officers of the household of a monarch, are public ministers in a monarchy.

Of public ministers, some have charge committed to them of a general administration, either of the whole dominion, or of a part thereof. Of the whole, as to a protector, or regent, may be committed by the predecessor of an infant king, during his minority, the whole administration of his kingdom. In which case, every subject is so far obliged to obedience, as the ordinances he shall make, and the commands he shall give be in the king's name, and not inconsistent with his sovereign power. Of a part, or province; as when either a monarch, or a sovereign assembly, shall give the general charge thereof to a governor, lieutenant, praefect or viceroy: and in this case also, every one of that province, is obliged to all he shall do in the name of the sovereign, and that not incompatible with the sovereign's right. For such protectors, viceroys, and governors, have no other right, but what depends on the sovereign's will; and no commission that can be given them, can be interpreted for a declaration of the will to transfer the sovereignty, without express and perspicuous words to that purpose. And this kind of public ministers resembleth the nerves, and tendons that move the several limbs of a body natural.

Others have special administration; that is to say, charges of some special business, either at home, or abroad: as at home; first, for the economy of a commonwealth, they that have authority concerning the *treasure*, as tributes, impositions, rents, fines, or whatsoever public revenue, to collect, receive, issue,

or take the accounts thereof, are public ministers: ministers, because they serve the person representative, and can do nothing against his command, nor without his authority: public, because they serve him in his political capacity.

Secondly, they that have authority concerning the *militia;* to have the custody of arms, forts, ports; to levy, pay, or conduct soldiers; or to provide for any necessary thing for the use of war, either by land or sea, are public ministers. But a soldier without command, though he fight for the commonwealth, does not therefore represent the person of it; because there is none to represent it to. For every one that hath command, represents it to them only whom he commandeth.

They also that have authority to teach, or to enable others to teach the people their duty to the sovereign power, and instruct them in the knowledge of what is just, and unjust, thereby to render them more apt to live in godliness, and in peace amongst themselves, and resist the public enemy, are public ministers: ministers, in that they do it not by their own authority, but by another's; and public, because they do it (or should do it) by no authority, but that of the sovereign. The monarch, or the sovereign assembly only hath immediate authority from God, to teach and instruct the people; and no man but the sovereign, receiveth his power *Dei gratia* simply; that is to say, from the favour of none but God: all other, receive theirs from the favour and providence of God, and their sovereigns; as in a monarchy *Dei gratia et regis*; or *Dei providentia et voluntate regis*.

They also to whom jurisdiction is given, are public ministers. For in their seats of justice they represent the person of the sovereign; and their sentence, is his sentence; for, (as hath been before declared) all judicature is essentially annexed to the sovereignty; and therefore all other judges are but ministers of him, or them that have the sovereign power. And as controversies are of two sorts, namely of *fact* and of *law*; so are judgments, some of fact, some of law: and consequently in the same controversy, there may be two judges, one of fact, another of law.

And in both these controversies, there may arise a controversy between the party judged, and the judge; which because they be both subjects to the sovereign, ought in equity to be judged by men agreed on by consent of both; for no man can be judge in his own cause. But the sovereign is already agreed on for judge by them both, and is therefore either to hear the cause, and determine it himself, or appoint for judge such as they shall both agree on. And this agreement is then understood to be made between them divers ways; as first, if the defendant be allowed to except against such of his judges, whose interest maketh him suspect them, (for as to the complainant he hath already chosen his own judge), those which he excepteth not against, are judges he himself agrees on. Secondly, if he appeal to any other judge, he can appeal no further; for his appeal is his choice. Thirdly, if he appeal to the sovereign himself, and he by himself, or by delegates which the parties shall agree on, give sentence; that sentence is final: for the defendant is judged by his own judges, that is to say, by himself.

These properties of just and rational judicature considered, I cannot forbear to observe the excellent constitution of the courts of justice, established both for Common, and also for Public Pleas in England. By Common Pleas, I mean those, where both the complainant and defendant are subjects: and by public, (which are also called Pleas of the Crown) those, where the complainant is the sovereign. For whereas there were two orders of men, whereof one was Lords, the other Commons; the Lords had this privilege, to have for judges in all capital crimes, none but Lords; and of them, as many as would be present; which being ever acknowledged as a privilege of favour, their judges were none but such as they had themselves desired. And in all controversies, every subject (as also in civil controversies the Lords) had for judges, men of the country where the matter in controversy lay; against which he might make his exceptions, till at last twelve men without exception being agreed on, they were judged by those twelve. So that having his own judges, there could be nothing alleged by the party, why the sentence should not be final. These public persons, with authority from the sovereign power, either to instruct, or judge the people, are such members of the commonwealth, as may fitly be compared to the organs of voice in a body natural.

Public ministers are also all those, that have authority from the sovereign, to procure the execution of judgments given; to publish the sovereign's commands; to suppress tumults; to apprehend, and im-

prison malefactors; and other acts tending to the conservation of the peace. For every act they do by such authority, is the act of the commonwealth; and their service, answerable to that of the hands, in a body natural.

Public ministers abroad, are those that represent the person of their own sovereign, to foreign states. Such are ambassadors, messengers, agents, and heralds, sent by public authority, and on public business.

But such as are sent by authority only of some private party of a troubled state, though they be received, are neither public, nor private ministers of the commonwealth; because none of their actions have the commonwealth for author. Likewise, an ambassador sent from a prince, to congratulate, condole, or to assist at a solemnity, though the authority be public; yet because the business is private, and belonging to him in his natural capacity; is a private person. Also if a man be sent into another country, secretly to explore their counsels, and strength; though both the authority, and the business be public; yet because there is none to take notice of any person in him, but his own; he is but a private minister; but yet a minister of the commonwealth; and may be compared to an eye in the body natural. And those that are appointed to receive the petitions or other informations of the people, and are as it were the public ear, are public ministers, and represent their sovereign in that office.

Neither a councillor, nor a council of state, if we consider it with no authority of judicature or command, but only of giving advice to the sovereign when it is required, or of offering it when it is not required, is a public person. For the advice is addressed to the sovereign only, whose person cannot in his own presence, be represented to him, by another. But a body of councillors, are never without some other authority, either of judicature, or of immediate administration: as in a monarchy, they represent the monarch, in delivering his commands to the public ministers: in a democracy, the council, or senate propounds the result of their deliberations to the people, as a council; but when they appoint judges, or hear causes, or give audience to ambassadors, it is in the quality of a minister of the people: and in an aristocracy, the council of state is the sovereign assembly itself; and gives counsel to none but themselves.

Chapter 24

Of the Nutrition, and Procreation of a Commonwealth

The Nutrition of a commonwealth consisteth, in the *plenty*, and *distribution* of *materials* conducing to life: in *concoction*, or *preparation*; and, (when concocted) in the *conveyance* of it, by convenient conduits, to the public use.

As for the plenty of matter, it is a thing limited by nature, to those commodities, which from (the two breasts of our common mother) land, and sea, God usually either freely giveth, or for labour selleth to mankind.

For the matter of this nutriment, consisting in animals, vegetals, and minerals, God hath freely laid them before us, in or near to the face of the earth; so as there needeth no more but the labour, and industry of receiving them. Insomuch as plenty dependeth (next to God's favour) merely on the labour and industry of men.

This matter, commonly called commodities, is partly *native*, and partly *foreign: native*, that which is to be had within the territory of the commonwealth: *foreign*, that which is imported from without. And because there is no territory under the dominion of one commonwealth, (except it be of very vast extent,) that produceth all things needful for the maintenance, and motion of the whole body; and few that produce not something more than necessary; the superfluous commodities to be had within, become no more superfluous, but supply these wants at home, by importation of that which may be had abroad, either by exchange, or by just war, or by labour: for a man's labour also, is a commodity exchangeable for benefit, as well as any other thing: and there have been commonwealths that having no more territory, than hath served them for habitation, have nevertheless, not only maintained, but also increased their power, partly by the labour of trading from one place to another, and partly by selling the manufactures, whereof the materials were brought in from other places.

The distribution of the materials of this nourishment, is the constitution of *mine*, and *thine*, and *his*;

that is to say, in one word *propriety*; and belongeth in all kinds of commonwealth to the sovereign power. For where there is no commonwealth, there is (as hath been already shown) a perpetual war of every man against his neighbour; and therefore every thing is his that getteth it, and keepeth it by force; which is neither *propriety*, nor *community*; but *uncertainty*. Which is so evident, that even *Cicero*, (a passionate defender of liberty,) in a public pleading, attributeth all propriety to the law civil. *Let the civil law*, saith he, *be once abandoned, or but negligently guarded, (not to say oppressed,) and there is nothing, that any man can be sure to receive from his ancestor, or leave to his children.* And again; *Take away the civil law, and no man knows what is his own, and what another man's.* Seeing therefore the introduction of *propriety* is an effect of commonwealth; which can do nothing but by the person that represents it, it is the act only of the sovereign; and consisteth in the laws, which none can make that have not the sovereign power. And this they well knew of old, who called that Νόμος, (that is to say, *distribution*,) which we call law; and defined justice, by *distributing* to every man *his own*.

In this distribution, the first law, is for division of the land itself: wherein the sovereign assigneth to every man a portion, according as he, and not according as any subject, or any number of them, shall judge agreeable to equity, and the common good. The children of Israel, were a commonwealth in the wilderness; but wanted the commodities of the earth, till they were masters of the Land of Promise; which afterward was divided amongst them, not by their own discretion, but by the discretion of *Eleazar* the Priest, and *Joshua* their General, who, when there were twelve tribes, making them thirteen by subdivision of the tribe of *Joseph*; made nevertheless but twelve portions of the land; and ordained for the tribe of *Levi* no land; but assigned them the tenth part of the whole fruits; which division was therefore arbitrary. And though a people coming into possession of a land by war, do not always exterminate the ancient inhabitants, (as did the Jews,) but leave to many, or most, or all of them their estates; yet it is manifest they hold them afterwards, as of the victors' distribution; as the people of *England* held all theirs of *William* the *Conqueror*.

From whence we may collect, that the propriety which a subject hath in his lands, consisteth in a right to exclude all other subjects from the use of them; and not to exclude their sovereign, be it an assembly, or a monarch. For seeing the sovereign, that is to say, the commonwealth (whose person he representeth,) is understood to do nothing but in order to the common peace and security, this distribution of lands, is to be understood as done in order to the same: and consequently, whatsoever distribution he shall make in prejudice thereof, is contrary to the will of every subject, that committed his peace, and safety to his discretion, and conscience; and therefore by the will of every one of them, is to be reputed void. It is true, that a sovereign monarch, or the greater part of a sovereign assembly, may ordain the doing of many things in pursuit of their passions, contrary to their own consciences, which is a breach of trust, and of the law of nature; but this is not enough to authorize any subject, either to make war upon, or so much as to accuse of injustice, or any way to speak evil of their sovereign; because they have authorized all his actions, and in bestowing the sovereign power, made them their own. But in what cases the commands of sovereigns are contrary to equity, and the law of nature, is to be considered hereafter in another place.

In the distribution of land, the commonwealth itself, may be conceived to have a portion, and possess, and improve the same by their representative; and that such portion may be made sufficient, to sustain the whole expense to the common peace, and defence necessarily required: Which were very true, if there could be any representative conceived free from human passions, and infirmities. But the nature of men being as it is, the setting forth of public land, or of any certain revenue for the commonwealth, is in vain; and tendeth to the dissolution of government, and to the condition of mere nature, and war, as soon as ever the sovereign power falleth into the hands of a monarch, or of an assembly, that are either too negligent of money, or too hazardous in engaging the public stock, into a long or costly war. Commonwealths can endure no diet: for seeing their expense is not limited by their own appetite, but by external accidents, and the appetites of their neighbours, the public riches cannot be limited by other limits, than

those which the emergent occasions shall require. And whereas in *England*, there were by the Conqueror, divers lands reserved to his own use, (besides forests, and chases, either for his recreation, or for preservation of woods,) and divers services reserved on the land he gave his subjects; yet it seems they were not reserved for his maintenance in his public, but in his natural capacity. For he, and his successors did for all that, lay arbitrary taxes on all subjects' land, when they judged it necessary. Or if those public lands, and services, were ordained as a sufficient maintenance of the commonwealth, it was contrary to the scope of the institution; being (as it appeared by those ensuing taxes) insufficient, and (as it appears by the late small revenue of the crown) subject to alienation and diminution. It is therefore in vain, to assign a portion to the commonwealth; which may sell, or give it away; and does sell and give it away when it is done by their representative.

As the distribution of lands at home; so also to assign in what places, and for what commodities, the subject shall traffic abroad, belongeth to the sovereign. For if it did belong to private persons to use their own discretion therein, some of them would be drawn for gain, both to furnish the enemy with means to hurt the commonwealth, and hurt it themselves, by importing such things, as pleasing men's appetites, be nevertheless noxious, or at least unprofitable to them. And therefore it belongeth to the commonwealth, (that is, to the sovereign only,) to approve, or disapprove both of the places, and matter of foreign traffic.

Further, seeing it is not enough to the sustentation of a commonwealth, that every man have a propriety in a portion of land, or in some few commodities, or a natural property in some useful art, and there is no art in the world, but is necessary either for the being, or well being almost of every particular man; it is necessary, that men distribute that which they can spare, and transfer their propriety therein, mutually one to another, by exchange, and mutual contract. And therefore it belongeth to the commonwealth, (that is to say, to the sovereign,) to appoint in what manner, all kinds of contract between subjects, (as buying, selling, exchanging, borrowing, lending, letting, and taking to hire,) are to be made; and by what words and signs they shall be understood for valid. And for the matter, and distribution of the nourishment, to the several members of the commonwealth, thus much (considering the model of the whole work) is sufficient.

By concoction, I understand the reducing of all commodities, which are not presently consumed, but reserved for nourishment in time to come, to some thing of equal value, and withal so portable, as not to hinder the motion of men from place to place; to the end a man may have in what place soever, such nourishment as the place affordeth. And this is nothing else but gold, and silver, and money. For gold and silver, being (as it happens) almost in all countries of the world highly valued, is a commodious measure of the value of all things else between nations; and money (of what matter soever coined by the sovereign of a commonwealth,) is a sufficient measure of the value of all things else, between the subjects of that commonwealth. By the means of which measures, all commodities, moveable, and immoveable, are made to accompany a man, to all places of his resort, within and without the place of his ordinary residence; and the same passeth from man to man, within the commonwealth; and goes round about, nourishing (as it passeth) every part thereof; in so much as this concoction, is as it were the sanguification of the commonwealth: for natural blood is in like manner made of the fruits of the earth; and circulating, nourisheth by the way, every member of the body of man.

And because silver and gold, have their value from the matter itself; they have first this privilege, that the value of them cannot be altered by the power of one, nor of a few commonwealths; as being a common measure of the commodities of all places. But base money, may easily be enhanced, or abased. Secondly, they have the privilege to make commonwealths move, and stretch out their arms, when need is, into foreign countries; and supply, not only private subjects that travel, but also whole armies with provision. But that coin, which is not considerable for the matter, but for the stamp of the place, being unable to endure change of air, hath its effect at home only; where also it is subject to the change of laws, and thereby to have the value diminished, to the prejudice many times of those that have it.

The conduits, and ways by which it is conveyed to the public use, are of two sorts; one, that conveyeth

it to the public coffers; the other, that issueth the same out again for public payments. Of the first sort, are collectors, receivers, and treasurers; of the second are the treasurers again, and the officers appointed for payment of several public or private ministers. And in this also, the artificial man maintains his resemblance with the natural; whose veins receiving the blood from the several parts of the body, carry it to the heart; where being made vital, the heart by the arteries sends it out again, to enliven, and enable for motion all the members of the same.

The procreation, or children of a commonwealth, are those we call *plantations*, or *colonies*; which are numbers of men sent out from the commonwealth, under a conductor, or governor, to inhabit a foreign country, either formerly void of inhabitants, or made void then, by war. And when a colony is settled, they are either a commonwealth of themselves, discharged of their subjection to their sovereign that sent them, (as hath been done by many commonwealths of ancient time,) in which case the commonwealth from which they went, was called their metropolis, or mother, and requires no more of them, than fathers require of the children, whom they emancipate and make free from their domestic government, which is honour, and friendship; or else they remain united to their metropolis, as were the colonies of the people of *Rome*; and then they are no commonwealths themselves, but provinces, and parts of the commonwealth that sent them. So that the right of colonies (saving honour, and league with their metropolis,) dependeth wholly on their licence, or letters, by which their sovereign authorized them to plant.

Chapter 25

Of Counsel

How fallacious it is to judge of the nature of things, by the ordinary and inconstant use of words, appeareth in nothing more, than in the confusion of counsels, and commands, arising from the imperative manner of speaking in them both, and in many other occasions besides. For the words *do this*, are the words not only of him that commandeth; but also of him that giveth counsel; and of him that exhorteth; and yet there are but few, that see not, that these are very different things; or that cannot distinguish between them, when they perceive who it is that speaketh, and to whom the speech is directed, and upon what occasion. But finding those phrases in men's writings, and being not able, or not willing to enter into a consideration of the circumstances, they mistake sometimes the precepts of counsellors, for the precepts of them that command; and sometimes the contrary; according as it best agreeth with the conclusions they would infer, or the actions they approve. To avoid which mistakes, and render to those terms of commanding, counselling, and exhorting, their proper and distinct significations, I define them thus.

COMMAND is where a man saith, *do this*, or *do not this*, without expecting other reason than the will of him that says it. From this it followeth manifestly, that he that commandeth, pretendeth thereby his own benefit: for the reason of his command is his own will only, and the proper object of every man's will, is some good to himself.

COUNSEL, is where a man saith, *do*, or *do not this*, and deduceth his reasons from the benefit that arriveth by it to him to whom he saith it. And from this it is evident, that he that giveth counsel, pretendeth only (whatsoever he intendeth) the good of him, to whom he giveth it.

Therefore between counsel and command, one great difference is, that command is directed to a man's own benefit; and counsel to the benefit of another man. And from this ariseth another difference, that a man may be obliged to do what he is commanded; as when he hath covenanted to obey: but he cannot be obliged to do as he is counselled, because the hurt of not following it, is his own; or if he should covenant to follow it, then is the counsel turned into the nature of a command. A third difference between them is, that no man can pretend a right to be of another man's counsel; because he is not to pretend benefit by it to himself: but to demand right to counsel another, argues a will to know his designs, or to gain some other good to himself; which (as I said before) is of every man's will the proper object.

This also is incident to the nature of counsel; that whatsoever it be, he that asketh it, cannot in equity accuse, or punish it: for to ask counsel of another, is

to permit him to give such counsel as he shall think best; and consequently, he that giveth counsel to his sovereign, (whether a monarch, or an assembly) when he asketh it, cannot in equity be punished for it, whether the same be conformable to the opinion of the most, or not, so it be to the proposition in debate. For if the sense of the assembly can be taken notice of, before the debate be ended, they should neither ask, nor take any further counsel; for the sense of the assembly, is the resolution of the debate, and end of all deliberation. And generally he that demandeth counsel, is author of it; and therefore cannot punish it; and what the sovereign cannot, no man else can. But if one subject giveth counsel to another, to do any thing contrary to the laws, whether that counsel proceed from evil intention, or from ignorance only, it is punishable by the commonwealth; because ignorance of the law, is no good excuse, where every man is bound to take notice of the laws to which he is subject.

EXHORTATION, and DEHORTATION, is counsel, accompanied with signs in him that giveth it, of vehement desire to have it followed; or to say it more briefly, *counsel vehemently pressed*. For he that exhorteth, doth not deduce the consequences of what he adviseth to be done, and tie himself therein to the rigour of true reasoning; but encourages him he counselleth, to action: as he that dehorteth, deterreth him from it. And therefore they have in their speeches, a regard to the common passions, and opinions of men, in deducing their reasons; and make use of similitudes, metaphors, examples, and other tools of oratory, to persuade their hearers of the utility, honour, or justice of following their advice.

From whence may be inferred, first, that exhortation and dehortation, is directed to the good of him that giveth the counsel, not of him that asketh it, which is contrary to the duty of a counsellor; who (by the definition of counsel) ought to regard, not his own benefit, but his whom he adviseth. And that he directeth his counsel to his own benefit, is manifest enough, by the long and vehement urging, or by the artificial giving thereof; which being not required of him, and consequently proceeding from his own occasions, is directed principally to his own benefit, and but accidentally to the good of him that is counselled, or not at all.

Secondly, that the use of exhortation and dehortation lieth only where a man is to speak to a multitude; because when the speech is addressed to one, he may interrupt him, and examine his reasons more rigorously, than can be done in a multitude; which are too many to enter into dispute, and dialogue with him that speaketh indifferently to them all at once.

Thirdly, that they that exhort and dehort, where they are required to give counsel, are corrupt counsellors, and as it were bribed by their own interest. For though the counsel they give be never so good; yet he that gives it, is no more a good counsellor, than he that giveth a just sentence for a reward, is a just judge. But where a man may lawfully command, as a father in his family, or a leader in an army, his exhortations and dehortations, are not only lawful, but also necessary, and laudable: But then they are no more counsels, but commands; which when they are for execution of sour labour; sometimes necessity, and always humanity requireth to be sweetened in the delivery, by encouragement, and in the tune and phrase of counsel, rather than in harsher language of command.

Examples of the difference between command and counsel, we may take from the forms of speech that express them in Holy Scripture. *Have no other Gods but me; make to thyself no graven image; take not God's name in vain; sanctify the sabbath; honour thy parents; kill not; steal not, &c. are commands; because the reason for which we are to obey them, is drawn from the will of God our king, whom we are obliged to obey. But these words, Sell all thou hast; give it to the poor; and follow me,* are counsel; because the reason for which we are to do so, is drawn from our own benefit; which is this, that we shall have *treasure in Heaven.* These words, *Go into the village over against you, and you shall find an ass tied, and her colt; loose her, and bring her to me,* are a command: for the reason of their fact is drawn from the will of their Master: but these words, *Repent and be baptized in the name of Jesus,* are counsel; because the reason why we should so do, tendeth not to any benefit of God Almighty, who shall still be king in what manner soever we rebel; but of ourselves, who have no other means of avoiding the punishment hanging over us for our sins.

As the difference of counsel from command, hath been now deduced from the nature of counsel, consisting in a deducing of the benefit, or hurt that may arise to him that is to be counselled, by the necessary or probable consequences of the action he propoundeth; so may also the differences between *apt*, and *inept* counsellors be derived from the same. For experience, being but memory of the consequences of like actions formerly observed, and counsel but the speech whereby that experience is made known to another; the virtues, and defects of counsel, are the same with the virtues, and defects intellectual: and to the person of a commonwealth, his counsellors serve him in the place of memory, and mental discourse. But with this resemblance of the commonwealth, to a natural man, there is one dissimilitude joined, of great importance; which is, that a natural man receiveth his experience, from the natural objects of sense, which work upon him without passion, or interest of their own; whereas they that give counsel to the representative person of a commonwealth, may have, and have often their particular ends, and passions, that render their counsels always suspected, and many times unfaithful. And therefore we may set down for the first condition of a good counsellor, *that his ends, and interest, be not inconsistent with the ends and interest of him he counselleth.*

Secondly, because the office of a counsellor, when an action comes into deliberation, is to make manifest the consequences of it, in such manner, as he that is counselled may be truly and evidently informed; he ought to propound his advice, in such form of speech, as may make the truth most evidently appear; that is to say, with as firm ratiocination, as significant and proper language, and as briefly, as the evidence will permit. And therefore *rash, and unevident inferences;* (such as are fetched only from examples, or authority of books, and are not arguments of what is good, or evil, but witnesses of fact, or of opinion,) *obscure, confused, and ambiguous expressions, also all metaphorical speeches, tending to the stirring up of passion,* (because such reasoning, and such expressions, are useful only to deceive, or to lead him we counsel towards other ends than his own) *are repugnant to the office of a counsellor.*

Thirdly, because the ability of counselling proceedeth from experience, and long study; and no man is presumed to have experience in all those things that to the administration of a great commonwealth are necessary to be known, *no man is presumed to be a good counsellor, but in such business, as he hath not only been much versed in, but hath also much meditated on, and considered.* For seeing the business of a commonwealth is this, to preserve the people in peace at home, and defend them against foreign invasion, we shall find, it requires great knowledge of the disposition of mankind, of the rights of government, and of the nature of equity, law, justice, and honour, not to be attained without study; and of the strength, commodities, places, both of their own country, and their neighbours; as also of the inclinations, and designs of all nations that may any way annoy them. And this is not attained to, without much experience. Of which things, not only the whole sum, but every one of the particulars requires the age, and observation of a man in years, and of more than ordinary study. The wit required for counsel, as I have said before (chap. 8.) is judgment. And the differences of men in that point come from different education, of some to one kind of study, or business, and of others to another. When for the doing of any thing, there be infallible rules, (as in engines and edifices, the rules of geometry,) all the experience of the world cannot equal his counsel, that has learnt, or found out the rule. And when there is no such rule, he that hath most experience in that particular kind of business, has therein the best judgment, and is the best counsellor.

Fourthly, to be able to give counsel to a commonwealth, in a business that hath reference to another commonwealth, *it is necessary to be acquainted with the intelligences, and letters* that come from thence, *and with all the records of treaties, and other transactions of state* between them; which none can do, but such as the representative shall think fit. By which we may see, that they who are not called to counsel, can have no good counsel in such cases to obtrude.

Fifthly, supposing the number of counsellors equal, a man is better counselled by hearing them apart, than in an assembly; and that for many causes. First, in hearing them apart, you have the advice of every man; but in an assembly many of them deliver their advice with *aye*, or *no*, or with their hands, or feet, not moved by their own sense, but by the eloquence

of another, or for fear of displeasing some that have spoken, or the whole assembly, by contradiction; or for fear of appearing duller in apprehension, than those that have applauded the contrary opinion. Secondly, in an assembly of many, there cannot choose but be some whose interests are contrary to that of the public; and these their interests make passionate, and passion eloquent, and eloquence draws others into the same advice. For the passions of men, which asunder are moderate, as the heat of one brand; in assembly are like many brands, that inflame one another, (especially when they blow one another with orations) to the setting of the commonwealth on fire, under pretence of counselling it. Thirdly, in hearing every man apart, one may examine (when there is need) the truth, or probability of his reasons, and of the grounds of the advice he gives, by frequent interruptions, and objections; which cannot be done in an assembly, where (in every difficult question) a man is rather astonied, and dazzled with the variety of discourse upon it, than informed of the course he ought to take. Besides, there cannot be an assembly of many, called together for advice, wherein there be not some, that have the ambition to be thought eloquent, and also learned in the politics; and give not their advice with care of the business propounded, but of the applause of their motley orations, made of the divers coloured threds, or shreads of authors; which is an impertinence at least, that takes away the time of serious consultation, and in the secret way of counselling apart, is easily avoided. Fourthly, in deliberations that ought to be kept secret, (whereof there be many occasions in public business,) the counsels of many, and especially in assemblies, are dangerous; and therefore great assemblies are necessitated to commit such affairs to lesser numbers, and of such persons as are most versed, and in whose fidelity they have most confidence.

To conclude, who is there that so far approves the taking of counsel from a great assembly of counsellors, that wisheth for, or would accept of their pains, when there is a question of marrying his children, disposing of his lands, governing his household, or managing his private estate, especially if there be amongst them such as wish not his prosperity? A man that doth his business by the help of many and prudent counsellors, with every one consulting apart in his proper element, does it best, as he that useth able seconds at tennis play, placed in their proper stations. He does next best, that useth his own judgment only; as he that has no second at all. But he that is carried up and down to his business in a framed counsel, which cannot move but by the plurality of consenting opinions, the execution whereof is commonly (out of envy, or interest) retarded by the part dissenting, does it worst of all, and like one that is carried to the ball, though by good players, yet in a wheel-barrow, or other frame, heavy of itself, and retarded also by the inconcurrent judgments, and endeavours of them that drive it; and so much the more, as they be more that set their hands to it; and most of all, when there is one, or more amongst them, that desire to have him lose. And though it be true, that many eyes see more than one; yet it is not to be understood of many counsellors; but then only, when the final resolution is in one man. Otherwise, because many eyes see the same thing in divers lines, and are apt to look asquint towards their private benefit; they that desire not to miss their mark, though they look about with two eyes, yet they never aim but with one; and therefore no great popular commonwealth was ever kept up; but either by a foreign enemy that united them; or by the reputation of some one eminent man amongst them; or by the secret counsel of a few; or by the mutual fear of equal factions; and not by the open consultations of the assembly. And as for very little commonwealths, be they popular, or monarchical, there is no human wisdom can uphold them, longer than the jealousy lasteth of their potent neighbours.

Chapter 26

Of Civil Laws

By CIVIL LAWS, I understand the laws, that men are therefore bound to observe, because they are members, not of this, or that commonwealth in particular, but of a commonwealth. For the knowledge of particular laws belongeth to them, that profess the study of the laws of their several countries; but the knowledge of civil law in general, to any man. The ancient law of *Rome* was called their *civil law*, from the word *civitas*, which signifies a commonwealth:

and those countries, which having been under the Roman empire, and governed by that law, retain still such part thereof as they think fit, call that part the civil law, to distinguish it from the rest of their own civil laws. But that is not it I intend to speak of here; my design being not to show what is law here, and there; but what is law; as *Plato*, *Aristotle*, *Cicero*, and divers others have done, without taking upon them the profession of the study of the law.

And first it is manifest, that law in general, is not counsel, but command; nor a command of any man to any man; but only of him, whose command is addressed to one formerly obliged to obey him. And as for civil law, it addeth only the name of the person commanding, which is *persona civitatis*, the person of the commonwealth.

Which considered, I define civil law in this manner. CIVIL LAW, *is to every subject, those rules, which the commonwealth hath commanded him, by word, writing, or other sufficient sign of the will, to make use of, for the distinction of right, and wrong; that is to say, of what is contrary, and what is not contrary to the rule.*

In which definition, there is nothing that is not at first sight evident. For every man seeth, that some laws are addressed to all the subjects in general; some to particular provinces; some to particular vocations; and some to particular men; and are therefore laws, to every of those to whom the command is directed; and to none else. As also, that laws are the rules of just, and unjust; nothing being reputed unjust, that is not contrary to some law. Likewise, that none can make laws but the commonwealth; because our subjection is to the commonwealth only: and that commands, are to be signified by sufficient signs; because a man knows not otherwise how to obey them. And therefore, whatsoever can from this definition by necessary consequence be deduced, ought to be acknowledged for truth. Now I deduce from it this that followeth.

1. The legislator in all commonwealths, is only the sovereign, be he one man, as in a monarchy, or one assembly of men, as in a democracy, or aristocracy. For the legislator is he that maketh the law. And the commonwealth only, prescribes, and commandeth the observation of those rules, which we call law: therefore the commonwealth is the legislator. But the commonwealth is no person, nor has capacity to do any thing, but by the representative, (that is, the sovereign;) and therefore the sovereign is the sole legislator. For the same reason, none can abrogate a law made, but the sovereign; because a law is not abrogated, but by another law, that forbiddeth it to be put in execution.

2. The sovereign of a commonwealth, be it an assembly, or one man, is not subject to the civil laws. For having power to make, and repeal laws, he may when he pleaseth, free himself from that subjection, by repealing those laws that trouble him, and making of new; and consequently he was free before. For he is free, that can be free when he will: nor is it possible for any person to be bound to himself; because he that can bind, can release; and therefore he that is bound to himself only, is not bound.

3. When long use obtaineth the authority of a law, it is not the length of time that maketh the authority, but the will of the sovereign signified by his silence, (for silence is sometimes an argument of consent;) and it is no longer law, than the sovereign shall be silent therein. And therefore if the sovereign shall have a question of right grounded, not upon his present will, but upon the laws formerly made; the length of time shall bring no prejudice to his right; but the question shall be judged by equity. For many unjust actions, and unjust sentences, go uncontrolled a longer time, than any man can remember. And our lawyers account no customs law, but such as are reasonable, and that evil customs are to be abolished: But the judgment of what is reasonable, and of what is to be abolished, belongeth to him that maketh the law, which is the sovereign assembly, or monarch.

4. The law of nature, and the civil law, contain each other, and are of equal extent. For the laws of nature, which consist in equity, justice, gratitude, and other moral virtues on these depending, in the condition of mere nature (as I have said before in the end of the 15th chapter,) are not properly laws, but qualities that dispose men to peace and to obedience. When a commonwealth is once settled, then are they actually laws, and not before; as being then the commands of the commonwealth; and therefore also civil laws: for it is the sovereign power that obliges men to obey them. For in the differences of private men, to declare, what is equity, what is justice, and what is moral virtue, and to make them binding, there

is need of the ordinances of sovereign power, and punishments to be ordained for such as shall break them; which ordinances are therefore part of the civil law. The law of nature therefore is a part of the civil law in all commonwealths of the world. Reciprocally also, the civil law is a part of the dictates of nature. For justice, that is to say, performance of covenant, and giving to every man his own, is a dictate of the law of nature. But every subject in a commonwealth, hath covenanted to obey the civil law, (either one with another, as when they assemble to make a common representative, or with the representative it self one by one, when subdued by the sword they promise obedience, that they may receive life;) and therefore obedience to the civil law is part also of the law of nature. Civil, and natural law are not different kinds, but different parts of law; whereof one part being written, is called civil, the other unwritten, natural. But the right of nature, that is, the natural liberty of man, may by the civil law be abridged, and restrained: nay, the end of making laws, is no other, but such restraint; without the which there cannot possibly be any peace. And law was brought into the world for nothing else, but to limit the natural liberty of particular men, in such manner, as they might not hurt, but assist one another, and join together against a common enemy.

5. If the sovereign of one commonwealth, subdue a people that have lived under other written laws, and afterwards govern them by the same laws, by which they were governed before; yet those laws are the civil laws of the victor, and not of the vanquished commonwealth. For the legislator is he, not by whose authority the laws were first made, but by whose authority they now continue to be laws. And therefore where there be divers provinces, within the dominion of a commonwealth, and in those provinces diversity of laws, which commonly are called the customs of each several province, we are not to understand that such customs have their force, only from length of time; but that they were anciently laws written, or otherwise made known, for the constitutions, and statutes of their sovereigns; and are now laws, not by virtue of the prescription of time, but by the constitutions of their present sovereigns. But if an unwritten law, in all the provinces of a dominion, shall be generally observed, and no iniquity appear in the use thereof; that law can be no other but a law of nature, equally obliging all mankind.

6. Seeing then all laws, written and unwritten, have their authority, and force, from the will of the commonwealth; that is to say, from the will of the representative; which in a monarchy is the monarch, and in other commonwealths the sovereign assembly; a man may wonder from whence proceed such opinions, as are found in the books of lawyers of eminence in several commonwealths, directly, or by consequence making the legislative power depend on private men, or subordinate judges. As for example, *that the common law, hath no controller but the parliament*; which is true only where a parliament has the sovereign power, and cannot be assembled, nor dissolved, but by their own discretion. For if there be a right in any else to dissolve them, there is a right also to control them, and consequently to control their controllings. And if there be no such right, then the controller of laws is not *parliamentum*, but *rex in parliamento*. And where a parliament is sovereign, if it should assemble never so many, or so wise men, from the countries subject to them, for whatsoever cause; yet there is no man will believe, that such an assembly hath thereby acquired to themselves a legislative power. *Item*, that the two arms of a commonwealth, are *force, and justice; the first whereof is in the king; the other deposited in the hands of the parliament*. As if a commonwealth could consist, where the force were in any hand, which justice had not the authority to command and govern.

7. That law can never be against reason, our lawyers are agreed; and that not the letter, (that is, every construction of it,) but that which is according to the intention of the legislator, is the law. And it is true: but the doubt is of whose reason it is, that shall be received for law. It is not meant of any private reason; for then there would be as much contradiction in the laws, as there is in the Schools; nor yet, (as Sir *Edward Coke* makes it,) an *artificial perfection of reason, gotten by long study, observation, and experience*, (as his was.) For it is possible long study may increase, and confirm erroneous sentences: and where men build on false grounds, the more they build, the greater is the ruin: and of those that study, and observe with equal time, and diligence, the reasons and resolutions are, and must remain discordant: and therefore

it is not that *juris prudentia*, or wisdom of subordinate judges; but the reason of this our artificial man the commonwealth, and his command, that maketh law: and the commonwealth being in their representative but one person, there cannot easily arise any contradiction in the laws; and when there doth, the same reason is able, by interpretation, or alteration, to take it away. In all courts of justice, the sovereign (which is the person of the commonwealth,) is he that judgeth: the subordinate judge, ought to have regard to the reason, which moved his sovereign to make such law, that his sentence may be according thereunto; which then is his sovereign's sentence; otherwise it is his own, and an unjust one.

8. From this, that the law is a command, and a command consisteth in declaration, or manifestation of the will of him that commandeth, by voice, writing, or some other sufficient argument of the same, we may understand, that the command of the commonwealth is law only to those, that have means to take notice of it. Over natural fools, children, or madmen there is no law, no more than over brute beasts; nor are they capable of the title of just, or unjust; because they had never power to make any covenant, or to understand the consequences thereof; and consequently never took upon them to authorize the actions of any sovereign, as they must do that make to themselves a commonwealth. And as those from whom nature, or accident hath taken away the notice of all laws in general; so also every man, from whom any accident, not proceeding from his own default, hath taken away the means to take notice of any particular law, is excused, if he observe it not; and to speak properly, that law is no law to him. It is therefore necessary, to consider in this place, what arguments, and signs be sufficient for the knowledge of what is the law; that is to say, what is the will of the sovereign, as well in monarchies, as in other forms of government.

And first, if it be a law that obliges all the subjects without exception, and is not written, nor otherwise published in such places as they may take notice thereof, it is a law of nature. For whatsoever men are to take knowledge of for law, not upon other men's words, but every one from his own reason, must be such as is agreeable to the reason of all men; which no law can be, but the law of nature. The laws of nature therefore need not any publishing, nor proclamation; as being contained in this one sentence, approved by all the world, *Do not that to another, which thou thinkest unreasonable to be done by another to thyself*.

Secondly, if it be a law that obliges only some condition of men, or one particular man, and be not written, nor published by word, then also it is a law of nature; and known by the same arguments, and signs, that distinguish those in such a condition, from other subjects. For whatsoever law is not written, or some way published by him that makes it law, can be known no way, but by the reason of him that is to obey it; and is therefore also a law not only civil, but natural. For example, if the sovereign employ a public minister, without written instructions what to do; he is obliged to take for instructions the dictates of reason; as if he make a judge, the judge is to take notice, that his sentence ought to be according to the reason of his sovereign, which being always understood to be equity, he is bound to it by the law of nature: or if an ambassador, he is (in all things not contained in his written instructions) to take for instruction that which reason dictates to be most conducing to his sovereign's interest; and so of all other ministers of the sovereignty, public and private. All which instructions of natural reason may be comprehended under one name of *fidelity*; which is a branch of natural justice.

The law of nature excepted, it belongeth to the essence of all other laws, to be made known, to every man that shall be obliged to obey them, either by word, or writing, or some other act, known to proceed from the sovereign authority. For the will of another, cannot be understood, but by his own word, or act, or by conjecture taken from his scope and purpose; which in the person of the commonwealth, is to be supposed always consonant to equity and reason. And in ancient time, before letters were in common use, the laws were many times put into verse; that the rude people taking pleasure in singing, or reciting them, might the more easily retain them in memory. And for the same reason *Solomon* adviseth a man, to bind the ten commandments upon his ten fingers. And for the law which *Moses* gave to the people of Israel at the renewing of the covenant, he biddeth them to teach it their children, by discoursing of it

both at home, and upon the way; at going to bed, and at rising from bed; and to write it upon the posts, and doors of their houses; and (*Deut.* 31. 12) to assemble the people, man, woman, and child, to hear it read.

Nor is it enough the law be written, and published; but also that there be manifest signs, that it proceedeth from the will of the sovereign. For private men, when they have, or think they have force enough to secure their unjust designs, and convoy them safely to their ambitious ends, may publish for laws what they please, without, or against the legislative authority. There is therefore requisite, not only a declaration of the law, but also sufficient signs of the author, and authority. The author, or legislator is supposed in every commonwealth to be evident, because he is the sovereign, who having been constituted by the consent of every one, is supposed by every one to be sufficiently known. And though the ignorance, and security of men be such, for the most part, as that when the memory of the first constitution of their commonwealth is worn out, they do not consider, by whose power they use to be defended against their enemies, and to have their industry protected, and to be righted when injury is done them; yet because no man that considers, can make question of it, no excuse can be derived from the ignorance of where the sovereignty is placed. And it is a dictate of natural reason, and consequently an evident law of nature, that no man ought to weaken that power, the protection whereof he hath himself demanded, or wittingly received against others. Therefore of who is sovereign, no man, but by his own fault, (whatsoever evil men suggest,) can make any doubt. The difficulty consisteth in the evidence of the authority derived from him; the removing whereof, dependeth on the knowledge of the public registers, public counsels, public ministers, and public seals; by which all laws are sufficiently verified; verified, I say, not authorized: for the verification, is but the testimony and record; not the authority of the law; which consisteth in the command of the sovereign only.

If therefore a man have a question of injury, depending on the law of nature; that is to say, on common equity; the sentence of the judge, that by commission hath authority to take cognizance of such causes, is a sufficient verification of the law of nature in that individual case. For though the advice of one that professeth the study of the law, be useful for the avoiding of contention; yet it is but advice: it is the judge must tell men what is law, upon the hearing of the controversy.

But when the question is of injury, or crime, upon a written law; every man by recourse to the registers, by himself or others, may (if he will) be sufficiently informed, before he do such injury, or commit the crime, whether it be an injury, or not: nay he ought to do so: for when a man doubts whether the act he goeth about, be just, or unjust; and may inform himself, if he will; the doing is unlawful. In like manner, he that supposeth himself injured, in a case determined by the written law, which he may by himself, or others see and consider; if he complain before he consults with the law, he does unjustly, and bewrayeth a disposition rather to vex other men, than to demand his own right.

If the question be of obedience to a public officer; to have seen his commission, with the public seal, and heard it read; or to have had the means to be informed of it, if a man would, is a sufficient verification of his authority. For every man is obliged to do his best endeavour, to inform himself of all written laws, that may concern his own future actions.

The legislator known; and the laws, either by writing, or by the light of nature, sufficiently published; there wanteth yet another very material circumstance to make them obligatory. For it is not the letter, but the intendment, or meaning; that is to say, the authentic interpretation of the law (which is the sense of the legislator,) in which the nature of the law consisteth; and therefore the interpretation of all laws dependeth on the authority sovereign; and the interpreters can be none but those, which the sovereign, (to whom only the subject oweth obedience) shall appoint. For else, by the craft of an interpreter, the law may be made to bear a sense, contrary to that of the sovereign; by which means the interpreter becomes the legislator.

All laws, written, and unwritten, have need of interpretation. The unwritten law of nature, though it be easy to such, as without partiality, and passion, make use of their natural reason, and therefore leaves the violators thereof without excuse; yet considering there be very few, perhaps none, that in some cases are not

blinded by self love, or some other passion; it is now become of all laws the most obscure; and has consequently the greatest need of able interpreters. The written laws, if they be short, are easily misinterpreted, from the divers significations of a word, or two: if long they be more obscure by the divers significations of many words: insomuch as no written law, delivered in few, or many words, can be well understood, without a perfect understanding of the final causes, for which the law was made; the knowledge of which final causes is in the legislator. To him therefore there cannot be any knot in the law, insoluble; either by finding out the ends, to undo it by; or else by making what ends he will, (as *Alexander* did with his sword in the Gordian knot,) by the legislative power; which no other interpreter can do.

The interpretation of the laws of nature, in a commonwealth, dependeth not on the books of moral philosophy. The authority of writers, without the authority of the commonwealth, maketh not their opinions law, be they never so true. That which I have written in this treatise, concerning the moral virtues, and of their necessity, for the procuring, and maintaining peace, though it be evident truth, is not therefore presently law; but because in all commonwealths in the world, it is part of the civil law: For though it be naturally reasonable; yet it is by the sovereign power that it is law: otherwise, it were a great error, to call the laws of nature unwritten law; whereof we see so many volumes published, and in them so many contradictions of one another, and of themselves.

The interpretation of the law of nature, is the sentence of the judge constituted by the sovereign authority, to hear and determine such controversies, as depend thereon; and consisteth in the application of the law to the present case. For in the act of judicature, the judge doth no more but consider, whether the demand of the party, be consonant to natural reason, and equity; and the sentence he giveth, is therefore the interpretation of the law of nature; which interpretation is authentic; not because it is his private sentence; but because he giveth it by authority of the sovereign, whereby it becomes the sovereign's sentence; which is law for that time, to the parties pleading.

But because there is no judge subordinate, nor sovereign, but may err in a judgment of equity; if afterward in another like case he find it more consonant to equity to give a contrary sentence, he is obliged to do it. No man's error becomes his own law; nor obliges him to persist in it. Neither (for the same reason) becomes it a law to other judges, though sworn to follow it. For though a wrong sentence given by authority of the sovereign, if he know and allow it, in such laws as are mutable, be a constitution of a new law, in cases, in which every little circumstance is the same; yet in laws immutable, such as are the laws of nature, they are no laws to the same, or other judges, in the like cases for ever after. Princes succeed one another; and one judge passeth, another cometh; nay, heaven and earth shall pass; but not one title of the law of nature shall pass; for it is the eternal law of God. Therefore all the sentences of precedent judges that have ever been, cannot all together make a law contrary to natural equity: nor any examples of former judges, can warrant an unreasonable sentence, or discharge the present judge of the trouble of studying what is equity (in the case he is to judge,) from the principles of his own natural reason. For example sake, it is against the law of nature, *to punish the innocent;* and innocent is he that acquitteth himself judicially, and is acknowledged for innocent by the judge. Put the case now, that a man is accused of a capital crime, and seeing the power and malice of some enemy, and the frequent corruption and partiality of judges, runneth away for fear of the event, and afterwards is taken, and brought to a legal trial, and maketh it sufficiently appear, he was not guilty of the crime, and being thereof acquitted, is nevertheless condemned to lose his goods; this is a manifest condemnation of the innocent. I say therefore, that there is no place in the world, where this can be an interpretation of a law of nature, or be made a law by the sentences of precedent judges, that had done the same. For he that judged it first, judged unjustly; and no injustice can be a pattern of judgment to succeeding judges. A written law may forbid innocent men to fly, and they may be punished for flying: but that flying for fear of injury, should be taken for presumption of guilt, after a man is already absolved of the crime judicially, is contrary to the nature of a presumption, which hath no place after judgment given. Yet this is set down by a great lawyer for the common law of *England*. *If a man*, (saith he) *that is*

innocent, be accused of felony, and for fear flyeth for the same; albeit he judicially acquitteth himself of the felony; yet if it be found that he fled for the felony; he shall notwithstanding his innocency, forfeit all his goods, chattels, debts, and duties. For as to the forfeiture of them, the law will admit no proof against the presumption in law, grounded upon his flight. Here you see, *an innocent man judicially acquitted, notwithstanding his innocency,* (when no written law forbad him to fly) after his acquittal, *upon a presumption in law,* condemned to lose all the goods he hath. If the law ground upon his flight a presumption of the fact, (which was capital,) the sentence ought to have been capital: if the presumption were not of the fact, for what then ought he to lose his goods? This therefore is no law of *England;* nor is the condemnation grounded upon a presumption of law, but upon the presumption of the judges. It is also against law, to say that no proof shall be admitted against a presumption of law. For all judges, sovereign and subordinate, if they refuse to hear proof, refuse to do justice: for though the sentence be just, yet the judges that condemn without hearing the proofs offered, are unjust judges; and their presumption is but prejudice; which no man ought to bring with him to the seat of justice, whatsoever precedent judgments, or examples he shall pretend to follow. There be other things of this nature, wherein men's judgments have been perverted, by trusting to precedents: but this is enough to show, that though the sentence of the judge, be a law to the party pleading, yet it is no law to any judge, that shall succeed him in that office.

In like manner, when question is of the meaning of written laws, he is not the interpreter of them, that writeth a commentary upon them. For commentaries are commonly more subject to cavil, than the text; and therefore need other commentaries; and so there will be no end of such interpretation. And therefore unless there be an interpreter authorized by the sovereign, from which the subordinate judges are not to recede, the interpreter can be no other than the ordinary judges, in the same manner, as they are in cases of the unwritten law; and their sentences are to be taken by them that plead, for laws in that particular case; but not to bind other judges, in like cases to give like judgments. For a judge may err in the interpretation even of written laws; but no error of a subordinate judge, can change the law, which is the general sentence of the sovereign.

In written laws, men use to make a difference between the letter, and the sentence of the law: and when by the letter, is meant whatsoever can be gathered from the bare words, it is well distinguished. For the significations of almost all words, are either in themselves, or in the metaphorical use of them, ambiguous; and may be drawn in argument, to make many senses; but there is only one sense of the law. But if by the letter, be meant the literal sense, then the letter, and the sentence or intention of the law, is all one. For the literal sense is that, which the legislator intended, should by the letter of the law be signified. Now the intention of the legislator is always supposed to be equity: for it were a great contumely for a judge to think otherwise of the sovereign. He ought therefore, if the word of the law do not fully authorize a reasonable sentence, to supply it with the law of nature; or if the case be difficult, to respite judgment till he have received more ample authority. For example, a written law ordaineth, that he which is thrust out of his house by force, shall be restored by force: it happens that a man by negligence leaves his house empty, and returning is kept out by force, in which case there is no special law ordained. It is evident, that this case is contained in the same law: for else there is no remedy for him at all; which is to be supposed against the intention of the legislator. Again, the word of the law, commandeth to judge according to the evidence: a man is accused falsely of a fact, which the judge saw himself done by another; and not by him that is accused. In this case neither shall the letter of the law be followed to the condemnation of the innocent, nor shall the judge give sentence against the evidence of the witnesses; because the letter of the law is to the contrary: but procure of the sovereign that another be made judge, and himself witness. So that the incommodity that follows the bare words of a written law, may lead him to the intention of the law, whereby to interpret the same the better; though no incommodity can warrant a sentence against the law. For every judge of right, and wrong, is not judge of what is commodious, or incommodious to the commonwealth.

The abilities required in a good interpreter of the law, that is to say, in a good judge, are not the same

with those of an advocate; namely the study of the laws. For a judge, as he ought to take notice of the fact, from none but the witnesses; so also he ought to take notice of the law, from nothing but the statutes, and constitutions of the sovereign, alleged in the pleading, or declared to him by some that have authority from the sovereign power to declare them; and need not take care beforehand, what he shall judge; for it shall be given him what he shall say concerning the fact, by witnesses; and what he shall say in point of law, from those that shall in their pleadings show it, and by authority interpret it upon the place. The Lords of parliament in *England* were judges, and most difficult causes have been heard and determined by them; yet few of them were much versed in the study of the laws, and fewer had made profession of them: and though they consulted with lawyers, that were appointed to be present there for that purpose; yet they alone had the authority of giving sentence. In like manner, in the ordinary trials of right, twelve men of the common people, are the judges, and give sentence, not only of the fact, but of the right; and pronounce simply for the complainant, or for the defendant; that is to say, are judges not only of the fact, but also of the right: and in a question of crime, not only determine whether done, or not done; but also whether it be *murder*, *homicide*, *felony*, *assault*, and the like, which are determinations of law: but because they are not supposed to know the law of themselves, there is one that hath authority to inform them of it, in the particular case they are to judge of. But yet if they judge not according to that he tells them, they are not subject thereby to any penalty; unless it be made appear, they did it against their consciences, or had been corrupted by reward.

The things that make a good judge, or good interpreter of the laws, are, first, *a right understanding* of that principal law of nature called *equity*; which depending not on the reading of other men's writings, but on the goodness of a man's own natural reason, and meditation, is presumed to be in those most, that have had most leisure, and had the most inclination to meditate thereon. Secondly, *contempt of unnecessary riches, and preferments.* Thirdly, *to be able in judgment to divest himself of all fear, anger, hatred, love, and compassion.* Fourthly, and lastly, *patience to hear; diligent attention in hearing; and memory to retain, digest and apply what he hath heard.*

The difference and division of the laws, has been made in divers manners, according to the different methods, of those men that have written of them. For it is a thing that dependeth not on nature, but on the scope of the writer; and is subservient to every man's proper method. In the Institutions of *Justinian*, we find seven sorts of civil laws.

1. The *edicts*, *constitutions*, and *epistles of the prince*, that is, of the emperor; because the whole power of the people was in him. Like these, are the proclamations of the kings of *England*.

2. *The decrees of the whole people of Rome*, (comprehending the senate,) when they were put to the question by the *senate*. These were laws, at first, by the virtue of the sovereign power residing in the people; and such of them as by the emperors were not abrogated, remained laws, by the authority imperial. For all laws that bind, are understood to be laws by his authority that has power to repeal them. Somewhat like to these laws, are the acts of parliament in England.

3. *The decrees of the common people*, (excluding the senate,) when they were put to the question by the *tribune* of the people. For such of them as were not abrogated by the emperors, remained laws by the authority imperial. Like to these, were the orders of the House of Commons in *England*.

4. *Senatus consulta*, the *orders of the senate*; because when the people of *Rome* grew so numerous, as it was inconvenient to assemble them; it was thought fit by the emperor, that men should consult the senate, instead of the people: and these have some resemblance with the acts of council.

5. *The edicts of praetors*, and (in some cases) of the *aediles:* such as are the chief justices in the courts of *England*.

6. *Responsa prudentum*; which were the sentences, and opinions of those lawyers, to whom the emperor gave authority to interpret the law, and to give answer to such as in matter of law demanded their advice; which answers, the judges in giving judgment were obliged by the constitutions of the emperor to observe: and should be like the reports of cases judged, if other judges be by the law of *England* bound to observe them. For the judges of the common law of *England*,

are not properly judges, but *juris consulti*; of whom the judges, who are either the lords, or twelve men of the country, are in point of law to ask advice.

7. Also, *unwritten customs*, (which in their own nature are an imitation of law,) by the tacit consent of the emperor, in case they be not contrary to the law of nature, are very laws.

Another division of laws, is into *natural* and *positive*. *Natural* are those which have been laws from all eternity; and are called not only *natural*, but also *moral* laws; consisting in the moral virtues, as justice, equity, and all habits of the mind that conduce to peace, and charity; of which I have already spoken in the fourteenth and fifteenth chapters.

Positive, are those which have not been from eternity; but have been made laws by the will of those that have had the sovereign power over others; and are either written, or made known to men, by some other argument of the will of their legislator.

Again, of positive laws, some are *human*, some *divine*; and of human positive laws, some are *distributive*, some *penal*. *Distributive* are those that determine the rights of the subjects, declaring to every man what it is, by which he acquireth and holdeth a propriety in lands, or goods, and a right or liberty of action: and these speak to all the subjects. *Penal* are those, which declare, what penalty shall be inflicted on those that violate the law; and speak to the ministers and officers ordained for execution. For though every one ought to be informed of the punishments ordained beforehand for their transgression; nevertheless the command is not addressed to the delinquent, (who cannot be supposed will faithfully punish himself,) but to public ministers appointed to see the penalty executed. And these penal laws are for the most part written together with the laws distributive; and are sometimes called judgments. For all laws are general judgments, or sentences of the legislator; as also every particular judgment, is a law to him, whose case is judged.

Divine positive laws (for natural laws being eternal, and universal, are all divine,) are those, which being the commandments of God, (not from all eternity, nor universally addressed to all men, but only to a certain people, or to certain persons,) are declared for such, by those whom God hath authorized to declare them. But this authority of man to declare what be these positive laws of God, how can it be known? God may command a man by a supernatural way, to deliver laws to other men. But because it is of the essence of law, that he who is to be obliged, be assured of the authority of him that declareth it, which we cannot naturally take notice to be from God, *how can a man without supernatural revelation be assured of the revelation received by the declarer?* and *how can he be bound to obey them?* For the first question, how a man can be assured of the revelation of another, without a revelation particularly to himself, it is evidently impossible. For though a man may be induced to believe such revelation, from the miracles they see him do, or from seeing the extraordinary sanctity of his life, or from seeing the extraordinary wisdom, or extraordinary felicity of his actions, all which are marks of God's extraordinary favour; yet they are not assured evidences of special revelation. Miracles are marvellous works: but that which is marvellous to one, may not be so to another. Sanctity may be feigned; and the visible felicities of this world, are most often the work of God by natural, and ordinary causes. And therefore no man can infallibly know by natural reason, that another has had a supernatural revelation of God's will; but only a belief; every one (as the signs thereof shall appear greater, or lesser) a firmer, or a weaker belief.

But for the second, how he can be bound to obey them; it is not so hard. For if the law declared, be not against the law of nature (which is undoubtedly God's law) and he undertake to obey it, he is bound by his own act; bound I say to obey it, but not bound to believe it: for men's belief, and interior cogitations, are not subject to the commands, but only to the operation of God, ordinary, or extraordinary. Faith of supernatural law, is not a fulfilling, but only an assenting to the same; and not a duty that we exhibit to God, but a gift which God freely giveth to whom he pleaseth; as also unbelief is not a breach of any of his laws; but a rejection of them all, except the laws natural. But this that I say, will be made yet clearer, by the examples and testimonies concerning this point in holy Scripture. The covenant God made with *Abraham* (in a supernatural manner) was thus, (*Gen.* 17. 10) *This is the covenant which thou shalt observe between me and thee and thy seed after thee. Abraham's* seed had not this revelation, nor were yet

in being; yet they are a party to the covenant, and bound to obey what *Abraham* should declare to them for God's law; which they could not be, but in virtue of the obedience they owed to their parents; who (if they be subject to no other earthly power, as here in the case of *Abraham*) have sovereign power over their children and servants. Again, where God saith to *Abraham*, *In thee shall all nations of the earth be blessed; for I know thou wilt command thy children, and thy house after thee to keep the way of the Lord, and to observe righteousness and judgment*, it is manifest, the obedience of his family, who had no revelation, depended on their former obligation to obey their sovereign. At Mount *Sinai Moses* only went up to God; the people were forbidden to approach on pain of death; yet were they bound to obey all that Moses declared to them for God's law. Upon what ground, but on this submission of their own, *Speak thou to us, and we will hear thee; but let not God speak to us, lest we die?* By which two places it sufficiently appeareth, that in a commonwealth, a subject that has no certain and assured revelation particularly to himself concerning the will of God, is to obey for such, the command of the commonwealth: for if men were at liberty, to take for God's commandments, their own dreams, and fancies, or the dreams and fancies of private men; scarce two men would agree upon what is God's commandment; and yet in respect of them, every man would despise the commandments of the commonwealth. I conclude therefore, that in all things not contrary to the moral law, (that is to say, to the law of nature,) all subjects are bound to obey that for divine law, which is declared to be so, by the laws of the commonwealth. Which also is evident to any man's reason; for whatsoever is not against the law of nature, may be made law in the name of them that have the sovereign power; and there is no reason men should be the less obliged by it, when it is propounded in the name of God. Besides, there is no place in the world where men are permitted to pretend other commandments of God, than are declared for such by the commonwealth. Christian states punish those that revolt from Christian religion, and all other states, those that set up any religion by them forbidden. For in whatsoever is not regulated by the commonwealth, it is equity, (which is the law of nature, and therefore an eternal law of God) that every man equally enjoy his liberty.

There is also another distinction of laws, into *fundamental* and *not fundamental*, but I could never see in any author, what a fundamental law signifieth. Nevertheless one may very reasonably distinguish laws in that manner.

For a fundamental law in every commonwealth is that, which being taken away, the commonwealth faileth, and is utterly dissolved; as a building whose foundation is destroyed. And therefore a fundamental law is that, by which subjects are bound to uphold whatsoever power is given to the sovereign, whether a monarch, or a sovereign assembly, without which the commonwealth cannot stand; such as is the power of war and peace, of judicature, of election of officers, and of doing whatsoever he shall think necessary for the public good. Not fundamental is that, the abrogating whereof, draweth not with it the dissolution of the commonwealth; such as are the laws concerning controversies between subject and subject. Thus much of the division of laws.

I find the words *lex civilis*, and *jus civile*, that is to say, *law* and *right civil*, promiscuously used for the same thing, even in the most learned authors; which nevertheless ought not to be so. For *right* is *liberty*, namely that liberty which the civil law leaves us: but *civil law* is an *obligation;* and takes from us the liberty which the law of nature gave us. Nature gave a right to every man to secure himself by his own strength, and to invade a suspected neighbour, by way of prevention: but the civil law takes away that liberty, in all cases where the protection of the law may be safely stayed for. Insomuch as *lex* and *jus*, are as different as *obligation* and *liberty*.

Likewise *laws* and *charters* are taken promiscuously for the same thing. Yet charters are donations of the sovereign; and not laws, but exemptions from law. The phrase of a law is, *jubeo*, *injungo*, *I command*, and *enjoin:* the phrase of a charter is, *dedi*, *concessi*, *I have given*, *I have granted:* but what is given or granted, to a man, is not forced upon him, by a law. A law may be made to bind all the subjects of a commonwealth: a liberty, or charter is only to one man, or some one part of the people. For to say all the people of a commonwealth, have liberty in any case whatsoever; is to say, that in such case, there

hath been no law made; or else having been made, is now abrogated.

Chapter 27

Of Crimes, Excuses, and Extenuations

A *sin*, is not only a transgression of a law, but also any contempt of the legislator. For such contempt, is a breach of all his laws at once. And therefore may consist, not only in the *commission* of a fact, or in the speaking of words by the laws forbidden, or in the *omission* of what the law commandeth, but also in the *intention*, or purpose to transgress. For the purpose to break the law, is some degree of contempt of him, to whom it belongeth to see it executed. To be delighted in the imagination only, of being possessed of another man's goods, servants, or wife, without any intention to take them from him by force or fraud, is no breach of the law, that saith, *Thou shalt not covet:* nor is the pleasure a man may have in imagining, or dreaming of the death of him, from whose life he expecteth nothing but damage, and displeasure, a sin; but the resolving to put some act in execution, that tendeth thereto. For to be pleased in the fiction of that, which would please a man if it were real, is a passion so adherent to the nature both of man, and every other living creature, as to make it a sin, were to make sin of being a man. The consideration of this, has made me think them too severe, both to themselves, and others, that maintain, that the first motions of the mind, (though checked with the fear of God) be sins. But I confess it is safer to err on that hand, than on the other.

A CRIME, is a sin, consisting in the committing (by deed, or word) of that which the law forbiddeth, or the omission of what it hath commanded. So that every crime is a sin; but not every sin a crime. To intend to steal, or kill, is a sin, though it never appear in word, or fact: for God that seeth the thoughts of man, can lay it to his charge: but till it appear by something done, or said, by which the intention may be argued by a human judge, it hath not the name of crime: which distinction the Greeks observed, in the word ἁμάρτημα, and ἔγκλημα, or ἀιτία; whereof the former, (which is translated *sin*,) signifieth any swerving from the law whatsoever; but the two latter, (which are translated *crime*,) signify that sin only, whereof one man may accuse another. But of intentions, which never appear by any outward act, there is no place for human accusation. In like manner the Latins by *peccatum*, which is *sin*, signify all manner of deviation from the law; but by *crimen*, (which word they derive from *cerno*, which signifies to perceive,) they mean only such sins, as may be made appear before a judge; and therefore are not mere intentions.

From this relation of sin to the law, and of crime to the civil law, may be inferred, first, that where law ceaseth, sin ceaseth. But because the law of nature is eternal, violation of covenants, ingratitude, arrogance, and all facts contrary to any moral virtue, can never cease to be sin. Secondly, that the civil law ceasing, crimes cease: for there being no other law remaining, but that of nature, there is no place for accusation; every man being his own judge, and accused only by his own conscience, and cleared by the uprightness of his own intention. When therefore his intention is right, his fact is no sin: if otherwise, his fact is sin; but not crime. Thirdly, that when the sovereign power ceaseth, crime also ceaseth: for where there is no such power, there is no protection to be had from the law; and therefore every one may protect himself by his own power: for no man in the institution of sovereign power can be supposed to give away the right of preserving his own body; for the safety whereof all sovereignty was ordained. But this is to be understood only of those, that have not themselves contributed to the taking away of the power that protected them: for that was a crime from the beginning.

The source of every crime, is some defect of the understanding; or some error in reasoning; or some sudden force of the passions. Defect in the understanding, is *ignorance*; in reasoning, *erroneous opinion*. Again, ignorance is of three sorts; of the *law*, and of the *sovereign*, and of the *penalty*. Ignorance of the law of nature excuseth no man; because every man that hath attained to the use of reason, is supposed to know, he ought not to do to another, what he would not have done to himself. Therefore into what place soever a man shall come, if he do any thing contrary to that law, it is a crime. If a man come from the *Indies* hither, and persuade men here to receive a new religion, or teach them any thing that

tendeth to disobedience of the laws of this country, though he be never so well persuaded of the truth of what he teacheth, he commits a crime, and may be justly punished for the same, not only because his doctrine is false, but also because he does that which he would not approve in another, namely, that coming from hence, he should endeavour to alter the religion there. But ignorance of the civil law, shall excuse a man in a strange country, till it be declared to him; because, till then no civil law is binding.

In the like manner, if the civil law of a man's own country, be not so sufficiently declared, as he may know it if he will; nor the action against the law of nature; the ignorance is a good excuse: in other cases ignorance of the civil law, excuseth not.

Ignorance of the sovereign power, in the place of a man's ordinary residence, excuseth him not; because he ought to take notice of the power, by which he hath been protected there.

Ignorance of the penalty, where the law is declared, excuseth no man: for in breaking the law, which without a fear of penalty to follow, were not a law, but vain words, he undergoeth the penalty, though he know not what it is; because, whosoever voluntarily doth any action, accepteth all the known consequences of it; but punishment is a known consequence of the violation of the laws, in every commonwealth; which punishment, if it be determined already by the law, he is subject to that; if not, then is he subject to arbitrary punishment. For it is reason, that he which does injury, without other limitation than that of his own will, should suffer punishment without other limitation, than that of his will whose law is thereby violated.

But when a penalty, is either annexed to the crime in the law itself, or hath been usually inflicted in the like cases; there the delinquent is excused from a greater penalty. For the punishment foreknown, if not great enough to deter men from the action, is an invitement to it: because when men compare the benefit of their injustice, with the harm of their punishment, by necessity of nature they choose that which appeareth best for themselves: and therefore when they are punished more than the law had formerly determined, or more than others were punished for the same crime; it is the law that tempted, and deceiveth them.

No law, made after a fact done, can make it a crime: because if the fact be against the law of nature, the law was before the fact; and a positive law cannot be taken notice of, before it be made; and therefore cannot be obligatory. But when the law that forbiddeth a fact, is made before the fact be done; yet he that doth the fact, is liable to the penalty ordained after, in case no lesser penalty were made known before, neither by writing, nor by example, for the reason immediately before alleged.

From defect in reasoning, (that is to say, from error,) men are prone to violate the laws, three ways. First, by presumption of false principles: as when men from having observed how in all places, and in all ages, unjust actions have been authorized by the force, and victories of those who have committed them; and that potent men, breaking through the cobweb laws of their country, the weaker sort, and those that have failed in their enterprises, have been esteemed the only criminals; have thereupon taken for principles, and grounds of their reasoning, *that justice is but a vain word: that whatsoever a man can get by his own industry, and hazard, is his own: that the practice of all nations cannot be unjust: that examples of former times are good arguments of doing the like again;* and many more of that kind: which being granted, no act in itself can be a crime, but must be made so (not by the law, but) by the success of them that commit it; and the same fact be virtuous, or vicious, as fortune pleaseth; so that what *Marius* makes a crime, *Sylla* shall make meritorious, and *Caesar*, (the same laws standing) turn again into a crime, to the perpetual disturbance of the peace of the commonwealth.

Secondly, by false teachers, that either misinterpret the law of nature, making it thereby repugnant to the law civil; or by teaching for laws, such doctrines of their own, or traditions of former times, as are inconsistent with the duty of a subject.

Thirdly, by erroneous inferences from true principles; which happens commonly to men that are hasty, and precipitate in concluding, and resolving what to do; such as are they, that have both a great opinion of their own understanding, and believe that things of this nature require not time and study, but only common experience, and a good natural wit; whereof no man thinks himself unprovided: whereas the

knowledge, of right and wrong, which is no less difficult, there is no man will pretend to, without great and long study. And of those defects in reasoning, there is none that can excuse (though some of them may extenuate) a crime, in any man, that pretendeth to the administration of his own private business; much less in them that undertake a public charge; because they pretend to the reason, upon the want whereof they would ground their excuse.

Of the passions that most frequently are the causes of crime, one, is vain glory, or a foolish overrating of their own worth; as if difference of worth, were an effect of their wit, or riches, or blood, or some other natural quality, not depending on the will of those that have the sovereign authority. From whence proceedeth a presumption that the punishments ordained by the laws, and extended generally to all subjects, ought not to be inflicted on them, with the same rigour they are inflicted on poor, obscure, and simple men, comprehended under the name of the *vulgar*.

Therefore it happeneth commonly, that such as value themselves by the greatness of their wealth, adventure on crimes, upon hope of escaping punishment, by corrupting public justice, or obtaining pardon by money, or other rewards.

And that such as have multitude of potent kindred; and popular men, that have gained reputation amongst the multitude, take courage to violate the laws, from a hope of oppressing the power, to whom it belongeth to put them in execution.

And that such as have a great, and false opinion of their own wisdom, take upon them to reprehend the actions, and call in question the authority of them that govern, and so to unsettle the laws with their public discourse, as that nothing shall be a crime, but what their own designs require should be so. It happeneth also to the same men, to be prone to all such crimes, as consist in craft, and in deceiving of their neighbours; because they think their designs are too subtle to be perceived. These I say are effects of a false presumption of their own wisdom. For of them that are the first movers in the disturbance of commonwealth, (which can never happen without a civil war,) very few are left alive long enough, to see their new designs established: so that the benefit of their crimes, redoundeth to posterity, and such as would least have wished it: which argues they were not so wise, as they thought they were. And those that deceive upon hope of not being observed, do commonly deceive themselves, (the darkness in which they believe they lie hidden, being nothing else but their own blindness;) and are no wiser than children, that think all hid, by hiding their own eyes.

And generally all vain-glorious men, (unless they be withal timorous,) are subject to anger; as being more prone than others to interpret for contempt, the ordinary liberty of conversation: and there are few crimes that may not be produced by anger.

As for the passions, of hate, lust, ambition, and covetousness, what crimes they are apt to produce, is so obvious to every man's experience and understanding, as there needeth nothing to be said of them, saving that they are infirmities, so annexed to the nature, both of man, and all other living creatures, as that their effects cannot be hindered, but by extraordinary use of reason, or a constant severity in punishing them. For in those things men hate, they find a continual, and unavoidable molestation; whereby either a man's patience must be everlasting, or he must be eased by removing the power of that which molesteth him. The former is difficult; the latter is many times impossible, without some violation of the law. Ambition, and covetousness are passions also that are perpetually incumbent, and pressing; whereas reason is not perpetually present, to resist them: and therefore whensoever the hope of impunity appears, their effects proceed. And for lust, what it wants in the lasting, it hath in the vehemence, which sufficeth to weigh down the apprehension of all easy, or uncertain punishments.

Of all passions, that which inclineth men least to break the laws, is fear. Nay, (excepting some generous natures,) it is the only thing, (when there is apparence of profit or pleasure by breaking the laws,) that makes men keep them. And yet in many cases a crime may be committed through fear.

For not every fear justifies the action it produceth, but the fear only of corporeal hurt, which we call *bodily fear*, and from which a man cannot see how to be delivered, but by the action. A man is assaulted, fears present death, from which he sees not how to escape, but by wounding him that assaulteth him; if he wound him to death, this is no crime; because no

man is supposed at the making of a commonwealth, to have abandoned the defence of his life, or limbs, where the law cannot arrive time enough to his assistance. But to kill a man, because from his actions, or his threatenings, I may argue he will kill me when he can, (seeing I have time, and means to demand protection, from the sovereign power,) is a crime. Again, a man receives words of disgrace, or some little injuries, (for which they that made the laws, had assigned no punishment, nor thought it worthy of a man that hath the use of reason, to take notice of,) and is afraid, unless he revenge it, he shall fall into contempt, and consequently be obnoxious to the like injuries from others; and to avoid this, breaks the law, and protects himself for the future, by the terror of his private revenge. This is a crime: for the hurt is not corporeal, but phantastical, and (though in this corner of the world, made sensible by a custom not many years since begun, amongst young and vain men,) so light, as a gallant man, and one that is assured of his own courage, cannot take notice of. Also a man may stand in fear of spirits, either through his own superstition, or through too much credit given to other men, that tell him of strange dreams and visions; and thereby be made believe they will hurt him, for doing, or omitting divers things, which nevertheless, to do, or omit, is contrary to the laws; and that which is so done, or omitted, is not to be excused by this fear; but is a crime. For (as I have shown before in the second chapter) dreams be naturally but the fancies remaining in sleep, after the impressions our senses had formerly received waking; and when men are by any accident unassured they have slept, seem to be real visions; and therefore he that presumes to break the law upon his own, or another's dream, or pretended vision, or upon other fancy of the power of invisible spirits, than is permitted by the commonwealth, leaveth the law of nature, which is a certain offence, and followeth the imagery of his own, or another private man's brain, which he can never know whether it signifieth any thing, or nothing, nor whether he that tells his dream, say true, or lie; which if every private man should have leave to do, (as they must by the law of nature, if any one have it) there could no law be made to hold, and so all commonwealth would be dissolved.

From these different sources of crimes, it appears already, that all crimes are not (as the Stoics of old time maintained) of the same allay. There is place, not only for EXCUSE, by which that which seemed a crime, is proved to be none at all; but also for EXTENUATION, by which the crime, that seemed great, is made less. For though all crimes do equally deserve the name of injustice, as all deviation from a straight line is equally crookedness, which the Stoics rightly observed; yet it does not follow that all crimes are equally unjust, no more than that all crooked lines are equally crooked; which the Stoics not observing, held it as great a crime, to kill a hen, against the law, as to kill one's father.

That which totally excuseth a fact, and takes away from it the nature of a crime, can be none but that, which at the same time, taketh away the obligation of the law. For the fact committed once against the law, if he that committed it be obliged to the law, can be no other than a crime.

The want of means to know the law, totally excuseth: For the law whereof a man has no means to inform himself, is not obligatory. But the want of diligence to inquire, shall not be considered as a want of means; nor shall any man, that pretendeth to reason enough for the government of his own affairs, be supposed to want means to know the laws of nature; because they are known by the reason he pretends to: only children, and madmen are excused from offences against the law natural.

Where a man is captive, or in the power of the enemy (and he is then in the power of the enemy, when his person, or his means of living, is so,) if it be without his own fault, the obligation of the law ceaseth; because he must obey the enemy, or die; and consequently such obedience is no crime: for no man is obliged (when the protection of the law faileth,) not to protect himself, by the best means he can.

If a man, by the terror of present death, be compelled to do a fact against the law, he is totally excused; because no law can oblige a man to abandon his own preservation. And supposing such a law were obligatory; yet a man would reason thus, *If I do it not, I die presently; if I do it, I die afterwards; therefore by doing it, there is time of life gained*; nature therefore compels him to the fact.

When a man is destitute of food, or other thing

necessary for his life, and cannot preserve himself any other way, but by some fact against the law; as if in a great famine he take the food by force, or stealth, which he cannot obtain for money, nor charity; or in defence of his life, snatch away another man's sword, he is totally excused, for the reason next before alleged.

Again, facts done against the law, by the authority of another, are by that authority excused against the author; because no man ought to accuse his own fact in another, that is but his instrument: but it is not excused against a third person thereby injured; because in the violation of the law, both the author and actor are criminals. From hence it followeth that when that man, or assembly, that hath the sovereign power, commandeth a man to do that which is contrary to a former law, the doing of it is totally excused: for he ought not to condemn it himself, because he is the author; and what cannot justly be condemned by the sovereign, cannot justly be punished by any other. Besides, when the sovereign commandeth any thing to be done against his own former law, the command, as to that particular fact, is an abrogation of the law.

If that man, or assembly, that hath the sovereign power, disclaim any right essential to the sovereignty, whereby there accrueth to the subject, any liberty inconsistent with the sovereign power, that is to say, with the very being of a commonwealth, if the subject shall refuse to obey the command in any thing, contrary to the liberty granted, this is nevertheless a sin, and contrary to the duty of the subject: for he ought to take notice of what is inconsistent with the sovereignty, because it was erected by his own consent, and for his own defence; and that such liberty as is inconsistent with it, was granted through ignorance of the evil consequence thereof. But if he not only disobey, but also resist a public minister in the execution of it, then it is a crime; because he might have been righted, (without any breach of the peace,) upon complaint.

The degrees of crime are taken on divers scales, and measured, first, by the malignity of the source, or cause: secondly, by the contagion of the example: thirdly, by the mischief of the effect: and fourthly, by the concurrence of times, places, and persons.

The same fact done against the law, if it proceed from presumption of strength, riches, or friends to resist those that are to execute the law, is a greater crime than if it proceed from hope of not being discovered, or of escape by flight: for presumption of impunity by force, is a root, from whence springeth, at all times, and upon all temptations, a contempt of all laws; whereas in the latter case, the apprehension of danger, that makes a man fly, renders him more obedient for the future. A crime which we know to be so, is greater than the same crime proceeding from a false persuasion that it is lawful: for he that committeth it against his own conscience, presumeth on his force, or other power, which encourages him to commit the same again: but he that doth it by error, after the error shewn him, is conformable to the law.

He, whose error proceeds from the authority of a teacher, or an interpreter of the law publicly authorized, is not so faulty, as he whose error proceedeth from a peremptory pursuit of his own principles, and reasoning: for what is taught by one that teacheth by public authority, the commonwealth teacheth, and hath a resemblance of law, till the same authority controlleth it; and in all crimes that contain not in them a denial of the sovereign power, nor are against an evident law, excuseth totally: whereas he that groundeth his actions on his private judgment, ought according to the rectitude, or error thereof, to stand, or fall.

The same fact, if it have been constantly punished in other men, is a greater crime, than if there have been many precedent examples of impunity. For those examples are so many hopes of impunity, given by the sovereign himself: and because he which furnishes a man with such a hope, and presumption of mercy, as encourageth him to offend, hath his part in the offence; he cannot reasonably charge the offender with the whole.

A crime arising from a sudden passion, is not so great, as when the same ariseth from long meditation: for in the former case there is a place for extenuation, in the common infirmity of human nature: but he that doth it with premeditation, has used circumspection, and cast his eye, on the law, on the punishment, and on the consequence thereof to human society; all which in committing the crime, he hath contemned, and postposed to his own appetite. But there is no

suddenness of passion sufficient for a total excuse: for all the time between the first knowing of the law, and the commission of the fact, shall be taken for a time of deliberation; because he ought by meditation of the law, to rectify the irregularity of his passions.

Where the law is publicly, and with assiduity, before all the people read and interpreted; a fact done against it, is a greater crime, than where men are left without such instruction, to enquire of it with difficulty, uncertainty, and interruption of their callings, and be informed by private men: for in this case, part of the fault is discharged upon common infirmity; but in the former, there is apparent negligence, which is not without some contempt of the sovereign power.

Those facts which the law expressly condemneth, but the law-maker by other manifest signs of his will tacitly approveth, are less crimes, than the same facts, condemned both by the law and lawmaker. For seeing the will of the law-maker is a law, there appear in this case two contradictory laws; which would totally excuse, if men were bound to take notice of the sovereign's approbation, by other arguments, than are expressed by his command. But because there are punishments consequent, not only to the transgression of his law, but also to the observing of it, he is in part a cause of the transgression, and therefore cannot reasonably impute the whole crime to the delinquent. For example, the law condemneth duels; the punishment is made capital: on the contrary part, he that refuseth duel, is subject to contempt and scorn, without remedy; and sometimes by the sovereign himself thought unworthy to have any charge, or preferment in war. If thereupon he accept duel, considering all men lawfully endeavour to obtain the good opinion of them that have the sovereign power, he ought not in reason to be rigorously punished; seeing part of the fault may be discharged on the punisher: which I say, not as wishing liberty of private revenges, or any other kind of disobedience; but a care in governors, not to countenance any thing obliquely, which directly they forbid. The examples of princes, to those that see them, are, and ever have been, more potent to govern their actions, than the laws themselves. And though it be our duty to do, not what they do, but what they say; yet will that duty never be performed, till it please God to give men an extraordinary, and supernatural grace to follow that precept.

Again, if we compare crimes by the mischief of their effects, first, the same fact, when it redounds to the damage of many, is greater, than when it redounds to the hurt of few. And therefore, when a fact hurteth, not only in the present, but also, (by example) in the future, it is a greater crime, than if it hurt only in the present: for the former, is a fertile crime, and multiplies to the hurt of many; the latter is barren. To maintain doctrines contrary to the religion established in the commonwealth, is a greater fault, in an authorized preacher, than in a private person: so also is it, to live profanely, incontinently, or do any irreligious act whatsoever. Likewise in a professor of the law, to maintain any point, or do any act, that tendeth to the weakening of the sovereign power, is a greater crime, than in another man: also in a man that hath such reputation for wisdom, as that his counsels are followed, or his actions imitated by many, his fact against the law, is a greater crime, than the same fact in another: for such men not only commit crime, but teach it for law to all other men. And generally all crimes are the greater, by the scandal they give; that is to say, by becoming stumbling-blocks to the weak, that look not so much upon the way they go in, as upon the light that other men carry before them.

Also facts of hostility against the present state of the commonwealth, are greater crimes, than the same acts done to private men: for the damage extends itself to all: such are the betraying of the strengths, or revealing of the secrets of the commonwealth to an enemy; also all attempts upon the representative of the commonwealth, be it a monarch, or an assembly; and all endeavours by word, or deed to diminish the authority of the same, either in the present time, or in succession: which crimes the Latins understand by *crimina laesae majestatis*, and consist in design, or act, contrary to a fundamental law.

Likewise those crimes, which render judgments of no effect, are greater crimes, than injuries done to one, or a few persons; as to receive money to give false judgment, or testimony, is a greater crime, than otherwise to deceive a man of the like, or a greater sum; because not only he has wrong, that falls by such judgments; but all judgments are rendered useless, and occasion ministered to force, and private revenges.

Also robbery, and depeculation of the public trea-

sure, or revenues, is a greater crime, than the robbing, or defrauding of a private man; because to rob the public, is to rob many at once.

Also the counterfeit usurpation of public ministry, the counterfeiting of public seals, or public coin, than counterfeiting of a private man's person, or his seal; because the fraud thereof, extendeth to the damage of many.

Of facts against the law, done to private men, the greater crime, is that, where the damage in the common opinion of men, is most sensible. And therefore

To kill against the law, is a greater crime, than any other injury, life preserved.

And to kill with torment, greater, than simply to kill.

And mutilation of a limb, greater, than the spoiling a man of his goods.

And the spoiling a man of his goods, by terror of death, or wounds, than by clandestine surreption.

And by clandestine surreption, than by consent fraudulently obtained.

And the violation of chastity by force, greater, than by flattery.

And of a woman married, than of a woman not married.

For all these things are commonly so valued; though some men are more, and some less sensible of the same offence. But the law regardeth not the particular, but the general inclination of mankind.

And therefore the offence men take, from contumely, in words, or gesture, when they produce no other harm, than the present grief of him that is reproached, hath been neglected in the laws of the Greeks, Romans, and other both ancient, and modern commonwealths; supposing the true cause of such grief to consist, not in the contumely, (which takes no hold upon men conscious of their own virtue,) but in the pusillanimity of him that is offended by it.

Also a crime against a private man, is much aggravated by the person, time, and place. For to kill one's parent, is a greater crime, than to kill another: for the parent ought to have the honour of a sovereign, (though he have surrendered his power to the civil law,) because he had it originally by nature. And to rob a poor man, is a greater crime, than to rob a rich man; because it is to the poor a more sensible damage.

And a crime committed in the time or place appointed for devotion, is greater, than if committed at another time or place: for it proceeds from a greater contempt of the law.

Many other cases of aggravation, and extenuation might be added: but by these I have set down, it is obvious to every man, to take the altitude of any other crime proposed.

Lastly, because in almost all crimes there is an injury done, not only to some private men, but also to the commonwealth; the same crime, when the accusation is in the name of the commonwealth, is called public crime: and when in the name of a private man, a private crime; and the pleas according thereunto called public, *judicia publica*, Pleas of the Crown; or Private Pleas. As in an accusation of murder, if the accuser be a private man, the plea is a Private Plea; if the accuser be the sovereign, the plea is a Public Plea.

Chapter 28

Of Punishments, and Rewards

A PUNISHMENT, *is an evil inflicted by public authority, on him that hath done, or omitted that which is judged by the same authority to be a transgression of the law; to the end that the will of men may thereby the better be disposed to obedience.*

Before I infer any thing from this definition, there is a question to be answered, of much importance; which is, by what door the right, or authority of punishing in any case, came in. For by that which has been said before, no man is supposed bound by covenant, not to resist violence; and consequently it cannot be intended, that he gave any right to another to lay violent hands upon his person. In the making of a commonwealth, every man giveth away the right of defending another; but not of defending himself. Also he obligeth himself, to assist him that hath the sovereignty, in the punishing of another; but of himself not. But to covenant to assist the sovereign, in doing hurt to another, unless he that so covenanteth have a right to do it himself, is not to give him a right to punish. It is manifest therefore that the right which the commonwealth (that is, he, or they that represent it) hath to punish, is not grounded on any concession, or gift of the subjects. But I have also showed formerly,

that before the institution of commonwealth, every man had a right to every thing, and to do whatsoever he thought necessary to his own preservation; subduing, hurting, or killing any man in order thereunto. And this is the foundation of that right of punishing, which is exercised in every commonwealth. For the subjects did not give the sovereign that right; but only in laying down theirs, strengthened him to use his own, as he should think fit, for the preservation of them all: so that it was not given, but left to him, and to him only; and (excepting the limits set him by natural law) as entire, as in the condition of mere nature, and of war of every one against his neighbour.

From the definition of punishment, I infer, first, that neither private revenges, nor injuries of private men, can properly be styled punishment; because they proceed not from public authority.

Secondly, that to be neglected, and unpreferred by the public favour, is not a punishment; because no new evil is thereby on any man inflicted; he is only left in the estate he was in before.

Thirdly, that the evil inflicted by public authority, without precedent public condemnation, is not to be styled by the name of punishment; but of an hostile act; because the fact for which a man is punished, ought first to be judged by public authority, to be a transgression of the law.

Fourthly, that the evil inflicted by usurped power, and judges without authority from the sovereign, is not punishment; but an act of hostility; because the acts of power usurped, have not for author, the person condemned; and therefore are not acts of public authority.

Fifthly, that all evil which is inflicted without intention, or possibility of disposing the delinquent, or (by his example) other men, to obey the laws, is not punishment; but an act of hostility; because without such an end, no hurt done is contained under that name.

Sixthly, whereas to certain actions, there be annexed by nature, divers hurtful consequences; as when a man in assaulting another, is himself slain, or wounded; or when he falleth into sickness by the doing of some unlawful act; such hurt, though in respect of God, who is the author of nature, it may be said to be inflicted, and therefore a punishment divine; yet it is not contained in the name of punishment in respect of men, because it is not inflicted by the authority of man.

Seventhly, if the harm inflicted be less than the benefit, or contentment that naturally followeth the crime committed, that harm is not within the definition; and is rather the price, or redemption, than the punishment of a crime: because it is of the nature of punishment, to have for end, the disposing of men to obey the law; which end (if it be less than the benefit of the transgression) it attaineth not, but worketh a contrary effect.

Eighthly, if a punishment be determined and prescribed in the law itself, and after the crime committed, there be a greater punishment inflicted, the excess is not punishment, but an act of hostility. For seeing the aim of punishment is not a revenge, but terror; and the terror of a great punishment unknown, is taken away by the declaration of a less, the unexpected addition is no part of the punishment. But where there is no punishment at all determined by the law, there whatsoever is inflicted, hath the nature of punishment. For he that goes about the violation of a law, wherein no penalty is determined, expecteth an indeterminate, that is to say, an arbitrary punishment.

Ninthly, harm inflicted for a fact done before there was a law that forbade it, is not punishment, but an act of hostility: for before the law, there is no transgression of the law: but punishment supposeth a fact judged, to have been a transgression of the law; therefore harm inflicted before the law made, is not punishment, but an act of hostility.

Tenthly, hurt inflicted on the representative of the commonwealth, is not punishment, but an act of hostility: because it is of the nature of punishment, to be inflicted by public authority, which is the authority only of the representative itself.

Lastly, harm inflicted upon one that is a declared enemy, falls not under the name of punishment: because seeing they were either never subject to the law, and therefore cannot transgress it; or having been subject to it, and professing to be no longer so, by consequence deny they can transgress it, all the harms that can be done them, must be taken as acts of hostility. But in declared hostility, all infliction of evil is lawful. From whence it followeth, that if a subject shall by fact, or word, wittingly, and deliberately deny the authority of the representative of the commonwealth (whatsoever penalty hath been formerly

ordained for treason,) he may lawfully be made to suffer whatsoever the representative will: For in denying subjection, he denies such punishment as by the law hath been ordained; and therefore suffers as an enemy of the commonwealth; that is, according to the will of the representative. For the punishments set down in the law, are to subjects, not to enemies; such as are they, that having been by their own act subjects, deliberately revolting, deny the sovereign power.

The first, and most general distribution of punishments, is into *divine*, and *human*. Of the former I shall have occasion to speak, in a more convenient place hereafter.

Human, are those punishments that be inflicted by the commandment of man; and are either *corporal*, or *pecuniary*, or *ignominy*, or *imprisonment*, or *exile*, or mixed of these.

Corporal punishment is that, which is inflicted on the body directly, and according to the intention of him that inflicteth it: such as are stripes, or wounds, or deprivation of such pleasures of the body, as were before lawfully enjoyed.

And of these, some be *capital*, some *less* than *capital*. Capital, is the infliction of death; and that either simply, or with torment. Less than capital, are stripes, wounds, chains, and any other corporal pain, not in its own nature mortal. For if upon the infliction of a punishment death follow not in the intention of the inflictor, the punishment is not to be esteemed capital, though the harm prove mortal by an accident not to be foreseen; in which case death is not inflicted, but hastened.

Pecuniary punishment, is that which consisteth not only in the deprivation of a sum of money, but also of lands, or any other goods which are usually bought and sold for money. And in case the law, that ordaineth such a punishment, be made with design to gather money, from such as shall transgress the same, it is not properly a punishment, but the price of privilege and exemption from the law, which doth not absolutely forbid the fact, but only to those that are not able to pay the money: except where the law is natural, or part of religion; for in that case it is not an exemption from the law, but a transgression of it. As where a law exacteth a pecuniary mulct, of them that take the name of God in vain, the payment of the mulct, is not the price of a dispensation to swear, but the punishment of the transgression of a law indispensable. In like manner if the law impose a sum of money to be paid, to him that has been injured; this is but a satisfaction for the hurt done him; and extinguisheth the accusation of the party injured, not the crime of the offender.

Ignominy, is the infliction of such evil, as is made dishonourable; or the deprivation of such good, as is made honourable by the commonwealth. For there be some things honourable by nature; as the effects of courage, magnanimity, strength, wisdom, and other abilities of body and mind: others made honourable by the commonwealth; as badges, titles, offices, or any other singular mark of the sovereign's favour. The former, (though they may fail by nature, or accident,) cannot be taken away by a law; and therefore the loss of them is not punishment. But the latter, may be taken away by the public authority that made them honourable, and are properly punishments: such are degrading men condemned, of their badges, titles, and offices; or declaring them incapable of the like in time to come.

Imprisonment, is when a man is by public authority deprived of liberty; and may happen from two divers ends; whereof one is the safe custody of a man accused; the other is the inflicting of pain on a man condemned. The former is not punishment; because no man is supposed to be punished, before he be judicially heard, and declared guilty. And therefore whatsoever hurt a man is made to suffer by bonds, or restraint, before his cause be heard, over and above that which is necessary to assure his custody, is against the law of nature. But the latter is punishment, because evil, and inflicted by public authority, for somewhat that has by the same authority been judged a transgression of the law. Under this word imprisonment, I comprehend all restraint of motion, caused by an external obstacle, be it a house, which is called by the general name of a prison; or an island, as when men are said to be confined to it; or a place where men are set to work, as in old time men have been condemned to quarries, and in these times to galleys; or be it a chain, or any other such impediment.

Exile (banishment) is when a man is for a crime, condemned to depart out of the dominion of the commonwealth, or out of a certain part thereof; and

during a prefixed time, or for ever, not to return into it: and seemeth not in its own nature, without other circumstances, to be a punishment; but rather an escape, or a public commandment to avoid punishment by flight. And *Cicero* says, there was never any such punishment ordained in the city of *Rome*; but calls it a refuge of men in danger. For if a man banished, be nevertheless permitted to enjoy his goods, and the revenue of his lands, the mere change of air is no punishment; nor does it tend to that benefit of the commonwealth, for which all punishments are ordained, (that is to say, to the forming of men's wills to the observation of the law;) but many times to the damage of the commonwealth. For a banished man, is a lawful enemy of the commonwealth that banished him; as being no more a member of the same. But if he be withal deprived of his lands, or goods, then the punishment lieth not in the exile, but is to be reckoned amongst punishments pecuniary.

All punishments of innocent subjects, be they great or little, are against the law of nature: For punishment is only for transgression of the law, and therefore there can be no punishment of the innocent. It is therefore a violation, first, of that law of nature, which forbiddeth all men, in their revenges, to look at any thing but some future good: For there can arrive no good to the commonwealth, by punishing the innocent. Secondly, of that, which forbiddeth ingratitude: For seeing all sovereign power, is originally given by the consent of every one of the subjects, to the end they should as long as they are obedient, be protected thereby; the punishment of the innocent, is a rendering of evil for good. And thirdly, of the law that commandeth equity; that is to say, an equal distribution of justice; which in punishing the innocent is not observed.

But the infliction of what evil soever, on an innocent man, that is not a subject, if it be for the benefit of the commonwealth, and without violation of any former covenant, is no breach of the law of nature. For all men that are not subjects, are either enemies, or else they have ceased from being so by some precedent covenants. But against enemies, whom the commonwealth judgeth capable to do them hurt, it is lawful by the original right of nature to make war; wherein the sword judgeth not, nor doth the victor make distinction of nocent, and innocent, as to the time past; nor has other respect of mercy, than as it conduceth to the good of his own people. And upon this ground it is, that also in subjects, who deliberately deny the authority of the commonwealth established, the vengeance is lawfully extended, not only to the fathers, but also to the third and fourth generation not yet in being, and consequently innocent of the fact, for which they are afflicted: because the nature of this offence, consisteth in the renouncing of subjection; which is a relapse into the condition of war, commonly called rebellion; and they that so offend, suffer not as subjects, but as enemies. For *rebellion*, is but war renewed.

Reward, is either of *gift*, or by *contract*. When by contract, it is called *salary*, and *wages*; which is benefit due for service performed, or promised. When of gift, it is benefit proceeding from the *grace* of them that bestow it, to encourage, or enable men to do them service. And therefore when the sovereign of a commonwealth appointeth a salary to any public office, he that receiveth it, is bound in justice to perform his office; otherwise, he is bound only in honour, to acknowledgment, and an endeavour of requital. For though men have no lawful remedy, when they be commanded to quit their private business, to serve the public, without reward or salary; yet they are not bound thereto, by the law of nature, nor by the institution of the commonwealth, unless the service cannot otherwise be done; because it is supposed the sovereign may make use of all their means, insomuch as the most common soldier, may demand the wages of his warfare, as a debt.

The benefits which a sovereign bestoweth on a subject, for fear of some power, and ability he hath to do hurt to the commonwealth, are not properly rewards; for they are not salaries; because there is in this case no contract supposed, every man being obliged already not to do the commonwealth disservice: nor are they graces; because they be extorted by fear, which ought not to be incident to the sovereign power: but are rather sacrifices, which the sovereign (considered in his natural person, and not in the person of the commonwealth) makes, for the appeasing the discontent of him he thinks more potent than himself; and encourage not to obedience, but on the contrary, to the continuance, and increasing of further extortion.

And whereas some salaries are certain, and proceed from the public treasure; and others uncertain, and casual, proceeding from the execution of the office for which the salary is ordained; the latter is in some cases hurtful to the commonwealth; as in the case of judicature. For where the benefit of the judges, and ministers of a court of justice, ariseth for the multitude of causes that are brought to their cognizance, there must needs follow two inconveniences: one, is the nourishing of suits; for the more suits, the greater benefit: and another that depends on that, which is contention about jurisdiction; each court drawing to itself, as many causes as it can. But in offices of execution there are not those inconveniences; because their employment cannot be increased by any endeavour of their own. And thus much shall suffice for the nature of punishment and reward; which are, as it were, the nerves and tendons, that move the limbs and joints of a commonwealth.

Hitherto I have set forth the nature of man, (whose pride and other passions have compelled him to submit himself to government;) together with the great power of his governor, whom I compared to *Leviathan*, taking that comparison out of the two last verses of the one and fortieth of *Job*; where God having set forth the great power of *Leviathan*, calleth him king of the proud. *There is nothing*, saith he, *on earth, to be compared with him. He is made so as not to be afraid. He seeth every high thing below him; and is king of all the children of pride.* But because he is mortal, and subject to decay, as all other earthly creatures are; and because there is that in heaven, (though not on earth) that he should stand in fear of, and whose laws he ought to obey; I shall in the next following chapters speak of his diseases, and the causes of his mortality; and of what laws of nature he is bound to obey.

Chapter 29

Of Those Things That Weaken, or Tend to the Dissolution of a Commonwealth

Though nothing can be immortal, which mortals make; yet, if men had the use of reason they pretend to, their commonwealths might be secured, at least, from perishing by internal diseases. For by the nature of their institution, they are designed to live, as long as mankind, or as the laws of nature, or as justice itself, which gives them life. Therefore when they come to be dissolved, not by external violence, but intestine disorder, the fault is not in men, as they are the *matter;* but as they are the *makers*, and orderers of them. For men, as they become at last weary of irregular jostling, and hewing one another, and desire with all their hearts, to conform themselves into one firm and lasting edifice; so for want, both of the art of making fit laws, to square their actions by, and also of humility, and patience, to suffer the rude and cumbersome points of their present greatness to be taken off, they cannot without the help of a very able architect, be compiled, into any other than a crazy building, such as hardly lasting out their own time, must assuredly fall upon the heads of their posterity.

Amongst the *infirmities* therefore of a commonwealth, I will reckon in the first place, those that arise from an imperfect institution, and resemble the diseases of a natural body, which proceed from a defectuous procreation.

Of which, this is one, *that a man to obtain a kingdom, is sometimes content with less power, than to the peace, and defence of the commonwealth is necessarily required.* From whence it cometh to pass, that when the exercise of the power laid by, is for the public safety to be resumed, it hath the resemblance of an unjust act; which disposeth great numbers of men (when occasion is presented) to rebel; in the same manner as the bodies of children, gotten by diseased parents, are subject either to untimely death, or to purge the ill quality, derived from their vicious conception, by breaking out into biles and scabs. And when kings deny themselves some such necessary power, it is not always (though sometimes), out of ignorance of what is necessary to the office they undertake; but many times out of a hope to recover the same again at their pleasure: Wherein they reason not well; because such as will hold them to their promises, shall be maintained against them by foreign commonwealths; who in order to the good of their own subjects let slip few occasions to *weaken* the estate of their neighbours. So was *Thomas Becket*, archbishop of *Canterbury*, supported against *Henry* the Second, by the Pope; the subjection of ecclesiastics

to the commonwealth, having been dispensed with by *William the Conqueror* at his reception, when he took an oath, not to infringe the liberty of the church. And so were the *barons*, whose power was by *William Rufus* (to have their help in transferring the succession from his elder brother, to himself,) increased to a degree, inconsistent with the sovereign power, maintained in their rebellion against *King John*, by the French.

Nor does this happen in monarchy only. For whereas the style of the ancient Roman commonwealth, was, *the senate, and people of Rome*; neither senate, nor people pretended to the whole power; which first caused the seditions, of *Tiberius Gracchus, Caius Gracchus, Lucius Saturninus*, and others; and afterwards the wars between the senate and the people, under *Marius* and *Sylla*; and again under *Pompey* and *Caesar*, to the extinction of their democracy, and the setting up of monarchy.

The people of *Athens* bound themselves but from one only action; which was, that no man on pain of death should propound the renewing of the war for the island of *Salamis*; and yet thereby, if *Solon* had not caused to be given out he was mad, and afterwards in gesture and habit of a madman, and in verse, propounded it to the people that flocked about him, they had had an enemy perpetually in readiness, even at the gates of their city; such damage, or shifts, are all commonwealths forced to, that have their power never so little limited.

In the second place, I observe the *diseases* of a commonwealth, that proceed from the poison of seditious doctrines, whereof one is, *That every private man is judge of good and evil actions.* This is true in the condition of mere nature, where there are no civil laws; and also under civil government, in such cases as are not determined by the law. But otherwise, it is manifest, that the measure of good and evil actions, is the civil law; and the judge the legislator, who is always representative of the commonwealth. From this false doctrine, men are disposed to debate with themselves, and dispute the commands of the commonwealth; and afterwards to obey, or disobey them, as in their private judgments they shall think fit. Whereby the commonwealth is distracted and *weakened*.

Another doctrine repugnant to civil society, is, that *whatsoever a man does against his conscience, is sin*; and it dependeth on the presumption of making himself judge of good and evil. For a man's conscience, and his judgment is the same thing; and as the judgment, so also the conscience may be erroneous. Therefore, though he that is subject to no civil law, sinneth in all he does against his conscience, because he has no other rule to follow but his own reason; yet it is not so with him that lives in a commonwealth; because the law is the public conscience, by which he hath already undertaken to be guided. Otherwise in such diversity, as there is of private consciences, which are but private opinions, the commonwealth must needs be distracted, and no man dare to obey the sovereign power, farther than it shall seem good in his own eyes.

It hath been also commonly taught, *that faith and sanctity, are not to be attained by study and reason, but by supernatural inspiration, or infusion*, which granted, I see not why any man should render a reason of his faith; or why every Christian should not be also a prophet; or why any man should take the law of his country, rather than his own inspiration, for the rule of his action. And thus we fall again into the fault of taking upon us to judge of good and evil; or to make judges of it, such private men as pretend to be supernaturally inspired, to the dissolution of all civil government. Faith comes by hearing, and hearing by those accidents, which guide us into the presence of them that speak to us; which accidents are all contrived by God Almighty; and yet are not supernatural, but only, for the great number of them that concur to every effect, unobservable. Faith and sanctity, are indeed not very frequent; but yet they are not miracles, but brought to pass by education, discipline, correction, and other natural ways, by which God worketh them in his elect, at such time as he thinketh fit. And these three opinions, pernicious to peace and government, have in this part of the world, proceeded chiefly from the tongues, and pens of unlearned divines; who joining the words of Holy Scripture together, otherwise than is agreeable to reason, do what they can, to make men think, that sanctity and natural reason, cannot stand together.

A fourth opinion, repugnant to the nature of a commonwealth, is this, *that he that hath the sovereign power, is subject to the civil laws.* It is true, that sover-

eigns are all subject to the laws of nature; because such laws be divine, and cannot by any man, or commonwealth be abrogated. But to those laws which the sovereign himself, that is, which the commonwealth maketh, he is not subject. For to be subject to laws, is to be subject to the commonwealth, that is to the sovereign representative, that is to himself; which is not subjection, but freedom from the laws. Which error, because it setteth the laws above the sovereign, setteth also a judge above him, and a power to punish him; which is to make a new sovereign; and again for the same reason a third, to punish the second; and so continually without end, to the confusion, and dissolution of the commonwealth.

A fifth doctrine, that tendeth to the dissolution of a commonwealth, is, *that every private man has an absolute propriety in his goods; such, as excludeth the right of the sovereign*. Every man has indeed a propriety that excludes the right of every other subject: and he has it only from the sovereign power; without the protection whereof, every other man should have equal right to the same. But if the right of the sovereign also be excluded, he cannot perform the office they have put him into; which is, to defend them both from foreign enemies, and from the injuries of one another; and consequently there is no longer a commonwealth.

And if the propriety of subjects, exclude not the right of the sovereign representative to their goods; much less to their offices of judicature, or execution, in which they represent the sovereign himself.

There is a sixth doctrine, plainly, and directly against the essence of a commonwealth; and it is this, *that the sovereign power may be divided*. For what is it to divide the power of a commonwealth, but to dissolve it; for powers divided mutually destroy each other. And for these doctrines, men are chiefly beholding to some of those, that making profession of the laws, endeavour to make them depend upon their own learning, and not upon the legislative power.

And as false doctrine, so also oftentimes the example of different government in a neighbouring nation, disposeth men to alteration of the form already settled. So the people of the Jews were stirred up to reject God, and to call upon the prophet *Samuel*, for a king after the manner of the nations: so also the lesser cities of *Greece*, were continually disturbed, with seditions of the aristocratical, and democratical factions; one part of almost every commonwealth, desiring to imitate the Lacedemonians; the other, the Athenians. And I doubt not, but many men, have been contented to see the late troubles in *England*, out of an imitation of the Low Countries; supposing there needed no more to grow rich, than to change, as they had done, the form of their government. For the constitution of man's nature, is of itself subject to desire novelty: When therefore they are provoked to the same, by the neighbourhood also of those that have been enriched by it, it is almost impossible for them, not to be content with those that solicit them to change; and love the first beginnings, though they be grieved with the continuance of disorder; like hot bloods, that having gotten the itch, tear themselves with their own nails, till they can endure the smart no longer.

And as to rebellion in particular against monarchy; one of the most frequent causes of it, is the reading of the books of policy, and histories of the ancient Greeks, and Romans; from which, young men, and all others that are unprovided of the antidote of solid reason, receiving a strong, and delightful impression, of the great exploits of war, achieved by the conductors of their armies, receive withal a pleasing idea, of all they have done besides; and imagine their great prosperity, not to have proceeded from the emulation of particular men, but from the virtue of their popular form of government: not considering the frequent seditions, and civil wars, produced by the imperfection of their policy. From the reading, I say, of such books, men have undertaken to kill their kings, because the Greek and Latin writers, in their books and discourses of policy, make it lawful, and laudable, for any man so to do; provided, before he do it, he call him tyrant. For they say not *regicide*, that is, killing of a king, but *tyrannicide*, that is, killing of a tyrant is lawful. From the same books, they that live under a monarch conceive an opinion, that the subjects in a popular commonwealth enjoy liberty; but that in a monarchy they are all slaves. I say, they that live under a monarchy conceive such an opinion; not they that live under a popular government: for they find no such matter. In sum, I cannot imagine, how any thing can be more prejudicial to a monarchy, than the allowing of such books to be publicly read, without present applying such correctives of discreet

masters, as are fit to take away their venom: which venom I will not doubt to compare to the biting of a mad dog, which is a disease the physicians call *hydrophobia*, or *fear of water*. For as he that is so bitten, has a continual torment of thirst, and yet abhorreth water; and is in such an estate, as if the poison endeavoured to convert him into a dog: so when a monarchy is once bitten to the quick, by those democratical writers, that continually snarl at that estate; it wanteth nothing more than a strong monarch, which nevertheless out of a certain *tyrannophobia*, or fear of being strongly governed, when they have him, they abhor.

As there have been doctors, that hold there be three souls in a man; so there be also that think there may be more souls, (that is, more sovereigns,) than one, in a commonwealth; and set up a *supremacy* against the *sovereignty*; *canons* against *laws;* and a *ghostly authority* against the *civil;* working on men's minds, with words and distinctions, that of themselves signify nothing, but bewray (by their obscurity) that there walketh (as some think invisibly) another kingdom, as it were a kingdom of fairies, in the dark. Now seeing it is manifest, that the civil power, and the power of the commonwealth is the same thing; and that supremacy, and the power of making canons, and granting faculties, implieth a commonwealth; it followeth, that where one is sovereign, another supreme; where one can make laws, and another make canons; there must needs be two commonwealths, of one and the same subjects; which is a kingdom divided in itself, and cannot stand. For notwithstanding the insignificant distinction of *temporal*, and *ghostly*, they are still two kingdoms, and every subject is subject to two masters. For seeing the *ghostly* power challengeth the right to declare what is sin it challengeth by consequence to declare what is law, (sin being nothing but the transgression of the law;) and again, the civil power challenging to declare what is law, every subject must obey two masters, who both will have their commands be observed as law; which is impossible. Or, if it be but one kingdom, either the *civil*, which is the power of the commonwealth, must be subordinate to the *ghostly*, and then there is no sovereignty but the *ghostly;* or the *ghostly* must be subordinate to the *temporal*, and then there is no *supremacy* but the *temporal*. When therefore these two powers oppose one another, the commonwealth cannot but be in great danger of civil war, and dissolution. For the *civil* authority being more visible, and standing in the clearer light of natural reason, cannot choose but draw to it in all times a very considerable part of the people: and the *spiritual*, though it stand in the darkness of School distinctions, and hard words; yet because the fear of darkness, and ghosts, is greater than other fears, cannot want a party sufficient to trouble, and sometimes to destroy a commonwealth, and this is a disease which not unfitly may be compared to the epilepsy, or falling sickness (which the Jews took to be one kind of possession by spirits) in the body natural. For as in this disease, there is an unnatural spirit, or wind in the head that obstructeth the roots of the nerves, and moving them violently, taketh away the motion which naturally they should have from the power of the soul in the brain, and thereby causeth violent, and irregular motions (which men call convulsions) in the parts; insomuch as he that is seized therewith, falleth down sometimes into the water, and sometimes into the fire, as a man deprived of his senses; so also in the body politic, when the spiritual power, moveth the members of a commonwealth, by the terror of punishments, and hope of rewards (which are the nerves of it,) otherwise than by the civil power (which is the soul of the commonwealth), they ought to be moved; and by strange, and hard words suffocates their understanding, it must needs thereby distract the people, and either overwhelm the commonwealth with oppression, or cast it into the fire of a civil war.

Sometimes also in the merely civil government, there be more than one soul: as when the power of levying money, (which is the nutritive faculty,) has depended on a general assembly; the power of conduct and command, (which is the motive faculty,) on one man; and the power of making laws, (which is the rational faculty,) on the accidental consent, not only of those two, but also of a third; this endangereth the commonwealth, sometimes for want of consent to good laws; but most often for want of such nourishment, as is necessary to life, and motion. For although few perceive, that such government, is not government, but division of the commonwealth into three factions, and call it mixed monarchy; yet the truth is, that it is not one independent commonwealth, but

three independent factions; nor one representative person, but three. In the kingdom of God, there may be three persons independent, without breach of unity in God that reigneth; but where men reign, that be subject to diversity of opinions, it cannot be so. And therefore if the king bear the person of the people, and the general assembly bear also the person of the people, and another assembly bear the person of a part of the people, they are not one person, nor one sovereign, but three persons, and three sovereigns.

To what disease in the natural body of man I may exactly compare this irregularity of a commonwealth, I know not. But I have seen a man, that had another man growing out of his side, with an head, arms, breast, and stomach, of his own: if he had had another man growing out of his other side, the comparison might then have been exact.

Hitherto I have named such diseases of a commonwealth, as are of the greatest, and most present danger. There be other, not so great; which nevertheless are not unfit to be observed. As first, the difficulty of raising money, for the necessary uses of the commonwealth; especially in the approach of war. This difficulty ariseth from the opinion, that every subject hath of a propriety in his lands and goods, exclusive of the sovereign's right to the use of the same. From whence it cometh to pass, that the sovereign power, which foreseeth the necessities and dangers of the commonwealth, (finding the passage of money to the public treasure obstructed, by the tenacity of the people,) whereas it ought to extend itself, to encounter, and prevent such dangers in their beginnings, contracteth itself as long as it can, and when it cannot longer, struggles with the people by stratagems of law, to obtain little sums, which not sufficing, he is fain at last violently to open the way for present supply, or perish; and being put often to these extremities, at last reduceth the people to their due temper; or else the commonwealth must perish. Insomuch as we may compare this distemper very aptly to an ague; wherein, the fleshy parts being congealed, or by venomous matter obstructed; the veins which by their natural course empty themselves into the heart, are not (as they ought to be) supplied from the arteries, whereby there succeedeth at first a cold contraction, and trembling of the limbs; and afterwards a hot, and strong endeavour of the heart, to force a passage for the blood; and before it can do that, contenteth itself with the small refreshments of such things as cool for a time, till (if nature be strong enough), it break at last the contumacy of the parts obstructed, and dissipateth the venom into sweat; or (if nature be too weak) the patient dieth.

Again, there is sometimes in a commonwealth, a disease, which resembleth the pleurisy; and that is, when the treasure of the commonwealth, flowing out of its due course, is gathered together in too much abundance in one, or a few private men, by monopolies, or by farms of the public revenues; in the same manner as the blood in a pleurisy, getting into the membrane of the breast, breedeth there an inflammation, accompanied with a fever, and painful stitches.

Also the popularity of a potent subject, (unless the commonwealth have very good caution of his fidelity,) is a dangerous disease; because the people (which should receive their motion from the authority of the sovereign,) by the flattery, and by the reputation of an ambitious man, are drawn away from their obedience to the laws, to follow a man, of whose virtues, and designs they have no knowledge. And this is commonly of more danger in a popular government, than in a monarchy; because an army is of so great force, and multitude, as it may easily be made believe, they are the people. By this means it was, that *Julius Caesar*, who was set up by the people against the senate, having won to himself the affections of his army, made himself master, both of senate and people. And this proceeding of popular, and ambitious men, is plain rebellion; and may be resembled to the effects of witchcraft.

Another infirmity of a commonwealth, is the immoderate greatness of a town, when it is able to furnish out of its own circuit, the number, and expense of a great army: as also the great number of corporations; which are as it were many lesser commonwealths in the bowels of a greater, like worms in the entrails of a natural man. To which may be added, the liberty of disputing against absolute power, by pretenders to political prudence; which though bred for the most part in the lees of the people; yet animated by false doctrines, are perpetually meddling with the fundamental laws, to the molestation of the commonwealth; like the little worms, which physicians call *ascarides*.

We may further add, the insatiable appetite, or Bulimia, of enlarging dominion; with the incurable *wounds* thereby many times received from the enemy; and the *wens*, of ununited conquests, which are many times a burthen, and with less danger lost, than kept; as also the *lethargy* of ease, and *consumption* of riot and vain expense.

Lastly, when in a war (foreign or intestine,) the enemies get a final victory; so as (the forces of the commonwealth keeping the field no longer), there is no farther protection of subjects in their loyalty; then is the commonwealth DISSOLVED, and every man at liberty to protect himself by such courses as his own discretion shall suggest unto him. For the sovereign, is the public soul, giving life and motion to the commonwealth; which expiring, the members are governed by it no more, than the carcase of a man, by his departed (though immortal) soul. For though the right of a sovereign monarch cannot be extinguished by the act of another; yet the obligation of the members may. For he that wants protection, may seek it any where; and when he hath it, is obliged (without fraudulent pretence of having submitted himself out of fear,) to protect his protection as long as he is able. But when the power of an assembly is once suppressed, the right of the same perisheth utterly; because the assembly itself is extinct; and consequently, there is no possibility for the sovereignty to reenter.

Chapter 30

Of the Office of the Sovereign Representative

The office of the sovereign, (be it a monarch, or an assembly,) consisteth in the end, for which he was trusted with the sovereign power, namely the procuration of *the safety of the people*; to which he is obliged by the law of nature, and to render an account thereof to God, the author of that law, and to none but him. But by safety here, is not meant a bare preservation, but also all other contentments of life, which every man by lawful industry, without danger, or hurt to the commonwealth, shall acquire to himself.

And this is intended should be done, not by care applied to individuals, further than their protection from injuries, when they shall complain; but by a general providence, contained in public instruction, both of doctrine, and example; and in the making, and executing of good laws, to which individual persons may apply their own cases.

And because, if the essential rights of sovereignty (specified before in the eighteenth chapter) be taken away, the commonwealth is thereby dissolved, and every man returneth into the condition, and calamity of a war with every other man, (which is the greatest evil that can happen in this life;) it is the office of the sovereign, to maintain those rights entire; and consequently against his duty, first, to transfer to another, or to lay from himself any of them. For he that deserteth the means, deserteth the ends; and he deserteth the means, that being the sovereign, acknowledgeth himself subject to the civil laws; and renounceth the power of supreme judicature; or of making war, or peace by his own authority; or of judging of the necessities of the commonwealth; or of levying money, and soldiers, when, and as much as in his own conscience he shall judge necessary; or of making officers, and ministers both of war and peace; or of appointing teachers, and examining what doctrines are conformable, or contrary to the defence, peace, and good of the people. Secondly, it is against his duty, to let the people be ignorant, or misinformed of the grounds, and reasons of those his essential rights; because thereby men are easy to be seduced, and drawn to resist him, when the commonwealth shall require their use and exercise.

And the grounds of these rights, have the rather need to be diligently, and truly taught; because they cannot be maintained by any civil law, or terror of legal punishment. For a civil law, that shall forbid rebellion (and such is all resistance to the essential rights of sovereignty), is not (as a civil law) any obligation, but by virtue only of the law of nature, that forbiddeth the violation of faith; which natural obligation if men know not, they cannot know the right of any law the sovereign maketh. And for the punishment, they take it but for an act of hostility; which when they think they have strength enough, they will endeavour by acts of hostility, to avoid.

As I have heard some say, that justice is but a word, without substance; and that whatsoever a man can

by force, or art, acquire to himself (not only in the condition of war, but also in a commonwealth,) is his own, which I have already showed to be false: so there be also that maintain, that there are no grounds, nor principles of reason, to sustain those essential rights, which make sovereignty absolute. For if there were, they would have been found out in some place, or other; whereas we see, there has not hitherto been any commonwealth, where those rights have been acknowledged, or challenged. Wherein they argue as ill, as if the savage people of America, should deny there were any grounds, or principles of reason, so to build a house, as to last as long as the materials, because they never yet saw any so well built. Time, and industry, produce every day new knowledge. And as the art of well building, is derived from principles of reason, observed by industrious men, that had long studied the nature of materials, and the divers effects of figure, and proportion, long after mankind began (though poorly) to build: so, long time after men have begun to constitute commonwealths, imperfect, and apt to relapse into disorder, there may principles of reason be found out, by industrious meditation, to make their constitution (excepting by external violence) everlasting. And such are those which I have in this discourse set forth: which whether they come not into the sight of those that have power to make use of them, or be neglected by them, or not, concerneth my particular interest, at this day, very little. But supposing that these of mine are not such principles of reason; yet I am sure they are principles from authority of Scripture; as I shall make it appear, when I shall come to speak of the kingdom of God, (administered by *Moses*,) over the Jews, his peculiar people by covenant.

But they say again, that though the principles be right, yet common people are not of capacity enough to be made to understand them. I should be glad, that the rich, and potent subjects of a kingdom, or those that are accounted the most learned, were no less incapable than they. But all men know, that the obstructions to this kind of doctrine, proceed not so much from the difficulty of the matter, as from the interest of them that are to learn. Potent men, digest hardly any thing that setteth up a power to bridle their affections; and learned men, any thing that discovereth their errors, and thereby lesseneth their authority: whereas the common people's minds, unless they be tainted with dependance on the potent, or scribbled over with the opinions of their doctors, are like clean paper, fit to receive whatsoever by public authority shall be imprinted in them. Shall whole nations be brought to *acquiesce* in the great mysteries of Christian religion, which are above reason; and millions of men be made believe, that the same body may be in innumerable places, at one and the same time, which is against reason; and shall not men be able, by their teaching, and preaching, protected by the law, to make that received, which is so consonant to reason, that any unprejudicated man, needs no more to learn it, than to hear it? I conclude therefore, that in the instruction of the people in the essential rights (which are the natural, and fundamental laws) of sovereignty, there is no difficulty, (whilst a sovereign has his power entire,) but what proceeds from his own fault, or the fault of those whom he trusteth in the administration of the commonwealth; and consequently, it is his duty, to cause them so to be instructed; and not only his duty, but his benefit also, and security, against the danger that may arrive to himself in his natural person, from rebellion.

And (to descend to particulars) the people are to be taught, first, that they ought not to be in love with any form of government they see in their neighbour nations, more than with their own, nor, (whatsoever present prosperity they behold in nations that are otherwise governed than they,) to desire change. For the prosperity of a people ruled by an aristocratical, or democratical assembly, cometh not from aristocracy, nor from democracy, but from the obedience, and concord of the subjects: nor do the people flourish in a monarchy, because one man has the right to rule them, but because they obey him. Take away in any kind of state, the obedience, (and consequently the concord of the people,) and they shall not only not flourish, but in short time be dissolved. And they that go about by disobedience, to do no more than reform the commonwealth, shall find they do thereby destroy it; like the foolish daughters of *Peleus*, (in the fable;) which desiring to renew the youth of their decrepid father, did by the counsel of *Medea*, cut him in pieces, and boil him, together with strange herbs, but made not of him a new man. This desire of change, is like the breach of the first of God's commandments: for there God says, *Non habebis*

Deos alienos; Thou shalt not have the Gods of other nations; and in another place concerning *kings*, that they are *Gods*.

Secondly, they are to be taught, that they ought not to be led with admiration of the virtue of any of their fellow subjects, how high soever he stand, nor how conspicuously soever he shine in the commonwealth; nor of any assembly, (except the sovereign assembly,) so as to defer to them any obedience, or honour, appropriate to the sovereign only, whom (in their particular stations) they represent; nor to receive any influence from them, but such as is conveyed by them from the sovereign authority. For that sovereign, cannot be imagined to love his people as he ought, that is not jealous of them, but suffers them by the flattery of popular men, to be seduced from their loyalty, as they have often been, not only secretly, but openly, so as to proclaim marriage with them *in facie ecclesiciae* by preachers; and by publishing the same in the open streets: which may fitly be compared to the violation of the second of the ten commandments.

Thirdly, in consequence to this, they ought to be informed, how great a fault it is, to speak evil of the sovereign representative, (whether one man, or an assembly of men;) or to argue and dispute his power; or any way to use his name irreverently, whereby he may be brought into contempt with his people, and their obedience (in which the safety of the commonwealth consisteth) slackened. Which doctrine the third commandment by resemblance pointeth to.

Fourthly, seeing people cannot be taught this, nor when it is taught, remember it, nor after one generation past, so much as know in whom the sovereign power is placed, without setting apart from their ordinary labour, some certain times, in which they may attend those that are appointed to instruct them; it is necessary that some such times be determined, wherein they may assemble together, and (after prayers and praises given to God, the sovereign of sovereigns) hear those their duties told them, and the positive laws, such as generally concern them all, read and expounded, and be put in mind of the authority that maketh them laws. To this end had the *Jews* every seventh day, a *sabbath*, in which the law was read and expounded; and in the solemnity whereof they were put in mind, that their king was God; that having created the world in six days, he rested the seventh day; and by their resting on it from their labour, that that God was their king, which redeemed them from their servile, and painful labour in *Egypt*, and gave them a time, after they had rejoiced in God, to take joy also in themselves, by lawful recreation. So that the first table of the commandments, is spent all in setting down the sum of God's absolute power; not only as God, but as king by pact, (in peculiar) of the Jews; and may therefore give light, to those that have sovereign power conferred on them by the consent of men, to see what doctrine they ought to teach their subjects.

And because the first instruction of children, dependeth on the care of their parents; it is necessary that they should be obedient to them, whilst they are under their tuition; and not only so, but that also afterwards (as gratitude requireth,) they acknowledge the benefit of their education, by external signs of honour. To which end they are to be taught, that originally the father of every man was also his sovereign lord, with power over him of life and death; and that the fathers of families, when by instituting a commonwealth, they resigned that absolute power, yet it was never intended, they should lose the honour due unto them for their education. For to relinquish such right, was not necessary to the institution of sovereign power; nor would there be any reason, why any man should desire to have children, or take the care to nourish, and instruct them, if they were afterwards to have no other benefit from them, than from other men. And this accordeth with the fifth commandment.

Again, every sovereign ought to cause justice to be taught, which (consisting in taking from no man what is his,) is as much as to say, to cause men to be taught not to deprive their neighbours, by violence, or fraud, of any thing which by the sovereign authority is theirs. Of things held in propriety, those that are dearest to a man are his own life, and limbs; and in the next degree (in most men,) those that concern conjugal affection; and after them riches and means of living. Therefore the people are to be taught, to abstain from violence to one another's person, by private revenges; from violation of conjugal honour; and from forcible rapine, and fraudulent surreption of one another's goods. For which purpose also it is necessary they be showed the evil consequences of false judgment, by

corruption either of judges or witnesses, whereby the distinction of propriety is taken away, and justice becomes of no effect: all which things are intimated in the sixth, seventh, eighth, and ninth commandments.

Lastly, they are to be taught, that not only the unjust facts, but the designs and intentions to do them, (though by accident hindered,) are injustice; which consisteth in the pravity of the will, as well as in the irregularity of the act. And this is the intention of the tenth commandment, and the sum of the second table; which is reduced all to this one commandment of mutual charity, *thou shalt love thy neighbour as thyself*: as the sum of the first table is reduced to *the love of God*; whom they had then newly received as their king.

As for the means, and conduits, by which the people may receive this instruction, we are to search, by what means so many opinions, contrary to the peace of mankind, upon weak and false principles, have nevertheless been so deeply rooted in them. I mean those, which I have in the precedent chapter specified: as that men shall judge of what is lawful and unlawful, not by the law itself, but by their own consciences; that is to say, by their own private judgments: that subjects sin in obeying the commands of the commonwealth, unless they themselves have first judged them to be lawful: that their propriety in their riches is such, as to exclude the dominion, which the commonwealth hath over the same: that it is lawful for subjects to kill such, as they call tyrants: that the sovereign power may be divided, and the like; which come to be instilled into the people by this means. They whom necessity, or covetousness keepeth attent on their trades, and labour; and they, on the other side, whom superfluity, or sloth carrieth after their sensual pleasures, (which two sorts of men take up the greatest part of mankind,) being diverted from the deep meditation, which the learning of truth, not only in the matter of natural justice, but also of all other sciences necessarily requireth, receive the notions of their duty, chiefly from divines in the pulpit, and partly from such of their neighbours, or familiar acquaintance, as having the faculty of discoursing readily, and plausibly, seem wiser and better learned in cases of law, and conscience, than themselves. And the divines, and such others as make show of learning, derive their knowledge from the universities, and from the schools of law, or from the books, which by men eminent in those schools, and universities have been published. It is therefore manifest, that the instruction of the people, dependeth wholly, on the right teaching of youth in the universities. But are not (may some man say) the universities of *England* learned enough already to do that? or is it you will undertake to teach the universities? Hard questions. Yet to the first, I doubt not to answer; that till towards the latter end of *Henry the Eighth*, the power of the Pope, was always upheld against the power of the commonwealth, principally by the universities; and that the doctrines maintained by so many preachers, against the sovereign power of the king, and by so many lawyers, and others, that had their education there, is a sufficient argument, that though the universities were not authors of those false doctrines, yet they knew not how to plant the true. For in such a contradiction of opinions, it is most certain, that they have not been sufficiently instructed; and it is no wonder, if they yet retain a relish of that subtle liquor, wherewith they were first seasoned, against the civil authority. But to the latter question, it is not fit, nor needful for me to say either aye, or no: for any man that sees what I am doing, may easily perceive what I think.

The safety of the people, requireth further, from him, or them that have the sovereign power, that justice be equally administered to all degrees of people; that is, that as well the rich and mighty, as poor and obscure persons, may be righted of the injuries done them; so as the great, may have no greater hope of impunity, when they do violence, dishonour, or any injury to the meaner sort, than when one of these, does the like to one of them: For in this consisteth equity; to which, as being a precept of the law of nature, a sovereign is as much subject, as any of the meanest of his people. All breaches of the law, are offences against the commonwealth: but there be some, that are also against private persons. Those that concern the commonwealth only, may without breach of equity be pardoned; for every man may pardon what is done against himself, according to his own discretion. But an offence against a private man, cannot in equity be pardoned, without the consent of him that is injured; or reasonable satisfaction.

The inequality of subjects, proceedeth from the acts of sovereign power; and therefore has no more

place in the presence of the sovereign; that is to say, in a court of justice, than the inequality between kings, and their subjects, in the presence of the King of kings. The honour of great persons, is to be valued for their beneficence and the aids they give to men of inferior rank, or not at all. And the violences, oppressions, and injuries they do, are not extenuated, but aggravated by the greatness of their persons; because they have least need to commit them. The consequences of this partiality towards the great, proceed in this manner. Impunity maketh insolence; insolence hatred; and hatred, an endeavour to pull down all oppressing and contumelious greatness, though with the ruin of the commonwealth.

To equal justice, appertaineth also the equal imposition of taxes; the equality whereof dependeth not on the equality of riches, but on the equality of the debt, that every man oweth to the commonwealth for his defence. It is not enough, for a man to labour for the maintenance of his life; but also to fight, (if need be,) for the securing of his labour. They must either do as the Jews did after their return from captivity, in re-edifying the temple, build with one hand, and hold the sword in the other; or else they must hire others to fight for them. For the impositions, that are laid on the people by the sovereign power, are nothing else but the wages, due to them that hold the public sword, to defend private men in the exercise of several trades, and callings. Seeing then the benefit that every one receiveth thereby, is the enjoyment of life, which is equally dear to poor and rich; the debt which a poor man oweth them that defend his life, is the same which a rich man oweth for the defence of his; saving that the rich, who have the service of the poor, may be debtors not only for their own persons, but for many more. Which considered, the equality of imposition, consisteth rather in the equality of that which is consumed, than of the riches of the persons that consume the same. For what reason is there, that he which laboureth much, and sparing the fruits of his labour, consumeth little, should be more charged, than he that living idly, getteth little, and spendeth all he gets; seeing the one hath no more protection from the commonwealth, than the other? But when the impositions, are laid upon those things which men consume, every man payeth equally for what he useth: nor is the commonwealth defrauded by the luxurious waste of private men.

And whereas many men, by accident inevitable, become unable to maintain themselves by their labour; they ought not to be left to the charity of private persons; but to be provided for, (as far-forth as the necessities of nature require,) by the laws of the commonwealth. For as it is uncharitableness in any man, to neglect the impotent; so it is in the sovereign of a commonwealth, to expose them to the hazard of such uncertain charity.

But for such as have strong bodies, the case is otherwise: they are to be forced to work; and to avoid the excuse of not finding employment, there ought to be such laws, as may encourage all manner of arts; as navigation, agriculture, fishing, and all manner of manufacture that requires labour. The multitude of poor, and yet strong people still increasing, they are to be transplanted into countries not sufficiently inhabited: where nevertheless, they are not to exterminate those they find there; but constrain them to inhabit closer together, and not range a great deal of ground, to snatch what they find; but to court each little plot with art and labour, to give them their sustenance in due season. And when all the world is overcharged with inhabitants, then the last remedy of all is war; which provideth for every man, by victory, or death.

To the care of the sovereign, belongeth the making of good laws. But what is a good law? By a good law, I mean not a just law: for no law can be unjust. The law is made by the sovereign power, and all that is done by such power, is warranted, and owned by every one of the people; and that which every man will have so, no man can say is unjust. It is in the laws of a commonwealth, as in the laws of gaming: whatsoever the gamesters all agree on, is injustice to none of them. A good law is that, which is *needful*, for the *good of the people*, and withal *perspicuous*.

For the use of laws, (which are but rules authorized) is not to bind the people from all voluntary actions; but to direct and keep them in such a motion, as not to hurt themselves by their own impetuous desires, rashness, or indiscretion; as hedges are set, not to stop travellers, but to keep them in the way. And therefore a law that is not needful, having not the true end of

a law, is not good. A law may be conceived to be good, when it is for the benefit of the sovereign; though it be not necessary for the people; but it is not so. For the good of the sovereign and people, cannot be separated. It is a weak sovereign, that has weak subjects; and a weak people, whose sovereign wanteth power to rule them at his will. Unnecessary laws are not good laws; but traps for money: which where the right of sovereign power is acknowledged, are superfluous; and where it is not acknowledged, insufficient to defend the people.

The perspicuity, consisteth not so much in the words of the law itself, as in a declaration of the causes, and motives, for which it was made. That is it, that shows us the meaning of the legislator; and the meaning of the legislator known, the law is more easily understood by few, than many words. For all words, are subject to ambiguity; and therefore multiplication of words in the body of the law, is multiplication of ambiguity: besides it seems to imply, (by too much diligence,) that whosoever can evade the words, is without the compass of the law. And this is a cause of many unnecessary processes. For when I consider how short were the laws of ancient times; and how they grew by degrees still longer; methinks I see a contention between the penners, and pleaders of the law; the former seeking to circumscribe the latter; and the latter to evade their circumscriptions; and that the pleaders have got the victory. It belongeth therefore to the office of a legislator, (such as is in all commonwealths the supreme representative, be it one man, or an assembly,) to make the reason perspicuous, why the law was made; and the body of the law itself, as short, but in as proper, and significant terms, as may be.

It belongeth also to the office of the sovereign, to make a right application of punishments, and rewards. And seeing the end of punishing is not revenge, and discharge of choler; but correction, either of the offender, or of others by his example; the severest punishments are to be inflicted for those crimes, that are of most danger to the public; such as are those which proceed from malice to the government established; those that spring from contempt of justice; those that provoke indignation in the multitude; and those, which unpunished seem authorized, as when they are committed by sons, servants, or favourites of men in authority: For indignation carrieth men, not only against the actors, and authors of injustice; but against all power that is likely to protect them; as in the case of *Tarquin;* when for the insolent act of one of his sons, he was driven out of *Rome*, and the monarchy itself dissolved. But crimes of infirmity; such as are those which proceed from great provocation, from great fear, great need, or from ignorance whether the fact be a great crime, or not, there is place many times for lenity, without prejudice to the commonwealth; and lenity when there is such place for it, is required by the law of nature. The punishment of the leaders, and teachers in a commotion; not the poor seduced people, when they are punished, can profit the commonwealth by their example. To be severe to the people, is to punish that ignorance, which may in great part be imputed to the sovereign, whose fault it was, they were no better instructed.

In like manner it belongeth to the office, and duty of the sovereign, to apply his rewards always so, as there may arise from them benefit to the commonwealth: wherein consisteth their use, and end; and is then done, when they that have well served the commonwealth, are with as little expense of the common treasure, as is possible, so well recompensed, as others thereby may be encouraged, both to serve the same as faithfully as they can, and to study the arts by which they may be enabled to do it better. To buy with money, or preferment, from a popular ambitious subject, to be quiet, and desist from making ill impressions in the minds of the people, has nothing of the nature of reward; (which is ordained not for disservice, but for service past;) nor a sign of gratitude, but of fear: nor does it tend to the benefit, but to the damage of the public. It is a contention with ambition, like that of *Hercules* with the monster *Hydra*, which having many heads, for every one that was vanquished, there grew up three. For in like manner, when the stubbornness of one popular man, is overcome with reward, there arise many more (by the example) that do the same mischief, in hope of like benefit: and as all sorts of manufacture, so also malice increaseth by being vendible. And though sometimes a civil war, may be deferred, by such ways as that, yet the danger grows still the greater, and the public ruin more assured. It is therefore against the duty of the sovereign,

to whom the public safety is committed, to reward those that aspire to greatness by disturbing the peace of their country, and not rather to oppose the beginnings of such men, with a little danger, than after a longer time with greater.

Another business of the sovereign, is to choose good counsellors; I mean such, whose advice he is to take in the government of the commonwealth. For this word counsel, *consilium*, corrupted from *considium*, is of a large signification, and comprehendeth all assemblies of men that sit together, not only to deliberate what is to be done hereafter, but also to judge of facts past, and of law for the present. I take it here in the first sense only: and in this sense, there is no choice of counsel, neither in a democracy, nor aristocracy; because the persons counselling are members of the person counselled. The choice of counsellors therefore is proper to monarchy; in which, the sovereign that endeavoureth not to make choice of those, that in every kind are the most able, dischargeth not his office as he ought to do. The most able counsellors, are they that have least hope of benefit by giving evil counsel, and most knowledge of those things that conduce to the peace, and defence of the commonwealth. It is a hard matter to know who expecteth benefit from public troubles; but the signs that guide to a just suspicion, is the soothing of the people in their unreasonable, or irremediable grievances, by men whose estates are not sufficient to discharge their accustomed expenses and may easily be observed by any one whom it concerns to know it. But to know, who has most knowledge of the public affairs, is yet harder; and they that know them, need them a great deal the less. For to know, who knows the rules almost of any art, is a great degree of the knowledge of the same art; because no man can be assured of the truth of another's rules, but he that is first taught to understand them. But the best signs of knowledge of any art, are, much conversing in it, and constant good effects of it. Good counsel comes not by lot, nor by inheritance; and therefore there is no more reason to expect good advice from the rich, or noble, in matter of state, than in delineating the dimensions of a fortress; unless we shall think there needs no method in the study of the politics, (as there does in the study of geometry,) but only to be lookers on; which is not so. For the politics is the harder study of the two. Whereas in these parts of *Europe*, it hath been taken for a right of certain persons, to have place in the highest council of state by inheritance; it is derived from the conquests of the ancient Germans; wherein many absolute lords joining together to conquer other nations, would not enter into the confederacy, without such privileges, as might be marks of difference in time following, between their posterity, and the posterity of their subjects; which privileges being inconsistent with the sovereign power, by the favour of the sovereign, they may seem to keep; but contending for them as their right, they must needs by degrees let them go, and have at last no further honour, than adhereth naturally to their abilities.

And how able soever be the counsellors in any affair, the benefit of their counsel is greater, when they give every one his advice, and the reasons of it apart, than when they do it in an assembly, by way of orations; and when they have premeditated, than when they speak on the sudden; both because they have more time, to survey the consequences of action; and are less subject to be carried away to contradiction, through envy, emulation, or other passions arising from the difference of opinion.

The best counsel, in those things that concern not other nations, but only the ease, and benefit the subjects may enjoy, by laws that look only inward, is to be taken from the general informations, and complaints of the people of each province, who are best acquainted with their own wants, and ought therefore, when they demand nothing in derogation of the essential rights of sovereignty, to be diligently taken notice of. For without those essential rights, (as I have often before said,) the commonwealth cannot at all subsist.

A commander of an army in chief, if he be not popular, shall not be beloved, nor feared as he ought to be by his army; and consequently cannot perform that office with good success. He must therefore be industrious, valiant, affable, liberal and fortunate, that he may gain an opinion both of sufficiency, and of loving his soldiers. This is popularity, and breeds in the soldiers both desire, and courage, to recommend themselves to his favour; and protects the severity of the general, in punishing (when need is) the mutinous, or negligent soldiers. But this love of soldiers,

(if caution be not given of the commander's fidelity,) is a dangerous thing to sovereign power; especially when it is in the hands of an assembly not popular. It belongeth therefore to the safety of the people, both that they be good conductors, and faithful subjects, to whom the sovereign commits his armies.

But when the sovereign himself is popular; that is, reverenced and beloved of his people, there is no danger at all from the popularity of a subject. For soldiers are never so generally unjust, as to side with their captain; though they love him, against their sovereign, when they love not only his person, but also his cause. And therefore those, who by violence have at any time suppressed the power of their lawful sovereign, before they could settle themselves in his place, have been always put to the trouble of contriving their titles, to save the people from the shame of receiving them. To have a known right to sovereign power, is so popular a quality, as he that has it needs no more, for his own part, to turn the hearts of his subjects to him, but that they see him able absolutely to govern his own family: nor, on the part of his enemies, but a disbanding of their armies. For the greatest and most active part of mankind, has never hitherto been well contented with the present.

Concerning the offices of one sovereign to another, which are comprehended in that law, which is commonly called the *law of nations*, I need not say any thing in this place; because the law of nations, and the law of nature, is the same thing. And every sovereign hath the same right, in procuring the safety of his people, that any particular man can have, in procuring the safety of his own body. And the same law, that dictateth to men that have no civil government, what they ought to do, and what to avoid in regard of one another, dictateth the same to commonwealths, that is, to the consciences of sovereign princes, and sovereign assemblies; there being no court of natural justice, but in the conscience only; where not man, but God reigneth; whose laws, (such of them as oblige all mankind,) in respect of God, as he is the author of nature, are *natural*; and in respect of the same God, as he is King of kings, are *laws*. But of the kingdom of God, as King of kings, and as King also of a peculiar people, I shall speak in the rest of this discourse.

Chapter 31

Of the Kingdom of God by Nature

That the condition of mere nature, that is to say, of absolute liberty, such as is theirs, that neither are sovereigns, nor subjects, is anarchy, and the condition of war: that the precepts, by which men are guided to avoid that condition, are the laws of nature: that a commonwealth, without sovereign power, is but a word, without substance, and cannot stand: that subjects owe to sovereigns, simple obedience, in all things, wherein their obedience is not repugnant to the laws of God, I have sufficiently proved, in that which I have already written. There wants only, for the entire knowledge of civil duty, to know what are those laws of God. For without that, a man knows not, when he is commanded any thing by the civil power, whether it be contrary to the law of God, or not: and so, either by too much civil obedience, offends the Divine Majesty, or through fear of offending God, transgresses the commandments of the commonwealth. To avoid both these rocks, it is necessary to know what are the laws divine. And seeing the knowledge of all law, dependeth on the knowledge of the sovereign power; I shall say something in that which followeth, of the KINGDOM OF GOD.

God is king, let the earth rejoice, saith the psalmist. (*Psalm* 96. 1). And again, (*Psalm* 98. 1) *God is king though the nations be angry; and he that sitteth on the cherubims, though the earth be moved.* Whether men will or not, they must be subject always to the divine power. By denying the existence, or providence of God, men may shake off their ease, but not their yoke. But to call this power of God, which extendeth itself not only to man, but also to beasts, and plants, and bodies inanimate, by the name of kingdom, is but a metaphorical use of the word. For he only is properly said to reign, that governs his subjects by his word, and by promise of rewards to those that obey it, and by threatening them with punishment that obey it not. Subjects therefore in the kingdom of God, are not bodies inanimate, nor creatures irrational; because they understand no precepts as his: nor atheists; nor they that believe not that God has any care of the actions of mankind; because they acknowledge

no word for his, nor have hope of his rewards, or fear of his threatenings. They therefore that believe there is a God that governeth the world, and hath given precepts, and propounded rewards, and punishments to mankind, are God's subjects; all the rest, are to be understood as enemies.

To rule by words, requires that such words be manifestly made known; for else they are no laws: for to the nature of laws belongeth a sufficient, and clear promulgation, such as may take away the excuse of ignorance; which in the laws of men is but of one only kind, and that is, proclamation, or promulgation by the voice of man. But God declareth his laws three ways; by the dictates of *natural reason*, by *revelation*, and by the *voice* of some *man*, to whom by the operation of miracles, he procureth credit with the rest. From hence there ariseth a triple word of God, *rational*, *sensible*, and *prophetic:* to which correspondeth a triple hearing; *right reason*, *sense supernatural*, and *faith*. As for sense supernatural, which consisteth in revelation, or inspiration, there have not been any universal laws so given, because God speaketh not in that manner, but to particular persons, and to divers men divers things.

From the difference between the other two kinds of God's word, *rational*, and *prophetic*, there may be attributed to God, a twofold kingdom, *natural*, and *prophetic:* natural, wherein he governeth as many of mankind as acknowledge his providence, by the natural dictates of right reason; and prophetic, wherein having chosen out one peculiar nation (the Jews) for his subjects, he governed them, and none but them, not only by natural reason, but by positive laws, which he gave them by the mouths of his holy prophets. Of the natural kingdom of God I intend to speak in this chapter.

The right of nature, whereby God reigneth over men, and punisheth those that break his laws, is to be derived, not from his creating them, as if he required obedience, as of gratitude for his benefits; but from his *irresistible power*. I have formerly shown, how the sovereign right ariseth from pact: to show how the same right may arise from nature, requires no more, but to show in what case it is never taken away. Seeing all men by nature had right to all things, they had right every one to reign over all the rest. But because this right could not be obtained by force, it concerned the safety of every one, laying by that right, to set up men (with sovereign authority) by common consent, to rule and defend them: whereas if there had been any man of power irresistible; there had been no reason, why he should not by that power have ruled, and defended both himself, and them, according to his own discretion. To those therefore whose power is irresistible, the dominion of all men adhereth naturally by their excellence of power; and consequently it is from that power, that the kingdom over men, and the right of afflicting men at his pleasure, belongeth naturally to God Almighty; not as Creator, and gracious; but as omnipotent. And though punishment be due for sin only, because by that word is understood affliction for sin; yet the right of afflicting, is not always derived from men's sin, but from God's power.

This question, *why evil men often prosper, and good men suffer adversity*, has been much disputed by the ancient, and is the same with this of ours, *by what right God dispenseth the prosperities and adversities of this life*; and is of that difficulty, as it hath shaken the faith, not only of the vulgar, but of philosophers, and which is more, of the Saints, concerning the Divine Providence. *How good*, (saith *David*) (*Psalm* 72. 1, 2, 3) *is the God of Israel to those that are upright in heart; and yet my feet were almost gone, my treadings had well-nigh slipt; for I was grieved at the wicked, when I saw the ungodly in such prosperity*. And *Job*, how earnestly does he expostulate with God, for the many afflictions he suffered, notwithstanding his righteousness? This question in the case of *Job*, is decided by God himself, not by arguments derived from *Job's* sin, but his own power. For whereas the friends of *Job* drew their arguments from his affliction to his sin, and he defended himself by the conscience of his innocence, God himself taketh up the matter, and having justified the affliction by arguments drawn from his power, such as this, (*Job* 38. 4) *Where wast thou, when I laid the foundations of the earth*, and the like, both approved Job's innocence, and reproved the erroneous doctrine of his friends. Conformable to this doctrine is the sentence of our Saviour, concerning the man that was born blind, in these words, *Neither hath this man sinned, nor his fathers; but that the works of God might be made manifest in him*. And though it be said, *that death entered into the world by sin*, (by which is meant that if *Adam* had never

sinned, he had never died, that is, never suffered any separation of his soul from his body,) it follows not thence, that God could not justly have afflicted him, though he had not sinned, as well as he afflicteth other living creatures, that cannot sin.

Having spoken of the right of God's sovereignty, as grounded only on nature; we are to consider next, what are the Divine laws, or dictates of natural reason; which laws concern either the natural duties of one man to another, or the honour naturally due to our Divine Sovereign. The first are the same laws of nature, of which I have spoken already in the 14th and 15th chapters of this treatise; namely, equity, justice, mercy, humility, and the rest of the moral virtues. It remaineth therefore that we consider, what precepts are dictated to men, by their natural reason only, without other word of God, touching the honour and worship of the Divine Majesty.

Honour consisteth in the inward thought, and opinion of the power, and goodness of another: and therefore to honour God, is to think as highly of his power and goodness, as is possible. And of that opinion, the external signs appearing in the words, and actions of men, are called *worship*; which is one part of that which the Latins understand by the word *cultus:* For *cultus* signifieth properly, and constantly, that labour which a man bestows on any thing, with a purpose to make benefit by it. Now those things whereof we make benefit, are either subject to us, and the profit they yield, followeth the labour we bestow upon them, as a natural effect; or they are not subject to us, but answer our labour, according to their own wills. In the first sense the labour bestowed on the earth, is called *culture;* and the education of children, a *culture* of their minds. In the second sense, where men's wills are to be wrought to our purpose, not by force, but by complaisance, it signifieth as much as courting, that is, a winning of favour by good offices; as by praises, by acknowledging their power, and by whatsoever is pleasing to them from whom we look for any benefit. And this is properly *worship:* in which sense *Publicola*, is understood for a worshipper of the people; and *cultus Dei*, for the worship of God.

From internal honour, consisting in the opinion of power and goodness, arise three passions; *love*, which hath reference to goodness; and *hope*, and *fear*, that relate to power: and three parts of external worship; *praise*, *magnifying*, and *blessing:* the subject of praise, being goodness; the subject of magnifying and blessing, being power, and the effect thereof felicity. Praise, and magnifying are signified both by words, and actions: by words, when we say a man is good, or great: by actions, when we thank him for his bounty, and obey his power. The opinion of the happiness of another, can only be expressed by words.

There be some signs of honour, (both in attributes and actions,) that be naturally so; as amongst attributes, *good*, *just*, *liberal*, and the like; and amongst actions, *prayers*, *thanks*, and *obedience*. Others are so by institution, or custom of men; and in some times and places are honourable; in others, dishonourable; in others indifferent: such as are the gestures in salutation, prayer, and thanksgiving, in different times and places, differently used. The former is *natural;* the latter *arbitrary* worship.

And of arbitrary worship, there be two differences: for sometimes it is a *commanded*, sometimes *voluntary* worship: commanded, when it is such as he requireth, who is worshipped: free, when it is such as the worshipper thinks fit. When it is commanded, not the words, or gesture, but the obedience is the worship. But when free, the worship consists in the opinion of the beholders: for if to them the words, or actions by which we intend honour, seem ridiculous, and tending to contumely; they are no worship; because no signs of honour; and no signs of honour; because a sign is not a sign to him that giveth it, but to him to whom it is made; that is, to the spectator.

Again, there is a *public*, and a *private* worship. Public, is the worship that a commonwealth performeth, as one person. Private, is that which a private person exhibiteth. Public, in respect of the whole commonwealth, is free; but in respect of particular men it is not so. Private, is in secret free; but in the sight of the multitude, it is never without some restraint, either from the laws, or from the opinion of men; which is contrary to the nature of liberty.

The end of worship amongst men, is power. For where a man seeth another worshipped, he supposeth him powerful, and is the readier to obey him; which makes his power greater. But God has no ends: the worship we do him, proceeds from our duty, and is directed according to our capacity, by those rules of honour, that reason dictateth to be done by the weak

to the more potent men, in hope of benefit, for fear of damage, or in thankfulness for good already received from them.

That we may know what worship of God is taught us by the light of nature, I will begin with his attributes. Where, first, it is manifest, we ought to attribute to him *existence*. For no man can have the will to honour that, which he thinks not to have any being.

Secondly, that those philosophers, who said the world, or the soul of the world was God, spake unworthily of him; and denied his existence. For by God, is understood the cause of the world; and to say the world is God, is to say there is no cause of it, that is, no God.

Thirdly, to say the world was not created, but eternal, (seeing that which is eternal has no cause,) is to deny there is a God.

Fourthly, that they who attributing (as they think) ease to God, take from him the care of mankind; take from him his honour: for it takes away men's love, and fear of him; which is the root of honour.

Fifthly, in those things that signify greatness, and power; to say he is *finite*, is not to honour him: for it is not a sign of the will to honour God, to attribute to him less than we can; and finite, is less than we can; because to finite, it is easy to add more.

Therefore to attribute *figure* to him, is not honour; for all figure is finite:

Nor to say we conceive, and imagine, or have an *idea* of him, in our mind: for whatsoever we conceive is finite:

Nor to attribute to him *parts*, or *totality;* which are the attributes only of things finite:

Nor to say he is in this, or that *place:* for whatsoever is in place, is bounded, and finite:

Nor that he is *moved*, or *resteth:* for both these attributes ascribe to him place:

Nor that there be more Gods than one; because it implies them all finite: for there cannot be more than one infinite:

Nor to ascribe to him (unless metaphorically, meaning not the passion but the effect) passions that partake of grief; as *repentance*, *anger*, *mercy:* or of want; as *appetite*, *hope*, *desire;* or of any passive faculty: for passion, is power limited by somewhat else.

And therefore when we ascribe to God a *will*, it is not to be understood, as that of man, for a *rational appetite;* but as the power, by which he effecteth every thing.

Likewise when we attribute to him *sight*, and other acts of sense; as also *knowledge*, and *understanding;* which in us is nothing else, but a tumult of the mind, raised by external things that press the organical parts of man's body: for there is no such thing in God; and being things that depend on natural causes, cannot be attributed to him.

He that will attribute to God, nothing but what is warranted by natural reason, must either use such negative attributes, as *infinite*, *eternal*, *incomprehensible;* or superlatives, as *most high*, *most great*, and the like; or indefinite, as *good*, *just*, *holy*, *creator;* and in such sense, as if he meant not to declare what he is, (for that were to circumscribe him within the limits of our fancy,) but how much we admire him, and how ready we would be to obey him; which is a sign of humility, and of a will to honour him as much as we can: For there is but one name to signify our conception of his nature, and that is, I AM: and but one name of his relation to us, and that is *God;* in which is contained Father, King, and Lord.

Concerning the actions of divine worship, it is a most general precept of reason, that they be signs of the intention to honour God; such as are, first, *prayers:* For not the carvers, when they made images, were thought to make them gods; but the people that *prayed* to them.

Secondly, *thanksgiving;* which differeth from prayer in divine worship, no otherwise, than that prayers precede, and thanks succeed the benefit; the end both of the one, and the other, being to acknowledge God, for author of all benefits, as well past, as future.

Thirdly, *gifts;* that is to say, *sacrifices*, and *oblations*, (if they be of the best,) are signs of honour: for they are thanksgivings.

Fourthly, *not to swear by any but God*, is naturally a sign of honour: for it is a confession that God only knoweth the heart; and that no man's wit, or strength can protect a man against God's vengeance on the perjured.

Fifthly, it is a part of rational worship, to speak considerately of God; for it argues a fear of him, and fear, is a confession of his power. Hence followeth, that the name of God is not to be used rashly, and to no purpose; for that is as much, as in vain: and it

is to no purpose unless it be by way of oath, and by order of the commonwealth, to make judgments certain; or between commonwealths, to avoid war. And that disputing of God's nature is contrary to his honour: for it is supposed, that in this natural kingdom of God, there is no other way to know any thing, but by natural reason; that is, from the principles of natural science; which are so far from teaching us any thing of God's nature, as they cannot teach us our own nature, nor the nature of the smallest creature living. And therefore, when men out of the principles of natural reason, dispute of the attributes of God, they but dishonour him: for in the attributes which we give to God, we are not to consider the signification of philosophical truth; but the signification of pious intention, to do him the greatest honour we are able. From the want of which consideration, have proceeded the volumes of disputation about the nature of God, that tend not to his honour, but to the honour of our own wits, and learning; and are nothing else but inconsiderate, and vain abuses of his sacred name.

Sixthly, in *prayers*, *thanksgivings*, *offerings* and *sacrifices*, it is a dictate of natural reason, that they be every one in his kind the best, and most significant of honour. As for example, that prayers and thanksgiving, be made in words and phrases, not sudden, nor light, nor plebeian; but beautiful, and well composed; For else we do not God as much honour as we can. And therefore the heathens did absurdly, to worship images for gods: but their doing it in verse, and with music, both of voice, and instruments, was reasonable. Also that the beasts they offered in sacrifice, and the gifts they offered, and their actions in worshipping, were full of submission, and commemorative of benefits received, was according to reason, as proceeding from an intention to honour him.

Seventhly, reason directeth not only to worship God in secret; but also, and especially, in public, and in the sight of men: For without that, (that which in honour is most acceptable) the procuring others to honour him, is lost.

Lastly, obedience to his laws (that is, in this case to the laws of nature,) is the greatest worship of all. For as obedience is more acceptable to God than sacrifice; so also to set light by his commandments, is the greatest of all contumelies. And these are the laws of that divine worship, which natural reason dictateth to private men.

But seeing a commonwealth is but one person, it ought also to exhibit to God but one worship; which then it doth, when it commandeth it to be exhibited by private men, publicly. And this is public worship; the property whereof, is to be *uniform:* for those actions that are done differently, by different men, cannot be said to be a public worship. And therefore, where many sorts of worship be allowed, proceeding from the different religions of private men, it cannot be said there is any public worship, nor that the commonwealth is of any religion at all.

And because words (and consequently the attributes of God) have their signification by agreement, and constitution of men; those attributes are to be held significative of honour, that men intend shall so be; and whatsoever may be done by the wills of particular men, where there is no law but reason, may be done by the will of the commonwealth, by laws civil. And because a commonwealth hath no will, nor makes no laws, but those that are made by the will of him, or them that have the sovereign power; it followeth, that those attributes which the sovereign ordaineth, in the worship of God, for signs of honour, ought to be taken and used for such, by private men in their public worship.

But because not all actions are signs by constitution, but some are naturally signs of honour, others of contumely, these latter (which are those that men are ashamed to do in the sight of them they reverence) cannot be made by human power a part of Divine worship; nor the former (such as are decent, modest, humble behaviour) ever be separated from it. But whereas there be an infinite number of actions, and gestures, of an indifferent nature; such of them as the commonwealth shall ordain to be publicly and universally in use, as signs of honour, and part of God's worship, are to be taken and used for such by the subjects. And that which is said in the Scripture, *It is better to obey God than men*, hath place in the kingdom of God by pact, and not by nature.

Having thus briefly spoken of the natural kingdom of God, and his natural laws, I will add only to this chapter a short declaration of his natural punishments. There is no action of man in this life, that is not the beginning of so long a chain of consequences,

as no human providence, is high enough, to give a man a prospect to the end. And in this chain, there are linked together both pleasing and unpleasing events; in such manner, as he that will do any thing for his pleasure, must engage himself to suffer all the pains annexed to it; and these pains, are the natural punishments of those actions, which are the beginning of more harm than good. And hereby it comes to pass, that intemperance is naturally punished with diseases; rashness, with mischances; injustice, with the violence of enemies; pride, with ruin; cowardice, with oppression: negligent government of princes, with rebellion; and rebellion, with slaughter. For seeing punishments are consequent to the breach of laws; natural punishments must be naturally consequent to the breach of the laws of nature; and therefore follow them as their natural, not arbitrary effects.

And thus far concerning the constitution, nature, and right of sovereigns; and concerning the duty of subjects, derived from the principles of natural reason. And now, considering how different this doctrine is, from the practice of the greatest part of the world, especially of these western parts, that have received their moral learning from *Rome*, and *Athens*; and how much depth of moral philosophy is required, in them that have the administration of the sovereign power; I am at the point of believing this my labour, as useless, as the commonwealth of *Plato*; For he also is of opinion that it is impossible for the disorders of state, and change of governments by civil war, ever to be taken away, till sovereigns be philosophers. But when I consider again, that the science of natural justice, is the only science necessary for sovereigns, and their principal ministers; and that they need not be charged with the sciences mathematical, (as by *Plato* they are,) further, than by good laws to encourage men to the study of them; and that neither *Plato*, nor any other philosopher hitherto, hath put into order, and sufficiently or probably proved all the theorems of moral doctrine, that men may learn thereby, both how to govern, and how to obey; I recover some hope, that one time or other, this writing of mine, may fall into the hands of a sovereign, who will consider it himself, (for it is short, and I think clear,) without the help of any interested, or envious interpreter; and by the exercise of entire sovereignty, in protecting the public teaching of it, convert this truth of speculation, into the utility of practice.

A REVIEW AND CONCLUSION

From the contrariety of some of the natural faculties of the mind, one to another, as also of one passion to another, and from their reference to conversation, there has been an argument taken, to infer an impossibility that any one man should be sufficiently disposed to all sorts of civil duty. The severity of judgment, they say, makes men censorious, and unapt to pardon the errors and infirmities of other men: and on the other side, celerity of fancy, makes the thoughts less steady than is necessary, to discern exactly between right and wrong. Again, in all deliberations, and in all pleadings, the faculty of solid reasoning, is necessary: for without it, the resolutions of men are rash, and their sentences unjust: and yet if there be not powerful eloquence, which procureth attention and consent, the effect of reason will be little. But these are contrary faculties; the former being grounded upon principles of truth; the other upon opinions already received, true, or false; and upon the passions and interests of men, which are different, and mutable.

And amongst the passions, *courage*, (by which I mean the contempt of wounds, and violent death) inclineth men to private revenges, and sometimes to endeavour the unsettling of the public peace: and *timorousness*, many times disposeth to the desertion of the public defence. Both these they say cannot stand together in the same person.

And to consider the contrariety of men's opinions, and manners in general, it is, they say, impossible to entertain a constant civil amity with all those, with whom the business of the world constrains us to converse: which business, consisteth almost in nothing else but a perpetual contention for honour, riches, and authority.

To which I answer, that these are indeed great difficulties, but not impossibilities: for by education, and discipline, they may be, and are sometimes reconciled. Judgment and fancy may have place in the same man; but by turns; as the end which he aimeth at

requireth. As the Israelites in Egypt, were sometimes fastened to their labour of making bricks, and other times were ranging abroad to gather straw: so also may the judgment sometimes be fixed upon one certain consideration, and the fancy at another time wandering about the world. So also reason, and eloquence, (though not perhaps in the natural sciences, yet in the moral) may stand very well together. For wheresoever there is place for adorning and preferring of error, there is much more place for adorning and preferring of truth, if they have it to adorn. Nor is there any repugnancy between fearing the laws, and not fearing a public enemy; nor between abstaining from injury, and pardoning it in others. There is therefore no such inconsistence of human nature, with civil duties, as some think. I have known clearness of judgment, and largeness of fancy; strength of reason, and graceful elocution; a courage for the war, and a fear for the laws, and all eminently in one man; and that was my most noble and honoured friend, Mr. Sidney Godolphin; who hating no man, nor hated of any, was unfortunately slain in the beginning of the late civil war, in the public quarrel, by an undiscerned, and an undiscerning hand.

To the Laws of Nature, declared in Chapter 15, I would have this added, *that every man is bound by nature, as much as in him lieth, to protect in war, the authority, by which he is himself protected in time of peace.* For he that pretendeth a right of nature to preserve his own body, cannot pretend a right of nature to destroy him, by whose strength he is preserved: it is a manifest contradiction of himself. And though this law may be drawn by consequence, from some of those that are there already mentioned; yet the times require to have it inculcated, and remembered.

And because I find by divers English books lately printed, that the civil wars have not yet sufficiently taught men in what point of time it is, that a subject becomes obliged to the conqueror; nor what is conquest; nor how it comes about, that it obliges men to obey his laws: therefore for further satisfaction of men therein, I say, the point of time, wherein a man becomes subject to a conqueror, is that point, wherein having liberty to submit to him, he consenteth, either by express words, or by other sufficient sign, to be his subject. When it is that a man hath the liberty to submit, I have showed before in the end of Chapter 21; namely, that for him that hath no obligation to his former sovereign but that of an ordinary subject, it is then, when the means of his life is within the guards and garrisons of the enemy; for it is then, that he hath no longer protection from him, but is protected by the adverse party for his contribution. Seeing therefore such contribution is every where, as a thing inevitable, (notwithstanding it be an assistance to the enemy,) esteemed lawful; a total submission, which is but an assistance to the enemy, cannot be esteemed unlawful. Besides, if a man consider that they who submit, assist the enemy but with part of their estates, whereas they that refuse, assist him with the whole, there is no reason to call their submission, or composition an assistance; but rather a detriment to the enemy. But if a man, besides the obligation of a subject, hath taken upon him a new obligation of a soldier, then he hath not the liberty to submit to a new power, as long as the old one keeps the field, and giveth him means of subsistence, either in his armies, or garrisons: for in this case, he cannot complain of want of protection, and means to live as a soldier. But when that also fails, a soldier also may seek his protection wheresoever he has most hope to have it; and may lawfully submit himself to his new master. And so much for the time when he may do it lawfully, if he will. If therefore he do it, he is undoubtedly bound to be a true subject: for a contract lawfully made, cannot lawfully be broken.

By this also a man may understand, when it is, that men may be said to be conquered; and in what the nature of conquest, and the right of a conqueror consisteth: for this submission is it implieth them all. Conquest, is not the victory itself; but the acquisition by victory, of a right, over the persons of men. He therefore that is slain, is overcome, but not conquered: he that is taken, and put into prison, or chains, is not conquered, though overcome; for he is still an enemy, and may save himself if he can: but he that upon promise of obedience, hath his life and liberty allowed him, is then conquered, and a subject; and not before. The Romans used to say, that their general had *pacified* such a *province*, that is to say, in English, *conquered* it; and that the country was *pacified* by victory, when the people of it had promised *imperata facere*, that is, *to do what the Roman people commanded*

them: this was to be conquered. But this promise may be either express, or tacit: express, by promise: tacit, by other signs. As for example, a man that hath not been called to make such an express promise, (because he is one whose power perhaps is not considerable;) yet if he live under their protection openly, he is understood to submit himself to the government: but if he live there secretly, he is liable to any thing that may be done to a spy, and enemy of the state. I say not, he does any injustice, (for acts of open hostility bear not that name); but that he may be justly put to death. Likewise, if a man, when his country is conquered, be out of it, he is not conquered, nor subject: but if at his return, he submit to the government, he is bound to obey it. So that *conquest* (to define it) is the acquiring of the right of sovereignty by victory. Which right, is acquired, in the people's submission, by which they contract with the victor, promising obedience, for life and liberty.

In Chapter 29, I have set down for one of the causes of the dissolutions of commonwealths, their imperfect generation, consisting in the want of an absolute and arbitrary legislative power; for want whereof, the civil sovereign is fain to handle the sword of justice unconstantly, and as if it were too hot for him to hold. One reason whereof (which I have not there mentioned) is this, that they will all of them justify the war, by which their power was at first gotten, and whereon (as they think) their right dependeth, and not on the possession. As if, for example, the right of the kings of England did depend on the goodness of the cause of William the Conqueror, and upon their lineal, and directest descent from him; by which means, there would perhaps be no tie of the subjects' obedience to their sovereign at this day in all the world: wherein whilst they needlessly think to justify themselves, they justify all the successful rebellions that ambition shall at any time raise against them, and their successors. Therefore I put down for one of the most effectual seeds of the death of any state, that the conquerors require not only a submission of men's actions to them for the future, but also an approbation of all their actions past; when there is scarce a commonwealth in the world, whose beginnings can in conscience be justified.

And because the name of tyranny, signifieth nothing more, nor less, than the name of sovereignty, be it in one, or many men, saving that they that use the former word, are understood to be angry with them they call tyrants; I think the toleration of a professed hatred of tyranny, is a toleration of hatred to commonwealth in general, and another evil seed, not differing much from the former. For to the justification of the cause of a conqueror, the reproach of the cause of the conquered, is for the most part necessary: but neither of them necessary for the obligation of the conquered. And thus much I have thought fit to say upon the review of the first and second part of this discourse.

In Chapter 35, I have sufficiently declared out of the Scripture, that in the commonwealth of the Jews, God himself was made the sovereign, by pact with the people; who were therefore called his *peculiar people*, to distinguish them from the rest of the world, over whom God reigned not by their consent, but by his own power: and that in this kingdom Moses was God's lieutenant on earth; and that it was he that told them what laws God appointed them to be ruled by. But I have omitted to set down who were the officers appointed to do execution; especially in capital punishments; not then thinking it a matter of so necessary consideration, as I find it since. We know that generally in all commonwealths, the execution of corporal punishments, was either put upon the guards, or other soldiers of the sovereign power; or given to those, in whom want of means, contempt of honour, and hardness of heart, concurred, to make them sue for such an office. But amongst the Israelites it was a positive law of God their sovereign, that he that was convicted of a capital crime, should be stoned to death by the people; and that the witnesses should cast the first stone, and after the witnesses, then the rest of the people. This was a law that designed who were to be the executioners; but not that any one should throw a stone at him before conviction and sentence, where the congregation was judge. The witnesses were nevertheless to be heard before they proceeded to execution, unless the fact were committed in the presence of the congregation itself, or in sight of the lawful judges; for then there needed no other witnesses but the judges themselves. Nevertheless, this manner of proceeding being not thoroughly understood, hath given occasion to a dangerous opinion, that any man may kill another, in some cases,

by a right of zeal; as if the executions done upon offenders in the kingdom of God in old time, proceeded not from the sovereign command, but from the authority of private zeal: which, if we consider the texts that seem to favour it, is quite contrary.

First, where the Levites fell upon the people, that had made and worshipped the Golden Calf, and slew three thousand of them; it was by the commandment of Moses, from the mouth of God; as is manifest, *Exod.* 32. 27. And when the son of a woman of Israel had blasphemed God, they that heard it, did not kill him, but brought him before Moses, who put him under custody, till God should give sentence against him; as appears, *Levit.* 25. 11, 12. Again, (*Numb.* 25. 6, 7) when Phinehas killed Zimri and Cosbi, it was not by right of private zeal: their crime was committed in the sight of the assembly; there needed no witness; the law was known, and he the heir apparent to the sovereignty; and which is the principal point, the lawfulness of his act depended wholly upon a subsequent ratification by Moses, whereof he had no cause to doubt. And this presumption of a future ratification, is sometimes necessary to the safety [of] a commonwealth; as in a sudden rebellion, any man that can suppress it by his own power in the country where it begins, without express law or commission, may lawfully do it, and provide to have it ratified, or pardoned, whilst it is in doing, or after it is done. Also *Numb.* 35. 30, it is expressly said, W*hosoever shall kill the murderer, shall kill him upon the word of witnesses:* but witnesses suppose a formal judicature, and consequently condemn that pretence of *jus zelotarum.* The law of Moses concerning him that enticeth to idolatry, that is to say, in the kingdom of God to a renouncing of his allegiance, (*Deut.* 13. 8) forbids to conceal him, and commands the accuser to cause him to be put to death, and to cast the first stone at him; but not to kill him before he be condemned. And (*Deut.* 17. 4, 5, 6) the process against idolatry is exactly set down: for God there speaketh to the people, as judge, and commandeth them, when a man is accused of idolatry, to enquire diligently of the fact, and finding it true, then to stone him; but still the hand of the witness throweth the first stone. This is not private zeal, but public condemnation. In like manner when a father hath a rebellious son, the law is (*Deut.* 21. 18) that he shall bring him before the judges of the town, and all the people of the town shall stone him. Lastly, by pretence of these laws it was, that St. Stephen was stoned, and not by pretence of private zeal: for before he was carried away to execution, he had pleaded his cause before the high priest. There is nothing in all this, nor in any other part of the Bible, to countenance executions by private zeal; which being oftentimes but a conjunction of ignorance and passion, is against both the justice and peace of a commonwealth.

In chapter 36, I have said, that it is not declared in what manner God spake supernaturally to Moses: not that he spake not to him sometimes by dreams and visions, and by a supernatural voice, as to other prophets: for the manner how he spake unto him from the mercy-seat, is expressly set down *Numbers* 7. 89, in these words, *From that time forward, when Moses entered into the Tabernacle of the congregation to speak with God, he heard a voice which spake unto him from over the mercy-seat, which is over the Ark of the testimony, from between the cherubims he spake unto him.* But it is not declared in what consisted the preeminence of the manner of God's speaking to Moses, above that of his speaking to other prophets, as to Samuel, and to Abraham, to whom he also spake by a voice, (that is, by vision) unless the difference consist in the clearness of the vision. For *face to face,* and *mouth to mouth,* cannot be literally understood of the infiniteness, and incomprehensibility of the Divine nature.

And as to the whole doctrine, I see not yet, but the principles of it are true and proper; and the ratiocination solid. For I ground the civil right of sovereigns, and both the duty and liberty of subjects, upon the known natural inclinations of mankind, and upon the articles of the law of nature; of which no man, that pretends but reason enough to govern his private family, ought to be ignorant. And for the power ecclesiastical of the same sovereigns, I ground it on such texts, as are both evident in themselves, and consonant to the scope of the whole Scripture. And therefore am persuaded, that he that shall read it with a purpose only to be informed, shall be informed by it. But for those that by writing, or public discourse, or by their eminent actions, have already engaged themselves to the maintaining of contrary opinions, they will not be so easily satisfied. For in such cases, it is natural

for men, at one and the same time, both to proceed in reading, and to lose their attention, in the search of objections to that they had read before: Of which in a time wherein the interests of men are changed (seeing much of that doctrine, which serveth to the establishing of a new government, must needs be contrary to that which conduced to the dissolution of the old,) there cannot choose but be very many.

In that part which treateth of a Christian commonwealth, there are some new doctrines, which, it may be, in a state where the contrary were already fully determined, were a fault for a subject without leave to divulge, as being an usurpation of the place of a teacher. But in this time, that men call not only for peace, but also for truth, to offer such doctrines as I think true, and that manifestly tend to peace and loyalty, to the consideration of those that are yet in deliberation, is no more, but to offer new wine, to be put into new cask, that both may be preserved together. And I suppose, that then, when novelty can breed no trouble, nor disorder in a state, men are not generally so much inclined to the reverence of antiquity, as to prefer ancient errors, before new and well proved truth.

There is nothing I distrust more than my elocution, which nevertheless I am confident (excepting the mischances of the press) is not obscure. That I have neglected the ornament of quoting ancient poets, orators, and philosophers, contrary to the custom of late time, (whether I have done well or ill in it,) proceedeth from my judgment, grounded on many reasons. For first, all truth of doctrine dependeth either upon *reason*, or upon *Scripture;* both which give credit to many, but never receive it from any writer. Secondly, the matters in question are not of *fact*, but of *right*, wherein there is no place for *witnesses*. There is scarce any of those old writers, that contradicteth not sometimes both himself and others; which makes their testimonies insufficient. Fourthly, such opinions as are taken only upon credit of antiquity, are not intrinsically the judgment of those that cite them, but words that pass (like gaping) from mouth to mouth. Fifthly, it is many times with a fraudulent design that men stick their corrupt doctrine with the cloves of other men's wit. Sixthly, I find not that the ancients they cite, took it for an ornament, to do the like with those that wrote before them. Seventhly, it is an argument of indigestion, when Greek and Latin sentences unchewed come up again, as they use to do, unchanged. Lastly, though I reverence those men of ancient time, that either have written truth perspicuously, or set us in a better way to find it out ourselves; yet to the antiquity itself I think nothing due: For if we will reverence the age, the present is the oldest. If the antiquity of the writer, I am not sure, that generally they to whom such honour is given, were more ancient when they wrote, than I am that am writing: But if it be well considered, the praise of ancient authors, proceeds not from the reverence of the dead, but from the competition, and mutual envy of the living.

To conclude, there is nothing in this whole discourse, nor in that I writ before of the same subject in Latin, as far as I can perceive, contrary either to the Word of God, or to good manners; or to the disturbance of the public tranquillity. Therefore I think it may be profitably printed, and more profitably taught in the Universities, in case they also think so, to whom the judgment of the same belongeth. For seeing the Universities are the fountains of civil, and moral doctrine, from whence the preachers, and the gentry, drawing such water as they find, use to sprinkle the same (both from the pulpit, and in their conversation) upon the people, there ought certainly to be great care taken, to have it pure, both from the venom of heathen politicians, and from the incantation of deceiving spirits. And by that means the most men, knowing their duties, will be the less subject to serve the ambition of a few discontented persons, in their purposes against the state; and be the less grieved with the contributions necessary for their peace, and defence; and the governors themselves have the less cause, to maintain at the common charge any greater army, than is necessary to make good the public liberty, against the invasions and encroachments of foreign enemies.

And thus I have brought to an end my Discourse of Civil and Ecclesiastical Government, occasioned by the disorders of the present time, without partiality, without application, and without other design, than to set before men's eyes the mutual relation between protection and obedience; of which the condition of human nature, and the laws divine, (both natural and positive) require an inviolable observation. And

though in the revolution of states, there can be no very good constellation for truths of this nature to be born under, (as having an angry aspect from the dissolvers of an old government, and seeing but the backs of them that erect a new,) yet I cannot think it will be condemned at this time, either by the public judge of doctrine, or by any that desires the continuance of public peace. And in this hope I return to my interrupted speculation of bodies natural; wherein, (if God give me health to finish it,) I hope the novelty will as much please, as in the doctrine of this artificial body it useth to offend. For such truth, as opposeth no man's profit, nor pleasure, is to all men welcome.

JOHN LOCKE

A number of recent interpretations of the political writings of John Locke (1632–1704) situate them in the context of the Exclusion Controversy of 1679–1683 and the Glorious Revolution of 1688–1689. This portrait of Locke as a radical activist reminds us that his political and religious writings, like those of Hobbes before him, are intimately associated with the turbulent events of seventeenth-century England. His discussions of toleration, property, civil authority, rebellion, and much else are not detached reflections on perennial themes; rather, they are engaged contributions to real political debate and concrete events. Yet, while these events occasioned many arguments in the *Two Treatises*, it is equally true that Locke was dealing with problems of the origin, extent, and limits to government that were central to political thought in England and Europe since the 1620s and remain central today. Moreover, as with his predecessors, his thinking reverberated well beyond these boundaries, especially in the next century in America, where his account of property, his argument for political obligation, and his justification for the right of a people to rebel against an oppressive government were widely cited in the years preceding the American Revolution. Locke, then, was both a living and a posthumous revolutionary, a defender of liberal government in his own world and in years and places far from his own. There is nothing belated about Locke's importance to the tradition of Western political theory and philosophy.

Locke was born in Somerset in 1632, went to Westminster, an excellent school near London, and matriculated at Christ Church, Oxford, where, as Peter Laslett tells us, he was "urbane, idle, unhappy, and unremarkable." Locke took a medical degree, in order to avoid the clergy, and studied philosophy. His interest in the science of his day continued throughout his life; in 1668 he was elected to the Royal Society, and he was a friend of Robert Boyle, Isaac Newton, Thomas Sydenham, and other figures central to the development of the new science. Like Hobbes, shortly after his graduation Locke became associated with a wealthy, powerful patron. Anthony Ashley Cooper, the first Earl of Shaftesbury, played a major role in Restoration politics and religious life. He strongly advocated toleration, vigorously opposed the threat of Catholic influence in England, and was a leader in the movement to exclude Charles II's brother, James, a Catholic, from the line of succession to the throne. Locke became, first, Shaftesbury's physician, then his research associate, coauthor, and political advisor. In the years of the Exclusion Controversy, Locke was active in Shaftesbury's revolutionary group, and even during Shaftesbury's imprisonment in 1680 and after his death in 1683, Locke continued his participation in this radical political movement.

In 1683, after the failure of the famous Rye House Plot to assassinate Charles II, Locke fled to Holland. There he played an active role in the community of exiled revolutionaries, negotiating transfers of funds, writing, and working in behalf of the aborted attempt to place the Duke of Monmouth on the throne. Prior to his flight to the Continent, Locke deposited with his old friend James Tyrrell a manuscript on political matters. Most likely it was the first of the *Two Treatises*, a detailed critique of the patriarchalism and doctrine of the Adamite right of kings presented in the recently republished work of Robert Filmer. During these years of the Exclusion Controversy and the debate over the rights of government, Locke, like Algernon Sydney (regicide and author of *Discourses Concerning Government*), Tyrrell (author of *Patriarcha Non Monarcha*), and Shaftesbury himself, was absorbed with the notion of political power and the rights of the people. This fragment, the *First Treatise*, was the initial product of these early reflections. But it was not the last. In the 1680s Locke added to his earlier work and by the decade's end had completed a second treatise to accompany the first. In it he developed his famous account of the state of nature in terms of his conception of property

and labor, his argument for the role and authority of government, and his defense of the right of resistance and the rights of the people against an oppressive government. The two treatises were published anonymously in 1689, one year after the installation of William and Mary and in the same year as Locke's *A Letter Concerning Toleration*.

After his return to England in 1689, Locke became a celebrity. By the end of the year appeared his most famous and influential work, the result of twenty years' labor and the foundation of his intellectual prominence, *An Essay Concerning Human Understanding*. Here Locke registers his important critique of Descartes's doctrine of innate ideas, argues for the empirical foundation of all of our concepts, beliefs, and judgments, and clarifies the nature and extent of our knowledge. Along the way, he discusses those ideas which ground the notion of natural law, which is so fundamental for his account of government in the *Second Treatise*. For his remaining years, Locke was revered as the author of the *Essay*. He produced a stream of works, on education, money, religion, and much else, engaged in public controversies over his work, and served as a public official. In 1696 he became a member of the Board of Trade; later he was to arrange for his friend, Isaac Newton, to be appointed Warden of the Mint.

In 1702 Locke suffered an attack that left him largely deaf, and then, on October 29, 1704, in Essex, in the home of his closest friend, the wife of Francis Masham, Damaris Cudworth, who had cared for him during his final dozen years, he died quietly. Locke the radical had made peace with his notoriety. He had become an intellectual giant and a respected political participant in a world that knew only part of him. For virtually all of his life, it was unknown by most that the great philosopher was also the author of the *Two Treatises of Government*.

Two Treatises of Civil Government

PREFACE

READER,

Thou hast here the beginning and end of a discourse concerning government; what fate has otherwise disposed of the papers that should have filled up the middle, and were more than all the rest, it is not worth while to tell thee. These, which remain, I hope are sufficient to establish the throne of our great restorer, our present King William; to make good his title in the consent of the people; which being the only one of all lawful governments, he has more fully and clearly than any prince in Christendom; and to justify to the world the people of England, whose love of their just and natural rights, with their resolution to preserve them, saved the nation when it was on the very brink of slavery and ruin. If these papers have that evidence I flatter myself is to be found in them, there will be no great miss of those which are lost, and my reader may be satisfied without them. For I imagine, I shall have neither the time nor inclination to repeat my pains, and fill up the wanting part of my answer, by tracing Sir Robert again, through all the windings and obscurities which are to be met with in the several branches of his wonderful system. The king, and body of the nation, have since so thoroughly confuted his hypothesis, that I suppose no body hereafter will have either the confidence to appear against our common safety, and be again an advocate for slavery; or the weakness to be deceived with contradictions dressed up in a popular style, and well turned periods. For if any one will be at the pains himself, in those parts which are here untouched, to strip Sir Robert's discourses of the flourish of doubtful expressions, and endeavour to reduce his words to direct, positive, intelligible propositions, and then compare them one with another, he will quickly be satisfied there was never so much glib nonsense put together in well sounding English. If he think it not worth while to examine his works all through, let him make an experiment in that part where he treats of usurpation; and let him try whether he can, with all his skill, make Sir Robert intelligible, and consistent with himself, or common sense. I should not speak so plainly of a gentleman, long since past answering, had not the pulpit, of late years, publicly owned his doctrine, and made it the current divinity of the times. It is necessary those men, who, taking on them to be teachers, have so dangerously misled others, should be openly shewed of what authority this their patriarch is, whom they have so blindly followed; that so they may either retract what upon so ill grounds they have vented, and cannot be maintained; or else justify those principles which they preached up for gospel, though they had no better an author than an English courtier. For I should not have writ against Sir Robert, or taken the pains to shew his mistakes, inconsistencies, and want of (what he so much boasts of, and pretends wholly to build on) scripture-proofs, were there not men amongst us, who, by crying up his books, and espousing his doctrine, save me from the reproach of writing against a dead adversary. They have been so zealous in this point, that, if I have done him any wrong, I cannot hope they should spare me. I wish, where they have done the truth and the public wrong, they would be as ready to redress it, and allow its just weight to this reflection, viz. that there cannot be done a greater mischief to prince and people, than the propagating wrong notions concerning government; that so at last all times might not have reason to complain of the *drum ecclesiastic*. If any one, really concerned for truth, undertake the confutation of my hypothesis, I promise him either to recant my mistake, upon fair conviction; or to answer his difficulties. But he must remember two things,

First, That cavilling here and there, at some expression, or little incident of my discourse, is not an answer to my book.

Secondly, That I shall not take railing for arguments, nor think either of these worth my notice. Though I shall always look on myself as bound to give satisfaction to any one, who shall appear to be conscientiously scrupulous in the point, and shall shew any just grounds for his scruples.

I have nothing more, but to advertise the reader that A. stands for our author. O. for his Observations on Hobbes, Milton, &c. And that a bare quotation of pages always means pages of his *Patriarcha*, edit. 1680.

Second Treatise of Government

Chap.

1. The introduction
2. Of the state of nature
3. Of the state of war
4. Of slavery
5. Of property
6. Of paternal power
7. Of political or civil society
8. Of the beginning of political societies
9. Of the ends of political society and government
10. Of the forms of a commonwealth
11. Of the extent of the legislative power
12. Of the legislative, executive, and federative power of the commonwealth
13. Of the subordination of the powers of the commonwealth
14. Of prerogative
15. Of paternal, political and despotical power, considered together
16. Of conquest
17. Of usurpation
18. Of tyranny
19. Of the dissolution of government

OF CIVIL GOVERNMENT

Chapter 1

1. It having been shewn in the foregoing discourse,

1. That Adam had not, either by natural right of fatherhood, or by positive donation from God, any such authority over his children, or dominion over the world, as is pretended:
2. That if he had, his heirs, yet, had no right to it:
3. That if his heirs had, there being no law of nature, nor positive law of God, that determines, which is the right heir in all cases that may arise, the right of succession, and consequently of bearing rule, could not have been certainly determined:
4. That if even that had been determined, yet the knowledge of which is the eldest line of Adam's posterity, being so long since utterly lost, that in the races of mankind and families of the world, there remains not to one above another the least pretence to be the eldest house, and to have the right of inheritance:

All these premises having, as I think, been clearly made out, it is impossible that the rulers now on earth, should make any benefit, or derive any the least shadow of authority from that, which is held to be the fountain of all power, *Adam's private dominion and paternal jurisdiction;* so that he that will not give just occasion to think that all government in the world is the product only of force and violence, and that men live together by no other rules but that of beasts, where the strongest carries it, and so lay a foundation for perpetual disorder and mischief, tumult, sedition, and rebellion (things that the followers of that hypothesis so loudly cry out against) must of necessity find out another rise of government, another original of political power, and another way of designing and knowing the persons that have it, than what Sir Robert Filmer hath taught us.

2. To this purpose, I think it may not be amiss, to set down what I take to be political power; that the

power of a *magistrate* over a subject may be distinguished from that of a *father* over his children, a *master* over his servant, a *husband* over his *wife*, and a *lord* over his slave. All which distinct powers happening sometimes together in the same man, if he be considered under these different relations, it may help us to distinguish these powers one from another, and shew the difference betwixt a ruler of a commonwealth, a father of a family, and a captain of a galley.

3. *Political power*, then, I take to be a *right* of making laws and penalties of death, and consequently all less penalties for the regulating and preserving of property, and of employing the force of the community, in the execution of such laws, and in the defence of the commonwealth from foreign injury; and all this only for the public good.

Chapter 2

Of the State of Nature

4. To understand political power, right, and derive it from its original, we must consider what state all men are naturally in, and that is, a *state of perfect freedom* to order their actions, and dispose of their possessions and persons, as they think fit, within the bounds of the law of nature; without asking leave, or depending upon the will of any other man.

A *state* also of *equality*, wherein all the power and jurisdiction is reciprocal, no one having more than another; there being nothing more evident, than that creatures of the same species and rank, promiscuously born to all the same advantages of nature, and the use of the same faculties, should also be equal one amongst another without subordination or subjection; unless the lord and master of them all should, by any manifest declaration of his will, set one above another, and confer on him, by an evident and clear appointment, an undoubted right to dominion and sovereignty.

5. This *equality* of men by nature, the judicious Hooker looks upon as so evident in itself, and beyond all question, that he makes it the foundation of that obligation to mutual love amongst men, on which he builds the duties we owe one another, and from whence he derives the great maxims of *justice* and *charity*. His words are, "The like natural inducement hath brought men to know, that it is no less their duty to love others than themselves; for seeing those things which are equal, must needs all have one measure; if I cannot but wish to receive good, even as much at every man's hands, as any man can wish unto his own soul, how should I look to have any part of my desire herein satisfied, unless myself be careful to satisfy the like desire, which is undoubtedly in other men, being of one and the same nature? To have any thing offered them repugnant to this desire, must needs in all respects grieve them as much as me; so that if I do harm, I must look to suffer, there being no reason that others should shew greater measure of love to me, than they have by me shewed unto them: my desire therefore to be loved of my equals in nature, as much as possibly may be, imposeth upon me a natural duty of bearing to themward fully the like affection: From which relation of equality between ourselves and them that are as ourselves, what several rules and canons natural reason hath drawn, for direction of life, no man is ignorant." Eccl. Pol. L. I.

6. But though this be *a state of liberty*, yet *it is not a state of licence:* though man in that state have an uncontrolable liberty to dispose of his person or possessions, yet he has not liberty to destroy himself, or so much as any creature in his possession, but where some nobler use than its bare preservation calls for it. The *state of nature* has a law of nature to govern it, which obliges every one: And reason, which is that law, teaches all mankind, who will but consult it, that being all *equal and independent*, no one ought to harm another in his life, health, liberty, or possessions. For men being all the workmanship of one omnipotent and infinitely wise Maker; all the servants of one sovereign master, sent into the world by his order, and about his business; they are his property, whose workmanship they are, made to last during his, not another's pleasure. And being furnished with like faculties, sharing all in one community of nature, there cannot be supposed any such subordination among us, that may authorize us to destroy another, as if we were made for one another's uses, as the inferior ranks of creatures are for ours. Every one, as he is *bound to preserve himself*, and not to quit his station wilfully, so by the like reason, when his own preservation

comes not in competition, ought he, as much as he can, *to preserve the rest of mankind*, and may not, unless it be to do justice to an offender, take away or impair the life, or what tends to the preservation of life, the liberty, health, limb, or goods of another.

7. And that all men may be restrained from invading others rights, and from doing hurt to one another, and the law of nature be observed, which willeth the peace and *preservation of all mankind*, the *execution* of the law of nature is, in that state, put into every man's hands, whereby every one has a right to punish the transgressors of that law to such a degree as may hinder its violation. For the *law of nature* would, as all other laws that concern men in this world, be in vain, if there were no body that in the state of nature had a *power to execute* that law, and thereby preserve the innocent and restrain offenders. And if any one in the state of nature may punish another for any evil he has done, every one may do so. For in that *state of perfect equality*, where naturally there is no superiority or jurisdiction of one over another, what any may do in prosecution of that law, every one must needs have a right to do.

8. And thus, in the state of nature, *one man comes by a power over another*; but yet no absolute or arbitrary power, to use a criminal, when he has got him in his hands, according to the passionate heats, or boundless extravagancy of his own will; but only to retribute to him, so far as calm reason and conscience dictate, what is proportionate to his *transgression*; which is so much as may serve for *reparation* and *restraint*. For these two are the only reasons, why one man may lawfully do harm to another, which is that we call *punishment*. In transgressing the law of nature, the offender declares himself to live by another rule than that of reason and common equity, which is that measure God has set to the actions of men, for their mutual security; and so he becomes dangerous to mankind, the tye, which is to secure them from injury and violence, being slighted and broken by him. Which being a trespass against the whole species, and the peace and safety of it, provided for by the law of nature; every man upon this score, by the right he hath to preserve mankind in general, may restrain, or, where it is necessary, destroy things noxious to them, and so may bring such evil on any one, who hath transgressed that law, as may make him repent the doing of it, and thereby deter him, and by his example others, from doing the like mischief. And in this case, and upon this ground, *every man hath a right to punish the offender, and be executioner of the law of nature*.

9. I doubt not but this will seem a very strange doctrine to some men: but before they condemn it, I desire them to resolve me, by what right any prince or state can put to death, or *punish an alien*, for any crime he commits in their country. It is certain their laws, by virtue of any sanction they receive from the promulgated will of the legislative, reach not a stranger. They speak not to him, nor, if they did, is he bound to hearken to them. The legislative authority, by which they are in force over the subjects of that commonwealth, hath no power over him. Those who have the supreme power of making laws in England, France, or Holland, are to an Indian but like the rest of the world, men without authority: And therefore, if by the law of nature every man hath not a power to punish offences against it, as he soberly judges the case to require, I see not how the magistrates of any community can *punish an alien* of another country; since in reference to him, they can have no more power, than what every man naturally may have over another.

10. Besides the crime which consists in violating the law, and varying from the right rule of reason, whereby a man so far becomes degenerate, and declares himself to quit the principles of human nature, and to be a noxious creature, there is commonly injury done to some person or other, and some other man receives damage by his transgression, in which case he who hath received any damage, has besides the right of punishment common to him with other men, a particular right to seek *reparation* from him that has done it. And any other person who finds it just, may also join with him that is injured, and assist him in recovering from the offender so much as may make satisfaction for the harm he has suffered.

11. From these *two distinct rights*, the one of *punishing* the *crime for restraint*, and preventing the like offence, which right of punishing is in every body; the other of taking reparation, which belongs only to the injured party; comes it to pass that the magistrate, who by being magistrate, hath the common right of punishing put into his hands, can often, where the

public good demands not the execution of the law, *remit* the punishment of criminal offences by his own authority, but yet cannot *remit* the satisfaction due to any private man, for the damage he has received. That, he who has suffered the damage has a right to demand in his own name, and he alone can remit: The damnified person has this power of appropriating to himself the goods or service of the offender, *by right of self-preservation*, as every man has a power to punish the crime, to prevent its being committed again, *by the right he has of preserving all mankind*; and doing all reasonable things he can in order to that end: And thus it is, that every man, in the state of nature, has a power to kill a murderer, both to deter others from doing the like injury, which no reparation can compensate, by the example of the punishment that attends it from every body, and also *to secure* men from the attempts of a criminal, who having renounced reason, the common rule and measure, God hath given to mankind, hath by the unjust violence and slaughter he hath committed upon one, declared war against all mankind; and therefore may be destroyed as a *lion* or a *tiger*, one of those wild savage beasts, with whom men can have no society nor security: And upon this is grounded the great law of nature, "Whoso sheddeth mans blood, by man shall his blood be shed." And Cain was so fully convinced, that every one had a right to destroy such a criminal, that after the murder of his brother, he cries out, "Every one that findeth me, shall slay me;" so plain was it writ in the hearts of all mankind.

12. By the same reason may a man in the state of nature *punish the lesser breaches* of that law. It will perhaps be demanded, with death? I answer, each transgression may be *punished* to that *degree*, and with so much *severity*, as will suffice to make it an ill bargain to the offender, give him cause to repent, and terrify others from doing the like. Every offence that can be committed in the state of nature, may in the state of nature be also punished equally, and as far forth as it may, in a commonwealth: for though it would be besides my present purpose, to enter here into the particulars of the law of nature, or its *measures of punishment*; yet it is certain there is such a law, and that too, as intelligible and plain to a rational creature, and a studier of that law, as the positive laws of commonwealths, nay possibly plainer; as much as reason is easier to be understood, than the fancies and intricate contrivances of men, following contrary and hidden interests put into words; for so truly are a great part of the *municipal laws* of countries, which are only so far right, as they are founded on the law of nature, by which they are to be regulated and interpreted.

13. To this strange doctrine, viz. That *in the state of nature every one has the executive power* of the law of nature, I doubt not but it will be objected, that it is unreasonable for men to be judges in their own cases, that self-love will make men partial to themselves and their friends: And on the other side, that ill nature, passion and revenge will carry them too far in punishing others; and hence nothing but confusion and disorder will follow, and that therefore God hath certainly appointed government to restrain the partiality and violence of men. I easily grant, that civil government is the proper remedy for the inconveniencies of the state of nature, which must certainly be great, where men may be judges in their own case, since it is easy to be imagined, that he who was so unjust as to do his brother an injury, will scarce be so just as to condemn himself for it: But I shall desire those who make this objection, to remember, that *absolute monarchs* are but men, and if government is to be the remedy of those evils, which necessarily follow from men's being judges in their own cases, and the state of nature is therefore not to be endured, I desire to know what kind of government that is, and how much better it is than the state of nature, where one man commanding a multitude, has the liberty to be judge in his own case, and may do to all his subjects whatever he pleases, without the least liberty to any one to question or control those who execute his pleasure? and in whatsoever he doth, whether led by reason, mistake or passion, must be submitted to? Much better it is in the state of nature, wherein men are not bound to submit to the unjust will of another: And if he that judges, judges amiss in his own, or any other case, he is answerable for it to the rest of mankind.

14. It is often asked as a mighty objection, *where are*, or ever were, there any *men in such a state of nature*? To which it may suffice as an answer at present: That since all princes and rulers of independent governments, all through the world, are in a state of

nature, it is plain the world never was, nor ever will be, without numbers of men in that state. I have named all governors of independent communities, whether they are, or are not, in league with others. For it is not every compact that puts an end to the state of nature between men, but only this one of agreeing together mutually to enter into one community, and make one body politic; other promises and compacts men may make one with another, and yet still be in the state of nature. The promises and bargains for truck, &c. between the two men in the desert island, mentioned by Garcilasso de la Vega, in his history of Peru; or between a Swiss and an Indian, in the woods of America, are binding to them, though they are perfectly in a state of nature, in reference to one another. For truth and keeping of faith belongs to men as men, and not as members of society.

15. To those that say, there were never any men in the state of nature, I will not only oppose the authority of the judicious Hooker, *Eccl. Pol. lib. I. sect. 10*, where he says, "The laws which have been hitherto mentioned," i.e. the laws of nature, "do bind men absolutely, even as they are men, although they have never any settled fellowship, never any solemn agreement amongst themselves what to do or not to do, but for as much as we are not by our selves sufficient to furnish ourselves with competent store of things, needful for such a life, as our nature doth desire, a life fit for the dignity of man; therefore to supply those defects and imperfections which are in us, as living singly and solely by ourselves, we are naturally induced to seek communion and fellowship with others. This was the cause of men's uniting themselves at first in politic societies." But I moreover affirm, that all men are naturally in that state, and remain so, till by their own consents they make themselves members of some politic society; and I doubt not in the sequel of this discourse to make it very clear.

Chapter 3

Of the State of War

16. The *state of war* is a state of *enmity* and *destruction:* And therefore declaring by word or action, not a passionate and hasty, but a sedate settled design upon another man's life, *puts him in a state of war* with him against whom he has declared such an intention, and so has exposed his life to the other's power to be taken away by him, or any one that joins with him in his defence, and espouses his quarrel: it being reasonable and just I should have a right to destroy that which threatens me with destruction. For *by the fundamental law of nature, man being to be preserved* as much as possible, when all cannot be preserved, the safety of the innocent is to be preferred: And one may destroy a man who makes war upon him, or has discovered an enmity to his being, for the same reason that he may kill a *wolf* or a *lion;* because such men are not under the ties of the common law of reason, have no other rule, but that of force and violence, and so may be treated as beasts of prey, those dangerous and noxious creatures, that will be sure to destroy him whenever he falls into their power.

17. And hence it is, that he who attempts to get another man into his absolute power, does thereby *put himself into a state of war* with him; it being to be understood as a declaration of a design upon his life. For I have reason to conclude, that he who would get me into his power without my consent, would use me as he pleased when he got me there, and destroy me too when he had a fancy to it; for no body can desire to *have me in his absolute power* unless it be to compel me by force to that which is against the right of my freedom, i.e. make me a slave. To be free from such force is the only security of my preservation; and reason bids me look on him, as an enemy to my preservation, who would take away that freedom which is the fence to it; so that he who makes an *attempt to enslave* me, thereby puts himself into a state of war with me. He that, in the state of nature, *would take away the freedom* that belongs to any one in that state, must necessarily be supposed to have a design to take away every thing else, that *freedom* being the foundation of all the rest: As he that, in the state of society, would take away the freedom belonging to those of that society or commonwealth, must be supposed to design to take away from them every thing else, and so be looked on as *in a state of war.*

18. This makes it lawful for a man to *kill a thief,* who has not in the least hurt him, nor declared any design upon his life, any farther, than by the use of

force, so to get him in his power, as to take away his money, or what he pleases, from him; because using force, where he has no right, to get me into his power, let his pretence be what it will, I have no reason to suppose, that he, who would *take away my liberty*, would not, when he had me in his power, take away every thing else. And therefore it is lawful for me to treat him as one who has put *himself into a state of war* with me, i.e. kill him if I can; for to that hazard does he justly expose himself, whoever introduces a state of war, and is aggressor in it.

19. And here we have the plain *difference between the state of nature and the state of war*; which however some men have confounded, are as far distant, as a state of peace, good will, mutual assistance and preservation, and a state of enmity, malice, violence and mutual destruction, are one from another. Men living together according to reason, without a common superior on earth, with authority to judge between them, is *properly the state of nature*. But force, or a declared design of force, upon the person of another, where there is no common superior on earth to appeal to for relief, *is the state of war*: And it is the want of such an appeal gives a man the right of war even against an aggressor, though he be in society and a fellow subject. Thus a *thief*, whom I cannot harm, but by appeal to the law, for having stolen all that I am worth, I may kill, when he sets on me to rob me but of my horse or coat; because the law, which was made for my preservation, where it cannot interpose to secure my life from present force, which, if lost, is capable of no reparation, permits me my own defence, and the right of war, a liberty to kill the aggressor, because the aggressor allows not time to appeal to our common judge, nor the decision of the law, for remedy in a case where the mischief may be irreparable. *Want of a common judge with authority, puts all men in a state of nature: Force without right, upon a man's person, makes a state of war*, both where there is, and is not, a common judge.

20. But when the actual force is over, the *state of war ceases* between those that are in society, and are equally on both sides subjected to the fair determination of the law; because then there lies open the remedy of appeal for the past injury, and to prevent future harm: but where no such appeal is, as in the state of nature, for want of positive laws, and judges with authority to appeal to, *the state of war once begun, continues* with a right to the innocent party to destroy the other whenever he can, until the aggressor offers peace, and desires reconciliation on such terms as may repair any wrongs he has already done, and secure the innocent for the future: nay, where an appeal to the law, and constituted judges, lies open, but the remedy is denied by a manifest perverting of justice, and a barefaced wresting of the laws to protect or indemnify the violence or injuries of some men, or party of men, *there* it *is* hard to imagine any thing but *a state of war*. For wherever violence is used, and injury done, though by hands appointed to administer justice, it is still violence and injury, however coloured with the name, pretences, or forms of law, the end whereof being to protect and redress the innocent, by an unbiassed application of it, to all who are under it; wherever that is not *bona fide* done, *war is made* upon the sufferers, who having no appeal on earth to right them, they are left to the only remedy in such cases, an appeal to heaven.

21. To avoid this *state of war* (wherein there is no appeal but to heaven, and wherein every the least difference is apt to end, where there is no authority to decide between the contenders) is one great *reason of men's putting themselves into society*, and quitting the state of nature. For where there is an authority, a power on earth, from which relief can be had by *appeal*, there the continuance of the *state of war* is excluded, and the controversy is decided by that power. Had there been any such court, any superior jurisdiction on earth, to determine the right between Jephthah and the Ammonites, they had never come to a *state of war*: But we see he was forced to appeal to heaven. "The Lord the Judge," says he, "be judge this day, between the children of Israel and the children of Ammon," *Judg.* xi. 27, and then prosecuting, and relying on his appeal, he leads out his army to battle: and therefore in such controversies, where the question is put, *who shall be judge?* it cannot be meant, who shall decide the controversy; every one knows what Jephthah here tells us, that "the Lord the Judge" shall judge. Where there is no judge on earth, the appeal lies to God in heaven. That question then cannot mean, who shall judge? whether another hath put himself in a *state of war* with me, and whether I may, as Jephthah did, *appeal to heaven* in it? of that

I myself can only be judge in my own conscience, as I will answer it, at the great day, to the supreme judge of all men.

Chapter 4

Of Slavery

22. The *natural liberty* of man is to be free from any superior power on earth, and not to be under the will or legislative authority of man, but to have only the law of nature for his rule. The *liberty of man*, in society, is to be under no other legislative power, but that established, by consent, in the commonwealth; nor under the dominion of any will, or restraint of any law, but what that legislative shall enact, according to the trust put in it. Freedom then is not what Sir Robert Filmer tells us, O, A. 55. "a liberty for every one to do what he lists, to live as he pleases, and not to be tied by any laws:" But *freedom of men under government*, is, to have a standing rule to live by, common to every one of that society, and made by the legislative power erected in it; a liberty to follow my own will in all things, where the rule prescribes not; and not to be subject to the inconstant, uncertain, unknown, arbitrary will of another man: As *freedom of nature* is, to be under no other restraint but the law of nature.

23. This freedom from absolute, arbitrary power, is so necessary to, and closely joined with a man's preservation, that he cannot part with it, but by what forfeits his preservation and life together. For a man, not having the power of his own life, cannot, by compact, or his own consent, enslave himself to any one, nor put himself under the absolute, arbitrary power of another, to take away his life, when he pleases. No body can give more power than he has himself; and he that cannot take away his own life, cannot give another power over it. Indeed, having by his fault forfeited his own life, by some act that deserves death; he, to whom he has forfeited it, may (when he has him in his power) delay to take it, and make use of him to his own service, and he does him no injury by it. For, whenever he finds the hardship of his slavery outweigh the value of his life, it is in his power, by resisting the will of his master, to draw on himself the death he desires.

24. This is the perfect condition of *slavery*, which is nothing else, but *the state of war continued, between a lawful conqueror and a captive*. For, if once compact enter between them, and make an agreement for a limited power on the one side, and obedience on the other, the state of war and slavery ceases, as long as the compact endures. For, as has been said, no man can, by agreement, pass over to another that which he hath not in himself, a power over his own life.

I confess, we find among the Jews, as well as other nations, that men did sell themselves; but, it is plain, this was only to *drudgery, not to slavery*. For it is evident, the person sold was not under an absolute, arbitrary, despotical power. For the master could not have power to kill him, at any time, whom, at a certain time, he was obliged to let go free out of his service: and the master of such a servant was so far from having an arbitrary power over his life, that he could not, at pleasure, so much as maim him, but the loss of an eye, or tooth, set him free, *Exod.* xxi.

Chapter 5

Of Property

25. Whether we consider natural *reason*, which tells us, that men, being once born, have a right to their preservation, and consequently to meat and drink, and such other things as nature affords for their subsistence: or *revelation*, which gives us an account of those grants God made of the world to Adam, and to Noah, and his sons, it is very clear, that God, as King David says, *Psal.* cxv. 16, "has given the earth to the children of men," given it to mankind in common. But this being supposed, it seems to some a very great difficulty how any one should ever come to have a *property* in any thing: I will not content myself to answer, that if it be difficult to make out *property*, upon a supposition, that God gave the world to Adam, and his posterity in common; it is impossible that any man, but one universal monarch, should have any property upon a supposition, that God gave the world to Adam, and his heirs in succession, exclusive of all the rest of his posterity. But I shall endeavour

to shew, how men might come to have a *property* in several parts of that which God gave to mankind in common, and that without any express compact of all the commoners.

26. God, who hath given the world to men in common, hath also given them reason to make use of it to the best advantage of life, and convenience. The earth, and all that is therein, is given to men for the support and comfort of their being. And though all the fruits it naturally produces, and beasts it feeds, belong to mankind in common, as they are produced by the spontaneous hand of nature; and no body has originally a private dominion, exclusive of the rest of mankind, in any of them, as they are thus in their natural state: yet being given for the use of men, there must of necessity be *a means to appropriate* them some way or other, before they can be of any use, or at all beneficial to any particular man. The fruit, or venison, which nourishes the wild Indian, who knows no enclosure, and is still a tenant in common, must be his, and so his, i.e. a part of him, that another can no longer have any right to it, before it can do him any good for the support of his life.

27. Though the earth, and all inferior creatures, be common to all men, yet every man has a property in his own person: this no body has any right to but himself. The labour of his body, and the work of his hands, we may say, are properly his. Whatsoever then he removes out of the state that nature hath provided, and left it in, he hath mixed his labour with, and joined to it something that is his own, and thereby makes it his property. It being by him removed from the common state nature hath placed it in, it hath by this labour something annexed to it, that excludes the common right of other men. For this labour being the unquestionable property of the labourer, no man but he can have a right to what that is once joined to, at least where there is enough, and as good, left in common for others.

28. He that is nourished by the acorns he picked up under an oak, or the apples he gathered from the trees in the wood, has certainly appropriated them to himself. No body can deny but the nourishment is his. I ask then, when did they begin to be his? When he digested? Or when he eat? Or when he boiled? Or when he brought them home? Or when he picked them up? And it is plain, if the first gathering made them not his, nothing else could. That *labour* put a distinction between them and common: that added something to them more than nature, the common mother of all, had done; and so they became his private right. And will any one say he had no right to those acorns or apples he thus appropriated, because he had not the consent of all mankind to make them his? Was it a robbery thus to assume to himself what belonged to all in common? If such a consent as that was necessary, man had starved, notwithstanding the plenty God had given him. We see in *commons*, which remain so by compact, that it is the taking any part of what is common, and removing it out of the state nature leaves it in, which *begins the property;* without which the common is of no use. And the taking of this or that part does not depend on the express consent of all the commoners. Thus the grass my horse has bit; the turfs my servant has cut; and the ore I have digged in any place, where I have a right to them in common with others, become my *property*, without the assignation or consent of any body. The *labour* that was mine, removing them out of that common state they were in, hath *fixed* my *property* in them.

29. By making an explicit consent of every commoner necessary to any one's appropriating to himself any part of what is given in common, children or servants could not cut the meat, which their father or master had provided for them in common, without assigning to every one his peculiar part. Though the water running in the fountain be every one's, yet who can doubt, but that in the pitcher is his only who drew it out? His *labour* hath taken it out of the hands of nature, where it was common, and belonged equally to all her children, and *hath* thereby *appropriated* it to himself.

30. Thus this law of reason makes the deer that Indian's who hath killed it; it is allowed to be his goods, who hath bestowed his labour upon it, though before it was the common right of every one. And amongst those who are counted the civilized part of mankind, who have made and multiplied positive laws to determine *property*, this original law of nature, for the *beginning of property*, in what was before common, still takes place; and by virtue thereof, what fish any one catches in the ocean, that great and still remaining common of mankind; or what ambergreise

any one takes up here, is *by* the *labour* that removes it out of that common state nature left it in, *made* his *property*, who takes that pains about it. And even amongst us, the hare that any one is hunting, is thought his who pursues her during the chase. For being a beast that is still looked upon as common, and no man's private possession; whoever has employed so much *labour* about any of that kind, as to find and pursue her, has thereby removed her from the state of nature, wherein she was common, and hath *begun a property*.

31. It will perhaps be objected to this, that *if gathering the acorns, or other fruits of the earth, &c.* makes a right to them, then any one may engross as much as he will. To which I answer, Not so. The same law of nature, that does by this means give us property, does also *bound* that *property* too. "God has given us all things richly," 1 *Tim*; vi. 17, is the voice of reason confirmed by inspiration. But how far has he given it us? *To enjoy*. As much as any one can make use of to any advantage of life before it spoils, so much he may by his labour fix a property in: whatever is beyond this, is more than his share, and belongs to others. Nothing was made by God for man to spoil or destroy. And thus, considering the plenty of natural provisions there was a long time in the world, and the few spenders; and to how small a part of that provision the industry of one man could extend itself, and engross it to the prejudice of others; especially keeping within the *bounds*, set by reason, *of* what might serve for his *use*; there could be then little room for quarrels or contentions about property so established.

32. But the *chief matter of property* being now not the fruits of the earth, and the beasts that subsist on it, but the *earth it self*; as that which takes in, and carries with it all the rest: I think it is plain, that *property* in that too is acquired as the former. *As much land* as a man tills, plants, improves, cultivates, and can use the product of, so much is his *property*. He by his labour does, as it were, enclose it from the common. Nor will it invalidate his right, to say every body else has an equal title to it; and therefore he cannot appropriate, he cannot enclose, without the consent of all his fellow commoners, all mankind. God, when he gave the world in common to all mankind, commanded man also to labour, and the penury of his condition required it of him. God and his reason commanded him to subdue the earth, i.e. improve it for the benefit of life, and therein lay out something upon it that was his own, his labour. He that, in obedience to this command of God, subdued, tilled, and sowed any part of it, thereby annexed to it something that was his *property*, which another had no title to, nor could without injury take from him.

33. Nor was this *appropriation* of any parcel of *land*, by improving it, any prejudice to any other man, since there was still enough, and as good left; and more than the yet unprovided could use. So that, in effect, there was never the less left for others because of his enclosure for himself. For he that leaves as much as another can make use of, does as good as take nothing at all. No body could think himself injured by the drinking of another man, though he took a good draught, who had a whole river of the same water left him to quench his thirst: And the case of land and water, where there is enough of both, is perfectly the same.

34. God gave the world to men in common; but since he gave it them for their benefit, and the greatest conveniences of life they were capable to draw from it, it cannot be supposed he meant it should always remain common and uncultivated. He gave it to the use of the industrious and rational, (and *labour* was to be *his title* to it) not to the fancy or covetousness of the quarrelsome and contentious. He that had as good left for his improvement, as was already taken up, needed not complain, ought not to meddle with what was already improved by another's labour: If he did, it is plain he desired the benefit of another's pains, which he had no right to, and not the ground which God had given him in common with others to labour on, and whereof there was as good left, as that already possessed, and more than he knew what to do with, or his industry could reach to.

35. It is true, in *land* that is *common* in England, or any other country, where there is plenty of people under government, who have money and commerce, no one can enclose or appropriate any part, without the consent of all his fellow-commoners: Because this is left common by compact, i.e. by the law of the land, which is not to be violated. And though it be common, in respect of some men, it is not so to all mankind, but is the joint property of this country, or

this parish. Besides, the remainder, after such enclosure, would not be as good to the rest of the commoners, as the whole was when they could all make use of the whole: whereas in the beginning and first peopling of the great common of the world, it was quite otherwise. The law man was under, was rather for appropriating. God commanded, and his wants forced him to *labour*. That was his *property* which could not be taken from him wherever he had fixed it. And hence subduing or cultivating the earth, and having dominion, we see are joined together. The one gave title to the other. So that God, by commanding to subdue, gave authority so far to *appropriate:* And the condition of human life, which requires labour and materials to work on, necessarily introduces private possessions.

36. The *measure of property* nature has well set by the extent of men's *labour, and the conveniences of life:* No man's labour could subdue or appropriate all; nor could his enjoyment consume more than a small part; so that it was impossible for any man, this way, to intrench upon the right of another, or acquire to himself a property, to the prejudice of his neighbour, who would still have room for as good, and as large a possession (after the other had taken out his) as before it was appropriated. This *measure* did confine every man's *possession* to a very moderate proportion, and such as he might appropriate to himself, without injury to any body, in the first ages of the world, when men were more in danger to be lost, by wandering from their company, in the then vast wilderness of the earth, than to be straitened for want of room to plant in. And the same measure may be allowed still without prejudice to any body, as full as the world seems. For supposing a man, or family, in the state they were at first peopling of the world by the children of Adam, or Noah; let him plant in some inland, vacant places of America, we shall find that the *possessions* he could make himself, upon the *measures* we have given, would not be very large, nor, even to this day, prejudice the rest of mankind, or give them reason to complain, or think themselves injured by this man's encroachment, though the race of men have now spread themselves to all the corners of the world, and do infinitely exceed the small number was at the beginning. Nay, the extent of *ground* is of so little value, *without labour*, that I have heard it affirmed, that in Spain itself a man may be permitted to plough, sow, and reap, without being disturbed, upon land he has no other title to, but only his making use of it. But, on the contrary, the inhabitants think themselves beholden to him, who by his industry on neglected and consequently waste land, has increased the stock of corn, which they wanted. But be this as it will, which I lay no stress on; this I dare boldly affirm, that the same *rule of propriety*, (*viz.*) that every man should have as much as he could make use of, would hold still in the world, without straitening any body, since there is land enough in the world to suffice double the inhabitants, had not the *invention of money*, and the tacit agreement of men to put a value on it, introduced (by consent) larger possessions, and a right to them; which, how it has done, I shall by and by shew more at large.

37. This is certain, that in the beginning, before the desire of having more than man needed had altered the intrinsic value of things, which depends only on their usefulness to the life of man; or had *agreed, that a little piece of yellow metal*, which would keep without wasting or decay, should be worth a great piece of flesh, or a whole heap of corn; though men had a right to appropriate, by their labour, each one to himself as much of the things of nature as he could use: yet this could not be much, nor to the prejudice of others, where the same plenty was still left to those who would use the same industry. To which let me add, that he who appropriates land to himself by his labour, does not lessen, but increase the common stock of mankind. For the provisions serving to the support of human life, produced by one acre of enclosed and cultivated land, are (to speak much within compass) ten times more than those which are yielded by an acre of land of an equal richness lying waste in common. And therefore he that encloses land, and has a greater plenty of the conveniencies of life from ten acres, than he could have from an hundred left to nature, may truly be said to give ninety acres to mankind. For his labour now supplies him with provisions out of ten acres, which were by the product of an hundred lying in common. I have here rated the improved land very low, in making its product but as ten to one, when it is much nearer an hundred to one. For I ask, whether in the wild woods and uncultivated waste of

America, left to nature, without any improvement, tillage, or husbandry, a thousand acres yield the needy and wretched inhabitants as many conveniencies of life, as ten acres equally fertile land do in Devonshire, where they are well cultivated?

Before the appropriation of land, he who gathered as much of the wild fruit, killed, caught, or tamed, as many of the beasts as he could; he that so employed his pains about any of the spontaneous products of nature, as any way to alter them from the state which nature put them in, *by* placing any of his *labour* on them, did thereby *acquire a propriety in them:* but if they perished, in his possession, without their due use; if the fruits rotted, or the venison putrified, before he could spend it, he offended against the common law of nature, and was liable to be punished; he invaded his neighbour's share, for he had *no right, farther than his use* called for any of them, and they might serve to afford him conveniencies of life.

38. The same *measures* governed the *possession of land* too: whatsoever he tilled and reaped, laid up and made use of, before it spoiled, that was his peculiar right; whatsoever he enclosed, and could feed, and make use of, the cattle and product was also his. But if either the grass of his inclosure rotted on the ground, or the fruit of his planting perished without gathering, and laying up, this part of the earth, notwithstanding his inclosure, was still to be looked on as waste, and might be the possession of any other. Thus at the beginning, Cain might take as much ground as he could till, and make it his own land, and yet leave enough to Abel's sheep to feed on; a few acres would serve for both their possessions. But as families increased, and industry enlarged their stocks, their *possessions enlarged* with the need of them; but yet it was commonly *without any fixed property in the ground* they made use of, till they incorporated, settled themselves together, and built cities, and then, by consent, they came in time to set out the *bounds of their distinct territories,* and agree on limits between them and their neighbours; and by laws within themselves settled the *properties* of those of the same society. For we see, that in that part of the world which was first inhabited, and therefore like to be best peopled, even as low down as Abraham's time, they wandered with their flocks, and their herds, which was their substance, freely up and down; and this Abraham did, in a country where he was a stranger. Whence it is plain, that at least a great part of the *land lay in common;* that the inhabitants valued it not, nor claimed property in any more than they made use of. But when there was not room enough in the same place, for their herds to feed together, they by consent, as Abraham and Lot did, *Gen.* xiii. 5. separated and enlarged their pasture, where it best liked them. And for the same reason Esau went from his father, and his brother, and planted in Mount Seir, *Gen.* xxxvi. 6.

39. And thus, without supposing any private dominion, and property in Adam, over all the *world,* exclusive of all other men, which can no way be proved, nor any one's property be made out from it; but supposing the *world* given, as it was, to the children of men *in common,* we see how *labour* could make men distinct titles to several parcels of it, for their private uses; wherein there could be no doubt of right, no room for quarrel.

40. Nor is it so strange, as perhaps before consideration it may appear, that the *property of labour* should be able to over-balance the community of land. For it is *labour* indeed that *puts the difference of value* on every thing; and let any one consider what the difference is between an acre of land planted with tobacco or sugar, sown with wheat or barley, and an acre of the same land lying in common, without any husbandry upon it, and he will find, that the improvement of *labour makes* the far greater part of the value. I think it will be but a very modest computation to say, that of the *products* of the earth useful to the life of man, nine tenths are the *effects of labour:* nay, if we will rightly estimate things as they come to our use, and cast up the several expences about them, what in them is purely owing to *nature,* and what to *labour,* we shall find, that in most of them ninety-nine hundredths are wholly to be put on the account of *labour.*

41. There cannot be a clearer demonstration of any thing, than several nations of the Americans are of this, who are rich in land, and poor in all the comforts of life; whom nature having furnished as liberally as any other people, with the materials of plenty, i.e. a fruitful soil, apt to produce in abundance what might serve for food, raiment, and delight; yet *for want of improving it by labour,* have not one

hundredth part of the conveniencies we enjoy: and a king of a large and fruitful territory there feeds, lodges, and is clad worse than a day labourer in England.

42. To make this a little clearer, let us but trace some of the ordinary provisions of life, through their several progresses, before they come to our use, and see how much they receive of their *value from human industry*. Bread, wine, and cloth, are things of daily use, and great plenty, yet notwithstanding, acorns, water, and leaves, or skins, must be our bread, drink, and cloathing, did not labour furnish us with these more useful commodities. For whatever bread is more worth than acorns, wine than water, and *cloth* or *silk*, than leaves, skins, or moss, that is *wholly owing to labour* and *industry*. The one of these being the food and raiment which unassisted nature furnishes us with; the other, provisions which our industry and pains prepare for us, which how much they exceed the other in value, when any one hath computed, he will then see how much *labour makes the far greatest part of the value* of things we enjoy in this world: and the ground which produces the materials, is scarce to be reckoned in, as any, or, at most, but a very small part of it: so little, that even amongst us, land that is left wholly to nature, that hath no improvement of pasturage, tillage, or planting, is called, as indeed it is, *waste*; and we shall find the benefit of it amount to little more than nothing.

This shews how much numbers of men are to be preferred to largeness of dominions; and that the increase of lands, and the right of employing of them, is the great art of government: and that prince, who shall be so wise and godlike, as by established laws of liberty to secure protection and encouragement to the honest industry of mankind, against the oppression of power and narrowness of party, will quickly be too hard for his neighbours; but this by the by. To return to the argument in hand.

43. An acre of land, that bears here twenty bushels of wheat, and another in America, which, with the same husbandry, would do the like, are, without doubt, of the same natural intrinsic value: but yet the benefit mankind receives from the one in a year, is worth 5 l. and from the other possibly not worth a penny, if all the profit an Indian received from it were to be valued, and sold here; at least, I may truly say, not one thousandth. It is *labour* then which *puts the greatest part of the value upon land*, without which it would scarcely be worth any thing: it is to that we owe the greatest part of all its useful products; for all that the straw, bran, bread, of that acre of wheat, is more worth than the product of an acre of as good land, which lies waste, is all the effect of labour. For it is not barely the ploughman's pains, the reaper's and thresher's toil, and the baker's sweat is to be counted into the *bread* we eat; the labour of those who broke the oxen, who digged and wrought the iron and stones, who felled and framed the timber employed about the plough, mill, oven, or any other utensils, which are a vast number requisite to this corn, from its being seed to be sown, to its being made bread, must all be *charged on* the account of *labour*, and received as an effect of that: nature and the earth furnished only the almost worthless materials, as in themselves. It would be a strange *catalogue of things, that industry provided and made use of, about every loaf of bread*, before it came to our use, if we could trace them; iron, wood, leather, bark, timber, stone, bricks, coals, lime, cloth, dying drugs, pitch, tar, masts, ropes, and all the materials made use of in the ship, that brought any of the commodities made use of by any of the workmen, to any part of the work, all which it would be almost impossible, at least too long, to reckon up.

44. From all which it is evident, that though the things of nature are given in common, yet man, by being master of himself, and *proprietor of his own person, and the actions or labour of it, had still in himself the great foundation of property*; and that, which made up the great part of what he applied to the support or comfort of his being, when invention and arts had improved the conveniencies of life, was perfectly his own, and did not belong in common to others.

45. Thus *labour*, in the beginning, *gave a right of property*, wherever any one was pleased to employ it upon what was common, which remained a long while the far greater part, and is yet more than mankind makes use of. Men, at first, for the most part, contented themselves with what unassisted nature offered to their necessities: and though afterwards, in some parts of the world, (where the increase of people and stock, with the *use of money*, had made land scarce, and so of some value) the several *communities*

settled the bounds of their distinct territories, and by laws within themselves regulated the properties of the private men of their society, and so, by *compact* and agreement, *settled the property* which labour and industry began; and the leagues that have been made between several states and kingdoms, either expressly or tacitly disowning all claim and right to the land in the others possession, have, by common consent, given up their pretences to their natural common right, which originally they had to those countries, and so have, by *positive agreement*, *settled a property* amongst themselves, in distinct parts and parcels of the earth; yet there are still *great tracts of ground* to be found, which (the inhabitants thereof not having joined with the rest of mankind, in the consent of the use of their common money) *lie waste*, and are more than the people who dwell on it do, or can make use of, and so still lie in common. Though this can scarce happen amongst that part of mankind that have consented to the use of money.

46. The greatest part of *things really useful* to the life of man, and such as the necessity of subsisting made the first commoners of the world look after, as it doth the Americans now, *are* generally things of *short duration*; such as, if they are not consumed by use, will decay and perish of themselves: gold, silver, and diamonds, are things that fancy or agreement hath put the value on, more than real use, and the necessary support of life. Now of those good things which nature hath provided in common, every one had a right, (as hath been said) to as much as he could use, and property in all that he could affect with his labour; all that his *industry* could extend to, to alter from the state nature had put it in, was his. He that *gathered* a hundred bushels of acorns or apples, had thereby a *property* in them, they were his goods as soon as gathered. He was only to look, that he used them before they spoiled, else he took more than his share, and robbed others. And indeed it was a foolish thing, as well as dishonest, to hoard up more than he could make use of. If he gave away a part to any body else, so that it perished not uselessly in his possession, these he also made use of. And if he also bartered away plums, that would have rotted in a week, for nuts that would last good for his eating a whole year, he did no injury; he wasted not the common stock; destroyed no part of the portion of goods that belonged to others, so long as nothing perished uselessly in his hands. Again, if he would give his nuts for a piece of metal, pleased with its colour; or exchange his sheep for shells, or wool for a sparkling pebble or a diamond, and keep those by him all his life, he invaded not the right of others, he might heap up as much of these durable things as he pleased; the *exceeding of the bounds of* his *just property* not lying in the largeness of his possession, but the perishing of any thing uselessly in it.

47. And thus *came in the use of money*, some lasting thing that men might keep without spoiling, and that by mutual consent men would take in exchange for the truly useful, but perishable supports of life.

48. And as different degrees of industry were apt to give men possessions in different proportions, so this *invention of money* gave them the opportunity to continue and enlarge them. For supposing an island, separate from all possible commerce with the rest of the world, wherein there were but an hundred families, but there were sheep, horses, and cows, with other useful animals, wholesome fruits, and land enough for corn for a hundred thousand times as many, but nothing in the island, either because of its commonness, or perishableness, fit to supply the place of *money:* What reason could any one have there to enlarge his possessions beyond the use of his family and a plentiful supply to its *consumption*, either in what their own industry produced, or they could barter for like perishable, useful commodities with others? Where there is not something, both lasting and scarce, and so valuable to be hoarded up, there men will not be apt to enlarge their *possessions of land*, were it never so rich, never so free for them to take. For I ask, what would a man value ten thousand, or an hundred thousand acres of excellent *land*, ready cultivated and well stocked too with cattle, in the middle of the inland parts of America, where he had no hopes of commerce with other parts of the world, to draw *money* to him by the sale of the product? It would not be worth the enclosing, and we should see him give up again to the wild common of nature, whatever was more than would supply the conveniencies of life to be had there for him and his family.

49. Thus in the beginning all the world was America, and more so than that is now; for no such thing as *money* was any where known. Find out something

that hath the *use and value of money* amongst his neighbours, you shall see the same man will begin presently to *enlarge* his possessions.

50. But since gold and silver, being little useful to the life of man in proportion to food, raiment, and carriage, has its *value* only from the consent of men, whereof *labour* yet *makes*, in great part, the *measure*, it is plain, that men have agreed to a disproportionate and unequal *possession of the earth*, they having, by a tacit and voluntary consent, found out a way how a man may fairly possess more land than he himself can use the product of, by receiving in exchange for the overplus, gold and silver, which may be hoarded up without injury to any one; these metals not spoiling or decaying in the hands of the possessor. This partage of things in an inequality of private possessions, men have made practicable out of the bounds of society, and without compact, only by putting a value on gold and silver, and tacitly agreeing in the use of money. For in governments, the laws regulate the right of property, and the possession of land is determined by positive constitutions.

51. And thus, I think, it is very easy to conceive, without any difficulty *how labour could at first begin a title of property* in the common things of nature, and how the spending it upon our uses bounded it. So that there could then be no reason of quarrelling about title, nor any doubt about the largeness of possession it gave. Right and conveniency went together; for as a man had a right to all he could employ his labour upon, so he had no temptation to labour for more than he could make use of. This left no room for controversy about the title, nor for encroachment on the right of others; what portion a man carved to himself, was easily seen; and it was useless, as well as dishonest, to carve himself too much, or take more than he needed.

Chapter 6

Of Paternal Power

52. It may perhaps be censured as an impertinent criticism, in a discourse of this nature, to find fault with words and names, that have obtained in the world: and yet possibly it may not be amiss to offer new ones, when the old are apt to lead men into mistakes, as this of *paternal power* probably has done, which seems so to place the power of parents over their children wholly in the *father*, as if the *mother* had no share in it, whereas, if we consult reason or revelation, we shall find she hath an equal title. This may give one reason to ask, whether this might not be more properly called *parental power*. For whatever obligation nature and the right of generation lays on children, it must certainly bind them equally to both concurrent causes of it. And accordingly we see the positive law of God every where joins them together without distinction, when it commands the obedience of children: "Honour thy father and thy mother," *Exod.* xx. 12. "Whosoever curseth his father or his mother," *Lev.* xx. 9. "Ye shall fear every man his mother and his father," *Lev.* xix. 5. "Children, obey your parents," &c. *Eph.* vi. 1, is the style of the Old and New Testament.

53. Had but this one thing been well considered, without looking any deeper into the matter, it might perhaps have kept men from running into those gross mistakes they have made, about this power of parents; which, however it might, without any great harshness, bear the name of absolute dominion, and regal authority, when under the title of *paternal power* it seemed appropriated to the father, would yet have sounded but oddly, and in the very name shewn the absurdity, if this supposed absolute power over children had been called *parental*; and thereby have discovered, that it belonged to the *mother* too. For it will but very ill serve the turn of those men, who contend so much for the absolute power and authority of the fatherhood, as they call it, that the mother should have any share in it. And it would have but ill supported the monarchy they contend for, when by the very name it appeared that that fundamental authority, from whence they would derive their government of a single person only, was not placed in one, but two persons jointly. But to let this of names pass.

54. Though I have said above, chap. ii. "That all men by nature are equal," I cannot be supposed to understand all sorts of *equality: age* or *virtue* may give men a just precedency: *excellency of parts* and *merit* may place others above the common level: *birth* may subject some, and *alliance* or *benefits* others, to pay

an observance to those whom nature, gratitude, or other respects, may have made it due; and yet all this consists with the *equality*, which all men are in, in respect of jurisdiction or dominion one over another; which was the *equality* I there spoke of, as proper to the business in hand, being that *equal right*, that every man hath, *to his natural freedom*, without being subjected to the will or authority of any other man.

55. *Children*, I confess, are not born in this state of *equality*, though they are born to it. Their parents have a sort of rule and jurisdiction over them, when they come into the world, and for some time after, but it is but a temporary one. The bonds of this subjection are like the swaddling clothes they are wrapt up in, and supported by, in the weakness of their infancy: Age and reason, as they grow up, loosen them, till at length they drop quite off, and leave a man at his own free disposal.

56. Adam was created a perfect man, his body and mind in full possession of their strength and reason, and so was capable from the first instant of his being to provide for his own support and preservation; and govern his actions according to the dictates of the law of reason which God had implanted in him. From him the world is peopled with his descendants, who are all born infants, weak and helpless, without knowledge or understanding: But to supply the defects of this imperfect state, till the improvement of growth and age hath removed them, Adam and Eve, and after them all *parents* were, by the law of nature, *under an obligation to preserve, nourish, and educate the children*, they had begotten; not as their own workmanship, but the workmanship of their own maker, the Almighty, to whom they were to be accountable for them.

57. The law, that was to govern Adam, was the same that was to govern all his posterity, the *law of reason*. But his offspring having another way of entrance into the world, different from him, by a natural birth, that produced them ignorant and without the use of *reason*, they were not presently *under that law*; for no body can be under a law, which is not promulgated to him: and this law being promulgated or made known by *reason* only, he that is not come to the use of his *reason*, cannot be said to be *under this law*; and Adam's children, being not presently as soon as born, *under this law of reason*, were not presently free. For law, in its true notion, *is* not so much the limitation, *as the direction of a free and intelligent agent* to his proper interest, and prescribes no farther than is for the general good of those under that law. Could they be happier without it, the law, as an useless thing, would of it self vanish: and that ill deserves the name of confinement which hedges us in only from bogs and precipices. So that, however it may be mistaken, *the end of law* is not to abolish or restrain, but *to preserve and enlarge freedom*. For in all the states of created beings capable of laws, *where there is no law, there is no freedom*. For liberty is to be free from restraint and violence from others which cannot be where there is no law: but freedom is not, as we are told, "a liberty for every man to do what he lists:" (for who could be free, when every other man's humour might domineer over him?) but a liberty to dispose, and order as he lists, his person, actions, possessions, and his whole property, within the allowance of those laws under which he is, and therein not to be subject to the arbitrary will of another, but freely follow his own.

58. The *power*, then, *that parents have* over their children, arises from that duty which is incumbent on them, to take care of their offspring during the imperfect state of childhood. To inform the mind, and govern the actions of their yet ignorant nonage, till reason shall take its place, and ease them of that trouble, is what the children want, and the parents are bound to. For God having given man an understanding to direct his actions, has allowed him a freedom of will, and liberty of acting, as properly belonging thereunto, within the bounds of that law he is under. But whilst he is in an estate, wherein he has not understanding of his own to direct his will, he is not to have any will of his own to follow: he that understands for him, must will for him too; he must prescribe to his will, and regulate his actions: but when he comes to the estate that made his *father a freeman*, the *son is a freeman* too.

59. This holds in all the laws a man is under, whether natural or civil. Is a man under the law of nature? *What made him free* of that law? What gave him a free disposing of his property according to his own will, within the compass of that law? I answer, a state of maturity, wherein he might be supposed capable to know that law, that so he might keep his

actions within the bounds of it. When he has acquired that state, he is presumed to know how far that law is to be his guide, and how far he may make use of his *freedom*, and so comes to have it; till then, some body else must guide him, who is presumed to know how far the law allows a liberty. If such a state of reason, such an age of discretion *made him free*, the same shall make his son free too. Is a man under the law of England? W*hat made him free* of that law? That is, to have the liberty to dispose of his actions and possessions according to his own will within the permission of that law? A capacity of knowing that law. Which is supposed by that law, at the age of one and twenty years, and in some cases sooner. If this made the father free, it shall make the son free too. Till then we see the law allows the son to have no will, but he is to be guided by the will of his father or guardian, who is to understand for him. And if the father die, and fail to substitute a deputy in his trust; if he hath not provided a tutor to govern his son, during his minority, during his want of understanding; the law takes care to do it; some other must govern him, and be a will to him, till he hath *attained to a state of freedom*, and his understanding be fit to take the government of his will. But after that, the father and son are equally free as much as tutor and pupil after nonage: equally subjects of the same law together, without any dominion left in the father over the life, liberty, or estate of his son, whether they be only in the state and under the law of nature, or under the positive laws of an established government.

60. But if, through defects that may happen out of the ordinary course of nature, any one comes not to such a degree of reason, wherein he might be supposed capable of knowing the law, and so living within the rules of it; he is *never capable of being a free man*, he is never let loose to the disposure of his own will (because he knows no bounds to it, has not understanding, its proper guide) but is continued under the tuition and government of others, all the time his own understanding is incapable of that charge. And so *lunatics* and *idiots* are never set free from the government of their parents. "Children, who are not as yet come into those years whereat they may have; and innocents which are excluded by a natural defect from ever having; thirdly, madmen, which for the present cannot possibly have the use of right reason to guide themselves; have for their guide the reason that guideth other men, which are tutors over them, to seek and procure their good for them," says Hooker, Eccl. Pol. Lib. I. Sect. 7. All which seems no more than that duty which God and nature has laid on man, as well as other creatures, to preserve their offspring, till they can be able to shift for themselves, and will scarce amount to an instance or proof of parents regal authority.

61. Thus we are *born free*, as we are born rational; not that we have actually the exercise of either: age, that brings one, brings with it the other too. And thus we see how *natural freedom and subjection to parents* may consist together, and are both founded on the same principle. A *child* is *free* by his father's title, by his father's understanding, which is to govern him till he hath it of his own. The *freedom of a man at years of discretion*, and the *subjection* of a child *to* his parents, whilst yet short of that age, are so consistent, and so distinguishable, that the most blinded contenders for monarchy, *by right of fatherhood*, cannot miss this difference; the most obstinate cannot but allow their consistency. For were their doctrine all true, were the right heir of Adam now known, and by that title settled a monarch in his throne, invested with all the absolute unlimited power, Sir Robert Filmer talks of; if he should die as soon as his heir were born, must not the child, notwithstanding he were never so free, never so much sovereign, be in subjection to his mother and nurse, to tutors and governors, till age and education brought him reason and ability to govern himself and others? The necessities of his life, the health of his body, and the information of his mind, would require him to be directed by the will of others, and not his own; and yet will any one think, that this restraint and subjection were inconsistent with, or spoiled him of, that liberty or sovereignty he had a right to, or gave away his empire to those who had the government of his nonage? This government over him only prepared him the better and sooner for it. If any body should ask me when my son is of *age to be free?* I shall answer, just when his monarch is of age to govern. "But at what time," says the judicious Hooker, Eccl. Pol. Lib. I. Sect. 6 "a man may be said to have attained so far forth the use of reason, as sufficeth to make him capable of those laws whereby he is then bound to guide his actions: this is a great

deal more easy for sense to discern, than for any one by skill and learning to determine."

62. Commonwealths themselves take notice of, and allow, that there is *a time when men* are to *begin to act like free men*, and therefore till that time require not oaths of fealty, or allegiance, or other public owning of, or submission to, the government of their countries.

63. The *freedom* then of man, and liberty of acting according to his own will, is *grounded* on his having *reason*, which is able to instruct him in that law he is to govern himself by, and make him know how far he is left to the freedom of his own will. To turn him loose to an unrestrained liberty, before he has reason to guide him, is not the allowing him the privilege of his nature to be free; but to thrust him out amongst brutes, and abandon him to a state as wretched, and as much beneath that of a man, as theirs. This is that which puts the *authority* into the *parents* hands to govern the *minority* of their children. God hath made it their business to employ this care on their offspring, and hath placed in them suitable inclinations of tenderness and concern to temper this power, to apply it, as his wisdom designed it, to the children's good as long as they should need to be under it.

64. But what reason can hence advance this care of the *parents* due to their offspring into an *absolute arbitrary dominion* of the father, whose power reaches no farther than, by such a discipline as he finds most effectual, to give such strength and health to their bodies, such vigour and rectitude to their minds, as may best fit his children to be most useful to themselves and others; and, if it be necessary to his condition, to make them work, when they are able, for their own subsistence. But in this power the *mother* too has her share with the *father*.

65. Nay, *this* power so little belongs to the father by any peculiar right of nature, but only as he is guardian of his children, that when he quits his care of them, he loses his power over them, which goes along with their nourishment and education, to which it is inseparably annexed; and it belongs as much to the foster-father of an exposed child, as to the natural father of another. So little power does the bare *act of begetting* give a man over his issue; if all his care ends there, and this be all the title he hath to the name and authority of a father. And what will become of this *paternal power* in that part of the world, where one woman hath more than one husband at a time? or in those parts of America, where, when the husband and wife part, which happens frequently, the children are all left to the mother, follow her, and are wholly under her care and provision? If the father die whilst the children are young, do they not naturally every where owe the same obedience to their mother, during their minority, as to their father were he alive? And will any one say, that the mother hath a legislative power over her children? that she can make standing rules, which shall be of perpetual obligation, by which they ought to regulate all the concerns of their property, and bound their liberty all the course of their lives? or can she enforce the observation of them with capital punishments? For this is the proper *power of the magistrate*, of which the father hath not so much as the shadow. His command over his children is but temporary, and reaches not their life or property: it is but a help to the weakness and imperfection of their nonage, a discipline necessary to their education: and though a father may dispose of his own possessions as he pleases, when his children are out of danger of perishing for want, yet his power extends not to the lives or goods, which either their own industry, or another's bounty has made theirs; nor to their liberty neither, when they are once arrived to the infranchisement of the years of discretion. The *father's empire* then ceases, and can from thence forwards no more dispose of the liberty of his son, than that of any other man: and it must be far from an absolute or perpetual jurisdiction, from which a man may withdraw himself, having licence from divine authority to *leave father and mother, and cleave to his wife*.

66. But though there be a time when a child comes to be as free from subjection to the will and command of his father, as the father himself is free from subjection to the will of any body else, and they are each under no other restraint but that which is common to them both, whether it be the law of nature, or municipal law of their country; yet this freedom exempts not a son from that honour which he ought, by the law of God and nature, to pay his parents. God having made the parents instruments in his great design of continuing the race of mankind, and the occasions of life to their children; as he hath laid on them an obligation to nourish, preserve, and bring

up their offspring; so he has laid on the children a perpetual obligation of *honouring their parents*, which containing in it an inward esteem and reverence to be shewn by all outward expressions, ties up the child from any thing that may ever injure or affront, disturb or endanger, the happiness or life of those from whom he received his; and engages him in all actions of defence, relief, assistance, and comfort of those, by whose means he entered into being, and has been made capable of any enjoyments of life. From this obligation no state, no freedom can absolve children. But this is very far from giving parents a power of command over their children, or an authority to make laws and dispose as they please of their lives and liberties. It is one thing to owe honour, respect, gratitude, and assistance; another to require an absolute obedience and submission. The *honour due to parents*, a monarch in his throne owes his mother, and yet this lessens not his authority, nor subjects him to her government.

67. The subjection of a minor places in the father a temporary government, which terminates with the minority of the child: and the *honour due from a child*, places in the parents a perpetual right to respect, reverence, support and compliance too, more or less, as the father's care, cost, and kindness in his education, have been more or less. This ends not with minority, but holds in all parts and conditions of a man's life. The want of distinguishing these two powers, viz. that which the father hath in the right of *tuition*, during minority, and the right of honour all his life, may perhaps have caused a great part of the mistakes about this matter. For to speak properly of them, the first of these is rather the privilege of children, and duty of parents, than any prerogative of paternal power. The nourishment and education of their children is a charge so incumbent on parents for their children's good, that nothing can absolve them from taking care of it. And though the *power of commanding and chastising* them go along with it, yet God hath woven into the principles of human nature such a tenderness for their offspring, that there is little fear that parents should use their power with too much rigour; the excess is seldom on the severe side, the strong bias of nature drawing the other way. And therefore God Almighty, when he would express his gentle dealing with the Israelites, he tells them, that though he chastened them, "he chastened them as a man chastens his son," *Deut.* viii. 5. i.e. with tenderness and affection, and kept them under no severer discipline than what was absolutely best for them, and had been less kindness to have slackened. This is that power to which children are commanded obedience, that the pains and care of their parents may not be increased, or ill rewarded.

68. On the other side, *honour* and *support*, all that which gratitude requires to return for the benefits received by and from them, is the indispensable duty of the child, and the proper privilege of the parents. This is intended for the parents advantage, as the other is for the child's; though education, the parents duty, seems to have most power, because the ignorance and infirmities of childhood stand in need of restraint and correction; which is a visible exercise of rule, and a kind of dominion. And that duty which is comprehended in the word *honour*, requires less obedience, though the obligation be stronger on grown than younger children. For who can think the command, "Children, obey your parents," requires in a man that has children of his own the same submission to his father, as it does in his yet young children to him; and that by this precept he were bound to obey all his father's commands, if, out of a conceit of authority, he should have the indiscretion to treat him still as a boy?

69. The first part then of *paternal power*, or rather duty, which is *education*, belongs so to the father, that it terminates at a certain season; when the business of education is over, it ceases of itself, and is also alienable before. For a man may put the tuition of his son in other hands; and he that has made his son an *apprentice* to another, has discharged him, during that time, of a great part of his obedience both to himself and to his mother. But all the *duty of honour*, the other part, remains nevertheless entire to them; nothing can cancel that: It is so inseparable from them both, that the father's authority cannot dispossess the mother of this right, nor can any man discharge his son from *honouring* her that bore him. But both these are very far from a power to make laws, and enforcing them with penalties that may reach estate, liberty, limbs, and life. The power of commanding ends with nonage; and though after that, *honour* and respect, support and defence, and whatsoever gratitude can

oblige a man to, for the highest benefits he is naturally capable of, be always due from a son to his parents; yet all this puts no sceptre into the father's hand, no sovereign power of commanding. He has no dominion over his son's property, or actions; nor any right that his will should prescribe to his son's in all things; however it may become his son in many things not very inconvenient to him and his family, to pay a deference to it.

70. A man may owe *honour* and respect to an ancient, or wise man; defence to his child or friend; relief and support to the distressed; and gratitude to a benefactor, to such a degree, that all he has, all he can do, cannot sufficiently pay it: but all these give no authority, no right to any one, of making laws over him from whom they are owing. And it is plain, all this is due not only to the bare title of father; not only because, as has been said, it is owing to the mother too, but because these obligations to parents, and the degrees of what is required of children, may be varied by the different care and kindness, trouble and expense, which is often employed upon one child more than another.

71. This shews the reason how it comes to pass, that *parents in societies*, where they themselves are subjects, retain a *power over their children*, and have as much right to their subjection as those who are in the state of nature. Which could not possibly be, if all political power were only paternal, and that in truth they were one and the same thing. For then, all paternal power being in the prince, the subject could naturally have none of it. But these two *powers*, *political* and *paternal*, are so perfectly distinct and separate, are built upon so different foundations, and given to so different ends, that every subject that is a father, has as much a paternal power over his children, as the prince has over his: and every prince, that has parents, owes them as much filial duty and obedience, as the meanest of his subjects do to theirs; and cannot therefore contain any part or degree of that kind of dominion which a prince or magistrate has over his subject.

72. Though the obligation on the parents to bring up their children, and the obligation on children to honour their parents, contain all the power on the one hand, and submission on the other, which are proper to this relation, yet there is *another power* ordinary *in the father*, whereby he has a tie on the obedience of his children; which though it be common to him with other men, yet the occasions of shewing it almost constantly happening to fathers in their private families, and the instances of it elsewhere being rare, and less taken notice of, it passes in the world for a part of paternal jurisdiction. And this is the power men generally have to *bestow their estates* on those who please them best. The possession of the father being the expectation and inheritance of the children, ordinarily in certain proportions, according to the law and custom of each country; yet it is commonly in the father's power to bestow it with a more sparing or liberal hand, according as the behaviour of this or that child hath comported with his will and humour.

73. This is no small tie on the obedience of children: and there being always annexed to the enjoyment of land a submission to the government of the country, of which that land is a part; it has been commonly supposed, that a father could *oblige his posterity to that government*, of which he himself was a subject, and that his compact held them; whereas it being only a necessary condition annexed to the land, and the inheritance of an estate which is under that government, reaches only those who will take it on that condition, and so is no natural tie or engagement, but a voluntary submission. For *every man's children* being by nature as free as himself, or any of his ancestors ever were, may, whilst they are in that freedom, choose what society they will join themselves to, what commonwealth they will put themselves under. But if they will enjoy the inheritance of their ancestors, they must take it on the same terms their ancestors had it, and submit to all the conditions annexed to such a possession. By this power indeed fathers oblige their children to obedience to themselves, even when they are past minority, and most commonly too subject them to this or that political power. But neither of these by any peculiar right of fatherhood, but by the reward they have in their hands to enforce and recompence such a compliance; and is no more power than what a Frenchman has over an Englishman, who, by the hopes of an estate he will leave him, will certainly have a strong tie on his obedience: and if, when it is left him, he will enjoy it, he must certainly take it upon the conditions

annexed to the *possession of land* in that country where it lies, whether it be France or England.

74. To conclude then, though the father's power of commanding extends no farther than the minority of his children, and to a degree only fit for the discipline and government of that age; and though that honour and respect, and all that which the Latins called piety, which they indispensably owe to their parents all their life-time, and in all estates, with all that support and defence which is due to them, gives the father no power of governing, i.e. making laws and enacting penalties on his children; though by all this he has no dominion over the property or actions of his son; yet it is obvious to conceive how easy it was, in the first ages of the world, and in places still, where the thinness of people gives families leave to separate into unpossessed quarters, and they have room to remove or plant themselves in yet vacant habitations, for the *father of the family* to become the prince[1] of it; he had been a ruler from the beginning of the infancy of his children: and since without some government it would be hard for them to live together, it was likeliest it should, by the express or tacit consent of the children when they were grown up, be in the father, where it seemed without any change barely to continue; when indeed nothing more was required to it, than the permitting the father to exercise alone, in his family, that executive power of the law of nature, which every free man naturally hath, and by that permission resigning up to him a monarchical power, whilst they remained in it. But that this was not by any *paternal right*, but only by the consent of his children, is evident from hence, that no body doubts, but if a stranger, whom chance or business had brought to his family, had there killed any of his children, or committed any other fact, he might condemn and put him to death, or otherwise punish him, as well as any of his children: which it was impossible he should do by virtue of any paternal authority over one who was not his child, but by virtue of that executive power of the law of nature, which, as a man, he had a right to: and he alone could punish him in his family, where the respect of his children had laid by the exercise of such a power, to give way to the dignity and authority they were willing should remain in him, above the rest of his family.

75. Thus it was easy, and almost natural for children, by a tacit, and scarce avoidable consent, to make way for the *father's authority and government*. They had been accustomed in their childhood to follow his direction, and to refer their little differences to him; and when they were men, who fitter to rule them? Their little properties, and less covetousness, seldom afforded greater controversies; and when any should arise, where could they have a fitter umpire than he, by whose care they had every one been sustained and brought up, and who had a tenderness for them all? It is no wonder that they made no distinction betwixt minority and full age; nor looked after one and twenty, or any other age that might make them the free disposers of themselves and fortunes, when they could have no desire to be out of their pupilage. The government they had been under during it, continued still to be more their protection than restraint: and they could no where find a greater security to their peace, liberties, and fortunes, than in the *rule of a father*.

76. Thus the natural *fathers of families* by an insensible change became the *politic monarchs* of them too: and as they chanced to live long, and leave able and worthy heirs, for several successions, or otherwise; so they laid the foundations of hereditary, or elective kingdoms, under several constitutions and manners, according as chance, contrivance, or occasions hap-

1. It is no improbable opinion therefore, which the arch-philosopher was of, "That the chief person in every household was always, as it were, a king: so when numbers of households joined themselves in civil societies together, kings were the first kind of governors amongst them, which is also, as it seemeth, the reason why the name of fathers continued still in them, who, of fathers, were made rulers; as also the ancient custom of governors to do as Melchizedeck, and being kings, to exercise the office of priests, which fathers did, at the first grew perhaps by the same occasion. Howbeit, this is not the only kind of regiment that has been received in the world. The inconveniences of one kind have caused sundry others to be devised; so that in a word, all public regiment of what kind soever, seemeth evidently to have risen from the deliberate advice, consultation and composition between men, judging it convenient and behoveful; there being no impossibility in nature considered by itself, but that man might have lived without any public regiment." Hooker's Eccl. P. L. I. Sect. 10.

pened to mould them. But if princes have their titles in their fathers right, and it be a sufficient proof of the natural *right of fathers* to political authority, because they commonly were those in whose hands we find, *de facto*, the exercise of government: I say, if this argument be good, it will as strongly prove, that all princes, nay princes only, ought to be priests, since it is as certain, that in the beginning, *the father of the family was priest, as that he was ruler in his own household.*

Chapter 7

Of Political or Civil Society

77. God having made man such a creature, that in his own judgment, it was not good for him to be alone, put him under strong obligations of necessity, convenience, and inclination, to drive him into society, as well as fitted him with understanding and language to continue and enjoy it. The first society was between man and wife, which gave beginning to that between parents and children; to which, in time, that between master and servant came to be added; and though all these might, and commonly did meet together, and make up but one family, wherein the master or mistress of it had some sort of rule proper to a family; each of these, or all together, came short of *political society*, as we shall see, if we consider the different ends, ties, and bounds of each of these.

78. *Conjugal society* is made by a voluntary compact between man and woman; and though it consist chiefly in such a communion and right in one another's bodies as is necessary to its chief end, procreation; yet it draws with it mutual support and assistance, and a communion of interests too, as necessary not only to unite their care and affection, but also necessary to their common offspring, who have a right to be nourished and maintained by them, till they are able to provide for themselves.

79. For the end of *conjunction between male and female* being not barely procreation, but the continuation of the species; this conjunction betwixt male and female ought to last, even after procreation, so long as is necessary to the nourishment and support of the young ones, who are to be sustained by those that got them, till they are able to shift and provide for themselves. This rule, which the infinite wise Maker hath set to the works of his hands, we find the inferior creatures steadily obey. In those viviparous animals which feed on grass, the *conjunction between male and female* lasts no longer than the very act of copulation; because the teat of the dam being sufficient to nourish the young, till it be able to feed on grass, the male only begets, but concerns not himself for the female or young, to whose sustenance he can contribute nothing. But in beasts of prey the conjunction lasts longer: because the dam not being able well to subsist herself, and nourish her numerous offspring by her own prey alone, a more laborious, as well as more dangerous way of living, than by feeding on grass; the assistance of the male is necessary to the maintenance of their common family, which cannot subsist till they are able to prey for themselves, but by the joint care of male and female. The same is to be observed in all birds (except some domestic ones, where plenty of food excuses the cock from feeding, and taking care of the young brood), whose young needing food in the nest, the cock and hen continue mates, till the young are able to use their wing, and provide for themselves.

80. And herein I think lies the chief, if not the only reason, *why the male and female in mankind are tied to a longer conjunction* than other creatures, viz. because the female is capable of conceiving, and *de facto* is commonly with child again, and brings forth too a new birth, long before the former is out of a dependency for support on his parents help, and able to shift for himself, and has all the assistance that is due to him from his parents: whereby the father, who is bound to take care for those he hath begot, is under an obligation to continue in conjugal society with the same woman longer than other creatures, whose young being able to subsist of themselves before the time of procreation returns again, the conjugal bond dissolves of itself, and they are at liberty, till Hymen at his usual anniversary season summons them again to choose new mates. Wherein one cannot but admire the wisdom of the great Creator, who having given to man foresight, and an ability to lay up for the future, as well as to supply the present necessity, hath made it necessary, that *society of man and wife should be more lasting*, than of male and female amongst

other creatures; that so their industry might be encouraged, and their interest better united, to make provision and lay up goods for their common issue, which uncertain mixture, or easy and frequent solutions of conjugal society, would mightily disturb.

81. But though these are ties upon *mankind*, which make the *conjugal bonds* more firm and lasting in man, than the other species of animals; yet it would give one reason to inquire, why this compact, where procreation and education are secured, and inheritance taken care for, may not be made determinable, either by consent, or at a certain time, or upon certain conditions, as well as any other voluntary compacts, there being no necessity in the nature of the thing, nor to the ends of it, that it should always be for life; I mean, to such as are under no restraint of any positive law, which ordains all such contracts to be perpetual.

82. But the husband and wife, though they have but one common concern, yet having different understandings, will unavoidably sometimes have different wills too; it therefore being necessary that the last determination, i.e. the rule, should be placed somewhere; it naturally falls to the man's share, as the abler and the stronger. But this reaching but to the things of their common interest and property, leaves the wife in the full and free possession of what by contract is her peculiar right, and gives the husband no more power over her life than she has over his. The *power of the husband* being so far from that of an absolute monarch, that the *wife* has in many cases a liberty to separate from him, where natural right or their contract allows it; whether that contract be made by themselves in the state of nature, or by the customs or laws of the country they live in; and the children upon such separation fall to the father's or mother's lot, as such contract does determine.

83. For all the ends of *marriage* being to be obtained under politic government, as well as in the state of nature, the civil magistrate doth not abridge the right or power of either naturally necessary to those ends, viz. procreation and mutual support and assistance whilst they are together; but only decides any controversy that may arise between man and wife about them. If it were otherwise, and that absolute sovereignty and power of life and death naturally belonged to the husband, and were *necessary to the society between man and wife*, there could be no matrimony in any of those countries where the husband is allowed no such absolute authority. But the ends of matrimony requiring no such power in the husband, the condition of conjugal society put it not in him, it being not at all necessary to that state. Conjugal society could subsist and attain its ends without it; nay, community of goods, and the power over them, mutual assistance and maintenance, and other things belonging to conjugal society, might be varied and regulated by that contract which unites man and wife in that society, as far as may consist with procreation and the bringing up of children till they could shift for themselves; nothing being necessary to any society, that is not necessary to the ends for which it is made.

84. The *society betwixt parents and children*, and the distinct rights and powers belonging respectively to them, I have treated of so largely, in the foregoing chapter, that I shall not here need to say any thing of it. And I think it is plain, that it is far different from a politic society.

85. *Master* and *servant* are names as old as history, but given to those of far different condition; for a free man makes himself a servant to another, by selling him, for a certain time, the service he undertakes to do, in exchange for wages he is to receive: and though this commonly puts him into the family of his master, and under the ordinary discipline thereof: yet it gives the master but a temporary power over him, and no greater than what is contained in the *contract* between them. But there is another sort of servants, which by a peculiar name we call *slaves*, who being captives taken in a just war, are by the right of nature subjected to the absolute dominion and arbitrary power of their masters. These men having, as I say, forfeited their lives, and with it their liberties, and lost their estates; and being in the *state of slavery*, not capable of any property, cannot in that state be considered as any part of *civil society*; the chief end whereof is the preservation of property,

86. Let us therefore consider a *master of a family* with all these subordinate relations of *wife*, *children*, *servants*, and *slaves*, united under the domestic rule of a family; which, what resemblance soever it may have in its order, offices, and number too, with a little commonwealth, yet is very far from it, both in its constitution, power, and end: or if it must be thought

a monarchy, and the *paterfamilias* the absolute monarch in it, absolute monarchy will have but a very shattered and short power, when it is plain by what has been said before, that the *master of the family* has a very distinct and differently limited power, both as to time and extent, over those several persons that are in it. For excepting the slave (and the family is as much a family, and his power as *paterfamilias* as great, whether there be any slaves in his family or no) he has no legislative power of life and death over any of them, and none too but what a *mistress of a family* may have as well as he. And he certainly can have no absolute power over the whole family, who has but a very limited one over every individual in it. But how a family, or any other society of men, differ from that which is properly political society, we shall best see by considering wherein political society itself consists.

87. Man being born, as has been proved, with a title to perfect freedom, and an uncontrolled enjoyment of all the rights and privileges of the law of nature, equally with any other man, or number of men in the world, hath by nature a power, not only to preserve his property, that is, his life, liberty, and estate, against the injuries and attempts of other men; but to judge of and punish the breaches of that law in others, as he is persuaded the offence deserves, even with death itself, in crimes where the heinousness of the fact, in his opinion, requires it. But because no *political* society can be, nor subsist, without having in itself the power to preserve the property, and, in order thereunto, punish the offences of all those of that society; there and there only is *political society*, where every one of the members hath quitted his natural power, resigned it up into the hands of the community in all cases that excludes him not from appealing for protection to the law established by it. And thus all private judgment of every particular member being excluded, the community comes to be umpire by settled standing rules, indifferent, and the same to all parties; and by men having authority from the community, for the execution of those rules, decides all the differences that may happen between any members of that society concerning any matter of right; and punishes those offences which any member hath committed against the society, with such penalties as the law has established, whereby it is easy to discern, who are, and who are not, in *political society* together. Those who are united into one body, and have a common established law and judicature to appeal to, with authority to decide controversies between them, and punish offenders, *are in civil society* one with another: but those who have no such common appeal, I mean on earth, are still in the state of nature, each being, where there is no other, judge for himself, and executioner: which is, as I have before shewed, the perfect *state of nature*.

88. And thus the commonwealth comes by a power to set down what punishment shall belong to the several transgressions which they think worthy of it, committed amongst the members of that society, (which is the *power of making laws*) as well as it has the power to punish any injury done unto any of its members, by any one that is not of it, (which is the power of war and peace,) and all this for the preservation of the property of all the members of that society, as far as is possible. But though every man who has entered into civil society, and is become a member of any commonwealth, has thereby quitted his power to punish offences against the law of nature, in prosecution of his own private judgment; yet with the judgment of offences, which he has given up to the legislative in all cases, where he can appeal to the magistrate, he has given a right to the commonwealth to employ his force, for the execution of the judgments of the commonwealth whenever he shall be called to it; which indeed are his own judgments, they being made by himself, or his representative. And herein we have the original of the legislative and executive power of civil society, which is to judge by standing laws, how far offences are to be punished, when committed within the commonwealth; and also to determine, by occasional judgments founded on the present circumstances of the fact, how far injuries from without are to be vindicated; and in both these to employ all the force of all the members, when there shall be need.

89. Whenever therefore any number of men are so united into one society, as to quit every one his executive power of the law of nature, and to resign it to the public, there and there only is a political, or civil society. And this is done, wherever any number of men, in the state of nature, enter into society to make one people, one body politic, under one supreme

government; or else when any one joins himself to, and incorporates with any government already made. For hereby he authorizes the society, or, which is all one, the legislative thereof, to make laws for him, as the public good of the society shall require; to the execution whereof, his own assistance (as to his own degrees) is due. And this puts men out of a state of nature into that of a commonwealth, by setting up a judge on earth, with authority to determine all the controversies, and redress the injuries that may happen to any member of the commonwealth: which judge is the legislative, or magistrate appointed by it. And wherever there are any number of men, however associated, that have no such decisive power to appeal to, there they are still in the state of nature.

90. Hence it is evident, that absolute monarchy, which by some men is counted the only government in the world, is indeed inconsistent with civil society, and so can be no form of civil government at all; for the end of civil society being to avoid and remedy these inconveniencies of the state of nature, which necessarily follow from every man's being judge in his own case, by setting up a known authority, to which every one of that society may appeal upon any injury received, or controversy that may arise, and which every one of the[2] society ought to obey; wherever any persons are, who have not such an authority to appeal to for the decision of any difference between them, there those persons are still *in the state of nature*. And so is every *absolute prince*, in respect of those who are under his dominion.

91. For he being supposed to have all, both legislative and executive power in himself alone, there is no judge to be found, no appeal lies open to any one, who may fairly, and indifferently, and with authority decide, and from whose decision relief and redress may be expected of any injury or inconveniency that may be suffered from the prince, or by his order: so that such a man, however intitled, *czar*, or *grand seignior*, or how you please, is as much *in the state of nature*, with all under his dominion, as he is with the rest of mankind. For wherever any two men are, who have no standing rule, and common judge to appeal to on earth, for the determination of controversies of right betwixt them, there they are still *in the state of*[3] *nature*, and under all the inconveniencies of it, with only this woful difference to the subject, or rather slave of an absolute prince; that whereas in the ordinary state of nature he has a liberty to judge of his right, and, according to the best of his power, to maintain it; now, whenever his property is invaded by the will and order of his monarch, he has not only no appeal, as those in society ought to have, but, as if he were degraded from the common state of rational creatures, is denied a liberty to judge of, or to defend his right; and so is exposed to all the misery and inconveniencies that a man can fear from one, who being in the unrestrained state of nature, is yet corrupted with flattery, and armed with power.

92. For he that thinks *absolute power purifies men's blood*, and corrects the baseness of human nature, need read but the history of this or any other age, to

2. The public power of all society is above every soul contained in "the same society; and the principal use of that power is, to give laws unto all that are under it, which laws in such cases we must obey," unless there be reason shewed which may necessarily inforce, that the law of reason, or of God, doth enjoin the contrary." Hook. Eccl. Pol. L. I. Sect. 16.

3. "To take away all such mutual grievances, injuries and wrongs," i.e. such as attend men in the state of nature, "there was no way but only by growing into composition and agreement amongst themselves, by ordaining some kind of government public, and by yielding themselves subject thereunto, that unto whom they granted authority to rule and govern, by them the peace, tranquillity, and happy state of the rest might be procured. Men always knew that where force and injury was offered, they might be defenders of themselves; they knew that however men may seek their own commodity; yet if this were done with injury unto others, it was not to be suffered, but by all men, and all good means to be withstood. Finally, they knew that no man might in reason take upon him to determine his own right, and according to his own determination proceed in maintenance thereof, in as much as every man is towards himself, and them whom he greatly affects, partial; and therefore that strifes and troubles would be endless, except they gave their common consent, all to be ordered by some, whom they should agree upon, without which consent there would be no reason that one man should take upon him to be lord or judge over another." Hooker's Eccl. Pol. L. I. Sect. 10.

be convinced of the contrary. He that would have been so insolent and injurious in the woods of America, would not probably be much better in a throne; where perhaps learning and religion shall be found out to justify all that he shall do to his subjects, and the sword presently silence all those that dare question it. For what the *protection of absolute monarchy* is, what kind of fathers of their countries it makes princes to be, and to what a degree of happiness and security it carries civil society, where this sort of government is grown to perfection; he that will look into the late relation of Ceylon, may easily see.

93. *In absolute monarchies*, indeed, as well as other governments of the world, the subjects have an appeal to the law, and judges to decide any controversies, and restrain any violence that may happen betwixt the subjects themselves, one amongst another. This every one thinks necessary, and believes he deserves to be thought a declared enemy to society and mankind, who should go about to take it away. But whether this be from a true love of mankind and society, and such a charity as we all owe one to another, there is reason to doubt. For this is no more than what every man, who loves his own power, profit, or greatness, may and naturally must do, keep those animals from hurting, or destroying one another, who labour and drudge only for his pleasure and advantage; and so are taken care of, not out of any love the master has for them, but love of himself, and the profit they bring him. For if it be asked, what security, what fence is there, in such a state, *against the violence and oppression of this absolute ruler?* the very question can scarce be borne. They are ready to tell you, that it deserves death only to ask after safety. Betwixt subject and subject, they will grant, there must be measures, laws, and judges, for their mutual peace and security: but as for the ruler he ought to be *absolute*, and is above all such circumstances; because he has power to do more hurt and wrong, it is right when he does it. To ask how you may be guarded from harm, or injury, on that side where the strongest hand is to do it, is presently the voice of faction and rebellion: as if when men quitting the state of nature entered into society, they agreed that all of them but one should be under the restraint of laws, but that he should still retain all the liberty of the state of nature, increased with power, and made licentious by impunity. This is to think, that men are so foolish, that they take care to avoid what mischiefs may be done them by *pole cats*, or *foxes;* but are content, nay think it safety, to be devoured by *lions.*

94. But whatever flatterers may talk to amuse people's understandings, it hinders not men from feeling; and when they perceive, that any man, in what station soever, is out of the bounds of the civil society which they are of, and that they have no appeal on earth against any harm they may receive from him, they are apt to think themselves in the state of nature, in respect of him whom they find to be so: and to take care, as soon as they can, to have that *safety and security in civil society*, for which it was instituted, and for which only they entered into it. And therefore, though perhaps at first, (as shall be shewed more at large hereafter in the following part of this discourse) some one good and excellent man having got a preeminency amongst the rest, had this deference paid to his goodness and virtue, as to a kind of natural authority, that the chief rule, with arbitration of their differences, by a tacit consent devolved into his hands, without any other caution, but the assurance they had of his uprightness and wisdom; yet when time, giving authority, and (as some men would persuade us) sacredness to customs, which the negligent and unforeseen innocence of the first ages began, had brought in successors of another stamp, the people finding their properties not secure under the government, as then it was, (whereas government has no other end but the preservation of[4] property) could never be safe nor at rest, *nor think themselves in civil society*, till the legislature was placed in collective bodies of men, call them senate, parliament, or what

4. "At the first, when some certain kind of regiment was once appointed, it may be that nothing was then farther thought upon for the manner of governing, but all permitted unto their wisdom and discretion, which were to rule, till by experience they found this for all parts very inconvenient, so as the thing which they had devised for a remedy, did indeed but increase the sore, which it should have cured. They saw, that to live by one man's will, became the cause of all men's misery. This constrained them to come into laws, wherein all men might see their duty beforehand, and know the penalties of transgressing them." Hooker's Eccl. Pol. L. I. Sect. 10.

you please. By which means every single person became subject, equally with other the meanest men, to those laws, which he himself, as part of the legislative, had established; nor could any one, by his own authority, avoid the force of the law, when once made; nor by any pretence of superiority plead exemption, thereby to license his own, or the miscarriages of any of his dependents.[5] *No man in civil society can be exempted from the laws of it.* For if any man may do what he thinks fit, and there be no appeal on earth, for redress or security against any harm he shall do; I ask, whether he be not perfectly still in the state of nature, and so can be *no part or member of that civil society:* unless any one will say, the state of nature and civil society are one and the same thing, which I have never yet found any one so great a patron of anarchy as to affirm.

Chapter 8

Of the Beginning of Political Societies

95. Men being, as has been said, by nature, all free, equal, and independent, no one can be put out of this estate, and subjected to the political power of another, without his own consent. The only way, whereby any one divests himself of his natural liberty, and puts on the *bonds of civil society*, is by agreeing with other men to join and unite into a community, for their comfortable, safe, and peaceable living one amongst another, in a secure enjoyment of their properties, and a greater security against any, that are not of it. This any number of men may do, because it injures not the freedom of the rest; they are left as they were in the liberty of the state of nature. When any number of men have so *consented to make one community or government*, they are thereby presently incorporated, and make *one body politic*, wherein the *majority* have a right to act and conclude the rest.

96. For when any number of men have, by the consent of every individual, made a *community*, they have thereby made that *community* one body, with a power to act as one body, which is only by the will and determination of the majority. For that which acts any community, being only the *consent* of the individuals of it, and it being necessary to that which is one body to move one way; it is necessary the body should move that way whither the greater force carries it, which is the *consent of the majority:* or else it is impossible it should act or continue one body, one community, which the consent of every individual that united into it, agreed that it should; and so every one is bound by that consent to be concluded by the majority. And therefore we see, that in assemblies, impowered to act by positive laws, where no number is set by that positive law which impowers them, the *act of the majority* passes for the act of the whole, and of course determines, as having, by the law of nature and reason, the power of the whole.

97. And thus every man, by consenting with others to make one body politic under one government, puts himself under an obligation, to every one of that society, to submit to the determination of the majority, and to be concluded by it; or else this *original compact*, whereby he with others incorporate into one society, would signify nothing, and be no compact, if he be left free, and under no other ties than he was in before in the state of nature. For what appearance would there be of any compact? What new engagement if he were no farther tied by any decrees of the society, than he himself thought fit, and did actually consent to? This would be still as great a liberty, as he himself had before his compact, or any one else in the state of nature hath, who may submit himself, and consent to any acts of it if he thinks fit.

98. For if *the consent of the majority* shall not, in reason, be received as *the act of the whole*, and conclude every individual; nothing but the consent of every individual can make any thing to be the act of the whole: But such a consent is next to impossible ever to be had, if we consider the infirmities of health, and avocations of business, which in a number, though much less than that of a commonwealth, will necessarily keep many away from the public assembly. To which if we add the variety of opinions, and contrariety of interests, which unavoidably happen in all collections of men, the coming into society upon such terms would be only like Cato's coming into the theatre, only to go out again. Such a constitution

5. "Civil law, being the act of the whole body politic, doth therefore over-rule each several part of the same body." Hooker, ibid.

as this would make the mighty *leviathan* of a shorter duration, than the feeblest creatures, and not let it outlast the day it was born in: which cannot be supposed, till we can think, that rational creatures should desire and constitute societies only to be dissolved. For where the majority cannot conclude the rest, there they cannot act as one body, and consequently will be immediately dissolved again.

99. Whosoever therefore out of a state of nature unite into a community, must be understood to give up all the power, necessary to the ends for which they unite into society, to the majority of the community, unless they expressly agreed in any number greater than the majority. And this is done by barely agreeing to *unite into one political society*, which is *all the compact* that is, or needs be, between the individuals, that enter into, or make up a commonwealth. And thus that, which begins and actually *constitutes any political society*, is nothing, but the consent of any number of freemen capable of a majority, to unite and incorporate into such a society. And this is that, and that only, which did, or could give beginning to any lawful government in the world.

100. To this I find two objections made.

First, *That there are no instances to be found in story, of a company of men independent and equal one amongst another, that met together, and in this way began and set up a government.*

Secondly, *It is impossible of right, that men should do so, because all men being born under government, they are to submit to that, and are not at liberty to begin a new one.*

101. To the first there is this to answer, That it is not at all to be wondered, that *history* gives us but a very little account of *men, that lived together in the state of nature.* The inconveniencies of that condition and the love and want of society, no sooner brought any number of them together, but they presently united and incorporated, if they designed to continue together. And if we may not suppose men ever to have been *in the state of nature*, because we hear not much of them in such a state, we may as well suppose the armies of Salmanasser or Xerxes were never children, because we hear little of them, till they were men, and embodied in armies. Government is every where antecedent to records, and letters seldom come in amongst a people till a long continuation of civil society has, by other more necessary arts, provided for their safety, ease, and plenty. And then they begin to look after the history of their founders, and search into their original, when they have outlived the memory of it. For it is with commonwealths, as with particular persons, they are commonly *ignorant of their own births and infancies:* and if they know any thing of their original, they are beholden for it to the accidental records that others have kept of it. And those that we have of the beginning of any politics in the world, excepting that of the Jews, where God himself immediately interposed, and which favours not at all paternal dominion, are all either plain instances of such a beginning as I have mentioned, or at least have manifest footsteps of it.

102. He must shew a strange inclination to deny evident matter of fact, when it agrees not with his hypothesis, who will not allow, that the *beginning* of Rome and Venice were by the uniting together of several men free and independent one of another, amongst whom there was no natural superiority or subjection. And if Josephus Acosta's word may be taken, he tells us, that in many parts of America there was no government at all. "There are great and apparent conjectures," says he, "that these men, speaking of those of Peru, for a long time had neither kings nor commonwealths, but lived in troops, as they do this day in Florida, the Cheriquanas, those of Brasil, and many other nations, which have no certain kings, but as occasion is offered, in peace or war, they choose their captains as they please," l. I. c. 25. If it be said, that every man there was born subject to his father, or the head of his family. That the subjection due from a child to a father took not away his freedom of uniting into what political society he thought fit, has been already proved. But be that as it will, these men, it is evident, were actually free; and whatever superiority some politicians now would place in any of them, they themselves claimed it not, but by consent were all equal, till by the same consent they set rulers over themselves. So that their politic societies all began from a voluntary union, and the mutual agreement of men freely acting in the choice of their governors, and forms of government.

103. And I hope those who went away from Sparta with Palantus, mentioned by Justin, l. iii. c. 4, will be allowed to have been freemen, *independent* one

of another, and to have set up a government over themselves, by their own consent. Thus I have given several examples out of history, of *people free and in the state of nature*, that being met together, incorporated and *began a commonwealth*. And if the want of such instances be an argument to prove that governments were not, nor could not be so begun, I suppose the contenders for paternal empire were better let it alone, than urge it against natural liberty. For if they can give so many instances out of history, of governments begun upon paternal right, I think (though at best an argument from what has been, to what should of right be, has no great force) one might, without any great danger, yield them the cause. But if I might advise them in the case, they would do well not to search too much into the *original of governments*, as they have begun *de facto*; lest they should find, at the foundation of most of them, something very little favourable to the design they promote, and such a power as they contend for.

104. But to conclude, reason being plain on our side, that men are naturally free, and the examples of history shewing, that the governments of the world, that were begun in peace, had their beginning laid on that foundation, and were *made by the consent of the people*; there can be little room for doubt, either where the right is, or what has been the opinion, or practice of mankind, about the *first erecting of governments*.

105. I will not deny, that if we look back as far as history will direct us, towards the *original of commonwealths*, we shall generally find them under the government and administration of one man. And I am also apt to believe, that where a family was numerous enough to subsist by itself, and continued entire together, without mixing with others, as it often happens, where there is much land, and few people, the government commonly began *in the father*. For the father having, by the law of nature, the same power with every man else to punish, as he thought fit, any offences against that law, might thereby punish his transgressing children, even when they were men, and out of their pupilage; and they were very likely to submit to his punishment, and all join with him against the offender, in their turns, giving him thereby power to execute his sentence against any transgression, and so in effect make him the law maker, and governour over all that remained in conjunction with his family. He was fittest to be trusted; paternal affection secured their property and interest under his care; and the custom of obeying him, in their childhood, made it easier to submit to him, rather than to any other. If, therefore, they must have one to rule them, as government is hardly to be avoided amongst men that live together; who so likely to be the man as he that was their common father; unless negligence, cruelty, or any other defect of mind or body made him unfit for it? But when either the father died, and left his next heir, for want of age, wisdom, courage, or any other qualities, less fit for rule; or where several families met, and consented to continue together; there, it is not to be doubted, but they used their natural freedom to set up him whom they judged the ablest, and most likely to rule well over them. Conformable hereunto we find the people of America, who (living out of the reach of the conquering swords, and spreading domination of the two great empires of Peru and Mexico) enjoyed their own natural freedom, though, *caeteris paribus*, they commonly prefer the heir of their deceased king; yet, if they find him any way weak, or incapable, they pass him by, and set up the stoutest and bravest man for their ruler.

106. Thus, though looking back as far as records give us any account of peopling the world, and the history of nations, we commonly find the government to be in one hand; yet it destroys not that which I affirm, viz. that the *beginning of politic society* depends upon the consent of the individuals, to join into, and make one society; who, when they are thus incorporated, might set up what form of government they thought fit. But this having given occasion to men to mistake, and think, that by nature government was monarchical, and belonged to the father; it may not be amiss here to consider, why people in the beginning generally pitched upon this form; which though perhaps the father's pre-eminency might, in the first institution of some commonwealth give rise to, and place in the beginning the power in one hand; yet it is plain that the reason, that continued the form of *government in a single person*, was not any regard or respect to paternal authority; since all petty monarchies, that is, almost all monarchies, near their original, have been commonly, at least upon occasion, *elective*.

107. First then, in the beginning of things, the father's government of the childhood of those sprung from him, having accustomed them to the *rule of one man*, and taught them that where it was exercised with care and skill, with affection and love to those under it, it was sufficient to procure and preserve to men all the political happiness they sought for in society. It was no wonder that they should pitch upon, and naturally run into that form of government, which from their infancy they had been all accustomed to; and which, by experience, they had found both easy and safe. To which, if we add, that monarchy being simple, and most obvious to men, whom neither experience had instructed in forms of government, nor the ambition or insolence of empire had taught to beware of the encroachments of prerogative, or the inconveniencies of absolute power, which monarchy in succession was apt to lay claim to, and bring upon them; it was not at all strange, that they should not much trouble themselves to think of methods of restraining any exorbitancies of those to whom they had given the authority over them, and of balancing the power of government, by placing several parts of it in different hands. They had neither felt the oppression of tyrannical dominion, nor did the fashion of the age, nor their possessions, or way of living, (which afforded little matter for covetousness or ambition) give them any reason to apprehend or provide against it; and therefore it is no wonder they put themselves into such a *frame of government*, as was not only, as I said, most obvious and simple, but also best suited to their present state and condition; which stood more in need of defence against foreign invasions and injuries, than of multiplicity of laws. The equality of a simple poor way of living, confining their desires within the narrow bounds of each man's small property, made few controversies, and so no need of many laws to decide them, or variety of officers to superintend the process, or look after the execution of justice, where there were but few trespasses, and few offenders. Since then those, who liked one another so well as to join into society, cannot but be supposed to have some acquaintance and friendship together, and some trust one in another; they could not but have greater apprehensions of others, than of one another: and therefore their first care and thought cannot but be supposed to be, how to secure themselves against foreign force. It was natural for them to put themselves under a *frame of government* which might best serve to that end, and choose the wisest and bravest man to conduct them in their wars, and lead them out against their enemies, and in this chiefly be their *ruler*.

108. Thus we see, that the *kings* of the Indians in America, which is still a pattern of the first ages in Asia and Europe, whilst the inhabitants were too few for the country, and want of people and money gave men no temptation to enlarge their possessions of land, or contest for wider extent of ground, are little more than *generals of their armies*; and though they command absolutely in war, yet at home and in time of peace they exercise very little dominion, and have but a very moderate sovereignty; the resolutions of peace and war being ordinarily either in the people, or in a council. Though the war itself, which admits not of plurality of governors, naturally devolves the command into the *king's sole authority*.

109. And thus, in Israel itself, the *chief business of their judges, and first kings*, seems to have been *to be captains in war*, and leaders of their armies; which (besides what is signified by *going out and in before the people*, which was to march forth to war, and home again at the heads of their forces) appears plainly in the story of Jephthah. The Ammonites making war upon Israel, the Gileadites in fear sent to Jephthah, a bastard of their family whom they had cast off, and article with him, if he will assist them against the Ammonites, to make him their ruler; which they do in these words, "And the people made him head and captain over them," *Judg.* xi. 11. which was, as it seems, all one as to be judge. "And he judged Israel," *Judg.* xii. 7. that is, was their captain-general, *six years*. So when Jotham upbraids the Shechemites with the obligation they had to Gideon, who had been their judge and ruler, he tells them, "He fought for you, and adventured his life far, and delivered you out of the hands of Midian," *Judg.* ix. 17. Nothing is mentioned of him, but what he did as a *general:* and indeed that is all is found in his history, or in any of the rest of the judges. And Abimelech particularly is called *king*, though at most he was but their *general*. And when, being weary of the ill conduct of Samuel's sons, the children of Israel desired a king, "like all the nations, to judge them, and to go out before them, and to fight their battles," *1 Sam.* viii. 20. God

granting their desire, says to Samuel. "I will send thee a man, and thou shalt anoint him to be captain over my people Israel, that he may save my people out of the hands of the Philistines," c. ix. 16. As if the only *business of a king* had been to lead out their armies, and fight in their defence; and accordingly at his inauguration, pouring a vial of oil upon him, declares to Saul, that "the Lord had anointed him to be captain over his inheritance," c. x. 1. And therefore those who, after Saul's being solemnly chosen and saluted *king* by the *tribes* of Mispah, were unwilling to have him their king, made no other objection but this, "How shall this man save us?" v. 27. as if they should have said, this man is unfit to be our *king*, not having skill and conduct enough in war to be able to defend us. And when God resolved to transfer the government to David, it is in these words, "But now thy kingdom shall not continue: the Lord hath sought him a man after his own heart, and the Lord hath commanded him to be captain over his people," c. xiii. 14. As if the whole kingly authority were nothing else but to be their general: and therefore the tribes who had stuck to Saul's family, and opposed David's reign, when they came to Hebron with terms of submission to him, they tell him, amongst other arguments, they had to submit to him as their king, that he was in effect their king in Saul's time, and therefore they had no reason but to receive him as their king now. "Also" (say they,) "in time past, when Saul was king over us, thou wast he that leddest out, and broughtest in Israel, and the Lord said unto thee, Thou shalt feed my people Israel, and thou shalt be a captain over Israel."

110. Thus, whether a family by degrees *grew up into a commonwealth*, and the fatherly authority being continued on to the elder son, every one in his turn growing up under it, tacitly submitted to it; and the easiness and equality of it not offending any one, every one acquiesced, till time seemed to have confirmed it, and settled a right of succession by prescription: or whether several families, or the descendants of several families, whom chance, neighbourhood, or business brought together, *uniting into society*, the need of a general, whose conduct might defend them against their enemies in war, and the great confidence the innocence and sincerity of that poor but virtuous age (such as are almost all those which begin governments, that ever come to last in the world), gave men of one another, made the first beginners of commonwealths generally put the rule into one man's hand, without any other express limitation or restraint, but what the nature of the thing and the end of government required: Whichever of those it was that at first put the rule into the hands of a single person, certain it is that no body was entrusted with it but for the public good and safety, and to those ends, in the infancies of commonwealths, those who had it, commonly used it. And unless they had done so, young societies could not have subsisted; without such nursing fathers tender and careful of the public weal, all governments would have sunk under the weakness and infirmities of their infancy, and the prince and the people had soon perished together.

111. But though the *golden age* (before vain ambition, and *amor sceleratus habendi*, evil concupiscence, had corrupted men's minds into a mistake of true power and honour) had more virtue, and consequently better governors, as well as less vicious subjects; and there was then *no stretching prerogative* on the one side, to oppress the people; nor consequently on the other, any *dispute about privilege*, to lessen or restrain the power of the magistrate; and so no contest betwixt rulers and people about governors or government: yet when ambition and luxury in future ages[6] would retain and increase the power, without doing the business for which it was given; and, aided by flattery, taught princes to have distinct and separate interests from their people; men found it necessary to examine more carefully the original and rights of government, and to find out ways to *restrain the exorbitancies*, and prevent the abuses of

6. "At first, when some certain kind of regiment was once approved, it may be nothing was then farther thought upon for the manner of governing, but all permitted unto their wisdom and discretion which were to rule, till by experience they found this for all parts very inconvenient, so as the thing which they had devised for a remedy, did indeed but increase the sore which it should have cured. They saw, that to live by one man's will, became the cause of all men's misery. This constrained them to come unto laws wherein all men might see their duty beforehand, and know the penalties of transgressing them." Hooker's Eccl. Pol. L. I. Sect. 10.

that power, which they having entrusted in another's hands only for their own good, they found was made use of to hurt them.

112. Thus we may see how probable it is, that people that were naturally free, and by their own consent either submitted to the government of their father, or united together out of different families to make a government, should generally put the *rule into one man's hands*, and choose to be under the conduct of a single person, without so much as by express conditions limiting or regulating his power, which they thought safe enough in his honesty and prudence. Though they never dreamed of monarchy being *jure divino*, which we never heard of among mankind, till it was revealed to us by the divinity of this last age; nor ever allowed paternal power to have a right to dominion, or to be the foundation of all government. And thus much may suffice to shew, that, as far as we have any light from history, we have reason to conclude, that all peaceful beginnings of government have been *laid in the consent of the people*. I say peaceful, because I shall have occasion in another place to speak of conquest, which some esteem a way of beginning of governments.

The other objection I find urged against the beginning of polities, in the way I have mentioned, is this, viz.

113. *That all men being born under government, some or other, it is impossible any of them should ever be free, and at liberty to unite together, and begin a new one, or ever be able to erect a lawful government.*

If this argument be good, I ask, how came so many lawful monarchies into the world? for if any body, upon this supposition, can shew me any one man in any age of the world free to begin a lawful monarchy, I will be bound to shew him ten other *free men* at liberty at the same time to unite and begin a new government under a regal or any other form. It being demonstration, that if any one, *born under the dominion* of another, may be so free as to have a right to command others in a new and distinct empire, every one that is *born under the dominion* of another may be so free too, and may become a ruler, or subject of a distinct separate government. And so by this their own principle, either all men, however born, are free, or else there is but one lawful prince, one lawful government in the world. And then they have nothing to do, but barely to shew us which that is; which when they have done, I doubt not but all mankind will easily agree to pay obedience to him.

114. Though it be a sufficient answer to their objection, to shew that it involves them in the same difficulties that it doth those they use it against; yet I shall endeavour to discover the weakness of this argument a little farther.

"All men," say they, "are born under government, and therefore they cannot be at liberty to begin a new one. Every one is born a subject to his father, or his prince, and is therefore under the perpetual tie of subjection and allegiance." It is plain mankind never owned nor considered any such natural *subjection that they were born in*, to one or to the other, that tied them, without their own consents, to a subjection to them and their heirs.

115. For there are no examples so frequent in history, both sacred and profane, as those of men withdrawing themselves, and their obedience from the jurisdiction they were born under, and the family or community they were bred up in, and *setting up new governments* in other places, from whence sprang all that number of petty commonwealths in the beginning of ages, and which always multiplied as long as there was room enough, till the stronger, or more fortunate, swallowed the weaker; and those great ones again breaking to pieces, dissolved into lesser dominions. All which are so many testimonies against paternal sovereignty, and plainly prove, that it was not the natural right of the father descending to his heirs, that made governments in the beginning, since it was impossible, upon that ground, there should have been so many little kingdoms; all must have been but only one universal monarchy, if men had not been *at liberty to separate themselves* from their families, and the government, be it what it will, that was set up in it, and go and make distinct commonwealths and other governments, as they thought fit.

116. This has been the practice of the world from its first beginning to this day; nor is it now any more hindrance to the freedom of mankind, that they are *born under constituted and ancient polities*, that have established laws, and set forms of government, than if they were born in the woods, amongst the unconfined inhabitants, that run loose in them. For those who would persuade us, that, *by being born under any government, we are naturally subjects to it*, and have

no more any title or pretence to the freedom of the state of nature; have no other reason (bating that of paternal power, which we have already answered) to produce for it, but only, because our fathers or progenitors passed away their natural liberty, and thereby bound up themselves and their posterity to a perpetual subjection to the government which they themselves submitted to. It is true, that whatever engagements or promises any one has made for himself, he is under the obligation of them, but cannot, by any compact whatsoever, bind his children or posterity. For his son, when a man, being altogether as free as the father, any *act of the father can no more give away the liberty of the son*, than it can of any body else: he may indeed annex such conditions to the land he enjoyed as a subject of any commonwealth, as may oblige his son to be of that community, if he will enjoy those possessions which were his father's; because that estate being his father's property, he may dispose, or settle it, as he pleases.

117. And this has generally given the occasion to mistake in this matter; because commonwealths not permitting any part of their dominions to be dismembered, nor to be enjoyed by any but those of their community, the son cannot ordinarily enjoy the possessions of his father, but under the same terms his father did, by becoming a member of the society; whereby he puts himself presently under the government he finds there established, as much as any other subject of that commonwealth. And thus *the consent of freemen, born under government, which only makes them members of it*, being given separately in their turns, as each comes to be of age, and not in a multitude together; people take no notice of it, and thinking it not done at all, or not necessary, conclude they are naturally subjects as they are men.

118. But, it is plain, governments themselves understand it otherwise; they claim *no power over the son, because of that they had over the father*; nor look on children as being their subjects, by their fathers being so. If a subject of England have a child, by an English woman in France, whose subject is he? Not the king of England's; for he must have leave to be admitted to the privileges of it. Nor the king of France's: for how then has his father a liberty to bring him away, and breed him as he pleases? And who ever was judged as a traitor or deserter, if he left, or warred against a country, for being barely born in it of parents that were aliens there? It is plain then, by the practice of governments themselves, as well as by the law of right reasons, that *a child is born a subject of no country or government*. He is under his father's tuition and authority, till he comes to age of discretion; and then he is a freeman, at liberty what government he will put himself under, what body politic he will unite himself to. For if an Englishman's son, born in France, be at liberty, and may do so, it is evident there is no tie upon him by his father's being a subject of this kingdom; nor is he bound up by any compact of his ancestors. And why then hath not his son, by the same reason, the same liberty, though he be born any where else? Since the power that a father hath naturally over his children is the same, wherever they be born, and the ties of natural obligations are not bounded by the positive limits of kingdoms and commonwealths.

119. Every man being, as has been shewed, naturally free, and nothing being able to put him into subjection to any earthly power, but only his own consent; it is to be considered, what shall be understood to be a *sufficient declaration of* a man's *consent, to make him subject* to the laws of any government. There is a common distinction of an express and a tacit consent, which will concern our present case. No body doubts but an express consent, of any man entering into any society, makes him a perfect member of that society, a subject of that government. The difficulty is, what ought to be looked upon as a *tacit consent*, and how far it binds, i.e. how far any one shall be looked on to have consented, and thereby submitted to any government, where he has made no expressions of it at all. And to this I say, that every man, that hath any possessions, or enjoyment of any part of the dominions of any government, doth thereby give his *tacit consent*, and is as far forth obliged to obedience to the laws of that government, during such enjoyment, as any one under it; whether this his possession be of land, to him and his heirs for ever, or a lodging only for a week; or whether it be barely travelling freely on the highway: and, in effect, it reaches as far as the very being of any one within the territories of that government.

120. To understand this the better, it is fit to consider, that every man, when he at first incorporates

himself into any commonwealth, he, by his uniting himself thereunto, annexed also, and submits to the community, those possessions which he has, or shall acquire, that do not already belong to any other government. For it would be a direct contradiction, for any one to enter into society with others for the securing and regulating of property, and yet to suppose, his land, whose property is to be regulated by the laws of the society, should be exempt from the jurisdiction of that government, to which he himself, the proprietor of the land, is a subject. By the same act therefore, whereby any one unites his person, which was before free, to any commonwealth; by the same he unites his possessions, which were before free, to it also: and they become, both of them, person and possession, subject to the government and dominion of that commonwealth, as long as it hath a being. Whoever therefore, from thenceforth, by inheritance, purchase, permission, or otherways, *enjoys any part of the land* so annexed to, and under the government *of that commonwealth, must take it with the condition* it is under; that is, *of submitting to the government of the commonwealth*, under whose jurisdiction it is, as far forth as any subject of it.

121. But since the government has a direct jurisdiction only over the land, and reaches the possessor of it, (before he has actually incorporated himself in the society) only as he dwells upon, and enjoys that; the obligation any one is under, by virtue of such enjoyment, to *submit to the government, begins and ends with the enjoyment:* so that whenever the owner, who has given nothing but such a tacit consent to the government, will, by donation, sale, or otherwise, quit the said possession, he is at liberty to go and incorporate himself into any other commonwealth; or to agree with others to begin a new one, *in vacuis locis*, in any part of the world they can find free and unpossessed: whereas he, that has once, by actual agreement, and any express declaration, given his *consent* to be of any commonwealth, is perpetually and indispensably obliged to be, and remain unalterably a subject to it, and can never be again in the liberty of the state of nature; unless, by any calamity, the government he was under comes to be dissolved, or else by some public act cuts him off from being any longer a member of it.

122. But submitting to the laws of any country, living quietly, and enjoying privileges and protection under them, *makes not a man a member of that society:* this is only a local protection and homage due to and from all those, who, not being in a state of war, come within the territories belonging to any government, to all parts whereof the force of its laws extends. But this no more *makes a man a member of that society*, a perpetual subject of that commonwealth, than it would make a man a subject to another, in whose family he found it convenient to abide for some time, though, whilst he continued in it, he were obliged to comply with the laws, and submit to the government he found there. And thus we see, that foreigners, by living all their lives under another government, and enjoying the privileges and protection of it, though they are bound, even in conscience, to submit to its administration, as far forth as any denison; yet do not thereby come to be *subjects or members of that commonwealth.* Nothing can make any man so, but his actually entering into it by positive engagement, and express promise and compact. This is that, which I think, concerning the beginning of political societies, and that *consent which makes any one a member of any commonwealth.*

Chapter 9

Of the Ends of Political Society and Government

123. If man in the state of nature be so free, as has been said; if he be absolute lord of his own person and possessions, equal to the greatest, and subject to no body, why will he part with his freedom? why will he give up this empire, and subject himself to the dominion and control of any other power? To which it is obvious to answer, that though in the state of nature he hath such a right, yet the enjoyment of it is very uncertain, and constantly exposed to the invasion of others. For all being kings as much as he, every man his equal, and the greater part no strict observers of equity and justice, the enjoyment of the property he has in this state is very unsafe, very unsecure. This makes him willing to quit this condition, which, however free, is full of fears and continual dangers: and it is not without reason, that he seeks

out, and is willing to join in society with others, who are already united, or have a mind to unite, for the mutual preservation of their lives, liberties, and estates, which I call by the general name, property.

124. The great and *chief end*, therefore, of men's uniting into commonwealths, and putting themselves under government, *is the preservation of their property*. To which in the state of nature there are many things wanting.

First, There wants an established, settled, known law, received and allowed by common consent to be the standard of right and wrong, and the common measure to decide all controversies between them. For though the law of nature be plain and intelligible to all rational creatures; yet men being biassed by their interest, as well as ignorant for want of studying it, are not apt to allow of it as a law binding to them in the application of it to their particular cases.

125. Secondly, In the state of nature there wants *a known and indifferent judge*, with authority to determine all differences according to the established law. For every one in that state being both judge and executioner of the law of nature, men being partial to themselves, passion and revenge is very apt to carry them too far, and with too much heat, in their own cases; as well as negligence, and unconcernedness, to make them too remiss in other men's.

126. Thirdly, In the state of nature, there often wants power to back and support the sentence when right, and to give it due execution. They who by any injustice offended, will seldom fail, where they are able, by force to make good their injustice; such resistance many times makes the punishment dangerous, and frequently destructive, to those who attempt it.

127. Thus mankind, notwithstanding all the privileges of the state of nature, being but in an ill condition, while they remain in it, are quickly driven into society. Hence it comes to pass that we seldom find any number of men live any time together in this state. The inconveniencies that they are therein exposed to, by the irregular and uncertain exercise of the power every man has of punishing the transgressions of others, make them take sanctuary under the established laws of government, and therein seek *the preservation of their property*. It is this makes them so willingly give up every one his single power of punishing, to be exercised by such alone, as shall be appointed to it amongst them; and by such rules as the community, or those authorized by them to that purpose, shall agree on. And in this we have the original *right and rise of both the legislative and executive power*, as well as of the governments and societies themselves.

128. For in the state of nature, to omit the liberty he has of innocent delights, a man has two powers.

The first is to do whatsoever he thinks fit for the preservation of himself and others within the permission of the *law of nature:* by which law, common to them all, he and all the rest of *mankind are one community*, make up one society, distinct from all other creatures. And, were it not for the corruption and viciousness of degenerate men, there would be no need of any other; no necessity that men should separate from this great and natural community, and by positive agreements combine into smaller and divided associations.

The other power a man has in the state of nature, is the *power to punish the crimes* committed against that law. Both these he gives up, when he joins in a private, if I may so call it, or particular politic society, and incorporates into any commonwealth, separate from the rest of mankind.

129. The first *power*, viz. *of doing whatsoever he thought fit for the preservation of himself*, and the rest of mankind, *he gives up* to be regulated by laws made by the society, so far forth as the preservation of himself and the rest of that society shall require; which laws of the society in many things confine the liberty he had by the law of nature.

130. *Secondly*, The *power of punishing he wholly gives up*, and engages his natural force, (which he might before employ in the execution of the law of nature, by his own single authority, as he thought fit) to assist the executive power of the society, as the law thereof shall require. For being now in a new state, wherein he is to enjoy many conveniencies, from the labour, assistance, and society of others in the same community, as well as protection from its whole strength; he is to part also, with as much of his natural liberty, in providing for himself, as the good, prosperity, and safety of the society shall require; which is not only necessary, but just, since the other members of the society do the like.

131. But though men, when they enter into society,

give up the equality, liberty, and executive power they had in the state of nature, into the hands of the society, to be so far disposed of by the legislative, as the good of the society shall require; yet it being only with an intention in every one the better to preserve himself, his liberty and property; (for no rational creature can be supposed to change his condition with an intention to be worse) the power of the society, or legislative constituted by them, *can never be supposed to extend farther, than the common good*; but is obliged to secure every one's property, by providing against those three defects above mentioned, that made the state of nature so unsafe and uneasy. And so whoever has the legislative or supreme power of any commonwealth, is bound to govern by established standing laws, promulgated and known to the people, and not by extemporary decrees; by indifferent and upright judges, who are to decide controversies by those laws; and to employ the force of the community at home, *only in the execution of such laws*; or abroad to prevent or redress foreign injuries, and secure the community from inroads and invasion. And all this to be directed to no other *end*, but the *peace*, *safety*, and *public good* of the people.

Chapter 10

Of the Forms of a Commonwealth

132. The majority having, as has been shewed, upon men's first uniting into society, the whole power of the community naturally in them, may employ all that power in making laws for the community from time to time, and executing those laws by officers of their own appointing; and then the *form* of the government is a perfect *democracy:* or else may put the power of making laws into the hands of a few select men, and their heirs or successors; and then it is an *oligarchy:* or else into the hands of one man, and then it is a *monarchy:* if to him and his heirs, it is an *hereditary monarchy:* if to him only for life, but upon his death the power only of nominating a successor to return to them; an *elective monarchy*. And so accordingly of these the community may make compounded and mixed forms of government, as they think good. And if the legislative power be at first given by the majority to one or more persons only for their lives, or any limited time, and then the supreme power to revert to them again; when it is so reverted, the community may dispose of it again anew into what hands they please, and so constitute a new form of government. For the *form of government depending upon the placing* the supreme power, which is the *legislative* (it being impossible to conceive that an inferiour power should prescribe to a superiour, or any but the supreme make laws), according as the power of making laws is placed, such is the *form of the commonwealth*.

133. By commonwealth, I must be understood all along to mean, not a democracy, or any form of government, but *any independent community*, which the Latines signified by the word *civitas;* to which the word which best answers in our language, is *commonwealth*, and most properly expresses such a society of men, which community or city in English does not. For there may be subordinate communities in government; and city amongst us has quite a different notion from commonwealth: and therefore, to avoid ambiguity, I crave leave to use the word *commonwealth* in that sense, in which I find it used by King *James the first:* and I take it to be its genuine signification; which if any body dislike, I consent with him to change it for a better.

Chapter 11

Of the Extent of the Legislative Power

134. The great end of men's entering into society being the enjoyment of their properties in peace and safety, and the great instrument and means of that being the laws established in that society; the *first and fundamental positive law* of all commonwealths *is the establishing of the legislative* power; as the *first and fundamental natural law*, which is to govern even the legislative itself, *is the preservation of the society*, and (as far as will consist with the public good) of every person in it. This *legislative* is not only *the supreme power* of the commonwealth, but sacred and unalterable in the hands where the community have once placed it; nor can any edict of any body else, in what form soever conceived, or by what power

soever backed, have the force and obligation of a law, which has not its *sanction from* that *legislative* which the public has chosen and appointed; for without this the law could not have that, which is absolutely necessary to its being a *law*,[7] *the consent of the society*; over whom no body can have a power to make laws, but by their own consent, and by authority received from them; and therefore all the obedience, which by the most solemn ties any one can be obliged to pay, ultimately terminates in this supreme power, and is directed by those laws which it enacts; nor can any oaths to any foreign power whatsoever, or any domestic subordinate power, discharge any member of the society from his *obedience to the legislative*, acting pursuant to their trust; nor oblige him to any obedience contrary to the laws so enacted, or farther than they do allow; it being ridiculous to imagine one can be tied ultimately to obey any power in the society, which is not the supreme.

135. Though the legislative, whether placed in one or more, whether it be always in being, or only by intervals, though it be the supreme power in every commonwealth; yet,

First, It is *not*, nor can possibly be absolutely *arbitrary* over the lives and fortunes of the people. For it being but the joint power of every member of the society given up to that person, or assembly, which is legislator, it can be no more than those persons had in a state of nature before they entered into society, and gave up to the community. For no body can transfer to another more power than he has in himself; and no body has an absolute arbitrary power over himself, or over any other, to destroy his own life, or take away the life or property of another. A man, as has been proved, cannot subject himself to the arbitrary power of another; and having in the state of nature no arbitrary power over the life, liberty, or possession of another, but only so much as the law of nature gave him for the preservation of himself and the rest of mankind; this is all he doth, or can give up to the commonwealth, and by it to the legislative power, so that the legislative can have no more than this. Their power, in the utmost bounds of it, is *limited to the public good* of the society. It is a power, that hath no other end but preservation, and therefore can never[8] have a right to destroy, enslave, or designedly to impoverish the subjects. The obligations of the law of nature cease not in society, but only in many cases are drawn closer, and have by human laws known penalties annexed to them, to enforce their observation. Thus the law of nature stands as an eternal rule to all men, legislators as well as others. The rules that they make for other men's actions, must, as well as their own and other men's actions, be conformable to the law of nature, i.e. to the will of God, of which

7. "The lawful power of making laws to command whole politic societies of men, belonging so properly unto the same entire societies, that for any prince or potentate of what kind soever upon earth, to exercise the same of himself, and not by express commission immediately and personally received from God, or else by authority derived at the first from their consent, upon whose persons they impose laws, it is no better than mere tyranny. Laws they are not therefore which public approbation hath not made so." Hooker's Eccl. Pol. L. I. Sect. 10. "Of this point therefore we are to note, that sith men naturally have no full and perfect power to command whole politic multitudes of men, therefore utterly without our consent, we could in such sort be at no man's commandment living. And to be commanded we do consent when that society, whereof we be a part, hath at any time before consented, without revoking the same after by the like universal agreement.

Laws therefore human, of what kind so ever, are available by consent." Ibid.

8. "Two foundations there are which bear up public societies, the one a natural inclination, whereby all men desire sociable life and fellowship; the other an order, expressly or secretly agreed upon, touching the manner of their union in living together: the latter is that which we call the law of a commonweal, the very soul of a politic body, the parts whereof are by law animated, held together, and set on work in such actions as the common good requireth. Laws politic, ordained for external order and regiment amongst men, are never framed as they should be, unless presuming the will of man to be inwardly obstinate, rebellious, and averse from all obedience to the sacred laws of his nature; in a word, unless presuming man to be, in regard of his depraved mind, little better than a wild beast, they do accordingly provide notwithstanding, so to frame his outward actions, that they be no hindrance unto the common good, for which societies are instituted. Unless they do this, they are not perfect." Hooker's Eccl. Pol. L. I. Sect. 10.

that is a declaration; and the *fundamental law of nature being the preservation of mankind*, no human sanction can be good or valid against it.

136. Secondly,[9] The legislative or supreme authority cannot assume to itself a power to rule, by extemporary, arbitrary decrees, but *is bound to dispense justice*, and decide the rights of the subject, *by promulgated, standing laws, and known authorised judges.* For the law of nature being unwritten, and so no-where to be found, but in the minds of men; they who through passion, or interest, shall miscite, or misapply it, cannot so easily be convinced of their mistake, where there is no established judge: and so it serves not, as it ought, to determine the rights, and fence the properties of those that live under it; especially where every one is judge, interpreter, and executioner of it too, and that in his own case: and he that has right on his side, having ordinarily but his own single strength, hath not force enough to defend himself from injuries, or to punish delinquents. To avoid these inconveniencies, which disorder men's properties in the state of nature, men unite into societies, that they may have the united strength of the whole society to secure and defend their properties, and may have standing rules to bound it, by which every one may know what is his. To this end it is that men give up all their natural power to the society which they enter into, and the community put the legislative power into such hands as they think fit: with this trust, that they shall be governed by *declared laws*, or else their peace, quiet, and property will still be at the same uncertainty, as it was in the state of nature.

137. Absolute arbitrary power, or governing without *settled standing laws*, can neither of them consist with the ends of society and government, which men would not quit the freedom of the state of nature for, and tie themselves up under, were it not to preserve their lives, liberties, and fortunes, and by *stated rules* of right and property to secure their peace and quiet. It cannot be supposed that they should intend, had they a power so to do, to give to any one, or more, an *absolute arbitrary power* over their persons and estates, and put a force into the magistrate's hand to execute his unlimited will arbitrarily upon them. This were to put themselves into a worse condition than the state of nature, wherein they had a liberty to defend their right against the injuries of others, and were upon equal terms of force to maintain it, whether invaded by a single man, or many in combination. Whereas by supposing they have given up themselves to the absolute arbitrary power and will of a legislator, they have disarmed themselves, and armed him, to make a prey of them when he pleases. He being in a much worse condition, who is exposed to the arbitrary power of one man, who has the command of 100,000, than he that is exposed to the arbitrary power of 100,000 single men; no body being secure, that his will, who has such a command, is better than that of other men, though his force be 100,000 times stronger. And therefore, whatever form the commonwealth is under, the ruling power ought to govern by declared and received laws, and not by extemporary dictates and undetermined resolutions. For then mankind will be in a far worse condition than in the state of nature, if they shall have armed one or a few men with the joint power of a multitude, to force them to obey at pleasure the exorbitant and unlimited decrees of their sudden thoughts, or unrestrained, and till that moment unknown wills, without having any measures set down which may guide and justify their actions; for all the power the government has, being only for the good of the society, as it ought not to be arbitrary and at pleasure, so it ought to be exercised by *established and promulgated laws*; that both the people may know their duty, and be safe and secure within the limits of the law, and the rulers too kept within their bounds, and not to be tempted, by the power they have in their hands, to employ it to such purposes, and by such measures, as they would not have known, and own not willingly.

138. *Thirdly*, The *supreme power cannot take* from any man part of his property without his own consent. For the preservation of property being the end of

9. "Human laws are measures in respect of men whose actions they must direct, howbeit such measures they are as have also their higher rules to be measured by, which rules are two, the law of God, and the law of nature; so that laws human must be made according to the general laws of nature, and without contradiction to any positive law of scripture, otherwise they are ill made." Hooker's Eccl. Pol. L. 3. Sect. 9.

"To constrain men to any thing inconvenient doth seem unreasonable." Ibid. L. I. Sect. 10.

government, and that for which men enter into society, it necessarily supposes and requires, that the people should *have property*, without which they must be supposed to lose that, by entering into society, which was the end for which they entered into it; too gross an absurdity for any man to own. *Men* therefore *in society having property*, they have such right to the goods, which by the law of the community are theirs, that no body hath a right to take their substance or any part of it from them, without their own consent; without this they have no property at all. For I have truly no property in that, which another can by right take from me, when he pleases, against my consent. Hence it is a mistake to think, that the *supreme or legislative power* of any commonwealth can do what it will, and dispose of the estates of the subject arbitrarily, or take any part of them at pleasure. This is not much to be feared in governments where the legislative consists, wholly or in part, in assemblies which are variable, whose members, upon the dissolution of the assembly, are subjects under the common laws of their country, equally with the rest. But in governments, where the legislative is in one lasting assembly always in being, or in one man, as in absolute monarchies, there is danger still, that they will think themselves to have a distinct interest from the rest of the community; and so will be apt to increase their own riches and power by taking what they think fit from the people. For a man's property is not at all secure, though there be good and equitable laws to set the bounds of it between him and his fellow subjects, if he who commands those subjects, have power to take from any private man, what part he pleases of his property, and use and dispose of it as he thinks good.

139. But government, into whatsoever hands it is put, being, as I have before shewed, intrusted with this condition, and *for this end*, that men might have and secure their properties; the prince, or senate, however it may have power to make laws, for the regulating of property between the subjects one amongst another, yet can never have a power to take to themselves the whole, or any part of the subject's property, without their own consent. For this would be in effect to leave them no property at all. And to let us see, that even absolute power where it is necessary, is not arbitrary by being absolute, but is still limited by that reason, and confined to those ends, which required it in some cases to be absolute, we need look no farther than the common practice of martial discipline. For the preservation of the army, and in it of the whole commonwealth, requires an absolute obedience to the command of every superiour officer, and it is justly death to disobey or dispute the most dangerous or unreasonable of them; but yet we see, that neither the serjeant, that could command a soldier to march up to the mouth of a cannon, or stand in a breach, where he is almost sure to perish, can command that soldier to give him one penny of his money; nor the general, that can condemn him to death for deserting his post, or for not obeying the most desperate orders, can yet, with all his absolute power of life and death, dispose of one farthing of that soldier's estate, or seize one jot of his goods; whom yet he can command any thing, and hang for the least disobedience: because such a blind obedience is necessary to that end, for which the commander has his power, viz. the preservation of the rest; but the disposing of his goods has nothing to do with it.

140. It is true, governments cannot be supported without great charge, and it is fit every one who enjoys his share of the protection, should pay out of his estate his proportion for the maintenance of it. But still it must be with his own consent, i.e. the consent of the majority, giving it either by themselves, or their representatives chosen by them. For if any one shall claim a *power to lay* and levy *taxes* on the people, by his own authority, and without such consent of the people, he thereby invades the *fundamental law of property*, and subverts the end of government. For what property have I in that, which another may by right take when he pleases, to himself?

141. *Fourthly*, The *legislative cannot transfer the power of making laws* to any other hands. For it being but a delegated power from the people, they who have it cannot pass it over to others. The people alone can appoint the form of the commonwealth, which is by constituting the legislative, and appointing in whose hands that shall be. And when the people have said, we will submit to rules, and be governed by laws made by such men, and in such forms, no body else can say other men shall make laws for them; nor can the people be bound by any laws, but such as are

enacted by those whom they have chosen, and authorized to make laws for them. The power of the legislative being derived from the people by a positive voluntary grant and institution, can be no other than what that positive grant conveyed, which being only to make laws, and not to make legislators, the legislative can have no power to transfer their authority of making laws and place it in other hands.

142. These are the bounds which the trust, that is put in them by the society and the law of God and nature, have *set to the legislative* power of every commonwealth, in all forms of government.

First, They are to govern by *promulgated established laws*, not to be varied in particular cases, but to have one rule for rich and poor, for the favourite at court, and the countryman at plough.

Secondly, These laws also ought to be designed for no other end ultimately, but *the good of the people*.

Thirdly, They must *not raise taxes* on the *property of the people, without the consent of the people*, given by themselves or their deputies. And this properly concerns only such governments where the legislative is always in being, or at least where the people have not reserved any part of the legislative to deputies, to be from time to time chosen by themselves.

Fourthly, The legislative neither must *nor can transfer the power of making laws* to any body else, or place it any where, but where the people have.

Chapter 12

Of the Legislative, Executive, and Federative Power of the Commonwealth

143. The legislative power is that, which has a right *to direct how the force of the commonwealth* shall be employed for preserving the community and the members of it. But because those laws which are constantly to be executed, and whose force is always to continue, may be made in a little time; therefore there is no need, that the legislative should be always in being, not having always business to do. And because it may be too great a temptation to human frailty, apt to grasp at power, for the same persons, who have the power of making laws, to have also in their hands the power to execute them, whereby they may exempt themselves from obedience to the laws they make, and suit the law, both in its making and execution, to their own private advantage, and thereby come to have a distinct interest from the rest of the community, contrary to the end of society and government: therefore in well ordered commonwealths, where the good of the whole is so considered, as it ought, the legislative power is put into the hands of divers persons, who, duly assembled, have by themselves, or jointly with others, a power to make laws; which when they have done, being separated again, they are themselves subject to the laws they have made; which is a new and near tie upon them, to take care that they make them for the public good.

144. But because the laws, that are at once, and in a short time made, have a constant and lasting force, and need a *perpetual execution*, or an attendance thereunto: therefore it is necessary there should be a *power always in being*, which should see to the execution of the laws that are made, and remain in force. And thus the legislative and executive power come often to be separated.

145. There is another power in every commonwealth, which one may call *natural*, because it is that which answers to the power every man naturally had before he entered into society. For though in a commonwealth, the members of it are distinct persons still in reference to one another, and as such are governed by the laws of the society; yet in reference to the rest of mankind, they make one body, which is, as every member of it before was, still in the state of nature with the rest of mankind. Hence it is, that the controversies that happen between any man of the society with those that are out of it, are managed by the public; and an injury done to a member of their body engages the whole in the reparation of it. So that, under this consideration, the whole community is one body in the state of nature, in respect of all other states or persons out of its community.

146. This therefore contains the power of war and peace, leagues and alliances, and all the transactions, with all persons and communities without the commonwealth; and may be called federative, if any one pleases. So the thing be understood, I am indifferent as to the name.

147. These two powers, executive and federative,

though they be really distinct in themselves, yet one comprehending the execution of the municipal laws of the society within itself, upon all that are parts of it; the other the management of the *security and interest of the public without*, with all those that it may receive benefit or damage from; yet they are always almost united. And though this *federative power* in the well or ill management of it be of great moment to the commonwealth, yet it is much less capable to be directed by antecedent, standing, positive laws, than the executive; and so must necessarily be left to the prudence and wisdom of those whose hands it is in, to be managed for the public good. For the laws that concern subjects one amongst another, being to direct their actions, may well enough precede them. But what is to be done in reference to foreigners, depending much upon their actions, and the variation of designs, and interests, must be left in great part to the prudence of those who have this power committed to them, to be managed by the best of their skill, for the advantage of the commonwealth.

148. Though, as I said, the executive and federative power of every community be really distinct in themselves, yet they are hardly to be separated, and placed at the same time in the hands of distinct persons. For both of them requiring the force of the society for their exercise, it is almost impracticable to place the force of the commonwealth in distinct, and not subordinate hands; or that the executive and federative power should be placed in persons that might act separately, whereby the force of the public would be under different commands: which would be apt some time or other to cause disorder and ruin.

Chapter 13

Of the Subordination of the Powers of the Commonwealth

149. Though in a constituted commonwealth, standing upon its own basis, and acting according to its own nature, that is, acting for the preservation of the community, there can be but *one supreme power*, which is the *legislative*, to which all the rest are and must be subordinate; yet the legislative being only a fiduciary power to act for certain ends, there remains still *in the people a supreme power to remove or alter the legislative*, when they find the legislative act contrary to the trust reposed in them. For all *power given with trust* for the attaining an end, being limited by that end; whenever that end is manifestly neglected or opposed, the trust must necessarily be forfeited, and the power devolve into the hands of those that gave it, who may place it anew where they shall think best for their safety and security. And thus the *community* perpetually *retains a supreme power* of saving themselves from the attempts and designs of any body, even of their legislators, whenever they shall be so foolish, or so wicked, as to lay and carry on designs against the liberties and properties of the subject. For no man, or society of men, having a power to deliver up their preservation, or consequently the means of it, to the absolute will and arbitrary dominion of another; whenever any one shall go about to bring them into such a slavish condition, they will always have a right to preserve what they have not a power to part with; and to rid themselves of those who invade this fundamental, sacred, and unalterable law of self-preservation, for which they entered into society. And thus the community may be said in this respect to be *always the supreme power*, but not as considered under any form of government, because this power of the people can never take place till the government be dissolved.

150. In all cases, whilst the government subsists, the *legislative is the supreme power*. For what can give laws to another, must needs be superiour to him; and since the legislative is no otherwise legislative of the society, but by the right it has to make laws for all the parts, and for every member of the society, prescribing rules to their actions, and giving power of execution, where they are transgressed; the legislative must needs be the supreme, and all other powers, in any members or parts of the society, derived from and subordinate to it.

151. In some commonwealths, where the legislative is not always in being, and the executive is vested in a single person, who has also a share in the legislative; there that single person in a very tolerable sense may also be called supreme; not that he has in himself all the supreme power, which is that of law-making; but because he has in him the supreme execution, from whom all inferiour magistrates derive all their several subordinate powers, or at least the greatest

part of them: having also no legislative superiour to him, there being no law to be made without his consent, which cannot be expected should ever subject him to the other part of the legislative, he is properly enough in this sense *supreme*. But yet it is to be observed, that though *oaths of allegiance* and fealty are taken to him, it is not to him as supreme legislator, but as *supreme executor* of the law, made by a joint power of him with others: allegiance being nothing but an *obedience according to law*, which when he violates, he has no right to obedience, nor can claim it otherwise, than as the public person invested with the power of the law; and so is to be considered as the image, phantom, or representative of the commonwealth, acted by the will of the society, declared in its laws; and thus he has no will, no power, but that of the law. But when he quits this representation, this public will, and acts by his own private will, he degrades himself, and is but a single private person without power, and without will, that has no right to obedience; the members owing no obedience but to the public will of the society.

152. The *executive power*, placed any where but in a person that has also a share in the legislative, is visibly subordinate and accountable to it, and may be at pleasure changed and displaced; so that it is not the *supreme executive power* that is exempt from subordination, but the *supreme executive power* vested in one, who having a share in the legislative, has no distinct superiour legislative to be subordinate and accountable to, farther than he himself shall join and consent; so that he is no more subordinate than he himself shall think fit, which one may certainly conclude will be but very little. Of other ministerial and subordinate powers in a commonwealth, we need not speak, they being so multiplied with infinite variety in the different customs and constitutions of distinct commonwealths, that it is impossible to give a particular account of them all. Only thus much, which is necessary to our present purpose, we may take notice of concerning them, that they have no manner of authority, any of them, beyond what is by positive grant and commission delegated to them, and are all of them accountable to some other power in the commonwealth.

153. It is not necessary, no, nor so much as convenient, that the *legislative* should be *always in being*. But absolutely necessary that the executive power should; because there is not always need of new laws to be made, but always need of execution of the laws that are made. When the legislative hath put the execution of the laws they make into other hands, they have a power still to resume it out of those hands, when they find cause, and to punish for any mal-administration against the laws. The same holds also in regard of the federative power, that and the executive being both *ministerial and subordinate to the legislative*, which, as has been shewed, in a constituted commonwealth is the supreme. The legislative also in this case being supposed to consist of several persons, (for if it be a single person, it cannot but be always in being, and so will, as supreme, naturally have the supreme executive power, together with the legislative) may *assemble, and exercise their legislature*, at the times that either their original constitution, or their own adjournment, appoints, or when they please; if neither of these hath appointed any time, or there be no other way prescribed to convoke them. For the supreme power being placed in them by the people, it is always in them, and they may exercise it when they please, unless by their original constitution they are limited to certain seasons, or by an act of their supreme power they have adjourned to a certain time; and when that time comes, they have a right to assemble and act again.

154. If the legislative, or any part of it, be made up of representatives chosen for that time by the people, which afterwards return into the ordinary state of subjects, and have no share in the legislature but upon a new choice, this power of choosing must also be exercised by the people, either at certain appointed seasons, or else when they are summoned to it; and in this latter case the power of convoking the legislative is ordinarily placed in the executive, and has one of these two limitations in respect of time: that either the original constitution requires their assembling and acting at certain intervals, and then the executive power does nothing but ministerially issue directions for their electing and assembling according to due forms; or else it is left to his prudence to call them by new elections, when the occasions, or exigencies of the public require the amendment of old, or making of new laws, or the redress or prevention of any inconveniencies, that lie on, or threaten the people.

155. It may be demanded here, What if the executive power, being possessed of the force of the commonwealth, shall make use of that force to hinder the *meeting* and *acting of the legislative*; when the original constitution, or the public exigencies require it? I say, using force upon the people without authority, and contrary to the trust put in him that does so, is a state of war with the people, who have a right to *reinstate* their *legislative in the exercise* of their power. For having erected a legislative, with an intent they should exercise the power of making laws, either at certain set times, or when there is need of it; when they are hindered by any force from what is so necessary to the society, and wherein the safety and preservation of the people consists, the people have a right to remove it by force. In all states and conditions, the true remedy of force without authority, is to oppose force to it. The use of force without authority, always puts him that uses it into a *state of war*, as the aggressor; and renders him liable to be treated accordingly.

156. The *power of assembling and dismissing the legislative*, placed in the executive, gives not the executive a superiority over it, but is a fiduciary trust placed in him for the safety of the people, in a case where the uncertainty and variableness of human affairs could not bear a steady fixed rule. For it not being possible that the first framers of the government should, by any foresight, be so much masters of future events as to be able to prefix so just periods of return and duration to the *assemblies of the legislative*, in all times to come, that might exactly answer all the exigencies of the commonwealth; the best remedy could be found for this defect was to trust this to the prudence of one who was always to be present, and whose business it was to watch over the public good. Constant *frequent meetings of the legislative*, and long continuations of their assemblies, without necessary occasion, could not but be burdensome to the people, and must necessarily in time produce more dangerous inconveniencies, and yet the quick turn of affairs might be sometimes such as to need their present help: any delay of their convening might endanger the public; and sometimes too their business might be so great, that the limited time of their sitting might be too short for their work, and rob the public of that benefit which could be had only from their mature deliberation. What then could be done in this case to prevent the community from being exposed some time or other to eminent hazard, on one side or the other, by fixed intervals and periods, set to the *meeting and acting of the legislative*; but to intrust it to the prudence of some, who being present, and acquainted with the state of public affairs, might make use of this prerogative for the public good? And where else could this be so well placed as in his hands, who was intrusted with the execution of the laws for the same end? Thus supposing the regulation of times for the *assembling and sitting of the legislative* not settled by the original constitution, it naturally fell into the hands of the executive, not as an arbitrary power depending on his good pleasure, but with this trust always to have it exercised only for the public weal, as the occurrences of times and change of affairs might require. Whether *settled periods of their convening*, or *a liberty* left to the prince for *convoking the legislative*, or perhaps a mixture of both, hath the least inconvenience attending it, it is not my business here to inquire; but only to shew, that though the executive power may have the prerogative of *convoking* and *dissolving* such *conventions of the legislative*, yet it is not thereby superiour to it.

157. Things of this world are in so constant a flux, that nothing remains long in the same state. Thus people, riches, trade, power, change their stations, flourishing mighty cities come to ruin, and prove in time neglected desolate corners, whilst other unfrequented places grow into populous countries, filled with wealth and inhabitants. But things not always changing equally, and private interest often keeping up customs and privileges, when the reasons of them are ceased; it often comes to pass, that in governments, where part of the legislative consists of representatives chosen by the people, that in tract of time this representation becomes very unequal and disproportionate to the reasons it was at first established upon. To what gross absurdities the following of custom, when reason has left it, may lead, we may be satisfied, when we see the bare name of a town, of which there remains not so much as the ruins, where scarce so much housing as a sheepcote, or more inhabitants than a shepherd is to be found, sends *as many representatives* to the grand assembly of law-makers, as a whole county numerous in people, and powerful in riches. This strangers stand amazed at, and every one must

confess needs a remedy. Though most think it hard to find one; because the constitution of the legislative being the original and supreme act of the society, antecedent to all positive laws in it, and depending wholly on the people, no inferiour power can alter it. And therefore the people, when the legislative is once constituted, having, in such a government as we have been speaking of, no power to act as long as the government stands; this inconvenience is thought incapable of a remedy.

158. *Salus populi suprema lex*, is certainly so just and fundamental a rule, that he, who sincerely follows it, cannot dangerously err. If therefore the executive, who has the power of convoking the legislative, observing rather the true proportion than fashion of representation, regulates not by old custom, but true reason, the *number of members* in all places that have a right to be distinctly represented, which no part of the people, however incorporated, can pretend to, but in proportion to the assistance which it affords to the public; it cannot be judged to have set up a new legislative, but to have restored the old and true one, and to have rectified the disorders which succession of time had insensibly, as well as inevitably introduced. For it being the interest as well as intention of the people, to have a fair and equal representative; whoever brings it nearest to that, is an undoubted friend to, and establisher of the government, and cannot miss the consent and approbation of the community. Prerogative being nothing but a power in the hands of the prince to provide for the public good, in such cases, which depending upon unforeseen and uncertain occurrences, certain and unalterable laws could not safely direct; whatsoever shall be done manifestly for the good of the people, and the establishing the government upon its true foundations, is, and always will be, just *prerogative*. The power of erecting new corporations, and therewith *new representatives*, carries with it a supposition that in time the *measures of representation* might vary, and those places have a just right to be represented which before had none; and by the same reason, those cease to have a right, and be too inconsiderable for such a privilege, which before had it. It is not a change from the present state, which perhaps corruption or decay has introduced, that makes an inroad upon the government; but the tendency of it to injure or oppress the people, and to set up one part or party, with a distinction from, and an unequal subjection of the rest. Whatsoever cannot but be acknowledged to be of advantage to the society, and people in general, upon just and lasting measures, will always, when done, justify itself; and whenever the people shall choose their *representatives upon* just and undeniably *equal measures*, suitable to the original frame of the government, it cannot be doubted to be the will and act of the society, whoever permitted or caused them so to do.

Chapter 14

Of Prerogative

159. Where the legislative and executive power are in distinct hands, (as they are in all moderated monarchies and well-framed governments) there the good of the society requires, that several things should be left to the discretion of him that has the executive power. For the legislators not being able to foresee, and provide by laws, for all that may be useful to the community, the executor of the laws having the power in his hands, has by the common law of nature a right to make use of it for the good of the society, in many cases, where the municipal law has given no direction, till the legislative can conveniently be assembled to provide for it. Many things there are, which the law can by no means provide for; and those must necessarily be left to the discretion of him that has the executive power in his hands, to be ordered by him as the public good and advantage shall require: nay, it is fit that the laws themselves should in some cases give way to the executive power, or rather to this fundamental law of nature and government, viz. That, as much as may be, all the members of the society are to be preserved. For since many accidents may happen, wherein a strict and rigid observation of the laws may do harm; (as not to pull down an innocent man's house to stop the fire, when the next to it is burning) and a man may come sometimes within the reach of the law, which makes no distinction of persons, by an action that may deserve reward and pardon; it is fit the ruler should have a power, in many cases, to mitigate the severity of the law, and pardon some offenders. For the *end of government*

being the *preservation of all*, as much as may be, even the guilty are to be spared, where it can prove no prejudice to the innocent.

160. This power to act according to discretion, for the public good, without the prescription of the law, and sometimes even against it, is that which is called *prerogative*. For since in some governments the lawmaking power is not always in being, and is usually too numerous, and so too slow for the dispatch requisite to execution; and because also it is impossible to foresee, and so by laws to provide for all accidents and necessities that may concern the public, or to make such laws as will do no harm, if they are executed with an inflexible rigour on all occasions, and upon all persons that may come in their way; therefore there is a latitude left to the executive power, to do many things of choice which the laws do not prescribe.

161. This power, whilst employed for the benefit of the community, and suitably to the trust and ends of the government, *is undoubted prerogative*, and never is questioned. For the people are very seldom or never scrupulous or nice in the point; they are far from examining prerogative, whilst it is in any tolerable degree employed for the use it was meant; that is, for the good of the people, and not manifestly against it. But if there comes to be a *question* between the executive power and the people, about a thing claimed as a *prerogative*, the tendency of the exercise of such prerogative to the good or hurt of the people will easily decide that question.

162. It is easy to conceive, that in the infancy of governments, when commonwealths differed little from families in number of people, they differed from them too but little in number of laws: and the governors being as the fathers of them, watching over them, for their good, the government was almost all prerogative. A few established laws served the turn, and the discretion and care of the ruler supplied the rest. But when mistake or flattery prevailed with weak princes to make use of this power for private ends of their own, and not for the public good, the people were fain by express laws to get prerogative determined in those points wherein they found disadvantage from it: and thus declared *limitations of prerogative* were by the people found necessary in cases which they and their ancestors had left, in the utmost latitude, to the wisdom of those princes who made no other but a right use of it; that is, for the good of their people.

163. And therefore they have a very wrong notion of government, who say, that the people have *encroached upon the prerogative*, when they have got any part of it to be defined by positive laws. For in so doing they have not pulled from the prince any thing that of right belonged to him, but only declared, that that power which they indefinitely left in his or his ancestors hands, to be exercised for their good, was not a thing which they intended him when he used it otherwise. For the end of government being the good of the community, whatsoever alterations are made in it, tending to that end, cannot be an encroachment upon any body, since no body in government can have a right tending to any other end: and those only are encroachments which prejudice or hinder the public good. Those who say otherwise, speak as if the prince had a distinct and separate interest from the good of the community, and was not made for it; the root and source from which spring almost all those evils and disorders which happen in kingly governments. And indeed, if that be so, the people under his government are not a society of rational creatures, entered into a community for their mutual good; they are not such as have set rulers over themselves, to guard and promote that good; but are to be looked on as an herd of inferior creatures under the dominion of a master, who keeps them and works them for his own pleasure or profit. If men were so void of reason, and brutish, as to enter into society upon such terms, prerogative might indeed be, what some men would have it, an arbitrary power to do things hurtful to the people.

164. But since a rational creature cannot be supposed, when free, to put himself into subjection to another, for his own harm; (though, where he finds a good and wise ruler, he may not perhaps think it either necessary or useful to set precise bounds to his power in all things) prerogative can be nothing but the people's permitting their rulers to do several things, of their own free choice, where the law was silent, and sometimes too against the direct letter of the law, for the public good; and their acquiescing in it when so done. For as a good prince, who is mindful of the trust put into his hands, and careful of the good of his people, cannot have too much prerogative, that

is, power to do good; so a weak and ill prince, who would claim that power which his predecessors exercised without the direction of the law, as a prerogative belonging to him by right of his office, which he may exercise at his pleasure, to make or promote an interest distinct from that of the public, gives the people an occasion to claim their right, and limit that power, which, whilst it was exercised for their good, they were content should be tacitly allowed.

165. And therefore he that will look into the *history of England*, will find, that prerogative was always *largest* in the hands of our wisest and best princes; because the people, observing the whole tendency of their actions to be the public good, contested not what was done without law to that end: or, if any human frailty or mistake (for princes are but men, made as others) appeared in some small declinations from that end; yet it was visible, the main of their conduct tended to nothing but the care of the public. The people therefore, finding reason to be satisfied with these princes, whenever they acted without, or contrary to the letter of the law, acquiesced in what they did, and without the least complaint, let them enlarge their prerogative as they pleased; judging rightly, that they did nothing herein to the prejudice of their laws, since they acted conformably to the foundation and end of all laws, the public good.

166. Such God-like princes indeed had some title to arbitrary power by that argument, that would prove absolute monarchy the best government, as that which God himself governs the universe by; because such kings partook of his wisdom and goodness. Upon this is founded that saying, That the reigns of good princes have been always most dangerous to the liberties of their people. For when their successors, managing the government with different thoughts, would draw the actions of those good rulers into precedent, and make them the standard of their prerogative, as if what had been done only for the good of the people was a right in them to do, for the harm of the people, if they so pleased; it has often occasioned contest, and sometimes public disorders, before the people could recover their original right, and get that to be declared not to be prerogative, which truly was never so: since it is impossible that any body in the society should ever have a right to do the people harm; though it be very possible, and reasonable, that the people should not go about to set any bounds to the prerogative of those kings, or rulers, who themselves transgressed not the bounds of the public good. For *prerogative is nothing but the power of doing public good without a rule.*

167. The power of calling parliaments in England, as to precise time, place, and duration, is certainly a prerogative of the king, but still with this trust, that it shall be made use of for the good of the nation, as the exigencies of the times, and variety of occasions, shall require. For it being impossible to foresee which should always be the fittest place for them to assemble in, and what the best season, the choice of these was left with the executive power, as might be most subservient to the public good, and best suit the ends of parliaments.

168. The old question will be asked in this matter of prerogative, "But who shall be judge when this power is made a right use of?" I answer: between an executive power in being, with such a prerogative, and a legislative that depends upon his will for their convening, there can be no *judge on earth;* as there can be none between the legislative and the people, should either the executive or the legislative, when they have got the power in their hands, design, or go about to enslave or destroy them. The people have no other remedy in this, as in all other cases where they have no judge on earth, but to *appeal to heaven.* For the rulers, in such attempts, exercising a power the people never put into their hands, (who can never be supposed to consent that any body should rule over them for their harm) do that which they have not a right to do. And where the body of the people, or any single man, is deprived of their right, or is under the exercise of a power without right, and have no appeal on earth, then they have a liberty to appeal to heaven, whenever they judge the cause of sufficient moment. And therefore, *though the people cannot* be *judge*, so as to have, by the constitution of that society, any superior power to determine and give effective sentence in the case; yet they have, by a law antecedent and paramount to all positive laws of men, reserved that ultimate determination to themselves which belongs to all mankind, where there lies no appeal on earth, viz. to judge, whether they have just cause to make their appeal to heaven. And this judgment they cannot part with, it being out of a

man's power so to submit himself to another, as to give him a liberty to destroy him; God and nature never allowing a man so to abandon himself, as to neglect his own preservation: and since he cannot take away his own life, neither can he give another power to take it. Nor let any one think, this lays a perpetual foundation for disorder; for this operates not, till the inconveniency is so great, that the majority feel it, and are weary of it, and find a necessity to have it amended. But this the executive power, or wise princes, never need come in the danger of: and it is the thing, of all others, they have most need to avoid, as of all others the most perilous.

Chapter 15

Of Paternal, Political, and Despotical Power, Considered Together

169. Though I have had occasion to speak of these separately before, yet the great mistakes of late about government having, as I suppose, arisen from confounding these distinct powers one with another, it may not, perhaps, be amiss to consider them here together.

170. *First*, then, *Paternal* or *parental power* is nothing but that which parents have over their children, to govern them for the children's good, till they come to the use of reason, or a state of knowledge, wherein they may be supposed capable to understand that rule, whether it be the law of nature, or the municipal law of their country, they are to govern themselves by: capable, I say, to know it, as well as several others, who live as freemen under that law. The affection and tenderness which God hath planted in the breast of parents towards their children, makes it evident that this is not intended to be a severe arbitrary government, but only for the help, instruction, and preservation of their offspring. But happen it as it will, there is, as I have proved, no reason why it should be thought to extend to life and death, at any time, over their children, more than over any body else; neither can there be any pretence why this *parental power* should keep the child, when grown to a man, in subjection to the will of his parents, any farther than having received life and education from his parents, obliges him to respect, honour, gratitude, assistance and support, all his life, to both father and mother. And thus, it is true, the paternal is a natural government, but not at all extending itself to the ends and jurisdictions of that which is political. The *power of the father doth not reach* at all to the *property* of the child, which is only in his own disposing.

171. *Secondly*, *Political power* is that power which every man having in the state of nature, has given up into the hands of the society, and therein to the governors, whom the society hath set over itself, with this express or tacit trust, that it shall be employed for their good, and the preservation of their property: now this *power*, which every man has *in the state of nature*, and which he parts with to the society in all such cases where the society can secure him, is to use such means for the preserving of his own property, as he thinks good, and nature allows him; and to punish the breach of the law of nature in others, so as (according to the best of his reason) may most conduce to the preservation of himself, and the rest of mankind. So that the *end and measure of this power*, when in every man's hands in the state of nature, being the preservation of all of his society, that is, all mankind in general; it can have no other *end or measure*, when in the hands of the magistrate, but to preserve the members of that society in their lives, liberties, and possessions; and so cannot be an absolute arbitrary power, over their lives and fortunes, which are as much as possible to be preserved; but a *power to make laws*, and annex such penalties to them, as may tend to the preservation of the whole, by cutting off those parts, and those only, which are so corrupt, that they threaten the sound and healthy, without which no severity is lawful. And this *power has its original only from compact* and agreement, and the mutual consent of those who make up the community.

172. Thirdly, Despotical power is an absolute, arbitrary power; one man has over another, to take away his life, whenever he pleases. This is a power, which neither nature gives, for it has made no such distinction between one man and another; nor compact can convey. For man not having such an arbitrary power over his own life, cannot give another man such a power over it; but it is *the effect only of forfeiture* which the aggressor makes of his own life, when he

puts himself into the state of war with another. For having quitted reason, which God hath given to be the rule betwixt man and man, and the common bond whereby human kind is united into one fellowship and society; and having renounced the way of peace which that teaches, and made use of the force of war, to compass his unjust ends upon another, where he has no right; and so revolting from his own kind to that of beasts, by making force, which is theirs, to be his rule of right; he renders himself liable to be destroyed by the injured person, and the rest of mankind, that will join with him in the execution of justice, as any other wild beast, or noxious brute, with whom mankind can have neither society nor security.[10] And thus *captives*, taken in a just and lawful war, and such only, are *subject to a despotical power*; which, as it arises not from compact, so neither is it capable of any, but is the state of war continued. For what compact can be made with a man that is not master of his own life? What condition can he perform? And if he be once allowed to be master of his own life, the *despotical arbitrary power* of his master ceases. He that is master of himself; and his own life, has a right too to the means of preserving it; so that, *as soon as compact enters*, *slavery ceases*, and he so far quits his absolute power, and puts an end to the state of war, who enters into conditions with his captive.

173. Nature gives the first of these, viz. *paternal power*, *to parents* for the benefit of their children during their minority, to supply their want of ability and understanding how to manage their property. (By property I must be understood here, as in other places, to mean that property which men have in their persons as well as goods.) *Voluntary agreement gives* the second, *viz. political power to governors* for the benefit of their subjects, to secure them in the possession and use of their properties. And *forfeiture gives* the third *despotical power to lords*, for their own benefit, over those who are stripped of all property.

174. He, that shall consider the distinct rise and extent, and the different ends of these several powers, will plainly see, that *paternal power* comes as far short of that of the *magistrate*, as *despotical* exceeds it; and that *absolute dominion*, however placed, is so far from being one kind of civil society, that it is as inconsistent with it, as slavery is with property. *Paternal power* is only where minority makes the child incapable to manage his property; *political*, where men have property in their own disposal; and *despotical*, over such as have no property at all.

10. Another copy, corrected by Mr. Locke, has it thus, "Noxious brute that is destructive to their being."

Chapter 16

Of Conquest

175. Though governments can originally have no other rise than that before-mentioned, nor *polities* be *founded* on any thing but *the consent of the people*; yet such have been the disorders ambition has filled the world with, that in the noise of war, which makes so great a part of the history of mankind, *this consent* is little taken notice of: and therefore many have mistaken the force of arms for the consent of the people, and reckon conquest as one of the originals of government. But conquest is as far from setting up any government, as demolishing an house is from building a new one in the place. Indeed, it often makes way for a new frame of a commonwealth, by destroying the former; but, without the consent of the people, can never erect a new one.

176. That the *aggressor*, who puts himself into the state of war with another, and *unjustly invades* another man's right, can, by such an unjust war, *never* come to *have a right over the conquered*, will be easily agreed by all men, who will not think, that robbers and pirates have a right of empire over whomsoever they have force enough to master; or that men are bound by promises, which unlawful force extorts from them. Should a robber break into my house, and with a dagger at my throat, make me seal deeds to convey my estate to him, would this give him any title? Just such a title, by his sword, has an *unjust conqueror*, who forces me into submission. The injury and the crime are equal, whether committed by the wearer of the crown, or some petty villain. The title of the offender, and the number of his followers, make no difference in the offence, unless it be to aggravate it. The only difference is, great robbers punish little ones, to keep them in their obedience; but the great

ones are rewarded with laurels and triumphs; because they are too big for the weak hands of justice in this world, and have the power in their own possession, which should punish offenders. What is my remedy against a robber, that so broke into my house? Appeal to the law for justice. But perhaps justice is denied, or I am crippled and cannot stir, robbed and have not the means to do it. If God has taken away all means of seeking remedy, there is nothing left but patience. But my son, when able, may seek the relief of the law, which I am denied: he or his son may renew his appeal, till he recover his right. But the conquered, or their children, have no court, no arbitrator on earth to appeal to. Then they may appeal, as Jephthah did, to heaven, and repeat their appeal till they have recovered the native right of their ancestors, which was, to have such a legislative over them, as the majority should approve, and freely acquiesce in. If it be objected, this would cause endless trouble; I answer, no more than justice does, where she lies open to all that appeal to her. He that troubles his neighbour without a cause, is punished for it by the justice of the court he appeals to. And he that *appeals to heaven* must be sure he has right on his side; and a right too that is worth the trouble and cost of the appeal, as he will answer at a tribunal that cannot be deceived, and will be sure to retribute to every one according to the mischiefs he hath created to his fellow-subjects; that is, any part of mankind: from whence it is plain, that he that *conquers in an unjust war, can thereby have no title to the subjection and obedience of the conquered.*

177. But supposing victory favours the right side, let us consider *a conqueror in a lawful war*, and see what power he gets, and over *whom.*

First, it is plain, *he gets no power by his conquest over those that conquered with him.* They that fought on his side cannot suffer by the conquest, but must at least be as much freemen as they were before. And most commonly they serve upon terms, and on conditions to share with their leader, and enjoy a part of the spoil, and other advantages that attended the conquering sword; or at least have a part of the subdued country bestowed upon them. And *the conquering people are not, I hope, to be slaves by conquest*, and wear their laurels only to shew they are sacrifices to their leader's triumph. They that found absolute monarchy upon the title of the sword, make their heroes, who are the founders of such monarchies, arrant Drawcansirs, and forget they had any officers and soldiers that fought on their side in the battles they won, or assisted them in the subduing, or shared in possessing, the countries they mastered. We are told by some, that the English monarchy is founded in the Norman conquest, and that our princes have thereby a title to absolute dominion: which if it were true, (as by the history it appears otherwise) and that William had a right to make war on this island; yet his dominion by conquest could reach no farther than to the Saxons and Britons, that were then inhabitants of this country. The Normans that came with him, and helped to conquer, and all descended from them, are freemen, and no subjects by conquest, let that give what dominion it will. And if I, or any body else, shall claim freedom, as derived from them, it will be very hard to prove the contrary; and it is plain, the law, that has made no distinction between the one and the other, intends not there should be any difference in their freedom or privileges.

178. But supposing, which seldom happens, that the conquerors and conquered never incorporate into one people, under the same laws and freedom. Let us see next *what power a lawful conqueror has over the subdued*; and that I say is purely despotical. He has an absolute power over the lives of those who by an unjust war have forfeited them; but not over the lives or fortunes of those who engaged not in the war, nor over the possessions even of those who were actually engaged in it.

179. Secondly, I say then the conqueror gets no power but only over those who have actually assisted, concurred, or consented to that unjust force that is used against him. For the people having given to their governors no power to do an unjust thing, such as is to make an unjust war, (for they never had such a power in themselves) they ought not to be charged as guilty of the violence and injustice that is committed in an unjust war, any farther than they actually abet it; no more than they are to be thought guilty of any violence or oppression their governors should use upon the people themselves, or any part of their fellow-subjects, they having impowered them no more to the one than to the other. Conquerors, it is true, seldom trouble themselves to make the distinc-

tion, but they willingly permit the confusion of war to sweep all together: but yet this alters not the right; for the conqueror's power over the lives of the conquered being only because they have used force to do, or maintain an injustice, he can have that power only over those who have concurred in that force; all the rest are innocent; and he has no more title over the people of that country, who have done him no injury, and so have made no forfeiture of their lives, than he has over any other, who without any injuries or provocations, have lived upon fair terms with him.

180. *Thirdly*, The *power a conqueror gets* over those he overcomes *in a just war, is perfectly despotical:* he has an absolute power over the lives of those, who, by putting themselves in a state of war, have forfeited them; but he has not thereby a right and title to their possessions. This I doubt not but at first sight will seem a strange doctrine, it being so quite contrary to the practice of the world; there being nothing more familiar in speaking of the dominion of countries, than to say such an one conquered it. As if conquest, without any more ado, conveyed a right of possession. But when we consider, that the practice of the strong and powerful, how universal soever it may be, is seldom the rule of right, however it be one part of the subjection of the conquered, not to argue against the conditions cut out to them by the conquering sword.

181. Though in all war there be usually a complication of force and damage, and the aggressor seldom fails to harm the estate, when he uses force against the persons of those he makes war upon; yet it is the use of force only that puts a man into the state of war. For whether by force he begins the injury, or else, having quietly, and by fraud, done the injury, he refuses to make reparation, and by force maintains it, (which is the same thing, as at first to have done it by force) it is the unjust use of force that makes the war. For he that breaks open my house, and violently turns me out of doors; or, having peaceably got in, by force keeps me out; does in effect the same thing; supposing we are in such a state, that we have no common judge on earth, whom I may appeal to, and to whom we are both obliged to submit. For of such I am now speaking. It is the *unjust use of force then, that puts a man into the state of war* with another; and thereby he that is guilty of it makes a forfeiture of his life. For quitting reason, which is the rule given between man and man, and using force, the way of beasts, he becomes liable to be destroyed by him he uses force against as any savage ravenous beast, that is dangerous to his being.

182. But because the miscarriages of the father are no faults of the children, and they may be rational and peaceable, notwithstanding the brutishness and injustice of the father; the father, by his miscarriages and violence, can forfeit but his own life, but involves not his children in his guilt or destruction. His goods, which nature, that willeth the preservation of all mankind as much as is possible, hath made to belong to the children, to keep them from perishing, do still continue to belong to his children. For supposing them not to have joined in the war, either through infancy, absence, or choice, they have done nothing to forfeit them: *nor has the conqueror any right* to take them away, by the bare title of having subdued him that by force attempted his destruction; though perhaps he may have some right to them, to repair the damages he has sustained by the war, and the defence of his own right; which how far it reaches to the possessions of the conquered, we shall see by and by. So that he that *by conquest has a right over a man's person* to destroy him if he pleases, has not thereby a right *over his estate* to possess and enjoy it. For it is the brutal force the aggressor has used, that gives his adversary a right to take away his life, and destroy him if he pleases as a noxious creature; but it is damage sustained that alone gives him title to another man's goods. For, though I may kill a thief that sets on me in the highway, yet I may not (which seems less) take away his money and let him go: this would be robbery on my side. His force, and the state of war he put himself in, made him forfeit his life, but gave me no title to his goods. The *right* then *of conquest extends only to the lives* of those who joined in the war, *not to their estates*, but only in order to make reparation for the damages received, and the charges of the war; and that too with reservation of the right of the innocent wife and children.

183. Let the conqueror have as much justice on his side as could be supposed, he has no right to seize more than the vanquished could forfeit: his life is at the victor's mercy; and his service and goods he may appropriate, to make himself reparation; but he cannot take the goods of his wife and children: they too

had a title to the goods he enjoyed, and their shares in the estate he possessed. For example, I in the state of nature (and all commonwealths are in the state of nature one with another) have injured another man, and refusing to give satisfaction it comes to a state of war, wherein my defending by force what I had gotten unjustly makes me the aggressor. I am conquered: my life, it is true, as forfeit, is at mercy, but not my wife's and children's. They made not the war, nor assisted in it. I could not forfeit their lives; they were not mine to forfeit. My wife had a share in my estate; that neither could I forfeit. And my children also, being born of me, had a right to be maintained out of my labour or substance. Here then is the case: the conqueror has a title to reparation for damages received, and the children have a title to their father's estate for their subsistence. For as to the wife's share, whether her own labour, or compact, gave her a title to it, it is plain, her husband could not forfeit what was hers. What must be done in the case? I answer; the fundamental law of nature being, that all, as much as may be, should be preserved, it follows, that if there be not enough fully to satisfy both, viz. for the conqueror's losses, and children's maintenance, he that hath, and to spare, must remit something of his full satisfaction, and give way to the pressing and preferable title of those who are in danger to perish without it.

184. But supposing the *charge* and *damages of the war* are to be made up to the conqueror, to the utmost farthing; and that the children of the vanquished, spoiled of all their father's goods, are to be left to starve and perish; yet the satisfying of what shall, on this score, be due to the conqueror, will scarce give him a *title to any country he shall conquer.* For the damages of war can scarce amount to the value of any considerable tract of land, in any part of the world, where all the land is possessed, and none lies waste. And if I have not taken away the conqueror's land, which, being vanquished, it is impossible I should; scarce any other spoil I have done him can amount to the value of mine, supposing it equally cultivated, and of an extent any way coming near what I had over-run of his. The destruction of a year's product or two (for it seldom reaches four or five) is the utmost spoil that usually can be done. For as to money, and such riches and treasure taken away, these are none of nature's goods, they have but a fantastical imaginary value: nature has put no such upon them: they are of no more account by her standard, than the wampompeke of the Americans to an European prince, or the silver money of Europe would have been formerly to an American. And five years product is not worth the perpetual inheritance of land, where all is possessed, and none remains waste, to be taken up by him that is disseized: which will be easily granted, if one do but take away the imaginary value of money, the disproportion being more than between five and five hundred; though, at the same time, half a year's product is more worth than the inheritance, where there being more land than the inhabitants possess and make use of, any one has liberty to make use of the waste: but there conquerors take little care to possess themselves of the *lands of the vanquished.* No damage therefore, that men in the state of nature (as all princes and governments are in reference to one another) suffer from one another, can give a conqueror power to dispossess the posterity of the vanquished, and turn them out of that inheritance which ought to be the possession of them and their descendants to all generations. The conqueror indeed will be apt to think himself master: and it is the very condition of the subdued not to be able to dispute their right. But if that be all, it gives no other title than what bare force gives to the stronger over the weaker. And, by this reason, he that is strongest will have a right to whatever he pleases to seize on.

185. Over those then that joined with him in the war, and over those of the subdued country that opposed him not, and the posterity even of those that did, the conqueror, even in a just war, hath, by his conquest, no *right of dominion:* they are free from any subjection to him, and if their former government be dissolved, they are at liberty to begin and erect another to themselves.

186. The conqueror, it is true, usually, by the force he has over them, compels them, with a sword at their breasts, to stoop to his conditions, and submit to such a government as he pleases to afford them; but the inquiry is, what right he has to do so? If it be said, they submit by their own consent, then this allows their own *consent* to be *necessary to give the conqueror a title to rule* over them. It remains only to be considered, whether *promises extorted by force,*

without right, can be thought consent, and *how far they bind*. To which I shall say, they *bind not at all*; because whatsoever another gets from me by force, I still retain the right of, and he is obliged presently to restore. He that forces my horse from me, ought presently to restore him, and I have still a right to retake him. By the same reason, he that *forced a promise* from me, ought presently to restore it, i.e. quit me of the obligation of it: or I may resume it myself, i.e. choose whether I will perform it. For the law of nature laying an obligation on me only by the rules she prescribes, cannot oblige me by the violation of her rules: such is the extorting any thing from me by force. Nor does it at all alter the case to say, "I gave my promise," no more than it excuses the force, and passes the right, when I put my hand in my pocket and deliver my purse myself to a thief, who demands it with a pistol at my breast.

187. From all which it follows, that the *government of a conqueror*, imposed by force, on the subdued, against whom he had no right of war, or who joined not in the war against him, where he had right, *has no obligation* upon them.

188. But let us suppose that all the men of that community, being all members of the same body politic, may be taken to have joined in that unjust war, wherein they are subdued, and so their lives are at the mercy of the conqueror.

189. I say this concerns not their children who are in their minority. For since a father hath not, in himself, a power over the life or liberty of his child, no act of his can possibly forfeit it. So that the children, whatever may have happened to the fathers, are freemen, and the absolute power of the conqueror reaches no farther than the persons of the men that were subdued by him, and dies with them: and should he govern them as slaves subjected to his absolute arbitrary power, he *has* no *such right of dominion over their children*. He can have no power over them but by their own consent, whatever he may drive them to say or do; and he has no lawful authority, whilst force, and not choice, compels them to submission.

190. Every man is born with a double right: *first*, *a right of freedom to his person*, which no other man has a power over, but the free disposal of it lies in himself. *Secondly*, *a right*, before any other man, *to inherit with* his brethren his *father's goods*.

191. By the first of these, a man is *naturally free* from subjection to any government, though he be born in a place under its jurisdiction. But if he disclaim the lawful government of the country he was born in, he must also quit the right that belonged to him by the laws of it, and the possessions there descending to him from his ancestors, if it were a government made by their consent.

192. By the second, the inhabitants of any country, who are descended, and derive a title to their estates from those who are subdued, and had a government forced upon them against their free consents, *retain a right to the possession of their ancestors*, though they consent not freely to the government, whose hard conditions were by force imposed on the possessors of that country. For, the first *conqueror never having had a title to the land* of that country, the people who are the descendants of, or claim under those who were forced to submit to the yoke of a government by constraint, have always a right to shake it off, and free themselves from the usurpation or tyranny which the sword hath brought in upon them, till their rulers put them under such a frame of government as they willingly and of choice consent to. Who doubts but the Grecian christians, descendants of the ancient possessors of that country, may justly cast off the Turkish yoke, which they have so long groaned under, whenever they have an opportunity to do it? For no government can have a right to obedience from a people who have not freely consented to it; which they can never be supposed to do, till either they are put in a full state of liberty to choose their government and governors, or at least till they have such standing laws, to which they have by themselves or their representatives given their free consent; and also till they are allowed their due property, which is, so to be proprietors of what they have, that no body can take away any part of it without their own consent, without which, men under any government are not in the state of freemen, but are direct slaves under the force of war.

193. But granting that the *conqueror* in a just war has a right to the estates, as well as power over the persons of the conquered; which, it is plain, he *hath* not: nothing of absolute power will follow from hence, in the continuance of the government. Because the descendants of these being all freemen, if he grants

them estates and possessions to inhabit his country (without which it would be worth nothing) whatsoever he grants them, they have, so far as it is granted, property in. The nature whereof is, that *without a man's own consent, it cannot be taken from him.*

194. Their *persons* are *free* by a native right, and their properties, be they more or less, are *their own, and at their own dispose*, and not at his; or else it is no property. Supposing the conqueror gives to one man a thousand acres, to him and his heirs for ever; to another he lets a thousand acres for his life, under the rent of 50*l.* or 500*l.* per annum, has not the one of these a right to his thousand acres for ever, and the other during his life, paying the said rent? and hath not the tenant for life a property in all that he gets over and above his rent, by his labour and industry during the said term, supposing it to be double the rent? Can any one say, the king, or conqueror, after his grant, may, by his power of conqueror, take away all, or part of the land from the heirs of one, or from the other during his life, he paying the rent? Or can he take away from either the goods or money they have got upon the said land, at his pleasure? If he can, then all free and voluntary contracts cease, and are void in the world; there needs nothing to dissolve them at any time but power enough: and all the grants and *promises* of *men in power* are but mockery and collusion. For can there be any thing more ridiculous than to say, I give you and yours this for ever, and that in the surest and most solemn way of conveyance can be devised; and yet it is to be understood, that I have a right, if I please, to take it away from you again to-morrow?

195. I will not dispute now, whether princes are exempt from the laws of their country; but this I am sure, they owe subjection to the laws of God and nature. No body, no power, can exempt them from the obligations of that eternal law. Those are so great, and so strong, in the case of *promises*, that omnipotency itself can be tied by them. *Grants, promises,* and *oaths,* are *bonds* that *hold the Almighty:* whatever some flatterers say to princes of the world, who all together, with all their people joined to them, are in comparison of the great God, but as a drop of the bucket, or a dust on the balance, inconsiderable, nothing!

196. The short of the *case in conquest* is this. The conqueror, if he have a just cause, has a despotical right over the persons of all that actually aided, and concurred in the war against him, and a right to make up his damage and cost out of their labour and estates, so he injure not the right of any other. Over the rest of the people, if there were any that consented not to the war, and over the children of the captives themselves, or the possessions of either, he has no power and so can have, *by virtue of conquest, no lawful title* himself *to dominion* over them, or derive it to his posterity; but is an aggressor, if he attempts upon their properties, and thereby puts himself in a state of war against them: and has no better a right of principality, he, nor any of his successors, than Hingar, or Hubba, the Danes, had here in England; or Spartacus had he conquered Italy, would have had; which is to have their yoke cast off, as soon as God shall give those under their subjection courage and opportunity to do it. Thus, notwithstanding whatever title the kings of Assyria had over Judah, by the sword, God assisted Hezekiah to throw off the dominion of that conquering empire. "And the Lord was with Hezekiah, and he prospered; wherefore he went forth, and he rebelled against the king of Assyria, and served him not," 2 *Kings*, xviii. 7. Whence it is plain, that shaking off a power, which force, and not right, hath set over any one, though it hath the name of *rebellion*, yet is no offence before God, but is that which he allows and countenances, though even promises and covenants, when obtained by force, have intervened. For it is very probable, to any one that reads the story of Ahaz and Hezekiah attentively, that the Assyrians subdued Ahaz, and deposed him, and made Hezekiah king in his father's life-time; and that Hezekiah by agreement had done him homage, and paid him tribute all this time.

Chapter 17

Of Usurpation

197. As conquest may be called a foreign usurpation, so usurpation is a kind of domestic conquest; with this difference, that an usurper can never have right on his side, it being no *usurpation* but where one is got into the *possession of what another has right to.* This, so far as it is *usurpation*, is a change only of

persons, but not of the forms and rules of the government; for if the usurper extend his power beyond what of right belonged to the lawful princes, or governors of the commonwealth, it is *tyranny* added to *usurpation*.

198. In all lawful governments, the designation of the persons, who are to bear rule, is as natural and necessary a part, as the form of the government itself, and is that which had its establishment originally from the people; the anarchy being much alike to have no form of government at all, or to agree, that it shall be monarchical, but to appoint no way to design the person that shall have the power, and be the monarch. Hence all commonwealths, with the form of government established, have rules also of appointing those who are to have any share in the public authority, and settled methods of conveying the right to them. For the anarchy is much alike to have no form of government at all, or to agree that it shall be monarchical, but to appoint no way to know or design the person that shall have the power and be the monarch. Whoever gets into the exercise of any part of the power, by other ways than what the laws of the community have prescribed, hath no right to be obeyed, though the form of the commonwealth be still preserved; since he is not the person the laws have appointed, and consequently not the person the people have consented to. Nor can such an *usurper*, or any deriving from him, ever have a title, till the people are both at liberty to consent, and have actually consented to allow, and confirm in him the power he hath till then usurped.

Chapter 18

Of Tyranny

199. As usurpation is the exercise of power, which another hath a right to, so *tyranny is the exercise of power beyond right*, which no body can have a right to. And this is making use of the power any one has in his hands, not for the good of those who are under it, but for his own private separate advantage.—When the governor, however intitled, makes not the law, but his will, the rule; and his commands and actions are not directed to the preservation of the properties of his people, but the satisfaction of his own ambition, revenge, covetousness, or any other irregular passion.

200. If one can doubt this to be truth, or reason, because it comes from the obscure hand of a subject, I hope the authority of a king will make it pass with him. King James the first, in his speech to the parliament, 1603, tells them thus: "I will ever prefer the weal of the public, and of the whole commonwealth, in making of good laws and constitutions, to any particular and private ends of mine. Thinking ever the wealth and weal of the commonwealth to be my greatest weal and worldly felicity; a point wherein a lawful king doth directly differ from a tyrant. For I do acknowledge, that the special and greatest point of difference that is between a rightful king and an usurping tyrant, is this, that whereas the proud and ambitious tyrant doth think his kingdom and people are only ordained for satisfaction of his desires and unreasonable appetites, the righteous and just king doth by the contrary acknowledge himself to be ordained for the procuring of the wealth and property of his people." And again, in his speech to the parliament, 1609, he hath these words: "The king binds himself by a double oath to the observation of the fundamental laws of his kingdom; tacitly, as by being a king, and so bound to protect as well the people, as the laws of his kingdom; and expressly, by his oath at his coronation; so as every just king, in a settled kingdom, is bound to observe that paction made to his people by his laws, in framing his government agreeable thereunto, according to that paction which God made with Noah after the deluge: Hereafter, seed-time and harvest, and cold and heat, and summer and winter, and day and night, shall not cease while the earth remaineth. And therefore a king governing in a settled kingdom, leaves to be a king, and degenerates into a tyrant, as soon as he leaves off to rule according to his laws." And a little after, "Therefore all kings that are not tyrants, or perjured, will be glad to bound themselves within the limits of their laws; and they that persuade them the contrary, are vipers, and pests, both against them and the commonwealth." Thus that learned king, who well understood the notions of things, makes the difference betwixt a *king* and a *tyrant* to consist only in this, that one makes the laws the bounds of his power, and the good of the public

the end of his government; the other makes all give way to his own will and appetite.

201. It is a mistake to think this fault is proper only to monarchies; other forms of government are liable to it, as well as that. For wherever the power, that is put in any hands for the government of the people, and the preservation of their properties, is applied to other ends, and made use of to impoverish, harass, or subdue them to the arbitrary and irregular commands of those that have it; there it presently becomes tyranny, whether those that thus use it are one or many. Thus we read of the thirty tyrants at Athens, as well as one at Syracuse; and the intolerable dominion of the decemviri at Rome was nothing better.

202. *Wherever law ends, tyranny begins,* if the law be transgressed to another's harm; and whosoever in authority exceeds the power given him by the law, and makes use of the force he has under his command, to compass that upon the subject, which the law allows not, ceases in that to be a magistrate; and, acting without authority, may be opposed as any other man, who by force invades the right of another. This is acknowledged in subordinate magistrates. He that hath authority to seize my person in the street, may be opposed as a thief and a robber if he endeavours to break into my house to execute a writ, notwithstanding that I know he has such a warrant, and such a legal authority, as will impower him to arrest me abroad. And why this should not hold in the highest, as well as in the most inferiour magistrate, I would gladly be informed. Is it reasonable that the eldest brother, because he has the greatest part of his father's estate, should thereby have a right to take away any of his younger brother's portions? Or, that a rich man, who possessed a whole country, should from thence have a right to seize, when he pleased, the cottage and garden of his poor neighbour? The being rightfully possessed of great power and riches, exceedingly beyond the greatest part of the sons of Adam, is so far from being an excuse, much less a reason for rapine and oppression, which the endamaging another without authority is, that it is a great aggravation of it. For the exceeding the bounds of authority is no more a right in a great, than in a petty officer; no more justifiable in a king than a constable; but is so much the worse in him, in that he has more trust put in him, has already a much greater share than the rest of his brethren, and is supposed, from the advantages of his education, employment, and counsellors, to be more knowing in the measures of right or wrong.

203. May the *commands* then *of a prince be opposed?* may he be resisted as often as any one shall find himself aggrieved, and but imagine he has not right done him? This will unhinge and overturn all polities, and, instead of government and order, leave nothing but anarchy and confusion.

204. To this I answer, that *force* is to be *opposed* to nothing but to unjust and unlawful *force*; whoever makes any opposition in any other case, draws on himself a just condemnation both from God and man; and so no such danger or confusion will follow, as is often suggested. For,

205. *First*, As, in some countries, the person of the prince by the law is sacred; and so, whatever he commands or does, his person is still free from all question or violence, not liable to force, or any judicial censure or condemnation. But yet opposition may be made to the illegal acts of any inferiour officer, or other commissioned by him; unless he will, by actually putting himself into a state of war with his people, dissolve the government, and leave them to that defence which belongs to every one in the state of nature. For of such things who can tell what the end will be? And a neighbour kingdom has shewed the world an odd example. In all other cases the *sacredness* of the *person exempts him from all inconveniencies*, whereby he is secure, whilst the government stands, from all violence and harm whatsoever; than which there cannot be a wiser constitution. For the harm he can do in his own person not being likely to happen often, nor to extend itself far; nor being able by his single strength to subvert the laws, nor oppress the body of the people, should any prince have so much weakness and ill-nature as to be willing to do it, the inconveniency of some particular mischiefs that may happen sometimes, when a heady prince comes to the throne, are well recompensed by the peace of the public, and security of the government, in the person of the chief magistrate, thus set out of the reach of danger: it being safer for the body that some few private men should be sometimes in danger to suffer, than that the head of the republic should be easily, and upon slight occasions, exposed.

206. *Secondly*, But this privilege belonging only

to the king's person, hinders not, but they may be questioned, opposed, and resisted, who use unjust force, though they pretend a commission from him, which the law authorizes not. As is plain in the case of him that has the king's writ to arrest a man, which is a full commission from the king; and yet he that has it cannot break open a man's house to do it, nor execute this command of the king upon certain days, nor in certain places, though this commission have no such exception in it, but they are the limitations of the law, which if any one transgress, the king's commission excuses him not. For the king's authority being given him only by the law, he cannot impower any one to act against the law, or justify him, by his commission, in so doing. The *commission* or *command of any magistrate, where he has no authority*, being as void and insignificant, as that of any private man. The difference between the one and the other being that the magistrate has some authority so far, and to such ends, and the private man has none at all. For it is not the commission, but the authority, that gives the right of acting; and *against the laws there can be no authority*. But notwithstanding such resistance, the king's person and authority are still both secured, and so *no danger to governor or government*.

207. *Thirdly*, supposing a government wherein the person of the chief magistrate is not thus sacred; yet this *doctrine* of the lawfulness of *resisting* all unlawful exercises of his power, *will not* upon every slight occasion endanger him, or *embroil the government*. For where the injured party may be relieved, and his damages repaired by appeal to the law, there can be no pretence for force, which is only to be used where a man is intercepted from appealing to the law. For nothing is to be accounted hostile force, but where it leaves not the remedy of such an appeal. And it is such force alone, that puts him that uses it *into a state of war*, and makes it lawful to resist him. A man with a sword in his hand, demands my purse in the highway, when perhaps I have not twelve-pence in my pocket: this man I may lawfully kill. To another I deliver £100 to hold only whilst I alight, which he refuses to restore me, when I am got up again, but draws his sword to defend the possession of it by force, if I endeavour to retake it. The mischief this man does me is an hundred, or possibly a thousand times more than the other perhaps intended me (whom I killed before he really did me any;) and yet I might lawfully kill the one, and cannot so much as hurt the other lawfully. The reason whereof is plain; because the one using force, which threatened my life, I could not have *time to appeal* to the law to secure it: and when it was gone, it was too late to appeal. The law could not restore life to my dead carcass, the loss was irreparable: which to prevent, the law of nature gave me a right to destroy him, who had put himself into a state of war with me, and threatened my destruction. But in the other case, my life not being in danger, I may have the *benefit of appealing* to the law, and have reparation for my £100 that way.

208. *Fourthly*, But if the unlawful acts done by the magistrate be maintained (by the power he has got) and the remedy which is due by law, be by the same power obstructed: yet the *right of resisting*, even in such manifest acts of tyranny, will not suddenly, or on slight occasions, disturb the government. For if it reach no farther than some private men's cases, though they have a right to defend themselves, and to recover by force what by unlawful force is taken from them: yet the right to do so will not easily engage them in a contest, wherein they are sure to perish; it being as impossible for one, or a few oppressed men to *disturb the government*, where the body of the people do not think themselves concerned in it, as for a raving madman, or heady malecontent, to overturn a well-settled state, the people being as little apt to follow the one, as the other.

209. But if either these illegal acts have extended to the majority of the people; or if the mischief and oppression has lighted only on some few, but in such cases, as the precedent and consequences seem to threaten all; and they are persuaded in their consciences, that their laws, and with them their estates, liberties, and lives are in danger, and perhaps their religion too: how they will be hindered from resisting illegal force, used against them, I cannot tell. This is an *inconvenience*, I confess, that *attends all governments* whatsoever, when the governors have brought it to this pass, to be generally suspected of their people; the most dangerous state which they can possibly put themselves in; wherein they are the less to be pitied, because it is so easy to be avoided; it being as impossible for a governor, if he really means the good of his

people, and the preservation of them, and their laws together, not to make them see and feel it, as it is for the father of a family, not to let his children see he loves and takes care of them.

210. But if all the world shall observe pretences of one kind, and actions of another; arts used to elude the law, and the trust of prerogative, (which is an arbitrary power in some things left in the prince's hand to do good, not harm, to the people) employed contrary to the end for which it was given: if the people shall find the ministers and subordinate magistrates chosen suitable to such ends, and favoured, or laid by, proportionably as they promote or oppose them: if they see several experiments made of arbitrary power, and that religion underhand favoured (though publicly proclaimed against) which is readiest to introduce it; and the operators in it supported, as much as may be; and when that cannot be done, yet approved still, and liked the better: if a *long train of actions shew the councils* all tending that way; how can a man any more hinder himself from being persuaded in his own mind, which way things are going; or from casting about how to save himself, than he could from believing the captain of the ship he was in, was carrying him, and the rest of the company, to Algiers, when he found him always steering that course, though cross winds, leaks in his ship, and want of men and provisions did often force him to turn his course another way for some time, which he steadily returned to again, as soon as the wind, weather, and other circumstances would let him?

Chapter 19

Of the Dissolution of Government

211. He that will with any clearness speak of the *dissolution of government*, ought in the first place to distinguish between the *dissolution of the society* and the *dissolution of the government*. That which makes the community, and brings men out of the loose state of nature into *one politic society*, is the agreement which every one has with the rest to incorporate, and act as one body, and so be one distinct commonwealth. The usual, and almost only way whereby *this union is dissolved*, is the inroad of foreign force making a conquest upon them. For in that case, (not being able to maintain and support themselves, as *one entire* and *independent body*) the union belonging to that body which consisted therein, must necessarily cease, and so every one return to the state he was in before, with a liberty to shift for himself, and provide for his own safety, as he thinks fit, in some other society. Whenever the *society is dissolved*, it is certain the government of that society cannot remain. Thus conquerors swords often cut up governments by the roots, and mangle societies to pieces, separating the subdued or scattered multitude from the protection of, and dependence on, that society which ought to have preserved them from violence. The world is too well instructed in, and too forward to allow of, this way of dissolving of governments, to need any more to be said of it; and there wants not much argument to prove, that where the *society is dissolved*, the government cannot remain; that being as impossible, as for the frame of a house to subsist when the materials of it are scattered and dissipated by a whirlwind, or jumbled into a confused heap by an earthquake.

212. Besides this overturning from without, *governments are dissolved from within*.

First, When the *legislative* is *altered*. Civil society being a state of peace, amongst those who are of it, from whom the state of war is excluded by the umpirage, which they have provided in their legislative, for the ending all differences that may arise amongst any of them; it is in their legislative, that the members of a commonwealth are united, and combined together into one coherent living body. This *is the soul that gives form, life, and unity* to the commonwealth: from hence the several members have their mutual influence, sympathy, and connexion; and therefore, when the legislative is broken, or dissolved, dissolution and death follows. For, *the essence and union of the society* consisting in having one will, the legislative, when once established by the majority, has the declaring, and as it were keeping of that will. The *constitution of the legislative* is the first and fundamental act of society, whereby provision is made for the *continuation of their union*, under the direction of persons, and bonds of laws, made by persons authorized thereunto, by the consent and appointment of the people; without which no one man, or number of men, amongst them, can have authority of making laws

that shall be binding to the rest. When any one, or more, shall take upon them to make laws, whom the people have not appointed so to do, they make laws without authority, which the people are not therefore bound to obey; by which means they come again to be out of subjection, and may constitute to themselves a new legislative, as they think best, being in full liberty to resist the force of those, who without authority would impose any thing upon them. Every one is at the disposure of his own will, when those who had, by the delegation of the society, the declaring of the public will, are excluded from it, and others usurp the place, who have no such authority or delegation.

213. This being usually brought about by such in the commonwealth who misuse the power they have, it is hard to consider it aright, and know at whose door to lay it, without knowing the form of government in which it happens. Let us suppose then the legislative placed in the concurrence of three distinct persons.

1. A single hereditary person, having the constant, supreme, executive power, and with it the power of convoking and dissolving the other two, within certain periods of time.
2. An assembly of hereditary nobility.
3. An assembly of representatives chosen *pro tempore*, by the people. Such a form of government supposed, it is evident.

214. First, That when such a single person, or prince, sets up his own arbitrary will in place of the laws, which are the will of the society, declared by the legislative, then the *legislative is changed*. For that being in effect the legislative, whose rules and laws are put in execution, and required to be obeyed; when other laws are set up, and other rules pretended, and enforced, than what the legislative, constituted by the society, have enacted, it is plain that the *legislative is changed*. Whoever introduces new laws, not being thereunto authorized, by the fundamental appointment of the society, or subverts the old, disowns and overturns the power by which they were made, and so sets up a *new legislative*.

215. Secondly, When the prince hinders the legislative from assembling in its due time, or from acting freely, pursuant to those ends for which it was constituted, the *legislative is altered:* for it is not a certain number of men, no, nor their meeting, unless they have also freedom of debating, and leisure of perfecting, what is for the good of the society, wherein the legislative consists: when these are taken away or altered, so as to deprive the society of the due exercise of their power, the legislative is truly altered. For it is not names that constitute governments, but the use and exercise of those powers that were intended to accompany them; so that he, who takes away the freedom, or hinders the acting of the legislative in its due seasons, in effect *takes away the legislative*, and *puts an end to the government*.

216. Thirdly, When, by the arbitrary power of the prince, the electors, or ways of election, are altered, without the consent, and contrary to the common interest of the people, there also the *legislative is altered*. For, if others than those whom the society hath authorized thereunto, do choose, or in another way than what the society hath prescribed, those chosen are not the legislative appointed by the people.

217. Fourthly, The delivery also of the people into the subjection of a foreign power, either by the prince, or by the legislative, is certainly a *change of the legislative*, and so a *dissolution of the government*. For the end why people entered into society being to be preserved one intire, free, independent society, to be governed by its own laws; this is lost, whenever they are given up into the power of another.

218. Why, in such a constitution as this, the *dissolution of the government* in these cases is to be imputed to the prince, is evident; because he, having the force, treasure, and offices of the state to employ, and often persuading himself, or being flattered by others, that as supreme magistrate, he is uncapable of control; he alone is in a condition to make great advances toward such changes, under pretence of lawful authority, and has it in his hands to terrify or suppress opposers, as factious, seditious, and enemies to the government: whereas no other part of the legislative, or people, is capable by themselves to attempt any alteration of the legislative, without open and visible rebellion, apt enough to be taken notice of; which, when, it prevails, produces effects very little different from foreign conquest. Besides, the prince in such a form of government having the power of dissolving the other parts of the legislative, and thereby rendering them private persons, they can never in opposition

to him, or without his concurrence, alter the legislative by a law, his consent being necessary to give any of their decrees that sanction. But yet, so far as the other parts of the legislative any way contribute to any attempt upon the government, and do either promote, or not, what lies in them, hinder such designs; they are guilty, and partake in this, which is certainly the greatest crime men can be guilty of one towards another.

219. There is one way more whereby such a government may be dissolved, and that is, when he who has the supreme executive power neglects and abandons that charge, so that the laws already made can no longer be put in execution. This is demonstratively to reduce all to anarchy, and so effectually to *dissolve the government*. For laws not being made for themselves, but to be, by their execution, the bonds of the society, to keep every part of the body politic in its due place and function; when that totally ceases, the *government* visibly *ceases*, and the people become a confused multitude, without order or connexion. Where there is no longer the administration of justice, for the securing of men's rights, nor any remaining power within the community to direct the force, or provide for the necessities of the public; there certainly is *no government left*. Where the laws cannot be executed, it is all one as if there were no laws; and a government without laws is, I suppose, a mystery in politics, inconceivable to human capacity, and inconsistent with human society.

220. In these and the like cases, *when the government is dissolved*, the people are at liberty to provide for themselves, by erecting a new legislative, differing from the other, by the change of persons, or form, or both, as they shall find it most for their safety and good. For the *society* can never, by the fault of another, lose the native and original right it has to preserve itself; which can only be done by a settled legislative, and a fair and impartial execution of the laws made by it. But the state of mankind is not so miserable that they are not capable of using this remedy, till it be too late to look for any. To tell *people* they *may provide for themselves*, by erecting a new legislative, when by oppression, artifice, or being delivered over to a foreign power, their old one is gone, is only to tell them, they may expect relief when it is too late, and the evil is past cure. This is in effect no more, than to bid them first be slaves, and then to take care of their liberty; and when their chains are on, tell them, they may act like freemen. This, if barely so, is rather mockery than relief; and men can never be secure from tyranny, if there be no means to escape it, till they are perfectly under it: And therefore it is, that they have not only a right to get out of it, but to prevent it.

221. There is, therefore, secondly, another way whereby *governments are dissolved*, and that is, when the legislative, or the prince either of them, act contrary to their trust.

First, The *legislative acts against the trust* reposed in them, when they endeavour to invade the property of the subject, and to make themselves, or any part of the community, masters, or arbitrary disposers of the lives, liberties, or fortunes of the people.

222. The reason why men enter into society, is the preservation of their property; and the end why they choose and authorize a legislative, is, that there may be laws made, and rules set, as guards and fences to the properties of all the members of the society: to limit the power, and moderate the dominion, of every part and member of the society. For since it can never be supposed to be the will of the society, that the legislative should have a power to destroy that, which every one designs to secure, by entering into society, and for which the people submitted themselves to legislators of their own making, whenever the *legislators endeavour to take away and destroy the property of the people*, or to reduce them to slavery under arbitrary power, they put themselves into a state of war with the people, who are thereupon absolved from any farther obedience, and are left to the common refuge, which God hath provided for all men, against force and violence. Whensoever therefore the *legislative* shall transgress this fundamental rule of society; and either by ambition, fear, folly or corruption, *endeavour to grasp* themselves, *or put into the hands of any other an absolute power* over the lives, liberties, and estates of the people; by this breach of trust they *forfeit the power*, the people had put into their hands, for quite contrary ends, and it devolves to the people, who have a right to resume their original liberty, and, by the establishment of a new legislative, (such as they shall think fit) provide for their own safety and security, which is the end for which they

are in society. What I have said here, concerning the legislative in general, holds true also concerning the supreme executor, who having a double trust put in him, both to have a part in the legislative, and the supreme execution of the law, acts against both, when he goes about to set up his own arbitrary will, as the law of the society. He *acts* also *contrary to his trust*, when he either employs the force, treasure, and offices of the society to corrupt the *representatives*, and gain them to his purposes; or openly pre-engages the *electors*, and prescribes to their choice, such, whom he has by solicitations, threats, promises, or otherwise, won to his designs: and employs them to bring in such, who have promised before-hand, what to vote, and what to enact. Thus to regulate candidates and electors, and new model the ways of election, what is it but to cut up the government by the roots, and poison the very fountain of public security? for the people having reserved to themselves the choice of their *representatives*, as the fence to their properties, could do it for no other end, but that they might always be freely chosen, and so chosen, freely act, and advise, as the necessity of the commonwealth, and the public good should, upon examination and mature debate, be judged to require. This, those who give their votes before they hear the debate, and have weighed the reasons on all sides, are not capable of doing. To prepare such an assembly as this, and endeavour to set up the declared abettors of his own will, for the true representatives of the people, and the law-makers of the society, is certainly as great a *breach of trust*, and as perfect a declaration of a design to subvert the government, as is possible to be met with. To which if one shall add rewards and punishments visibly employed to the same end, and all the arts of perverted law made use of, to take off and destroy all that stand in the way of such a design, and will not comply and consent to betray the liberties of their country, it will be past doubt what is doing. What power they ought to have in the society, who thus employ it contrary to the trust that went along with it in its first institution, is easy to determine; and one cannot but see, that he, who has once attempted any such thing as this, cannot any longer be trusted.

223. To this perhaps it will be said, that the people being ignorant, and always discontented, to lay the foundation of government in the unsteady opinion and uncertain humour of the people, is to expose it to certain ruin; and *no government will be able long to subsist*, if the people may set up a new legislative, whenever they take offence at the old one. To this I answer, quite the contrary. People are not so easily got out of their old forms as some are apt to suggest. They are hardly to be prevailed with to amend the acknowledged faults in the frame they have been accustomed to. And if there be any original defects, or adventitious ones introduced by time, or corruption: it is not an easy thing to get them changed, even when all the world sees there is an opportunity for it. This slowness and aversion in the people to quit their old constitutions, has in the many revolutions which have been seen in this kingdom, in this and former ages, still kept us to, or, after some interval of fruitless attempts, still brought us back again to, our old legislative of king, lords, and commons: and whatever provocations have made the crown be taken from some of our princes heads, they never carried the people so far as to place it in another line.

224. But it will be said, this *hypothesis* lays a *ferment for* frequent *rebellion*. To which I *answer*,

First, no more than any other *hypothesis:* for when the people are made miserable, and find themselves *exposed to the ill usage of arbitrary power*, cry up their governors as much as you will, for *sons of Jupiter*; let them be sacred or divine, descended, or authorized from heaven; give them out for whom or what you please, the same will happen. *The people generally ill treated*, and contrary to right, will be ready upon any occasion to ease themselves of a burden that sits heavy upon them. They will wish, and seek for the opportunity, which in the change, weakness, and accidents of human affairs, seldom delays long to offer itself. He must have lived but a little while in the world, who has not seen examples of this in his time; and he must have read very little, who cannot produce examples of it in all sorts of governments in the world.

225. *Secondly*, I answer, such *revolutions happen* not upon every little mismanagement in public affairs. *Great mistakes* in the ruling part, many wrong and inconvenient laws, and all the slips of human frailty, will be *borne by the people* without mutiny or murmur. But if a long train of abuses, prevarications and artifices, all tending the same way, make the design visible to the people, and they cannot but feel what

they lie under, and see whither they are going; it is not to be wondered, that they should then rouse themselves, and endeavour to put the rule into such hands which may secure to them the ends for which government was at first erected; and without which, ancient names, and specious forms, are so far from being better, that they are much worse, than the state of nature, or pure anarchy; the inconveniencies being all as great and as near, but the remedy farther off and more difficult.

226. *Thirdly*, I answer, that *this doctrine* of a power in the people of providing for their safety anew, by a new legislative, when their legislators have acted contrary to their trust, by invading their property, is the *best fence against rebellion*, and the probablest means to hinder it. For *rebellion* being an opposition, not to persons, but authority, which is founded only in the constitutions and laws of the government; those, whoever they be, who by force break through, and by force justify their violation of them, are truly and properly *rebels.* For when men, by entering into society and civil government, have excluded force, and introduced laws for the preservation of property, peace, and unity amongst themselves; those who set up force again in opposition to the laws, do *rebellare*, that is, bring back again the state of war, and are properly rebels: Which they who are in power, (by the pretence they have to authority, the temptation of force they have in their hands, and the flattery of those about them) being likeliest to do; the properest way to prevent the evil, is to shew them the danger and injustice of it, who are under the greatest temptation to run into it.

227. In both the forementioned cases, when either the legislative is changed, or the legislators act contrary to the end for which they were constituted, those who are guilty are *guilty of rebellion;* for if any one by force takes away the established legislative of any society, and the laws by them made pursuant to their trust, he thereby takes away the umpirage, which every one had consented to, for a peaceable decision of all their controversies, and a bar to the state of war amongst them. They who remove, or change the legislative, take away this decisive power, which no body can have but by the appointment and consent of the people; and so destroying the authority which the people did, and no body else can set up, and introducing a power which the people hath not authorized, they actually *introduce a state of war*, which is that of force without authority; and thus by removing the legislative established by the society, (in whose decisions the people acquiesced and united, as to that of their own will) they untie the knot, and *expose the people anew to the state of war.* And if those, who by force take away the legislative, are *rebels*, the *legislators* themselves, as has been shewn, can be no less esteemed so; when they, who were set up for the protection and preservation of the people, their liberties and properties, shall by force invade and endeavour to take them away; and so they putting themselves into a state of war with those who made them the protectors and guardians of their peace, are properly, and with the greatest aggravation, *rebellantes*, rebels.

228. But if they, who say, "it lays a foundation for rebellion," mean that it may occasion civil wars, or intestine broils, to tell the people they are absolved from obedience when, illegal attempts are made upon their liberties or properties, and may oppose the unlawful violence of those who were their magistrates, when they invade their properties contrary to the trust put in them; and that therefore this doctrine is not to be allowed, being so destructive to the peace of the world: they may as well say, upon the same ground, that honest men may not oppose robbers or pirates, because this may occasion disorder or bloodshed. If any *mischief* come in such cases, it is not to be charged upon him who defends his own right, but *on him that invades* his neighbour's. If the innocent honest man must quietly quit all he has, for peace sake, to him who will lay violent hands upon it, I desire it may be considered, what a kind of peace there will be in the world, which consists only in violence and rapine; and which is to be maintained only for the benefit of robbers and oppressors. Who would not think it an admirable peace betwixt the mighty and the mean, when the lamb, without resistance, yielded his throat to be torn by the imperious wolf? Polyphemus's den gives us a perfect pattern of such a peace, and such a government, wherein Ulysses and his companions had nothing to do, but quietly to suffer themselves to be devoured. And no doubt Ulysses, who was a prudent man, preached up *passive obedience*, and exhorted them to a quiet submission,

by representing to them of what concernment peace was to mankind; and by shewing the inconveniencies might happen, if they should offer to resist Polyphemus, who had now the power over them.

229. The end of government is the good of mankind: and which is *best for mankind*, that the people should be always exposed to the boundless will of tyranny; or that the rulers should be sometimes liable to be opposed, when they grow exorbitant in the use of their power, and employ it for the destruction, and not the preservation of the properties of their people?

230. Nor let any one say, that mischief can arise from hence, as often as it shall please a busy head, or turbulent spirit, to desire the alteration of the government. It is true, such men may stir, whenever they please; but it will be only to their own just ruin and perdition. For till the mischief be grown general, and the ill designs of the rulers become visible, or their attempts sensible to the greater part, the people, who are more disposed to suffer than right themselves by resistance, are not apt to stir. The examples of particular injustice or oppression, of here and there an unfortunate man, moves them not. But if they universally have a persuasion, grounded upon manifest evidence, that designs are carrying on against their liberties, and the general course and tendency of things cannot but give them strong suspicions of the evil intention of their governors, who is to be blamed for it? Who can help it, if they, who might avoid it, bring themselves into this suspicion? Are the people to be blamed, if they have the sense of rational creatures, and can think of things no otherwise than as they find and feel them? And is it not rather *their fault*, who put things into such a posture, that they would not have them thought to be as they are? I grant, that the pride, ambition, and turbulency of private men, have sometimes caused great disorders in commonwealths, and factions have been fatal to states and kingdoms. But whether *the mischief* hath *oftener* begun *in the peoples wantonness*, and a desire to cast off the lawful authority of their rulers, or in *the rulers insolence*, and endeavours to get and exercise an arbitrary power over their people; whether oppression, or disobedience, gave the first rise to the disorder; I leave it to impartial history to determine. This I am sure, whoever, either ruler or subject, by force goes about to invade the rights of either prince or people, and lays the foundation for *overturning* the constitution and frame of *any just government*; is highly guilty of the greatest crime, I think, a man is capable of; being to answer for all those mischiefs of blood, rapine, and desolation, which the breaking to pieces of governments bring on a country. And he who does it, is justly to be esteemed the common enemy and pest of mankind, and is to be treated accordingly.

231. That *subjects* or *foreigners*, attempting by force on the properties of any people, may be resisted with force, is agreed on all hands. But that *magistrates*, doing the same thing, may be *resisted*, hath of late been denied: as if those who had the greatest privileges and advantages by the law, had thereby a power to break those laws, by which alone they were set in a better place than their brethren: whereas their offence is thereby the greater, both as being ungrateful for the greater share they have by the law, and breaking also that trust which is put into their hands by their brethren.

232. Whosoever uses *force without right*, as every one does in society, who does it without law, puts himself into a *state of war* with those against whom he so uses it; and in that state all former ties are cancelled, all other rights cease, and every one has a right to defend himself, and to *resist the aggressor*. This is so evident, that Barclay himself, that great assertor of the power and sacredness of kings, is forced to confess, that it is lawful for the people, in some cases, to resist their king; and that too in a chapter, wherein he pretends to shew, that the divine law shuts up the people from all manner of rebellion. Whereby it is evident, even by his own doctrine, that, since they may in some cases resist, all resisting of *princes* is not rebellion. His words are these. "Quod siquis dicat, Ergone populus tyrannicae crudelitati & furori jugulum semper praebebit? Ergone multitudo civitates suas fame, ferro, & flamma vastari, seque, conjuges, & liberos fortunae ludibrio & tyranni libidini exponi, inque omnia vitae pericula omnesque miserias & molestias a rege de luci patientur? Num illis quod omni animantium generi est a natura tributum, denegari debet, ut sc. vim vi repellant, seseq; ab injuria tueantur? Huic brevitur responsum sit, Populo universo negari defensionem, quae juris naturalis est, neque ultionem quae praeter naturam est adversus regem concedi debere. Quapropter si rex non in

singulares tantum personas aliquot privatum odium exerceat, sed corpus etiam reipublicae, cujus ipse caput est, i.e. totum populum, vel insignem aliquam ejus partem immani & intoleranda saevitia seu tyrannide divexet; populo quidem hoc casu resistendi ac tuendi se ab injuria potestas competit; sed tuendi se tantum, non enim in principem invadendi: & restituendae injuriae illatae, non recedendi a debita reverentia propter acceptam injuriam. Praesentem denique impetum propulsandi non vim praeteritam ulciscendi jus habet. Horum enim alterum a natura est, ut vitam scilicet corpusque tueamur. Alterum vero contra naturam, ut inferior de superiori supplicium sumat. Quod itaque populus malum, antequam factum sit, impedire potest, ne fiat; id postquam factum est, in regem authorem sceleris vindicare non potest: populus igitur hoc amplius quam privatus quispiam habet: quod huic, vel ipsis adversariis judicibus, excepto Buchanano, nullum nisi in patientia remedium superest. Cum ille si intolerabilis tyrannus est (modicum enim ferre omnino debet) resistere cum reverentia possit." Barclay *contra Monarchom.* l. iii. c. 8.

In English thus:

233. "But if any one should ask, Must the people then always lay themselves open to, the cruelty and rage of tyranny? Must they see their cities pillaged and laid in ashes, their wives and children exposed to the tyrant's lust and fury, and themselves and families reduced by their king to ruin, and all the miseries of want and oppression; and yet sit still? Must men alone be debarred the common privilege of opposing force with force, which nature allows so freely to all other creatures for their preservation from injury? I answer: Self-defence is a part of the law of nature; nor can it be denied the community, even against the king himself: but to revenge themselves upon him, must by no means be allowed them; it being not agreeable to that law. Wherefore if the king should shew an hatred, not only to some particular persons, but sets himself against the body of the commonwealth, whereof he is the head, and shall, with intolerable ill-usage, cruelly tyrannize over the whole, or a considerable part of the people, in this case the people have a right to resist and defend themselves from injury: but it must be with this caution, that they only defend themselves, but do not attack their prince: they may repair the damages received, but must not for any provocation exceed the bounds of due reverence and respect. They may repulse the present attempt, but must not revenge past violences. For it is natural for us to defend life and limb, but that an inferiour should punish a superiour, is against nature. The mischief which is designed them the people may prevent before it be done; but when it is done, they must not revenge it on the king, though author of the villainy. This therefore is the privilege of the people in general, above what any private person hath; that particular men are allowed by our adversaries themselves (Buchanan only excepted) to have no other remedy but patience; but the body of the people may with reverence resist intolerable tyranny; for, when it is but moderate, they ought to endure it."

234. Thus far that great advocate of monarchical power allows of *resistance*.

235. It is true, he has annexed two limitations to it, to no *purpose*:

First, He says, it must be with reverence.

Secondly, It must be without retribution, or punishment; and the reason he gives is, "Because an inferiour cannot punish a superiour."

First, *How to resist force without striking again*, or how to *strike with reverence*, will need some skill to make intelligible. He that shall oppose an assault only with a shield to receive the blows, or in any more respectful posture, without a sword in his hand, to abate the confidence and force of the assailant, will quickly be at an end of his *resistance*, and will find such a defence serve only to draw on himself the worse usage. This is as ridiculous a way of resisting, as Juvenal thought it of fighting; "ubi to pulsas, ego vapulo tantum." And the success of the combat will be unavoidably the same he there describes it:

> Libertas pauperis haec est:
> Pulsatus rogat, & pugnis concisus, adorat,
> Ut liceat paucis cum dentibus inde reverti.

This will always be the event of such an imaginary *resistance*, where men may not strike again. He therefore *who may resist, must be allowed to strike*. And then let our author, or any body else, join a knock on the head, or a cut on the face, with as much *reverence* and *respect* as he thinks fit. He that can reconcile blows and reverence, may, for aught I know,

deserve for his pains a civil, respectful cudgelling, wherever he can meet with it.

Secondly, as to his second, "An inferiour cannot punish a superiour;" that is true, generally speaking, whilst he is his superiour. But to resist force with force, being the *state of war* that *levels the parties*, cancels all former relation of reverence, respect, and *superiority:* And then the odds that remains, is, that he, who opposes the unjust aggressor, has this *superiority* over him, that he has a right when he prevails, to punish the offender, both for the breach of the peace, and all the evils that followed upon it. Barclay therefore, in another place, more coherently to himself, denies it to be lawful to *resist* a king in any case. But he there assigns two cases, whereby a king may unking himself. His words are,

"Quid ergo, nulline casus incidere possunt quibus populo sese erigere atque in regem impotentius dominantem arma capere & invadere jure suo suaque authoritate liceat? Nulli certe quamdiu rex manet. Semper enim ex divinis id obstat, Regem honorificato; & qui potestati resistit, Dei ordinationi resistit: non alias igitur in eum populo potestas est quam si id committat propter quod ipso jure rex esse desinat. Tunc enim se ipse principatu exuit atque in privatis constituit liber: hoc modo populus & superior efficitur, reverso ad eum sc. jure illo quod ante regem inauguratum in interregno habuit. At sunt paucorum generum commissa ejusmodi quae hunc effectum pariunt. At ego cum plurima animo perlustrem, duo tantam invenio, duos, inquam, casus quibus rex ipso facto ex rege non regem se facit & omni honore & dignitate regali atque in subditos potestate destituit; quorum etiam meminit Winzerus. Horum unus est, Si regnum disperdat, quemadmodum de Nerone fertur, quod is nempe senatum populumque Romanum, atque adeo urbem ipsam ferro flammaque vastare, ac novas sibi sedes quaerere, decrevisset. Et de Caligula, quod palam denunciarit se neque civem neque principem senatui amplius fore, inque animo habuerit interempto utriusque ordinis electissimo quoque Alexandriam commigrare, ac ut populum uno ictu interimeret, unam ei cervicem optavit. Talia cum rex aliquis meditatur & molitur serio, omnem regnandi curam & animum ilico abjicit, ac proinde imperium in subditos amittit, ut dominus servi pro derelicto habiti dominium."

236. "Alter casus est, Si rex in alicujus clientelam se contulit, ac regnum quod liberum a majoribus & populo traditum accepit, alienae ditioni mancipavit. Nam tunc quamvis forte non ea mente id agit populo plane ut incommodet: tamen quia quod praecipuum est regiae dignitatis amisit, ut summus scilicet in regno secundum Deum sit, & solo Deo inferior, atque populum etiam totum ignorantem vel invitum, cujus libertatem sartam & tectam conservare debuit in alterius gentis ditionem & potestatem dedidit, hac velut quadam regni ab alienatione efficit, ut nec quod ipse in regno imperium habuit retineat, nec in eum cui collatum voluit, juris quicquam transferat; atque ita eo facto liberum jam & suae potestatis populum relinquit, cujus rei exemplum unum annales Scotici suppeditant." Barclay *contra Monarchom.* l. iii. c. 16.

Which in English runs thus:

237. "What then, can there no case happen wherein the people may of right, and by their own authority, help themselves, take arms, and set upon their king imperiously domineering over them? None at all, whilst he remains a king. Honour the king, and he that resists the power, resists the ordinance of God; are divine oracles that will never permit it. The people therefore can never come by a power over him, unless he does something that makes him cease to be a king. For then he divests himself of his crown and dignity, and returns to the state of a private man, and the people become free and superiour, the power which they had in the interregnum, before they crowned him king, devolving to them again. But there are but few miscarriages which bring the matter to this state. After considering it well on all sides, I can find but two. Two cases there are, I say, whereby a king, ipso facto, becomes no king, and loses all power and regal authority over his people; which are also taken notice of by Winzerus.

The first is, If he endeavour to overturn the government, that is, if he have a purpose and design to ruin the kingdom and commonwealth; as it is recorded of Nero, that he resolved to cut off the senate and people of Rome, lay the city waste with fire and sword, and then remove to some other place. And of Caligula, that he openly declared, that he would be no longer a head to the people or senate, and that he had it in his thoughts to cut off the worthiest men of both ranks, and then retire to Alexandria: and he wished

that the people had but one neck, that he might dispatch them all at a blow. Such designs as these, when any king harbours in his thoughts, and seriously promotes, he immediately gives up all care and thought of the commonwealth; and consequently forfeits the power of governing his subjects, as a master does the dominion over his slaves whom he hath abandoned."

238. "The other case is, When a king makes himself the dependent of another, and subjects his kingdom which his ancestors left him, and the people put free into his hands, to the dominion of another. For however perhaps it may not be his intention to prejudice the people, yet because he has hereby lost the principal part of regal dignity, viz. to be next and immediately under God supreme in his kingdom; and also because he betrayed or forced his people, whose liberty he ought to have carefully preserved, into the power and dominion of a foreign nation. By this, as it were, alienation of his kingdom, he himself loses the power he had in it before, without transferring any the least right to those on whom he would have bestowed it; and so by this act sets the people free, and leaves them at their own disposal. One example of this is to be found in the Scotch Annals."

239. In these cases Barclay, the great champion of absolute monarchy, is forced to allow, that a king may be *resisted*, and *ceases to be a king*. That is, in short, not to multiply cases, in whatsoever he has no authority, there he is no king, and may be resisted. For wheresoever the *authority ceases*, *the king ceases too*, and becomes like other men who have no *authority*. And these two cases the instances differ little from those above-mentioned, to be destructive to governments, only that he has omitted the principle from which his doctrine flows; and that is, the breach of trust, in not preserving the form of government agreed on, and in not intending the end of government itself, which is the public good and preservation of property. When a king has dethroned himself, and put himself in a state of war with his people, what shall hinder them from prosecuting him who is no king, as they would any other man, who has put himself into a state of war with them; Barclay and those of his opinion would do well to tell us. This farther I desire may be taken notice of out of Barclay, that he says, "The mischief that is designed them, the people may prevent before it be done"; whereby he allows "resistance" when tyranny is but in design. "Such designs as these" (says he) "when any king harbours in his thoughts and seriously promotes, he immediately gives up all care and thought of the commonwealth;" so that, according to him, the neglect of the public good is to be taken as an evidence of such "design," or at least for a sufficient cause of "resistance." And the reason of all, he gives in these words, "Because he betrayed or forced his people, whose liberty he ought carefully to have preserved." What he adds, "into the power and dominion of a foreign nation," signifies nothing, the fault and forfeiture lying in the loss of their "liberty," which he "ought to have preserved," and not in any distinction of the persons to whose dominion they were subjected. The people's right is equally invaded, and their liberty lost, whether they are made slaves to any of their own, or a foreign nation; and in this lies the injury, and against this only have they the right of defence. And there are instances to be found in all countries, which shew, that it is not the change of nations in the persons of their governors, but the change of government, that gives the offence. Bilson, a bishop of our church, and a great stickler for the power and prerogative of princes, does, if I mistake not, in his treatise of christian subjection, acknowledge, *that princes may forfeit their power*, and their title to the obedience of their subjects; and if there needed authority in a case where reason is so plain, I could send my reader to Bractan, Fortescue, and the author of the Mirrour, and others, writers that cannot be suspected to be ignorant of our government, or enemies to it. But I thought Hooker alone might be enough to satisfy those men, who relying on him for their ecclesiastical polity, are by a strange fate carried to deny those principles upon which he builds it. Whether they are herein made the tools of cunninger workmen, to pull down their own fabric, they were best look. This I am sure, their civil policy is so new, so dangerous, and so destructive to both rulers and people, that as former ages never could bear the broaching of it; so it may be hoped, those to come, redeemed from the impositions of these Egyptian under taskmasters, will abhor the memory of such servile flatterers, who, whilst it seemed to serve their turn, resolved all government into absolute tyranny, and would have all men born to, what their mean souls fitted them for, slavery.

240. Here, it is like, the common question will be made, *Who shall be judge*, whether the prince or legislative act contrary to their trust? This, perhaps, ill-affected and factious men may spread amongst the people, when the prince only makes use of his due prerogative. To this I reply, "The people shall be judge;" for who shall be *judge* whether his trustee or deputy acts well, and according to the trust reposed in him, but he who deputes him, and must by having deputed him, have still a power to discard him, when he fails in his trust? If this be reasonable in particular cases of private men, why should it be otherwise in that of the greatest moment, where the welfare of millions is concerned, and also where the evil, if not prevented, is greater, and the redress very difficult, dear, and dangerous?

241. But farther, this question, ("Who shall be judge?") cannot mean that there is no judge at all. For where there is no judicature on earth, to decide controversies amongst men, God in heaven is judge. He alone, it is true, is judge of the right. But *every man* is *judge* for himself, as in all other cases, so in this, whether another hath put himself into a state of war with him, and whether he should appeal to the supreme judge, as Jephthah did.

242. If a controversy arise betwixt a prince and some of the people, in a matter where the law is silent, or doubtful, and the thing be of great consequence, I should think the proper *umpire*, in such a case, should be the body of the *people*: for in cases where the prince hath a trust reposed in him, and is dispensed from the common ordinary rules of the law; there, if any men find themselves aggrieved, and think the prince acts contrary to, or beyond that trust, who so proper to *judge* as the body of the *people*, (who, at first, lodged that trust in him) how far they meant it should extend? But if the prince, or whoever they be in the administration, decline that way of determination, the appeal then lies no where but to heaven; force between either persons, who have no known superior on earth, or which permits no appeal to a judge on earth, being properly a state of war, wherein the appeal lies only to heaven; and in that state the *injured party must judge* for himself, when he will think fit to make use of that appeal, and put himself upon it.

243. To conclude, The *power that every individual gave the society*, when he entered into it, can never revert to the individuals gain, as long as the society lasts, but will always remain in the community; because without this there can be no community, no commonwealth, which is contrary to the original agreement: so also when the society hath placed the legislative in any assembly of men, to continue in them and their successors, with direction and authority for providing such successors, the *legislative can never revert to the people* whilst that government lasts: Because, having provided a legislative with power to continue for ever, they have given up their political power to the legislative, and cannot resume it. But if they have set limits to the duration of their legislative, and made this supreme power in any person, or assembly, only temporary; or else, when by the miscarriages of those in authority, it is forfeited; upon the forfeiture, or at the determination of the time set, *it reverts to the society*, and the people have a right to act as supreme, and continue the legislative in themselves; or erect a new form, or under the old form place it in new hands, as they think good.

A Letter Concerning Toleration

Honoured Sir,

Since you are pleased to inquire what are my thoughts about the mutual toleration of Christians in their different professions of religion, I must needs answer you freely, that I esteem that toleration to be the chief characteristical mark of the true Church. For whatsoever some people boast of the antiquity of places and names, or of the pomp of their outward worship; others, of the reformation of their discipline; all, of the orthodoxy of their faith (for everyone is orthodox to himself): these things, and all others of this nature, are much rather marks of men striving for power and empire over one another, than of the Church of Christ. Let anyone have never so true a claim to all these things, yet if he be destitute of charity, meekness, and good-will in general towards all mankind, even to those that are not Christians, he is certainly yet short of being a true Christian himself. 'The kings of the Gentiles exercise Lordship over them,' said our Saviour to his disciples, 'but ye shall not be so' (Luke 22.25). The business of true religion is quite another thing. It is not instituted in order to the erection of an external pomp, nor to the obtaining of ecclesiastical dominion, nor to the exercising of compulsive force; but to the regulating of men's lives according to the rules of virtue and piety. Whosoever will list himself under the banner of Christ must in the first place, and above all things, make war upon his own lusts and vices. It is in vain for any man to usurp the name of Christian without holiness of life, purity of manners, and benignity and meekness of spirit.

'Thou, when thou art converted, strengthen thy brethren' (Luke 22.32), said our Lord to Peter. It would indeed be very hard for one that appears careless about his own salvation to persuade me that he were extremely concerned for mine. For it is impossible that those should sincerely and heartily apply themselves to make other people Christians who have not really embraced the Christian religion in their own hearts. If the Gospel and the apostles may be credited, no man can be a Christian without charity, and without that faith which works, not by force, but by love. Now I appeal to the consciences of those that persecute, torment, destroy, and kill other men upon pretence of religion, whether they do it out of friendship and kindness towards them, or no? And I shall then indeed, and not till then, believe they do so, when I shall see those fiery zealots correcting, in the same manner, their friends and familiar acquaintances for the manifest sins they commit against the precepts of the Gospel; when I shall see them prosecute with fire and sword the members of their own communion that are tainted with enormous vices, and without amendment are in danger of eternal perdition; and when I shall see them thus express their love and desire of the salvation of their souls by the infliction of torments and exercise of all manner of cruelties. For if it be out of a principle of charity, as they pretend, and love to men's souls, that they deprive them of their estates, maim them with corporal punishments, starve and torment them in noisome prisons, and in the end even take away their lives; I say if all this be done merely to make men Christians, and procure their salvation, why then do they suffer 'whoredom, fraud, malice, and such like enormities' (Rom. 1), which (according to the apostle) manifestly relish of heathenish corruption, to predominate so much and abound amongst their flocks and people? These and suchlike things are certainly more contrary to the glory of God, to the purity of the church, and to the salvation of souls than any conscientious dissent from ecclesiastical decisions, or separation from public worship, whilst accompanied with innocency of life. When then does this burning zeal for

God, for the Church, and for the salvation of souls (burning, I say, literally, with fire and faggot) pass by those moral vices and wickednesses without any chastisement, which are acknowledged by all men to be diametrically opposite to the profession of Christianity; and bend all its nerves either to the introducing of ceremonies, or to the establishment of opinions which for the most part are about nice and intricate matters that exceed the capacity of ordinary understandings? Which of the parties contending about these things is in the right, which of them is guilty of schism or heresy, whether those that domineer or those that suffer, will then at last be manifest when the cause of their separation comes to be judged of. He certainly that follows Christ, embraces his doctrine, and bears his yoke, thoughhe forsake both father and mother, separate from the public assembly and ceremonies of his country, or whomsoever or whatsoever else he relinquishes, will not then be judged an heretic.

Now, though the divisions that are amongst sects should be allowed to be never so obstructive of the salvation of souls, yet nevertheless 'adultery, fornication, uncleanness, lasciviousness, idolatry, and such like things cannot be denied to be works of the flesh'; concerning which the apostle has expressly declared, that 'they who do them shall not inherit the kingdom of God' (Gal. 5). Whosoever, therefore, is sincerely solicitous about the kingdom of God, and thinks it his duty to endeavour the enlargement of it amongst men, ought to apply himself with no less care and industry to the rooting out of these immoralities than to the extirpation of sects. But if anyone do otherwise, and whilst he is cruel and implacable towards those that differ from him in opinion, he be indulgent to such iniquities and immoralities as are unbecoming the name of a Christian, let such a one talk never so much of the Church, he plainly demonstrates by his actions that 'tis another kingdom he aims at, and not the advancement of the kingdom of God.

That any man should think fit to cause another man whose salvation he heartily desires to expire in torments, and that even in an unconverted state, would, I confess, seem very strange to me, and, I think, to any other also. But nobody, surely, will ever believe that such a carriage can proceed from charity, love, or good-will. If anyone maintain that men ought to be compelled by fire and sword to profess certain doctrines, and conform to this or that exterior worship, without any regard had unto their morals; if anyone endeavour to convert those that are erroneous unto the faith by forcing them to profess things that they do not believe, and allowing them to practise things that the Gospel does not permit; it cannot be doubted indeed but such a one is desirous to have a numerous assembly joined in the same profession with himself; but that he principally intends by those means to compose a truly Christian Church is altogether incredible. It is not therefore to be wondered at if those who do not really contend for the advancement of the true religion, and of the Church of Christ, make use of arms that do not belong to the Christian warfare. If, like the captain of our salvation, they sincerely desired the good of souls, they would tread in the steps, and follow the perfect example, of that prince of peace who sent out his soldiers to the subduing of nations and gathering them into his Church, not armed with the sword, or other instruments of force, but prepared with the gospel of peace, and with the exemplary holiness of their conversation. This was his method. Though if infidels were to be converted by force, if those that are either blind or obstinate were to be drawn off from their errors by armed soldiers, we know very well that it was much more easy for him to do it with armies of heavenly legions, than for any son of the Church, how potent soever, with all his dragoons.

The toleration of those that differ from others in matters of religion is so agreeable to the Gospel of Jesus Christ, and to the genuine reason of mankind, that it seems monstrous for men to be so blind, as not to perceive the necessity and advantage of it in so clear a light. I will not here tax the pride and ambition of some, the passion and uncharitable zeal of others. These are faults from which human affairs can perhaps scarce ever be perfectly freed; but yet such as nobody will bear the plain imputation of, without covering them with some specious colour, and so pretend to commendation, whilst they are carried away by their own irregular passions. But however, that some may not colour their spirit of persecution and unchristian cruelty with a pretence of care for the public weal and observation of the laws; and that others, under pretence of religion, may not seek im-

punity for their libertinism and licentiousness; in a word, that none may impose either upon himself or others by the pretences of loyalty and obedience to the prince, or of tenderness and sincerity in the worship of God, I esteem it above all things necessary to distinguish exactly the business of civil government from that of religion, and to settle the just bounds that lie between the one and the other. If this be not done there can be no end put to the controversies that will be always arising between those that have, or at least pretend to have, on the one side, a concernment for the interest of men's souls, and, on the other side, a care of the commonwealth.

The commonwealth seems to me to be a society of men constituted only for the procuring, preserving, and advancing of their own civil interests.

Civil interests I call life, liberty, health, and indolency of body; and the possession of outward things, such as money, lands, houses, furniture, and the like.

It is the duty of the civil magistrate, by the impartial execution of equal laws, to secure unto all the people in general, and to every one of his subjects in particular, the just possession of these things belonging to this life. If anyone presume to violate the laws of public justice and equity, established for the preservation of these things, his presumption is to be checked by the fear of punishment, consisting in the deprivation of diminution of those civil interests, or goods, which otherwise he might and ought to enjoy. But seeing no man does willingly suffer himself to be punished by the deprivation of any part of his good, and much less of his liberty or life, therefore is the magistrate armed with the force and strength of all his subjects, in order to the punishment of those that violate any other man's rights.

Now that the whole jurisdiction of the magistrate reaches only to these civil concernments, and that all civil power, right, and dominion is bounded and confined to the only care of promoting these things; and that it neither can nor ought in any manner to be extended to the salvation of souls, these following considerations seem unto me abundantly to demonstrate.

First, because the care of souls is not committed to the civil magistrate, any more than to other men. It is not committed unto him, I say, by God; because it appears not that God has ever given any such authority to one man over another as to compel anyone to his religion. Nor can any such power be vested in the magistrate by the consent of the people, because no man can so far abandon the care of his own salvation as blindly to leave it to the choice of any other, whether prince or subject, to prescribe to him what faith or worship he shall embrace. For no man can, if he would, conform his faith to the dictates of another. All the life and power of true religion consists in the inward and full persuasion of the mind; and faith is not faith without believing. Whatever profession we make, to whatever outward worship we conform, if we are not fully satisfied in our own mind that the one is true, and the other well pleasing unto God, such profession and such practice, far from being any furtherance, are indeed great obstacles to our salvation. For in this manner, instead of expiating other sins by the exercise of religion, I say in offering thus unto God Almighty such a worship as we esteem to be displeasing unto him, we add unto the number of our other sins those also of hypocrisy, and contempt of his divine majesty.

In the second place, the care of souls cannot belong to the civil magistrate, because his power consists only in outward force; but true and saving religion consists in the inward persuasion of the mind, without which nothing can be acceptable to God. And such is the nature of the understanding that it cannot be compelled to the belief of anything by outward force. Confiscation of estate, imprisonment, torments, nothing of that nature can have any such efficacy as to make men change the inward judgement that they have framed of things.

It may indeed be alleged that the magistrate may make use of arguments, and thereby draw the heterodox into the way of truth, and procure their salvation. I grant it; but this is common to him with other men. In teaching, instructing, and redressing the erroneous by reason, he may certainly do what becomes any good man to do. Magistracy does not oblige him to put off either humanity or Christianity. But it is one thing to persuade, another to command; one thing to press with arguments, another with penalties. This the civil power alone has a right to do; to the other good-will is authority enough. Every man has commission to admonish, exhort, convince another of error, and by reasoning to draw him into truth: but to give laws, receive obedience, and compel with the

sword, belongs to none but the magistrate. And upon this ground I affirm that the magistrate's power extends not to the establishing of any articles of faith, or forms of worship, by the force of his laws. For laws are of no force at all without penalties, and penalties in this case are absolutely impertinent, because they are not proper to convince the mind. Neither the profession of any articles of faith nor the conformity to any outward form of worship (as has already been said) can be available to the salvation of souls, unless the truth of the one, and the acceptableness of the other unto God, be thoroughly believed by those that so profess and practise. But penalties are no ways capable to produce such belief. It is only light and evidence that can work a change in men's opinions; and that light can in no manner proceed from corporal sufferings, or any other outward penalties.

In the third place, the care of the salvation of men's souls cannot belong to the magistrate, because, though the rigour of laws and the forces of penalties were capable to convince and change men's minds, yet would not that help at all to the salvation of their souls. For there being but one truth, one way to heaven, what hope is there that more men would be led into it, if they had no other rule to follow but the religion of the court, and were put under a necessity to quit the light of their own reason; to oppose the dictates of their own consciences; and blindly to resign up themselves to the will of their governors, and to the religion which either ignorance, ambition, or superstition had chanced to establish in the countries where they were born? In the variety and contradiction of opinions in religion, wherein the princes of the world are as much divided as in their secular interests, the narrow way would be much straitened: one country alone would be in the right, and all the rest of the world would be put under an obligation of following their princes in the ways that lead to destruction; and that which heightens the absurdity, and very ill suits the notion of a deity, men would owe their eternal happiness or misery to the places of their nativity.

These considerations, to omit many others that might have been urged to the same purpose, seem unto me sufficient to conclude that all the power of civil government relates only to men's civil interests, is confined to the care of the things of this world, and has nothing to do with the world to come.

Let us now consider what a Church is. A Church, then, I take to be a voluntary society of men, joining themselves together of their own accord in order to the public worshipping of God, in such a manner as they judge acceptable to him, and effectual to the salvation of their souls.

I say it is a free and voluntary society. Nobody is born a member of any Church; otherwise the religion of parents would descend unto children by the same right of inheritance as their temporal estates, and everyone would hold his faith by the same tenure he does his land; than which nothing can be imagined more absurd. Thus therefore that matter stands: no man by nature is bound unto any particular Church or sect, but everyone joins himself voluntarily to that society in which he believes he has found that profession and worship which is truly acceptable to God. The hopes of salvation, as it was the only cause of his entrance into that communion, so it can be the only reason of his stay there. For if afterwards he discover anything either erroneous in the doctrine, or incongruous in the worship of that society to which he has joined himself, why should it not be as free for him to go out as it was to enter? No member of a religious society can be tied with any other bonds but what proceed from the certain expectation of eternal life. A Church then is a society of members voluntarily uniting to this end.

It follows now that we consider what is the power of this Church, and unto what laws it is subject.

Forasmuch as no society, how free soever, or upon whatsoever slight occasion instituted (whether of philosophers for learning, of merchants for commerce, or of men of leisure for mutual conversation and discourse), no Church or company, I say, can in the least subsist and hold together, but will presently dissolve and break to pieces, unless it be regulated by some laws, and the members all consent to observe some order. Place and time of meeting must be agreed on; rules for admitting and excluding members must be established; distinction of officers and putting things into a regular course, and suchlike, cannot be omitted. But since the joining together of several

members into this Church society, as has already been demonstrated, is absolutely free and spontaneous, it necessarily follows that the right of making its laws can belong to none but the society itself, or at least (which is the same thing) to those whom the society by common consent has authorized thereunto.

Some perhaps may object that no such society can be said to be a true Church, unless it have in it a bishop, or a presbyter, with ruling authority derived from the very apostles, and continued down unto the present times by an uninterrupted succession.

To these I answer, in the first place: let them show me the edict by which Christ has imposed that law upon his Church. And let not any man think me impertinent if, in a thing of this consequence, I require that the terms of that edict be very express and positive. For the promise he has made us that 'wheresoever two or three are gathered together in his name, he will be in the midst of them' (Matt. 18.20) seems to imply the contrary. Whether such an assembly want anything necessary to a true Church, pray do you consider. Certain I am that nothing can be there wanting unto the salvation of souls, which is sufficient to our purpose.

Next, pray observe how great have always been the divisions amongst even those who lay so much stress upon the divine institution and continued succession of a certain order of rulers in the Church. Now their very dissension unavoidably puts us upon a necessity of deliberating, and consequently allows a liberty of choosing that which, upon consideration, we prefer.

And, in the last place, I consent that these men have a ruler of their Church, established by such a long series of succession as they judge necessary, provided I may have liberty at the same time to join myself to that society in which I am persuaded those things are to be found which are necessary to the salvation of my soul. In this manner ecclesiastical liberty will be preserved on all sides, and no man will have a legislator imposed upon him, but whom himself has chosen.

But since men are so solicitous about the true Church, I would only ask them, here by the way, if it be not more agreeable to the Church of Christ to make the conditions of her communion consist in such things, and such things only, as the Holy Spirit has in the Holy Scripture declared, in express words, to be necessary to salvation. I ask, I say, whether this be not more agreeable to the Church of Christ, than for men to impose their own inventions and interpretations upon others, as if they were of divine authority, and to establish by ecclesiastical laws as absolutely necessary to the profession of Christianity, such things as the Holy Scriptures do either not mention, or at least not expressly command? Whosoever requires those things in order to ecclesiastical communion which Christ does not require in order to life eternal, he may perhaps indeed constitute a society accommodated to his own opinion and his own advantage, but how that can be called the Church of Christ which is established upon laws that are not his, and which excludes such persons from its communion as he will one day receive into the Kingdom of Heaven, I understand not. But this being not a proper place to inquire into the marks of the true Church, I will only mind those that contend so earnestly for the decrees of their own society, and that cry out continually 'The Church! The Church!', with as much noise, and perhaps upon the same principle, as the Ephesian silversmiths did for their Diana; this, I say, I desire to mind them of: that the Gospel frequently declares that the true disciples of Christ must suffer persecution; but that the Church of Christ should persecute others, and force others by fire and sword to embrace her faith and doctrine, I could never yet find in any of the books of the New Testament.

The end of a religious society, as has already been said, is the public worship of God, and, by means thereof, the acquisition of eternal life. All discipline ought therefore to tend to that end, and all ecclesiastical laws to be thereunto confined. Nothing ought nor can be transacted in this society relating to the possession of civil and worldly goods. No force is here to be made use of, upon any occasion whatsoever. For force belongs wholly to the civil magistrate, and the possession of all outward goods is subject to his jurisdiction.

But it may be asked, by what means then shall ecclesiastical laws be established, if they must be thus destitute of all compulsive power? I answer, they must be established by means suitable to the nature of such things, whereof the external profession and

observation, if not proceeding from a thorough conviction and approbation of the mind, is altogether useless and unprofitable. The arms by which the members of this society are to be kept within their duty are exhortations, admonitions, and advices. If by these means the offenders will not be reclaimed, and the erroneous convinced, there remains nothing further to be done, but that such stubborn and obstinate persons, who give no ground to hope for their reformation, should be cast out and separated from the society. This is the last and utmost force of ecclesiastical authority: no other punishment can thereby be inflicted than that, the relation ceasing between the body and the member which is cut off, the person so condemned ceases to be a part of that Church.

These things being thus determined, let us inquire in the next place how far the duty of toleration extends, and what is required from everyone by it.

And first, I hold that no Church is bound by the duty of toleration to retain any such person in her bosom as, after admonition, continued obstinately to offend against the laws of the society. For these being the condition of communion, and the bond of the society, if the breach of them were permitted without any animadversion, the society would immediately be thereby dissolved. But nevertheless, in all such cases care is to be taken that the sentence of excommunication, and the execution thereof, carry with it no rough usage, of word or action, whereby the ejected person may any wise be damnified in body or estate. For all force (as has often been said) belongs only to the magistrate, nor ought any private persons, at any time, to use force, unless it be in self-defence against unjust violence. Excommunication neither does, nor can, deprive the excommunicated person of any of those civil goods that he formerly possessed. All those things belong to the civil government, and are under the magistrate's protection. The whole force of excommunication consists only in this, that the resolution of the society in that respect being declared, the union that was between the body and some member comes thereby to be dissolved, and, that relation ceasing, the participation of some certain things which the society communicated to its members, and unto which no man has any civil right, comes also to cease. For there is no civil injury done unto the excommunicated person by the Church minister's refusing him that bread and wine, in the celebration of the Lord's Supper, which was not bought with his, but other men's money.

Secondly, no private person has any right, in any manner, to prejudice another person in his civil enjoyments because he is of another Church or religion. All the rights and franchises that belong to him as a man, or as a denizen, are inviolably to be preserved to him. These are not the business of religion. No violence nor injury is to be offered him, whether he be Christian or pagan. Nay we must not content ourselves with the narrow measures of bare justice: charity, bounty, and liberality must be added to it. This the Gospel enjoins, this reason directs, and this that natural fellowship we are born into requires of us. If any man err from the right way, it is his own misfortune, no injury to thee: nor, therefore, art thou to punish him in the things of this life because thou supposest he will be miserable in that which is to come.

What I say concerning the mutual toleration of private persons differing from one another in religion, I understand also of particular Churches; which stand, as it were, in the same relation to each other as private persons among themselves, nor has any one of them any manner of jurisdiction over any other, no not even when the civil magistrate (as it sometimes happens) comes to be of this or the other communion. For the civil government can give no new right to the Church, nor the Church to the civil government. So that whether the magistrate join himself to any church or separate from it, the Church remains always as it was before, a free and voluntary society. It neither acquires the power of the sword by the magistrate's coming to it, nor does it lose the right of instruction and excommunication by his going from it. This is the fundamental and immutable right of a spontaneous society, that it has power to remove any of its members who transgress the rules of its institution. But it cannot, by the accession of any new members, acquire any right of jurisdiction over those that are not joined with it. And therefore peace, equity, and friendship are always mutually to be observed by particular Churches, in the same manner as by private persons, without any pretence of superiority or jurisdiction over one another.

That the thing may be made yet clearer by an example, let us suppose two Churches, the one of Arminians, the other of Calvinists, residing in the city of Constantinople. Will anyone say that either of these Churches has right to deprive the members of the other of their estates and liberty (as we see practised elsewhere) because of their differing from it in some doctrines or ceremonies? Whilst the Turks in the meanwhile silently stand by, and laugh to see with what inhuman cruelty Christians thus rage against Christians? But if one of these Churches hath this power of treating the other ill, I ask which of them it is to whom that power belongs, and by what right? It will be answered undoubtedly, that it is the orthodox Church which has the right of authority over the erroneous or heretical. This is, in great and specious words, to say just nothing at all. For every Church is orthodox to itself; to other, erroneous or heretical. Whatsoever any Church believes, it believes to be true; and the contrary thereunto it pronounces to be error. So that the controversy between these Churches about the truth of the ir doctrines, and the purity of their worship, is on both sides equal; nor is there any judge, either at Constantinople or elsewhere upon earth, by whose sentence it can be determined. The decision of that question belongs only to the supreme judge of all men, to whom also alone belongs the punishment of the erroneous. In the meanwhile, let those men consider how heinously they sin, who, adding injustice, if not to the ir error yet certainly to their pride, do rashly and arrogantly take upon them to misuse the servants of another master, who are not at all accountable to them.

Nay, further, if it could be manifest which of these two dissenting Churches were in the right way, there would not accrue thereby to the orthodox any right of destroying the other. For Churches have neither any jurisdiction in worldly matters, nor are fire and sword any proper instruments wherewith to convince men's minds of error, and inform them of the truth. Let us suppose, nevertheless, that the civil magistrate inclined to favour one of them, and to put his sword into their hands, that (by his consent) they might chastise the dissenters as they pleased. Will any man say that any right can be derived unto a Christian Church, over its brethren, from a Turkish Emperor? An infidel, who has himself no authority to punish Christians for the articles of their faith, cannot confer such an authority upon any society of Christians, nor give unto them a right which he has not himself. This would be the case at Constantinople. And the reason of the thing is the same in any Christian kingdom. The civil power is the same in every place; nor can that power, in the hands of a Christian prince, confer any greater authority upon the Church, than in the hands of a heathen; which is to say, just none at all.

Nevertheless, it is worth to be observed, and lamented, that the most violent of these defenders of the truth, the opposers of errors, the exclaimers against schism, do hardly ever let loose this their zeal for God, with which they are so warmed and inflamed, unless where they have the civil magistrate on their side. But so soon as ever court favour has given them the better end of the staff, and they begin to feel themselves the stronger, then presently peace and charity are to be laid aside; otherwise they are religiously to be observed. Where they have not the power to carry on persecution, and to become masters, there they desire to live upon fair terms, and preach up toleration. When they are not strengthened with the civil power, then they can bear most patiently, and unmovedly, the contagion of idolatry, superstition, and heresy in their neighbourhood; of which, in other occasions, the interest of religion makes them to be extremely apprehensive. They do not forwardly attack those errors which are in fashion at court, or are countenanced by the government. Here they can be content to spare their arguments; which yet (with their leave) is the only right method of propagating truth, which has no such way of prevailing, as when strong arguments and good reason are joined with the softness of civility and good usage.

Nobody therefore, in fine, neither single persons, nor Churches, nay, nor even commonwealths, have any just title to invade the civil rights and worldly goods of each other, upon pretence of religion. Those that are of another opinion would do well to consider with themselves how pernicious a seed of discord and war, how powerful a provocation to endless hatreds, rapines, and slaughters they thereby furnish unto mankind. No peace and security, no, not so much as common friendship, can ever be established or preserved amongst men, so long as this opinion prevails,

that dominion is founded in grace, and that religion is to be propagated by force of arms.

In the third place, let us see what the duty of toleration requires from those who are distinguished from the rest of mankind (from the laity, as they please to call us) by some ecclesiastical character and office, whether they be bishops, priests, presbyters, ministers, or however else dignified or distinguished. It is not my business to inquire here into the original of the power or dignity of the clergy. This only I say, that whencesoever their authority be sprung, since it is ecclesiastical, it ought to be confined within the bounds of the Church, nor can it in any manner be extended to civil affairs; because the Church itself is a thing absolutely separate and distinct from the commonwealth. The boundaries on both sides are fixed and immovable. He jumbles heaven and earth together, the things most remote and opposite, who mixes these two societies, which are in their original, end, business, and in everything perfectly distinct, and infinitely different from each other. No man therefore, with whatsoever ecclesiastical office he be dignified, can deprive another man that is not of his Church and faith, either of liberty, or of any part of his worldly goods, upon the account of that difference which is between them in religion. For whatsoever is not lawful to the whole Church cannot, by any ecclesiastical right, become lawful to any of its members.

But this is not all. It is not enough that ecclesiastical men abstain from violence and rapine, and all manner of persecution. He that pretends to be a successor of the apostles, and takes upon him the office of teaching, is obliged also to admonish his hearers of the duties of peace and good-will towards all men; as well towards the erroneous as the orthodox; towards those that differ from them in faith and worship, as well as towards those that agree with them therein. And he ought industriously to exhort all men whether private persons or magistrates (if any such there be in his Church), to charity, meekness, and toleration; and diligently endeavour to allay and temper all that heat, and unreasonable averseness of mind, which either any man's fiery zeal for his own sect, or the craft of others, has kindled against dissenters. I will not undertake to represent how happy and how great would be the fruit, both in Church and state, if the pulpits everywhere sounded with this doctrine of peace and toleration; lest I should seem to detract from, nor would have it diminished either by others or themselves. But this I say, that thus it ought to be. And if anyone that professes himself to be a minister of the word of God, a preacher of the Gospel of peace, teach otherwise, he either understands not, or neglects, the business of his calling, and shall one day give account thereof unto the Prince of Peace.

If Christians are to be admonished that they abstain from all manner of revenge, even after repeated provocations and multiplied injuries, how much more ought they who suffer nothing, who have had no harm done them, forbear violence, and abstain from all manner of ill-usage towards those from whom they have received none! This caution and temper they ought certainly to use towards those who mind only their own business, and are solicitous for nothing but that (whatever men think of them) they may worship God in that manner which they are persuaded is acceptable to him, and in which they have the strongest hopes of eternal salvation. In private domestic affairs, in the management of estates, in the conservation of bodily health, every man may consider what suits his own convenience, and follow what course he likes best. No man complains of the ill-management of his neighbour's affairs. No man is angry with another for an error committed in sowing his land, or in marrying his daughter. Nobody corrects a spendthrift for consuming his substance in taverns. Let any man pull down, or build, or make whatsoever expenses he pleases, nobody murmurs, nobody controls him; he has his liberty. But if any man do not frequent the Church, if he do not there conform his behaviour exactly to the accustomed ceremonies, or if he brings not his children to be initiated in the sacred mysteries of this or the other congregation, this immediately causes an uproar, and the neighbourhood is filled with noise and clamour. Everyone is ready to be the avenger of so great a crime. And the zealots hardly have patience to refrain from violence and rapine so long till the cause be heard, and the poor man be, according to form, condemned to the loss of liberty, goods, or life.

Oh that our ecclesiastical orators, of every sect, would apply themselves with all the strength of arguments that they are able, to the confounding of men's errors! But let them spare their persons. Let them not

supply their want of reasons with the instruments of force which belong to another jurisdiction, and do ill become a churchman's hands. Let them not call in the magistrate's authority to the aid of their eloquence, or learning; lest, perhaps, whilst they pretend only love for the truth, this their intemperate zeal, breathing nothing but fire and sword, betray their ambition, and show that what they desire is temporal dominion. For it will be very difficult to persuade men of sense, that he, who with dry eyes, and satisfaction of mind, can deliver his brother unto the executioner to be burnt alive, does sincerely and heartily concern himself to save that brother from the flames of hell in the world to come.

In the last place, let us now consider what is the magistrate's duty in the business of toleration; which certainly is very considerable.

We have already proved that the care of souls does not belong to the magistrate: not a magisterial care, I mean, (if I may so call it) which consists in prescribing by laws, and compelling by punishments. But a charitable care, which consists in teaching, admonishing, and persuading, cannot be denied unto any man. The care, therefore, of every man's soul belongs unto himself, and is to be left unto himself. But what if he neglect the care of his soul? I answer: What if he neglect the care of his health, or of his estate, which things are nearlier related to the government of the magistrate than the other? Will the magistrate provide by an express law, that such a one shall not become poor or sick? Laws provide, as much as is possible, that the goods and health of subjects be not injured by the fraud or violence of others; they do not guard them from the negligence or ill-husbandry of the possessors themselves. No man can be forced to be rich or healthful, whether he will or no. Nay, God himself will not save men against their wills. Let us suppose, however, that some prince were desirous to force his subjects to accumulate riches, or to preserve the health and strength of their bodies. Shall it be provided by law, that they must consult none but Roman physicians, and shall everyone be bound to live according to their prescriptions? What, shall no potion, no broth, be taken, but what is prepared either in the Vatican, suppose, or in a Geneva shop? Or, to make these subjects rich, shall they all be obliged by law to become merchants, or musicians? Or, shall everyone turn victualler, or smith, because there are some that maintain their families plentifully, and grow rich in those professions?

But it may be said, there are a thousand ways to wealth, but only one way to heaven. 'Tis well said indeed, especially by those that plead for compelling men into this or the other way. For if there were several ways that lead thither, there would not be so much as a pretence left for compulsion. But now if I be marching on with my utmost vigour, in that way which, according to the sacred geography, leads straight to Jerusalem, why am I beaten and ill-used by others; because, perhaps, I wear not buskins; because my hair is not of the right cut; because perhaps I have not been dipped [i.e., baptized] in the right fashion; because I eat flesh upon the road, or some other food which agrees with my stomach; because I avoid certain byways, which seem unto me to lead into briars or precipices; because amongst the several paths that are in the same road, I choose that to walk in which seems to be the straightest and cleanest; because I avoid to keep company with some travellers that are less grave, and others that are more sour than they ought to be; or, in fine, because I follow a guide that either is, or is not, clothed in white, and crowned with a mitre? Certainly, if we consider right, we shall find that for the most part they are such frivolous things as these that (without any prejudice to religion or the salvation of souls, if not accompanied with superstition or hypocrisy) might either be observed or omitted; I say they are such like things as these, which breed implacable enmities amongst Christian brethren, who are all agreed in the substantial and truly fundamental part of religion.

But let us grant unto these zealots, who condemn all things that are not of their mode, that from these circumstances arise different ends. What shall we conclude from thence? There is only one of these which is the true way to eternal happiness. But in this great variety of ways that men follow, it is still doubted which is this right one. Now neither the care of the commonwealth, nor the right of enacting laws, does discover this way that leads to heaven more certainly to the magistrate, then every private man's search and study discovers it unto himself. I have a weak body, sunk under a languishing disease, for which (I suppose) there is one only remedy, but that unknown.

Does it therefore belong unto the magistrate to prescribe me a remedy, because there is but one, and because it is unknown? Because there is but one way for me to escape death, will it therefore be safe for me to do whatsoever the magistrate ordains? Those things that every man ought sincerely to inquire into himself, and by meditation, study, search, and his own endeavours, attain the knowledge of, cannot be looked upon as the peculiar possession of any one sort of men. Princes indeed are born superior unto other men in power, but in nature equal. Neither the right nor the art of ruling does necessarily carry along with it the certain knowledge of other things; and least of all of the true religion. For if it were so, how could it come to pass that the lords of the earth should differ so vastly as they do in religious matters? But let us grant that it is probable the way to eternal life may be better known by a prince than by his subjects; or at least, that in this incertitude of things, the safest and most commodious way for private persons is to follow his dictates. You will say, what then? If he should bid you follow merchandise for your livelihood, would you decline that course for fear it should not succeed? I answer: I would turn merchant upon the prince's command, because in case I should have ill-success in trade, he is abundantly able to make up my loss some other way. If it be true, as he pretends, that he desires I should thrive and grow rich, he can set me up again when unsuccessful voyages have broke me. But this is not the case, in the things that regard the life to come. If there I take a wrong course, if in that respect I am once undone, it is not in the magistrate's power to repair my loss, to ease my suffering, or to restore me in any measure, much less entirely, to a good estate. What security can be given for the Kingdom of Heaven?

Perhaps some will say that they do not suppose this infallible judgement, that all men are bound to follow in the affairs of religion, to be in the civil magistrate, but in the Church. What the Church has determined, that the civil magistrate orders to be observed; and he provides by his authority that nobody shall either act or believe, in the business of religion, otherwise than the Church teaches. So that the judgement of those things is in the Church. The magistrate himself yields obedience thereunto, and requires the like obedience from others. I answer: Who sees not how frequently the name of the Church, which was so venerable in the time of the apostles, has been made use of to throw dust in people's eyes, in following ages? But however, in the present case it helps us not. The one only narrow way which leads to heaven is not better known to the magistrate than to private persons, and therefore I cannot safely take him for my guide, who may probably be as ignorant of the way as myself, and who certainly is less concerned for my salvation than I myself am. Amongst so many kings of the Jews, how many of them were there whom any Israelite, thus blindly following, had not fallen into idolatry, and thereby into destruction? Yet nevertheless, you bid me be of good courage, and tell me that all is now safe and secure, because the magistrate does not now enjoin the observance of his own decrees in matters of religion, but only the decrees of the Church. Of what Church, I beseech you? Of, that certainly, which likes him best. As if he that compels me by laws and penalties to enter into this or the other Church did not interpose his own judgement in the matter. What difference is there whether he lead me himself, or deliver me over to be led by others? I depend both ways upon his will, and it is he that determines both ways of my eternal state. Would an Israelite, that had worshipped Baal upon the command of his king, have been in any better condition, because somebody had told him that the king ordered nothing in religion upon his own head, nor commanded anything to be done by his subjects in divine worship, but what was approved by the counsel of priests, and declared to be of divine right by the doctors of their Church? If the religion of any Church become therefore true and saving, because the head of that sect, the prelates and priests, and those of that tribe, do all of them, with all their might, extol and praise it, what religion can ever be accounted erroneous, false, and destructive? I am doubtful concerning the doctrine of the Socinians; I am suspicious of the way of worship practised by the papists or Lutherans; will it be ever a jot the safer for me to join unto the one or the other of those Churches, upon the magistrate's command, because he commands nothing in religion but by the authority and counsel of the doctors of that Church?

But, to speak the truth, we must acknowledge that the Church (if a convention of clergymen, making

canons, must be called by that name) is for the most part more apt to be influenced by the court, than the court by the Church. How the Church was under the vicissitude of orthodox and Arian emperors is very well known. Or, if those things be too remote, the English history affords us fresher examples, in the reigns of Henry the 8th, Edward the 6th, Mary, and Elizabeth, how easily and smoothly the clergy changed their decrees, their articles of faith, their form of worship, everything, according to the inclination of those kings and queens. Yet were those kings and queens of such different minds, in point of religion, and enjoined thereupon such different things, that no man in his wits (I had almost said none but an atheist) will presume to say that any sincere and upright worshipper of God could, with a safe conscience, obey their several decrees. To conclude: it is the same thing whether a king that prescribes laws to another man's religion pretend to do it by his own judgement, or by the ecclesiastical authority and advice of others. The decisions of churchmen, whose differences and disputes are sufficiently known, cannot be any sounder, or safer, than his. Nor can all their suffrages joined together add any new strength unto the civil power. Though this also must be taken notice of, that princes seldom have any regard to the suffrages of ecclesiastics that are not favourers of their own faith and way of worship.

But after all, the principal consideration, and which absolutely determines this controversy, is this: although the magistrate's opinion in religion be sound, and the way that he appoints be truly evangelical, yet if I be not thoroughly persuaded thereof in my own mind, there will be no safety for me in following it. No way whatsoever that I shall walk in, against the dictates of my conscience, will ever bring me to the mansions of the blessed. I may grow rich by an art that I take not delight in; I may be cured of some disease by remedies that I distrust, and by a worship that I abhor. It is in vain for an unbeliever to take up the outward show of another man's profession. Faith only, and inward sincerity, are the things that procure acceptance with God. The most likely and most approved remedy can have no effect upon the patient, if his stomach reject it as soon as taken. And you will in vain cram a medicine down a sick man's throat, which his particular constitution will be sure to turn into poison. In a word: whatsoever may be doubtful in religion, yet this at least is certain, that no religion which I believe not to be true, can be either true or profitable unto me. In vain therefore do princes compel their subjects to come into their Church communion, under pretence of saving their souls. If they believe, they will come of their own accord; if they believe not, their coming will nothing avail them. How great soever, in fine, may be the pretence of good-will, and charity, and concern for the salvation of men's souls, men cannot be forced to be saved whether they will or no. And therefore, when all is done, they must be left to their own consciences.

Having thus at length freed men from all dominion over one another in matters of religion, let us now consider what they are to do. All men know and acknowledge that God ought to be publicly worshipped. Why otherwise do they compel one another unto the public assemblies? Men therefore constituted in this liberty are to enter into some religious society, that they may meet together, not only for mutual edification, but to own to the world that they worship God, and offer unto his Divine Majesty such service as they themselves are not ashamed of, and such as they think not unworthy of him, nor unacceptable to him; and finally that by the purity of doctrine, holiness of life, and decent form of worship, they may draw others unto the love of the true religion, and perform such other things in religion as cannot be done by each private man apart.

These religious societies I call Churches: and these I say the magistrate ought to tolerate. For the business of these assemblies of the people is nothing but what is lawful for every man in particular to take care of, I mean the salvation of their souls; nor, in this case, is there any difference between the national Church and other separated congregations.

But as in every Church there are two things especially to be considered—the outward form and rights of worship, and the doctrines and articles of faith—these things must be handled each distinctly; that so the whole matter of toleration may the more clearly be understood.

Concerning outward worship, I say (in the first place) that the magistrate has no power to enforce by law, either in his own Church, or much less in

another, the use of any rites or ceremonies whatsoever in the worship of God. And this, not only because these Churches are free societies, but because whatsoever is practised in the worship of God is only so far justifiable as it is believed by those that practise it to be acceptable unto him. Whatsoever is not done with that assurance of faith, is neither well in itself, nor can it be acceptable to God. To impose such things, therefore, upon any people, contrary to their own judgement, is in effect to command them to offend God; which, considering that the end of all religion is to please him, and that liberty is essentially necessary to that end, appears to be absurd beyond expression.

But perhaps it may be concluded from hence, that I deny unto the magistrate all manner of power about indifferent things; which, if it be not granted, the whole subject-matter of law-making is taken away. No, I readily grant that indifferent things, and perhaps none but such, are subjected to the legislative power. But it does not therefore follow that the magistrate may ordain whatsoever he pleases concerning anything that is indifferent. The public Good is the rule and measure of all law-making. If a thing be not useful to the commonwealth, though it be never so indifferent, it may not presently be established by law.

But further: things never so indfferent in their own nature, when they are brought into the Church and worship of God, are removed out of the reach of the magistrate's jurisdiction; because in that use they have no connection at all with civil affairs. The only business of the Church is the salvation of souls: and it no way concerns the commonwealth, or any member of it, that this or the other ceremony be there made use of. Neither the use nor the omission of any ceremonies, in those religious assemblies, does either advantage or prejudice the life, liberty, or estate of any man. For example, let it be granted that the washing of an infant with water is in itself an indfferent thing. Let it be granted also, that if the magistrate understand such washing to be profitable to the curing or preventing of any disease that children are subject unto, and esteem the matter weighty enough to be taken care of by a law, in that case he may order it to be done. But will anyone therefore say, that a magistrate has the same right to ordain, by law, that all children shall be baptized by priests, in the sacred font, in order to the purification of their souls? The extreme difference of these two cases is visible to everyone at first sight. Or let us apply the last case to the child of a Jew, and the thing will speak itself. For what hinders but a Christian magistrate may have subjects that are Jews? Now if we acknowledge that such an injury may not be done unto a Jew, as to compel him, against his own opinion, to practise in his religion a thing that is in its nature indifferent, how can we maintain that anything of this kind may be done to a Christian?

Again: things in their own nature indifferent cannot, by any human authority, be made any part of the worship of God; for this very reason, because they are indifferent. For since indifferent things are not capable, by any virtue of their own, to propitiate the Deity, no human power or authority can confer on them so much dignity and excellency as to enable them to do it. In the common affairs of life, that use of indifferent things which God has not forbidden is free and lawful, and therefore in those things human authority has place. But it is not so in matters of religion. Things indifferent are not otherwise lawful in the worship of God than as they are instituted by God himself; and as he, by some positive command, has ordained them to be made a part of that worship which he will vouchsafe to accept of at the hands of poor sinful men. Nor when an incensed deity shall ask us, 'Who has required these or such-like things at your hands?' will it be enough to answer him, that the magistrate commanded them. If civil jurisdiction extended thus far, what might not lawfully be introduced into religion? What hodge-podge of ceremonies, what superstitious inventions, built upon the magistrate's authority, might not (against conscience) be imposed upon the worshippers of God? For the greatest part of these ceremonies and superstitions consists in the religious use of such things as are in their own nature indifferent: nor are they sinful upon any other account, than because God is not the author of them. The sprinkling of water, and the use of bread and wine, are both in their own nature, and in the ordinary occasions of life, altogether indifferent. Will any man therefore say that these things could have been introduced into religion, and made a part of divine worship, if not by divine institution? If any human authority or civil power could have done this, why

might it not also enjoin the eating of fish and drinking of ale in the holy banquet, as a part of divine worship? Why not the sprinkling of the blood of beasts in Churches, and expiations by water or fire, and abundance more of this kind? But these things, how indifferent soever they be in common uses, when they come to be annexed unto divine authority, they are as abominable to God, as the sacrifice of a dog. And why a dog so abominable? What difference is there between a dog and a goat, in respect of the divine nature, equally and infinitely distant from all affinity with matter; unless it be that God required the use of the one in his worship, and not of the other? We see therefore that indifferent things, how much soever they be under the power of the civil magistrate, yet cannot upon that pretence be introduced into religion, and imposed upon religious assemblies, because in the worship of God they wholly cease to be indifferent. He that worships God does it with design to please him and procure his favour. But that cannot be done by him who, upon the command of another, offers unto God that which he knows will be displeasing to him, because not commanded by himself. This is not to please God, or appease his wrath, but willingly and knowingly to provoke him by a manifest contempt, which is a thing absolutely repugnant to the nature and end of worship.

But it will here be asked: If nothing belonging to divine worship be left to human discretion, how is it then that Churches themselves have the power of ordering anything about the time and place of worship, and the like? To this I answer that in religious worship we must distinguish between what is part of the worship itself, and what is but a circumstance. That is a part of the worship which is believed to be appointed by God, and to be well-pleasing to him, and therefore that is necessary. Circumstances are such things which, though in general they cannot be separated from worship, yet the particular instances or modifications of them are not determined; and therefore they are indifferent. Of this sort are the time and place of worship, the habit and posture of him that worships. These are circumstances, and perfectly indifferent, where God has not given any express command about them. For example, amongst the Jews, the time and place of their worship, and the habits of those that officiated in it, were not mere circumstances, but a part of the worship itself; in which, if anything were defective, or different from that institution, they could not hope that it would be accepted by God. But these, to Christians under the liberty of the Gospel, are mere circumstances of worship, which the prudence of every Church may bring into such use as shall be judged most subservient to the end of order, decency, and edification. Though, even under the Gospel also, those who believe the first or the seventh day to be set apart by God, and consecrated still to his worship, to them that portion of time is not a simple circumstance, but a real part of divine worship, which can neither be changed nor neglected.

In the next place: as the magistrate has no power to impose by his laws the use of any rites and ceremonies in any Church, so neither has he any power to forbid the use of such rites and ceremonies as are already received, approved, and practised by any Church, because if he did so, he would destroy the Church itself, the end of whose institution is only to worship God with freedom, after its own manner.

You will say, by this rule, if some congregations should have a mind to sacrifice infants, or (as the primitive Christians were falsely accused) lustfully pollute themselves in promiscuous uncleanness, or practise any other such heinous enormities, is the magistrate obliged to tolerate them, because they are committed in a religious assembly? I answer, No. These things are not lawful in the ordinary course of life, nor in any private house; and therefore neither are they so in the worship of God, or in any religious meeting. But indeed if any people congregated upon account of religion should be desirous to sacrifice a calf, I deny that that ought to be prohibited by a law. Meliboeus, whose calf it is, may lawfully kill his own calf at home, and burn any part of it that he thinks fit, for no injury is thereby done to anyone, no prejudice to another man's goods. And for the same reason he may kill his calf also in a religious meeting. Whether the doing so be well-pleasing to God or no, it is their part to consider that do it. The part of the magistrate is only to take care that the commonwealth receive no prejudice, and that there be no injury done to any man, either in life or estate. And thus what may be spent on a feast, may be spent on a sacrifice. But if peradventure such were the state of things, that the

interest of the commonwealth required all slaughter of beasts should be forborne for some while, in order to the increasing of the stock of cattle, that had been destroyed by some extraordinary murrain, who sees not that the magistrate, in such a case, may forbid all his subjects to kill any calves for any use whatsoever? Only 'tis to be observed that in this case the law is not made about a religious but a political matter; nor is the sacrifice but the slaughter of calves thereby prohibited.

By this we see what difference there is between the Church and the commonwealth. Whatsoever is lawful in the commonwealth cannot be prohibited by the magistrate in the Church. Whatsoever is permitted unto any of his subjects for their ordinary use, neither can nor ought to be forbidden by him to any sect of people for their religious uses. If any man may lawfully take bread or wine, either sitting or kneeling, in his own house, the law ought not to abridge him of the same liberty in his religious worship; though in the Church the use of bread and wine be very different, and be there applied to the mysteries of faith, and rites of divine worship. But those things that are prejudicial to the commonweal of a people in their ordinary use, are therefore forbidden by laws, those things ought not to be permitted to Churches in their sacred rites. Only the magistrate ought always to be very careful that he do not misuse his authority, to the oppression of any Church, under pretence of public good.

It may be said: What if a Church be idolatrous, is that also to be tolerated by the magistrate? In answer I ask: What power can be given to the magistrate for the suppression of an idolatrous Church, which may not, in time and place, be made use of to the ruin of an orthodox one? For it must be remembered that the civil power is the same everywhere, and the religion of every prince is orthodox to himself. If, therefore, such a power be granted unto the civil magistrate in spirituals, as that at Geneva (for example), he may extirpate, by violence and blood, the religion which is there reputed idolatrous; by the same rule another magistrate, in some neighbouring country, may oppress the reformed religion; and, in India, the Christian. The civil power can either change everything in religion, according to the prince's pleasure, or it can change nothing. If it be once permitted to introduce anything into religion, by the means of laws and penalties, there can be no bounds put to it; but it will in the same manner be lawful to alter everything, according to that rule of truth which the magistrate has framed unto himself. No man whatsoever ought, therefore, to be deprived of his terrestrial enjoyments upon account of his religion. Not even Americans, subjected unto a Christian prince, are to be punished either in body or goods for not embracing our faith and worship. If they are persuaded that they please God in observing the rites of their own country, and that they shall obtain happiness by that means, they are to be left unto God and themselves. Let us trace this matter to the bottom. Thus it is: an inconsiderable and weak number of Christians, destitute of everything, arrive in a pagan country. These foreigners beseech the inhabitants, by the bowels of humanity, that they would succor them with the necessaries of life. Those necessaries are given them; habitations are granted; and they all join together and grow up into one body of people. The Christian religion to this means takes root in that country, and spreads itself; but does not suddenly grow the strongest. While things are in this condition, peace, friendship, faith, and equal justice are preserved amongst them. At length the magistrate becomes a Christian, and by that means their party becomes the most powerful. Then immediately all compacts are to be broken, all civil rights to be violated, that idolatry may be extirpated. And unless these innocent pagans, strict observers of the rules of equity and of the law of nature, and no ways offending against the laws of the society, I say unless they will forsake their ancient religion, and embrace a new and strange one, they are to be turned out of the lands and possessions of their forefathers, and perhaps deprived of life itself. Then at last it appears what zeal for the Church, joined with the desire of dominion, is capable to produce; and how easily the pretence of religion, and of the care of souls, serves for a cloak to covetousness, rapine, and ambition.

Now whosoever maintains that idolatry is to be rooted out of any place by laws, punishments, fire, and sword, may apply this story to himself, for the reason of the thing is equal, both in America and Europe. And neither pagans there, nor any dissenting Christians here, can with any right be deprived of their worldly goods by the predominating faction of a Court-

Church; nor are any civil rights to be either changed or violated upon account of religion in one place more than another.

But idolatry (say some) is a sin, and therefore not to be tolerated. If they said it were therefore to be avoided, the inference were good. But it does not follow that, because it is a sin, it ought therefore to be punished by the magistrate. For it does not belong unto the magistrate to make use of his sword in punishing everything, indifferently, that he takes to be a sin against God. Covetousness, uncharitableness, idleness, and many other things are sins, by the consent of all men, which yet no man ever said were to be punished by the magistrate. The reason is, because they are not prejudicial to other men's rights, nor do they break the public peace of societies. nay even the sins of lying and perjury are no where punishable by laws; unless in certain cases, in which the real turpitude of the thing, and the offence against God, are not considered, but only the injury done unto men's neighbours, and to the commonwealth. And what if in another country, to a Mahometan or a pagan prince, the Christian religion seem false and offensive to God; may not the Christians for the same reason, and after the same manner, be extirpated there?

But it may be urged further, that by the law of Moses idolaters were to be rooted out. True indeed, by the law of Moses. But that is not obligatory to us Christians. Nobody pretends that everything, generally, enjoined by the law of Moses, ought to be practised by Christians. But there is nothing more frivolous than that common distinction of moral, judicial, and ceremonial law, which men ordinarily make use of. For no positive law whatsoever can oblige any people but those to whom it is given. 'Hear O Israel' sufficiently restrains the obligation of the law of Moses only to that people. And this consideration alone is answer enough unto those that urge the authority of the law of Moses for the inflicting of capital punishments upon idolaters. But, however, I will examine this argument a little more particularly.

The case of idolaters, in respect of the Jewish commonwealth, falls under a double consideration. The first is of those who, being initiated in the mosaical rites, and made citizens of that commonwealth, did afterwards apostatize from the worship of the God of Israel. These were proceeded against as traitors and rebels, guilty of no less than high treason. For the commonwealth of the Jews, different in that from all others, was an absolute theocracy; nor was there, or could there be, any difference between that commonwealth and the Church. The laws established there concerning the worship of one invisible deity were the civil laws of that people, and a part of their political government, in which God himself was the legislator. Now if anyone can show me where there is a commonwealth, at this time, constituted upon that foundation, I will acknowledge that the ecclesiastical laws do there unavoidably become a part of the civil; and that the subjects of that government both may and ought to be kept in strict conformity with that Church by the civil power. But there is absolutely no such thing, under the Gospel, as a Christian commonwealth. There are, indeed, many cities and kingdoms that have embraced the faith of Christ, but they have retained their ancient form of government, with which the law of Christ hath not at all meddled. He, indeed, hath taught men how, by faith and good works, they may attain eternal life. But he instituted no commonwealth; he prescribed unto his followers no new and peculiar form of government; nor put he the sword into any magistrate's hand, with commission to make use of it in forcing men to forsake their former religion, and receive his.

Secondly, foreigners, and such as were strangers to the commonwealth of Israel, were not compelled by force to observe the rites of Mosaical law. But, on the contrary, in the very same place where it is ordered that 'an Israelite that was an idolater should be put to death', there it is provided that 'strangers should not be vexed nor oppressed' (Exod. 22.20, 21). I confess that the seven nations that possessed the land which was promised to the Israelites were utterly to be cut off. But this was not singly because they were idolaters. For if that had been the reason, why were the Moabites and other nations to be spared? No, the reason is this: God being in a peculiar manner the king of the Jews, he could not suffer the adoration of any other deity (which was properly an act of high treason against himself) in the land of Canaan, which was his kingdom. For such a manifest revolt could no ways consist with his dominion, which was perfectly political, in that country. All idolatry was therefore to be rooted out of the bounds of his kingdom; because it

was an acknowledgement of another God, that is to say another king, against the laws of empire. The inhabitants were also to be driven out, that the entire possession of the land might be given to the Israelites. And for the like reason the Emims and the Horims were driven out of their countries by the children of Esau and Lot (Deut. 2); and their lands, upon the same grounds, given by God to the invaders. But though all idolatry was thus rooted out of the land of Canaan, yet every idolater was not brought to execution. The whole family of Rahab, the whole nation of the Gibeonites, articled with Joshua, and were allowed by treaty; and there were many captives amongst the Jews who were idolaters. David and Solomon subdued many countries without the confines of the Land of Promise, and carried their conquests as far as Euphrates. Amongst so many captives taken, so many nations reduced under their obedience, we find not one man forced into the Jewish religion and the worship of the true God, and punished for idolatry, though all of them were certainly guilty of it. If anyone, indeed, becoming a proselyte, desired to be made a denizen of their commonwealth, he was obliged to submit unto their laws, that is, to embrace their religion. But this he did willingly, on his own accord, not by constraint. He did not unwillingly submit, to show his obedience, but he sought and solicited for it, as a privilege. And as soon as he was admitted, he became subject to the laws of the commonwealth, by which all idolatry was forbidden within the borders of the land of Canaan. But the law (as I have said) did not reach to any of those regions, however subjected unto the Jews, that were situated without those bounds.

Thus far concerning toward worship. Let us now consider articles of faith.

The articles of religion are some of them practical, and some speculative. Now, though both sorts consist in the knowledge of truth, yet these terminate simply in the understanding, those influence the will and manners. Speculative opinions, therefore, and articles of faith, as they are called, which are required only to be believed, cannot be imposed on any Church by the law of the land. For it is absurd that things should be enjoined by laws which are not in men's power to perform. And to believe this or that to be true, does not depend upon our will. But of this enough has been said already. But (will some say) let men at least profess that they believe. A sweet religion, indeed, that obliges men to dissemble, and tell lies both to God and man, for the salvation of their souls! If the magistrate thinks to save men thus, he seems to understand little of the way of salvation. And if he does it not in order to save them, why is he so solicitous about the articles of faith as to enact them by a law?

Further, the magistrate ought not to forbid the preaching or professing of any speculative opinions in any Church, because they have no manner of relation to the civil rights of the subjects. If a Roman Catholic believe that to be really the body of Christ which another man calls bread, he does no injury thereby to his neighbour. If a Jew do not believe the New Testament to be the Word of God, he does not thereby alter anything in men's civil rights. If a heathen doubt of both Testaments, he is not therefore to be punished as a pernicious citizen. The power of the magistrate, and the estates of the people, may be equally secure, whether any man believe these things or no. I readily grant that these opinions are false and absurd. But the business of laws is not to provide for the truth of opinions, but for the safety and security of the commonwealth, and of every particular man's goods and person. And so it ought to be. For truth certainly would do well enough, if she were once left to shift for herself. She seldom has received, and I fear never will receive, much assistance from the power of great men, to whom she is but rarely known, and more rarely welcome. She is not taught by laws, nor has she any need of force to procure her entrance into the minds of men. Errors indeed prevail by assistance of foreign and borrowed succours, but if truth makes not her way into the understanding by her own light, she will be but the weaker for any borrowed force violence can add to her. Thus much for speculative opinions. Let us now proceed to practical ones.

A good life, in which consists not the last part of religion and true piety, concerns also the civil government; and in it lies the safety both of men's souls and of the commonwealth. Moral actions belong therefore to the jurisdiction both of the outward and inward court; both of the civil and domestic governor; I mean, both of the magistrate and conscience. Here, therefore, is great danger, lest one of these jurisdictions entrench upon the other, and discord arise

between the keeper of the public peace and the overseers of souls. But if what has been already said concerning the limits of both these governments be rightly considered, it will easily remove all difficulty in this matter.

Every man has an immortal soul, capable of eternal happiness or misery; whose happiness depending upon his believing and doing those things in this life which are necessary to the obtaining of God's favour, and are prescribed by God to that end, it follows from thence, first, that the observance of these things is the highest obligation that lies upon mankind, and that our utmost care, application, and diligence ought to be exercised in the search and performance of them, because there is nothing in this world that is of any consideration in comparison with eternity. Secondly, that seeing one man does not violate the right of another by his erroneous opinions, and undue manner of worship, nor is his perdition any prejudice to another man's affairs, therefore the care of each man's salvation belongs only to himself. But I would not have this understood, as if I meant hereby to condemn all charitable admonitions, and affectionate endeavours to reduce men from errors; which are indeed the greatest duty of a Christian. Anyone may employ as many exhortations and arguments as he pleases towards the promoting of another man's salvation. But all force and compulsion are to be forborne. Nothing is to be done imperiously. Nobody is obliged in that matter to yield obedience unto the admonitions or injunctions of another, further than he himself is persuaded. Every man, in that, has the supreme and absolute authority of judging for himself. And the reason is, because nobody else is concerned in it, nor can receive any prejudice from his conduct therein.

But besides their souls, which are immortal, men have also their temporal lives here upon earth; the state whereof being frail and fleeting, and the duration uncertain, they have need of several outward conveniences to the support thereof, which are to be procured or preserved by pains and industry. For those things that are necessary to the comfortable support of our lives are not the spontaneous products of nature, nor do offer themselves fit and prepared for our use. This part therefore draws on another care, and necessarily gives another employment. But the pravity of mankind being such that they had rather injuriously prey upon the fruits of other men's labours, then take pains to provide for themselves, the necessity of preserving men in the possession of what honest industry has already acquired, and also of preserving their liberty and strength, whereby they may acquire what they may further want, obliges men to enter into society with one another, that by mutual assistance, and joint force, they may secure unto each other their properties in the things that contribute to the comfort and happiness of this life; leaving in the meanwhile to every man the care of his own eternal happiness, the attainment whereof can neither be facilitated by another man's industry, nor can the loss of it turn to another man's prejudice, nor the hope of it be forced from him by any external violence. But forasmuch as men thus entering into societies, grounded upon their mutual compacts of assistance, for the defence of their temporal goods, may nevertheless be deprived of them, either by the rapine and fraud of their fellow-citizens, or by the hostile violence of foreigners, the remedy of this evil consists in arms, riches, and multitude of citizens; the remedy of the other in laws; and the care of all things relating both to the one and the other is committed by the society to the civil magistrate. This is the original, this is the use, and these are the bounds of the legislative, which is the supreme power in every commonwealth. I mean, that provision may be made for the security of each man's private possessions; for the peace, riches, and public commodities of the whole people; and, as much as possible, for the increase of their inward strength, against foreign invasions.

These things being thus explained, it is easy to understand to what end the legislative power ought to be directed, and by what measures regulated; and that is the temporal good and outward prosperity of the society; which is the sole reason of men's entering into society, and the only thing they seek and aim at in it. And it is also evident what liberty remains to men in reference to their eternal salvation, and that is, that everyone should do what he in his conscience is persuaded to be acceptable to the Almighty, on whose good pleasure and acceptance depends his eternal happiness. For obedience is due in the first place to God, and afterwards to the laws.

But some may ask, What if the magistrate should enjoin anything by his authority that appears unlawful

to the conscience of a private person? I answer that if government be faithfully administered, and the counsels of the magistrate be indeed directed to the public good, this will seldom happen. But if perhaps it do so fall out, I say that such a private person is to abstain from the action that he judges unlawful; and he is to undergo the punishment, which it is not unlawful for him to bear. For the private judgement of any person concerning a law enacted in political matters, for the public good, does not take away the obligation of that law, nor deserve a dispensation. But if the law indeed be concerning things that lie not within the verge of the magistrate's authority (as, for example, that the people, or any party amongst them, should be compelled to embrace a strange religion, and join in the worship and ceremonies of another Church), men are not in these cases obliged by that law, against their consciences. For the political society is instituted for no other end but only to secure every man's possession of the things of this life. The care of each man's soul, and of the things of heaven, which neither does belong to the commonwealth nor can be subjected to it, is left entirely to every man's self. Thus the safeguard of men's lives, and of the things that belong unto this life, is the business of the commonwealth; and the preserving of those things unto their owners is the duty of the magistrate. And, therefore, the magistrate cannot take away these worldly things from this man, or party, and give them to that; nor change property amongst fellow-subjects (no, not even by a law) for a cause that has no relation to the end of civil government—I mean, for their religion, which, whether it be true or false, does no prejudice to the worldly concerns of their fellow-subjects, which are the things that only belong unto the care of the commonwealth.

But what if the magistrate believe such a law as this to be for the public good? I answer: As the private judgement of any particular person, if erroneous, does not exempt him from the obligation of law, so the private judgement (as I may call it) of the magistrate does not give him any new right of imposing laws upon his subjects, which neither was in the constitution of the government granted him, nor ever was in the power of the people to grant; and least of all if he make it his business to enrich and advance his followers and fellow-sectaries with the spoils of others. But what if the magistrate believe that he has a right to make such laws, and that they are for the public good; and his subjects believe the contrary? Who shall be judge between them? I answer, God alone. For there is no judge upon earth between the supreme magistrate and the people. God, I say, is the only judge in this case, who will retribute unto everyone at the last day according to his desserts; that is, according to his sincerity and uprightness in endeavouring to promote piety, and the public weal and peace of mankind. But what shall be done in the meanwhile? I answer: The principal and chief care of everyone ought to be of his own soul first, and in the next place of the public peace: though yet there are very few will think 'tis peace there, where they see all laid waste.

There are two sorts of contests amongst men: the one managed by law, the other by force; and these are of that nature, that where the one ends, the other always begins. But it is not my business to inquire into the power of the magistrate in the different constitutions of nations. I only know what usually happens where controversies arise without a judge to determine them. You will say, then the magistrate being the stronger will have his will, and carry his point. Without doubt; but the question is not here concerning the doubtfulness of the event, but the rule of right.

But to come to particulars. I say, first, no opinions contrary to human society, or to those moral rules which are necessary to the preservation of civil society, are to be tolerated by the magistrate. But of these, indeed, examples in any Church are rare. For no sect can usually arrive to such a degree of madness, as that it should think fit to teach, for doctrines of religion, such things as manifestly undermine the foundations of society, and are therefore condemned by the judgement of all mankind: because their own interest, peace, reputation, everything would be thereby endangered.

Another more secret evil, but more dangerous to the commonwealth, is when men arrogate to themselves, and to those of their own sect, some peculiar prerogative, covered over with a specious show of deceitful words, but in effect opposite to the civil right of the community. For example, we cannot find any sect that teaches expressly, and openly, that men are

not obliged to keep their promises; that princes may be dethroned by those that differ from them in religion; or that the dominion of all things belongs only to themselves. For these things, proposed thus nakedly and plainly, would soon draw on them the eye and hand of the magistrate, and awaken all the care of the commonwealth to a watchfulness against the spreading of so dangerous an evil. But, nevertheless, we find those that say the same things, in other words. What else do they mean, who teach that faith is not to be kept with heretics? Their meaning, forsooth, is that the privilege of breaking faith belongs unto themselves. For they declare all that are not of their communion to be heretics, or at least may declare them so whensoever they think fit. What can be the meaning of their asserting that kings excommunicated forfeit their crowns and kingdoms? It is evident that they thereby arrogate unto themselves the power of deposing kings, because they challenge the power of excommunication as the peculiar right of their hierarchy. That dominion is founded in grace is also an assertion by which those that maintain it do plainly lay claim to the possession of all things, for they are not so wanting to themselves as not to believe, or at least as not to profess, themselves to be the truly pious and faithful. These, therefore, and the like, who attribute unto the faithful, religious, and orthodox, that is, in plain terms, unto themselves, any peculiar privilege or power above other mortals, in civil concernments; or who, upon pretence of religion, do challenge any manner of authority over such as are not associated with them in their ecclesiastical communion: I say these have no right to be tolerated by the magistrate; as neither those that will not own and teach the duty of tolerating all men in matters of mere religion. For what do all these and the like doctrines signify, but that those men may, and are ready upon any occasion to, seize the government, and possess themselves of the estates and fortunes of their fellow-subjects; and that they only ask leave to be tolerated by the magistrate so long, until they find themselves strong enough to effect it?

Again, that Church can have no right to be tolerated by the magistrate which is constituted upon such a bottom that all those who enter into it do thereby, *ipso facto*, deliver themselves up to the protection and service of another prince. For by this means the magistrate would give way to the settling of a foreign jurisdiction in his own country, and suffer his own people to be listed, as it were, for soldiers against his own government. Nor does the frivolous and fallacious distinction between the court and the Church afford any remedy to this inconvenience; especially when both the one and the other are equally subject to the absolute authority of the same person, who has not only power to persuade the members of his Church to whatsoever he lists, either as purely religious, or as in order thereunto, but can also enjoin it them on pain of eternal fire. It is ridiculous for anyone to profess himself to be a Mahometan only in his religion, but in everything else a faithful subject to a Christian magistrate, whilst at the same time he acknowledges himself bound to yield blind obedience to the Mufti of Constantinople, who himself is entirely obedient to the Ottoman emperor, and frames the feigned oracles of that religion according to his pleasure. But this Mahometan, living amongst Christians, would yet more apparently renounce their government if he acknowledged the same person to be head of his Church who is the supreme magistrate in the state.

Lastly, those are not at all to be tolerated who deny the being of a God. Promises, covenants, and oaths, which are the bonds of human society, can have no hold upon an atheist. The taking away of God, though but even in thought, dissolves all. Besides also, those that by their atheism undermine and destroy all religion can have no pretence of religion whereupon to challenge the privilege of a toleration. As for other practical opinions, though not absolutely free from all error, yet if they do not tend to establish domination over others, or civil impunity to the Church in which they are taught, there can be no reason why they should not be tolerated.

It remains that I say something concerning those assemblies, which being vulgarly called, and perhaps having sometimes been, conventicles, and nurseries of factions and seditions, are thought to afford the strongest matter of objection against this doctrine of toleration. But this has not happened by anything peculiar unto the genius of such assemblies, but by the unhappy circumstances of an oppressed or ill-settled liberty. These accusations would soon cease if the law of toleration were once so settled that all Churches

were obliged to lay down toleration as the foundation of their own liberty; and teach that liberty of conscience is every man's natural right, equally belonging to dissenters as to themselves; and that nobody ought to be compelled in matters of religion, either by law or force. The establishment of this one thing would take away all ground of complaints and tumults upon account of conscience. And these causes of discontents and animosities being once removed, there would remain nothing in these assemblies that were not more peaceable, and less apt to produce disturbance of state, than in any other meetings whatsoever. But let us examine particularly the heads of these accusations.

You'll say that assemblies and meetings endanger the public peace, and threaten the commonwealth. I answer: If this be so, why are there daily such numerous meetings in markets, and courts of judicature? Why are crowds upon the exchange, and a concourse of people in cities suffered? You'll reply: These are civil assemblies, but those that we object against are ecclesiastical. I answer: 'Tis a likely thing indeed, that such assemblies as are altogether remote from civil affairs, should be most apt to embroil them. Oh, but civil assemblies are composed of men that differ from one another in matters of religion; but these ecclesiastical meetings are of persons that are all of one opinion. As if an agreement in matters of religion were in effect a conspiracy against the commonwealth; or as if men would not be so much the more warmly unanimous in religion, the less liberty they had of assembling. But it will be urged still, that civil assemblies are open, and free for anyone to enter into; whereas religious conventicles are more private, and thereby give opportunity to clandestine machinations. I answer: That this is not strictly true, for many civil assemblies are not open to everyone. And if some religious meetings be private, who are they (I beseech you) that are to be blamed for it? Those that desire or those that forbid their being public? Again, you'll say that religious communion does exceedingly unite men's minds and affections to one another, and is therefore the more dangerous. But if this be so, why is not the magistrate afraid of his own Church; and why does he not forbid their assemblies, as things dangerous to his government? You'll say: Because he himself is a part, and even the head of them. As if he were not also a part of the commonwealth, and the head of the whole people.

Let us, therefore, deal plainly. The magistrate is afraid of other Churches, but not of his own; because he is kind and favourable to the one, but severe and cruel to the other. These he treats like children, and indulges them even to wantonness. Those he uses as slaves; and, how blamelessly soever they demean themselves, recompenses them no otherwise than by galleys, prisons, confiscations, and death. These he cherishes and defends. Those he continually scourges and oppresses. Let him turn the tables; or let those dissenters enjoy but the same privileges in civils as his other subjects, and he will quickly find that these religious meetings will be no longer dangerous. For if men enter into seditious conspiracies, 'tis not religion that inspires them to it in their meetings, but their sufferings and oppressions that make them willing to ease themselves. Just and moderate governments are everywhere quiet, everywhere safe. But oppression raises ferments, and makes men struggle to cast off an uneasy and tyrannical yoke. I know that seditions are very frequently raised upon pretence of religion. But 'tis as true that, for religion, subjects are frequently ill-treated, and live miserably. Believe me, the stirs that are made, proceed not from any peculiar temper of this or that Church or religious society, but from the common disposition of all mankind, who, when they groan under any heavy burden, endeavour naturally to shake off the yoke that galls their necks. Suppose this business of religion were let alone, and that there were some other distinction made between men and men, upon account of their different complexions, shapes, and features, so that those who have black hair (for example), or grey eyes, should not enjoy the same privileges as other citizens; that they should not be permitted either to buy or sell, or live by their callings; that parents should not have the government and education of their own children; that they should either be excluded from the benefit of the laws, or meet with partial judges; can it be doubted but these persons, thus distinguished from others by the colour of their hair and eyes, and united together by one common persecution, would be as dangerous to the magistrate as any others that had associated themselves merely upon the account of religion? Some enter into company for trade and profit: others, for

want of business, have their clubs for claret. Neighbourhood joins some, and religion others. But there is only one thing which gathers people into seditious commotions, and that is oppression.

You'll say: What, will you have people to meet at divine service against the magistrate's will? I answer: Why, I pray, against his will? Is it not both lawful and necessary that they should meet? Against his will, do you say? That's what I complain of. That is the very root of all the mischief. Why are assemblies less sufferable in a Church than in a theatre or market? Those that meet there are not either more vicious or more turbulent than those that meet elsewhere. The business in that is, that they are ill-used, and therefore they are not to be suffered. Take away the partiality that is used towards them in matters of common right; change the laws, take away the penalties unto which they are subjected; and all things will immediately become safe and peaceable. Nay, those that are averse to the religion of the magistrate will think themselves so much the more bound to maintain the peace of the commonwealth as their condition is better in that place than elsewhere. And all the several separate congregations, like so many guardians of the public peace, will watch one another, that nothing may be innovated or changed in the form of the government, because they can hope for nothing better than what they already enjoy; that is, an equal condition with their fellow-subjects, under a just and moderate government. Now if that Church which agrees in religion with the prince be esteemed the chief support of any civil government, and that for no other reason (as has already been shown) than because the prince is kind and the laws are favourable to it; how much greater will be the security of a government where all good subjects, of whatsoever Church they be, without any distinction upon account of religion, enjoying the same favour of the prince, and the same benefit of the laws, shall become the common support and guard of it; and where none will have any occasion to fear the severity of the laws, but those that do injuries to their neighbours, and offend against the civil peace?

That we may draw towards a conclusion: the sum of all we drive at is that every man may enjoy the same rights that are granted to others. Is it permitted to worship God in the Roman manner? Let it be permitted to do it in the Geneva form also. Is it permitted to speak Latin in the market-place? Let those that have a mind to it be permitted to do it also in the Church. Is it lawful for any man in his own house to kneel, stand, sit, or use any other posture; and to clothe himself in white or black, in short or in long garments? Let it not be made unlawful to eat bread, drink wine, or wash with water in the Church. In a word, whatsoever things are left free by law in the common occasions of life, let them remain free unto every Church in divine worship. Let no man's life, or body, or house, or estate suffer any manner of prejudice upon these accounts. Can you allow of the Presbyterian discipline? Why should not the Episcopal also have what they like? Ecclesiastical authority, whether it be administered by the hands of a single person, or many, is everywhere the same; and neither has any jurisdiction in things civil, nor any manner of power of compulsion, nor anything at all to do with riches and revenues.

Ecclesiastical assemblies and sermons are justified by daily experience and public allowance. These are allowed to people of some one persuasion. Why not to all? If anything pass in a religious meeting seditiously, and contrary to the public peace, it is to be punished in the same manner, and no otherwise, than as if it had happened in a fair or market. These meetings ought not to be sanctuaries for factious and flagitious fellows; nor ought it to be less lawful for men to meet in Churches than in halls; nor any one part of the subjects to be esteemed more blamable, for their meeting together, than others. Everyone is to be accountable for his own actions; and no man is to be laid under a suspicion, or odium, for the fault of another. Those that are seditious, murderers, thieves, robbers, adulterers, slanderers, etc., of whatsoever Church, whether national or not, ought to be punished and suppressed. But those whose doctrine is peaceable, and whose manners are pure and blameless, ought to be upon equal terms with their fellow-subjects. Thus if solemn assemblies, observations of festivals, public worship be permitted to any one sort of professors, all these things ought to be permitted to the Presbyterians, Independents, Anabaptists, Arminians, Quakers, and others, with the same liberty. Nay, if we may openly speak the truth, and as becomes one man to another, neither pagan, nor Mahometan, nor

Jew ought to be excluded from the civil rights of the commonwealth because of his religion. The Gospel commands no such thing. The Church, which 'judges not those that are without' (1 Cor. 5.12, 13), wants it not. And the commonwealth, which embraces indifferently all men that are honest, peaceable, and industrious, requires it not. Shall we suffer a pagan to deal and trade with us, and shall we not suffer him to pray unto and worship God? If we allow the Jews to have private houses and dwellings amongst us, why should we not allow them to have synagogues? Is their doctrine more false, their worship more abominable, or is the civil peace more endangered by their meeting in public than in their private houses? But if these things may be granted to Jews and pagans, surely the condition of any Christians ought not to be worse than theirs in a Christian commonwealth.

You'll say, perhaps: Yes, it ought to be. Because they are more inclinable to factions, tumults, and civil wars. I answer: Is this the fault of the Christian religion? If it be so, truly the Christian religion is the worst of all religions, and ought neither to be embraced by any particular person, nor tolerated by any commonwealth. For if this be the genius, this the nature of the Christian religion, to be turbulent, and destructive to the civil peace, that Church itself which the magistrate indulges will not always be innocent. But far be it from us to say any such thing of that religion which carries the greatest opposition to covetousness, ambition, discord, contention, and all manner of inordinate desires; and is the most modest and peaceable religion that ever was. We must therefore seek another cause of those evils that are charged upon religion. And if we consider right, we shall find it to consist wholly in the subject that I am treating of. It is not the diversity of opinions (which cannot be avoided), but the refusal of toleration to those that are of different opinions (which might have been granted), that has produced all the bustles and wars that have been in the Christian world upon account of religion. The heads and leaders of the Church, moved by avarice and insatiable desire of dominion, making use of the immoderate ambition of magistrates, and the credulous superstition of the giddy multitude, have incensed and animated them against those that dissent from themselves, by preaching unto them, contrary to the laws of the Gospel and to the precepts of charity, that schismatics and heretics are to be ousted of their possessions, and destroyed. And thus have they mixed together and confounded two things that are in themselves most different, the Church and the commonwealth. Now as it is very difficult for men patiently to suffer themselves to be stripped of the goods which they have got by their honest industry, and, contrary to all the laws of equity, both human and divine, to be delivered up for a prey to other men's violence and rapine, especially when they are otherwise altogether blameless, and that the occasion for which they are thus treated does not at all belong to the jurisdiction of the magistrate, but entirely to the conscience of every particular man, for the conduct of which he is accountable to God only; what else can be expected but that these men, growing weary of the evils under which they labour, should in the end think it lawful for them to resist force with force, and to defend their natural rights (which are not forfeitable upon account of religion) with arms as well as they can? That this has been hitherto the ordinary course of things is abundantly evident in history; and that will continue to be so hereafter is but too apparent in reason. It cannot indeed be otherwise, so long as the principle of persecution for religion shall prevail, as it has done hitherto, with magistrate and people; and so long as those that ought to be the preachers of peace and concord shall continue, with all their art and strength, to excite men to arms, and sound the trumpet of war. But that magistrates should thus suffer these incendiaries, and disturbers of the public peace, might justly be wondered at, if it did not appear that they have been invited by them unto a participation of the spoil, and have therefore thought fit to make use of their covetousness and pride as means whereby to increase their own power. For who does not see that these good men are indeed more ministers of the government than ministers of the Gospel; and that by flattering the ambition and favouring the dominion of princes and men in authority, they endeavour with all their might to promote that tyranny in the commonwealth which otherwise they should not be able to establish in the Church? This is the unhappy agreement that we see between the Church and state. Whereas if each of them would contain itself within its own bound, the one attending to the worldly welfare of the commonwealth, the

other to the salvation of souls, it is impossible that any discord should ever have happened between them. *Sed, pudet haec opprobria*, etc. God Almighty grant, I beseech him, that the Gospel of Peace may at length be preached, and that civil magistrates growing more careful to conform their own consciences to the law of God, and less solicitous about the binding of other men's consciences by human laws, may, like fathers of their country, direct all their counsels and endeavours to promote universally the civil welfare of all their children; except only of such as are arrogant, ungovernable, and injurious to their brethren; and that all ecclesiastical men, who boast themselves to be the successors of the apostles, walking peaceably and modestly in the apostles' steps, without intermeddling with state affairs, may apply themselves wholly to promote the salvation of souls.

Farewell.

POSTSCRIPT

Perhaps it may not be amiss to add a few things concerning heresy and schism. A Turk is not, nor can be, either heretic or schismatic to a Christian; and if any man fall off from the Christian faith to Mahometism, he does not thereby become a heretic or schismatic, but an apostate and an infidel. This nobody doubts of. And by this it appears that men of different religions cannot be heretics or schismatics to one another.

We are to inquire, therefore, what men are of the same religion. Concerning which it is manifest that those who have one and the same rule of faith and worship are of the same religion; and those who have not the same rule of faith and worship are of different religions. For since all things that belong unto that religion are contained in that rule, it follows necessarily that those who agree in one rule are of one and the same religion, and vice versa. Thus Turks and Christians are of different religions, because these take the Holy Scriptures to be the rule of their religion, and those the Alcoran. And for the same reason there may be different religions also even amongst Christians. The Papists and the Lutherans, though both of them profess faith in Christ, and are therefore called Christians, yet are not both of the same religion, because these acknowledge nothing but the Holy Scriptures to be the rule and foundation of their religion, those take in also traditions and the decrees of popes, and all these together make the rule of their religion. And thus the Christians of St John (as they are called) and the Christians of Geneva are of different religions, because these also take only the Scriptures, and those I know not what traditions, for the rule of their religion.

This being settled, it follows, first, that heresy is a separation made in ecclesiastical communion between men of the same religion, for some opinions no way contained in the rule itself. And, secondly, that amongst those who acknowledge nothing but the Holy Scriptures to be their rule of faith, heresy is a separation made in their Christian communion for opinions not contained in the express words of Scripture. Now this separation may be made in a twofold manner:

1. When the greater part, or (by the magistrate's patronage) the stronger part, of the Church separates itself from others by excluding them out of her communion because they will not profess their belief of certain opinions which are not to be found in the express words of Scripture. For it is not the paucity of those that are separated, nor the authority of the magistrate, that can make any man guilty of heresy. But he only is an heretic who divides the Church into parts, introduces names and marks of distinction, and voluntarily makes a separation because of such opinions.

2. When anyone separates himself from the communion of a Church because that Church does not publicly profess some certain opinions which the Holy Scriptures do not expressly teach.

Both these are heretics because they err in fundamentals, and they err obstinately against knowledge. For when they have determined the Holy Scriptures to be the only foundation of faith, they nevertheless lay down certain propositions as fundamental which are not in the Scripture; and because others will not acknowledge these additional opinions of theirs, nor build upon them as if they were necessary and fundamental, they therefore make a separation in the Church, either by withdrawing themselves from the others, or expelling the others from them. Nor does it signify anything for them to say that their confessions

and symbols are agreeable to Scripture and to the analogy of faith. For if they be conceived in the express words of Scripture, there can be no question about them, because those are acknowledged by all Christians to be of divine inspiration, and therefore fundamental. But if they say that the articles which they require to be professed are consequences deduced from the Scripture, it is undoubtedly well done of them to believe and profess such things as seem unto them so agreeable to the rule of faith. But it would be very ill done to obtrude those things upon others, unto whom they do not seem to be the indubitable doctrines of the Scripture. And to make a separation for such things as these, which neither are nor can be fundamental, is to become heretics. For I do not think there is any man arrived to that degree of madness, as that he dare give out his consequences and interpretations of Scripture as divine inspirations, and compare the articles of faith that he has framed according to his own fancy with the authority of the Scripture. I know there are some propositions so evidently agreeable to scripture that nobody can deny them to be drawn from thence: but about those, therefore, there can be no difference. This only I say, that however clearly we may think this or the other doctrine to be deduced from Scripture, we ought not therefore to impose it upon others as a necessary article of faith because we believe it to be agreeable to the rule of faith; unless we would be content also that other doctrines should be imposed upon us in the same manner; and that we should be compelled to receive and profess all the different and contradictory opinions of Lutherans, Calvinists, Remonstrants, Anabaptists, and other sects, which the contrivers of symbols, systems, and confessions are accustomed to deliver unto their followers as genuine and necessary deductions from the Holy Scripture. I cannot but wonder at the extravagant arrogance of those men who think that they themselves can explain things necessary to salvation more clearly than the Holy Ghost, the eternal and infinite wisdom of God.

Thus much concerning heresy, which word in common use is applied only to the doctrinal part of religion. Let us now consider schism, which is a crime near akin to it. For both these words seem unto me to signify an ill-grounded separation in ecclesiastical communion, made about things not necessary. But since use, which is the supreme law in matter of language, has determined that heresy relates to errors in faith, and schism to those in worship or disciplines, we must consider them under that distinction.

Schism, then, for the same reasons that have already been alleged, is nothing else but a separation made in the communion of the Church upon account of something in divine worship, or ecclesiastical discipline, that is not any necessary part of it. Now nothing in worship or discipline can be necessary to Christian communion but what Christ our legislator, or the apostles by inspiration of the Holy Spirit, have commanded in express words.

In a word: he that denies not anything that the Holy Scriptures teach in express words, nor makes a separation upon occasion of anything that is not manifestly contained in the sacred text, however he may be nicknamed by any sect of Christians, and declared by some or all of them to be utterly void of true Christianity, yet in deed and in truth this man cannot be either a heretic or a schismatic.

These things might have been explained more largely, and more advantageously; but it is enough to have hinted at them thus, briefly, to a person of your parts.

DAVID HUME

The philosophical writings of David Hume (1711–1776) reflect the confluence of a number of important traditions and controversies of the early modern period. Hume was widely read and a powerful intellect; this combination placed him at a critical juncture in eighteenth-century philosophy.

Hume was attracted, for example, to the scientific method exemplified in the work of Isaac Newton, and at the same time he was passionately committed to the humanistic study of Cicero, Seneca, and Virgil, among other classical authors. Furthermore, Hume's greatest insight was that Thomas Hobbes, René Descartes, Baruch Spinoza, and others had trusted too much in reason and its powers, and, in order to show their error, he embraced the modes of skeptical attack found in the writings of Sextus Empiricus and employed by Pierre Bayle, one of his favorite authors. Among other doubts that Hume had about the role and authority of reason, one concerned morality. He admired the moral philosophy of the First Earl of Shaftesbury, Francis Hutcheson, and Bishop Butler, with its focus on the sentiments and on benevolence; he saw in this tradition a response to the pessimism and otherworldliness of Scottish Calvinism and other modes of Christian thought. Hume was also a vigorous opponent of religion but a devoted friend of the good life as lived in this world. In his own day, he sought "literary fame" but achieved it only in measured degree and then only for his historical and political writings. His philosophy influenced but a few until after his death, when its powerful impact on diverse schools of thought established Hume as a member of the pantheon of early modern philosophers.

Hume was born on April 26, 1711, in Edinburgh, Scotland, near the family estate of Ninewells. In 1722 he entered the University of Edinburgh ostensibly to pursue a law degree. After spending four years at the university but refusing to prepare for a law career, he returned home in 1726 for a period of intense reading and studying. In 1734 Hume took a position in Bristol, which was not a success, and in the same year travelled to France, where, from 1734 to 1737, he completed the composition of his great systematic work, *A Treatise of Human Nature*. The first two books were published anonymously in London in 1739, the third book in 1740.

Although the book received some critical notice, it was, in Hume's eyes, largely ignored. He always treated it as a failure. It stimulated no debate and did nothing to cultivate its author's fame. Hume thought that the *Treatise*'s problems stemmed from his literary style. He chose to rewrite the first and third parts and to publish them separately. The *Philosophical Essays* (later *An Inquiry*) *Concerning the Human Understanding* appeared in 1748 and then in a revised version in 1758. *An Enquiry Concerning the Principles of Morals* was published in 1751.

During the decades following the publication of the *Treatise*, Hume held a number of minor positions, private and public, and wrote extensively. Twice he was passed over for academic positions, in 1745 at Edinburgh and again in 1751 in Glasgow. His *Essays Moral and Political*, published in 1741–42, were very well received, and his six-volume history of England, which appeared from 1754 to 1762, made Hume a celebrity in France and at home. His most famous critique of religion, *Dialogues Concerning Natural Religion*, was begun in 1751 but published only three years after his death in 1776. He died in Scotland, where he had lived since 1769. By that time, Hume's secular treatment of morality, his attack on rational religion and deism, and his criticism of Calvinism had made him so notorious that his friend Adam Smith, to whom he had entrusted the manuscript of the *Dialogues*, feared arranging for its publication. When it appeared in 1779, it did so without a publisher's imprint.

Hume's great contribution to moral theory rests on his attack on the primacy and self-sufficiency of reason and on his development of the moral sense tradition of Shaftesbury and Hutcheson. Morality rests not on

reason, as Spinoza and Locke had argued, and not on the commands of God, as religious thinkers claimed. Rather, morality is based on our feelings of approval and disapproval and on the benevolence that such feeling positively endorses. Reason does of course play important roles in such a moral view, ordering the sentiments and elsewhere, but ultimately, for Hume, morality is grounded in our sentiments or feelings and not in faith or reason, and its goal is not divine reward or an otherworldly salvation but rather the best and most enjoyable life here on earth. Unlike Hobbes, then, Hume saw human nature as fundamentally good and human life as desirable.

Moreover, Hume's moral thinking is not simply an attempt to understand morality. It is also a vehicle for moral conduct and practice. In his own words: "Be a philosopher; but, amidst all your philosophy, be still a man."

Of the Influencing Motives of the Will

Nothing is more usual in philosophy, and even in common life, than to talk of the combat of passion and reason, to give the preference to reason, and assert that men are only so far virtuous as they conform themselves to its dictates. Every rational creature, it is said, is obliged to regulate his actions by reason; and if any other motive or principle challenge the direction of his conduct, he ought to oppose it, till it be entirely subdued, or at least brought to a conformity with that superior principle. On this method of thinking the greatest part of moral philosophy, ancient and modern, seems to be founded; nor is there an ampler field, as well for metaphysical arguments, as popular declarations, than this supposed preëminence of reason above passion. The eternity, invariableness, and divine origin of the former, have been displayed to the best advantage: the blindness, inconstancy, and deceitfulness of the latter, have been as strongly insisted on. In order to show the fallacy of all this philosophy, I shall endeavour to prove *first*, that reason alone can never be a motive to any action of the will; and *secondly*, that it can never oppose passion in the direction of the will.

The understanding exerts itself after two different ways, as it judges from demonstration or probability; as it regards the abstract relations of our ideas, or those relations of objects of which experience only gives us information. I believe it scarce will be asserted, that the first species of reasoning alone is ever the cause of any action. As its proper province is the world of ideas, and as the will always places us in that of realities, demonstration and volition seem upon that account to be totally removed from each

other. Mathematics, indeed, are useful in all mechanical operations, and arithmetic in almost every art and profession: but it is not of themselves they have any influence. Mechanics are the art of regulating the motions of bodies *to some designed end or purpose*; and the reason why we employ arithmetic in fixing the proportions of numbers, is only that we may discover the proportions of their influence and operation. A merchant is desirous of knowing the sum total of his accounts with any person: why? but that he may learn what sum will have the same *effects* in paying his debt, and going to market, as all the particular articles taken together. Abstract or demonstrative reasoning, therefore, never influences any of our actions, but only as it directs our judgment concerning causes and effects; which leads us to the second operation of the understanding.

It is obvious, that when we have the prospect of pain or pleasure from any object, we feel a consequent emotion of aversion or propensity, and are carried to avoid or embrace what will give us this uneasiness or satisfaction. It is also obvious, that this emotion rests not here, but, making us cast our view on every side, comprehends whatever objects are connected with its original one by the relation of cause and effect. Here then reasoning takes place to discover this relation; and according as our reasoning varies, our actions receive a subsequent variation. But it is evident, in this case, that the impulse arises not from reason, but is only directed by it. It is from the prospect of pain or pleasure that the aversion or propensity arises towards any object: and these emotions extend themselves to the causes and effects of that object, as they are pointed out to us by reason and experience. It can never in the least concern us to know, that such objects are causes, and such others effects, if both the causes and effects be indifferent to us. Where the objects themselves do not affect us, their connection can never give them any influence; and it is plain that, as reason is nothing but the discovery of this connection, it cannot be by its means that the objects are able to affect us.

Since reason alone can never produce any action, or give rise to volition, I infer, that the same faculty is as incapable of preventing volition, or of disputing the preference with any passion or emotion. This consequence is necessary. It is impossible reason could have the latter effect of preventing volition, but by giving an impulse in a contrary direction to our passions; and that impulse, had it operated alone, would have been ample to produce volition. Nothing can oppose or retard the impulse of passion, but a contrary impulse; and if this contrary impulse ever arises from reason, that latter faculty must have an original influence on the will, and must be able to cause, as well as hinder, any act of volition. But if reason has no original influence, it is impossible it can withstand any principle which has such an efficacy, or ever keep the mind in suspense a moment. Thus, it appears, that the principle which opposes our passion cannot be the same with reason, and is only called so in an improper sense. We speak not strictly and philosophically, when we talk of the combat of passion and of reason. Reason is, and ought only to be, the slave of the passions, and can never pretend to any other office than to serve and obey them. As this opinion may appear somewhat extraordinary, it may not be improper to confirm it by some other considerations.

A passion is an original existence, or, if you will, modification of existence, and contains not any representative quality, which renders it a copy of any other existence or modification. When I am angry, I am actually possessed with the passion, and in that emotion have no more a reference to any other object, than when I am thirsty, or sick, or more than five feet high. It is impossible, therefore, that this passion can be opposed by, or be contradictory to truth and reason; since this contradiction consists in the disagreement of ideas, considered as copies, with those objects which they represent.

What may at first occur on this head is, that as nothing can be contrary to truth or reason, except what has a reference to it, and as the judgments of our understanding only have this reference, it must follow that passions can be contrary to reason only, so far as they are *accompanied* with some judgment or opinion. According to this principle, which is so obvious and natural, it is only in two senses that any affection can be called unreasonable. First, When a passion, such as hope or fear, grief or joy, despair or security, is founded on the supposition of the existence of objects, which really do not exist. Secondly, When in exerting any passion in action, we choose

means insufficient for the designed end, and deceive ourselves in our judgment of causes and effects. Where a passion is neither founded on false suppositions, nor chooses means insufficient for the end, the understanding can neither justify nor condemn it. It is not contrary to reason to prefer the destruction of the whole world to the scratching of my finger. It is not contrary to reason for me to choose my total ruin, to prevent the least uneasiness of an Indian, or person wholly unknown to me. It is as little contrary to reason to prefer even my own acknowledged lesser good to my greater, and have a more ardent affection for the former than the latter. A trivial good may, from certain circumstances, produce a desire superior to what arises from the greatest and most valuable enjoyment; nor is there anything more extraordinary in this, than in mechanics to see one pound weight raise up a hundred by the advantage of its situation. In short, a passion must be accompanied with some false judgment, in order to its being unreasonable; and even then it is not the passion, properly speaking, which is unreasonable, but the judgment.

The consequences are evident. Since a passion can never, in any sense, be called unreasonable, but when founded on a false supposition, or when it chooses means insufficient for the designed end, it is impossible that reason and passion can ever oppose each other, or dispute for the government of the will and actions. The moment we perceive the falsehood of any supposition, or the insufficiency of any means, our passions yield to our reason without any opposition. I may desire any fruit as of an excellent relish; but whenever you convince me of my mistake, my longing ceases. I may will the performance of certain actions as means of obtaining any desired good; but as my willing of these actions is only secondary, and founded on the supposition that they are causes of the proposed effect; as soon as I discover the falsehood of that supposition, they must become indifferent to me.

It is natural for one, that does not examine objects with a strict philosophic eye, to imagine, that those actions of the mind are entirely the same, which produce not a different sensation, and are not immediately distinguishable to the feeling and perception. Reason, for instance, exerts itself without producing any sensible emotions; and except in the more sublime disquisitions of philosophy, or in the frivolous subtilties of the schools, scarce ever conveys any pleasure or uneasiness. Hence it proceeds, that every action of the mind which operates with the same calmness and tranquillity, is confounded with reason by all those who judge of things from the first view and appearance. Now it is certain there are certain calm desires and tendencies, which, though they be real passions, produce little emotion in the mind, and are more known by their effects than by the immediate feeling or sensation. These desires are of two kinds; either certain instincts originally implanted in our natures, such as benevolence and resentment, the love of life, and kindness to children; or the general appetite to good, and aversion to evil, considered merely as such. When any of these passions are calm, and cause no disorder in the soul, they are very readily taken for the determinations of reason, and are supposed to proceed from the same faculty with that which judges of truth and falsehood. Their nature and principles have been supposed the same, because their sensations are not evidently different.

Beside these calm passions, which often determine the will, there are certain violent emotions of the same kind, which have likewise a great influence on that faculty. When I receive any injury from another, I often feel a violent passion of resentment, which makes me desire his evil and punishment, independent of all considerations of pleasure and advantage to myself. When I am immediately threatened with any grievous ill, my fears, apprehensions, and aversions rise to a great height, and produce a sensible emotion.

The common error of metaphysicians has lain in ascribing the direction of the will entirely to one of these principles, and supposing the other to have no influence. Men often act knowingly against their interest; for which reason, the view of the greatest possible good does not always influence them. Men often counteract a violent passion in prosecution of their interest and designs; it is not, therefore, the present uneasiness alone which determines them. In general we may observe that both these principles operate on the will; and where they are contrary, that either of them prevails, according to the *general* character or *present* disposition of the person. What we call strength of mind, implies the prevalence of

the calm passions above the violent; though we may easily observe, there is no man so constantly possessed of this virtue as never on any occasion to yield to the solicitations of passion and desire. From these variations of temper proceeds the great difficulty of deciding concerning the actions and resolutions of men, where there is any contrariety of motives and passions.

BOOK III
OF MORALS

Part I
Of virtue and vice in general

Section I

Moral Distinctions Not Derived from Reason

There is an inconvenience which attends all abstruse reasoning, that it may silence, without convincing an antagonist, and requires the same intense study to make us sensible of its force, that was at first requisite for its invention. When we leave our closet, and engage in the common affairs of life, its conclusions seem to vanish like the phantoms of the night on the appearance of the morning; and it is difficult for us to retain even that conviction which we had attained with difficulty. This is still more conspicuous in a long chain of reasoning, where we must preserve to the end the evidence of the first propositions, and where we often lose sight of all the most received maxims, either of philosophy or common life. I am not, however, without hopes, that the present system of philosophy will acquire new force as it advances; and that our reasonings concerning *morals* will corroborate whatever has been said concerning the *understanding* and the *passions*. Morality is a subject that interests us above all others; we fancy the peace of society to be at stake in every decision concerning it; and it is evident that this concern must make our speculations appear more real and solid, than where the subject is in a great measure indifferent to us. What affects us, we conclude, can never be a chimera; and, as our passion is engaged on the one side or the other, we naturally think that the question lies within human comprehension; which, in other cases of this nature, we are apt to entertain some doubt of. Without this advantage, I never should have ventured upon a third volume of such abstruse philosophy, in an age wherein the greatest part of men seem agreed to convert reading into an amusement, and to reject every thing that requires any considerable degree of attention to be comprehended.

It has been observed, that nothing is ever present to the mind but its perceptions; and that all the actions of seeing, hearing, judging, loving, hating, and thinking, fall under this denomination. The mind can never exert itself in any action which we may not comprehend under the term of *perception;* and consequently that term is no less applicable to those judgments by which we distinguish moral good and evil, than to every other operation of the mind. To approve of one character, to condemn another, are only so many different perceptions.

Now, as perceptions resolve themselves into two kinds, viz. *impressions* and *ideas*, this distinction gives rise to a question, with which we shall open up our present enquiry concerning morals, *whether it is by means of our* ideas *or* impressions *we distinguish betwixt vice and virtue, and pronounce an action blamable or praiseworthy?* This will immediately cut off all loose discourses and declamations, and reduce us to something precise and exact on the present subject.

Those who affirm that virtue is nothing but a conformity to reason; that there are eternal fitnesses and unfitnesses of things, which are the same to every rational being that considers them; that the immutable measures of right and wrong impose an obligation, not only on human creatures, but also on the Deity himself: all these systems concur in the opinion, that morality, like truth, is discerned merely by ideas, and by their juxtaposition and comparison. In order, therefore, to judge of these systems, we need only consider whether it be possible from reason alone, to distinguish betwixt moral good and evil, or whether there must concur some other principles to enable us to make that distinction.

If morality had naturally no influence on human passions and actions, it were in vain to take such pains to inculcate it; and nothing would be more fruitless than that multitude of rules and precepts with which

all moralists abound. Philosophy is commonly divided into *speculative* and *practical*; and as morality is always comprehended under the latter division, it is supposed to influence our passions and actions, and to go beyond the calm and indolent judgments of the understanding. And this is confirmed by common experience, which informs us that men are often governed by their duties, and are deterred from some actions by the opinion of injustice, and impelled to others by that of obligation.

Since morals, therefore, have an influence on the actions and affections, it follows that they cannot be derived from reason; and that because reason alone, as we have already proved, can never have any such influence. Morals excite passions, and produce or prevent actions. Reason of itself is utterly impotent in this particular. The rules of morality, therefore, are not conclusions of our reason.

No one, I believe, will deny the justness of this inference; nor is there any other means of evading it, than by denying that principle on which it is founded. As long as it is allowed, that reason has no influence on our passions and actions, it is in vain to pretend that morality is discovered only by a deduction of reason. An active principle can never be founded on an inactive; and if reason be inactive in itself, it must remain so in all its shapes and appearances, whether it exerts itself in natural or moral subjects, whether it considers the powers of external bodies, or the actions of rational beings.

It would be tedious to repeat all the arguments by which I have proved[1] that reason is perfectly inert, and can never either prevent or produce any action or affection. It will be easy to recollect what has been said upon that subject. I shall only recall on this occasion one of these arguments, which I shall endeavour to render still more conclusive, and more applicable to the present subject.

Reason is the discovery of truth or falsehood. Truth or falsehood consists in an agreement or disagreement either to the *real* relations of ideas, or to *real* existence and matter of fact. Whatever therefore is not susceptible of this agreement or disagreement, is incapable of being true or false, and can never be an object of our reason. Now, it is evident our passions, volitions, and actions, are not susceptible of any such agreement or disagreement; being original facts and realities, complete in themselves, and implying no reference to other passions, volitions, and actions. It is impossible, therefore, they can be pronounced either true or false, and be either contrary or conformable to reason.

This argument is of double advantage to our present purpose. For it proves *directly*, that actions do not derive their merit from a conformity to reason, nor their blame from a contrariety to it; and it proves the same truth more *indirectly*, by shewing us, that as reason can never immediately prevent or produce any action by contradicting or approving of it, it cannot be the source of moral good and evil, which are found to have that influence. Actions may be laudable or blamable; but they cannot be reasonable or unreasonable: laudable or blamable, therefore, are not the same with reasonable or unreasonable. The merit and demerit of actions frequently contradict, and sometimes control our natural propensities. But reason has no such influence. Moral distinctions, therefore, are not the offspring of reason. Reason is wholly inactive, and can never be the source of so active a principle as conscience, or a sense of morals.

But perhaps it may be said, that though no will or action can be immediately contradictory to reason, yet we may find such a contradiction in some of the attendants of the action, that is, in its causes or effects. The action may cause a judgment, or may be *obliquely* caused by one, when the judgment concurs with a passion; and by an abusive way of speaking, which philosophy will scarce allow of, the same contrariety may, upon that account, be ascribed to the action. How far this truth or falsehood may be the source of morals, it will now be proper to consider.

It has been observed that reason, in a strict and philosophical sense, can have an influence on our conduct only after two ways: either when it excites a passion, by informing us of the existence of something which is a proper object of it; or when it discovers the connexion of causes and effects, so as to afford us means of exerting any passion. These are the only kinds of judgment which can accompany our actions, or can be said to produce them in any manner; and it must be allowed, that these judgments may often be false and erroneous. A person may be affected with

1. Book II. Part III. Sec. III.

passion, by supposing a pain or pleasure to lie in an object which has no tendency to produce either of these sensations, or which produces the contrary to what is imagined. A person may also take false measures for the attaining his end, and may retard, by his foolish conduct, instead of forwarding the execution of any project. These false judgments may be thought to affect the passions and actions, which are connected with them, and may be said to render them unreasonable, in a figurative and improper way of speaking. But though this be acknowledged, it is easy to observe, that these errors are so far from being the source of all immorality, that they are commonly very innocent, and draw no manner of guilt upon the person who is so unfortunate as to fall into them. They extend not beyond a mistake of *fact*, which moralists have not generally supposed criminal, as being perfectly involuntary. I am more to be lamented than blamed, if I am mistaken with regard to the influence of objects in producing pain or pleasure, or if I know not the proper means of satisfying my desires. No one can ever regard such errors as a defect in my moral character. A fruit, for instance, that is really disagreeable, appears to me at a distance, and, through mistake, I fancy it to be pleasant and delicious. Here is one error. I choose certain means of reaching this fruit, which are not proper for my end. Here is a second error; nor is there any third one, which can ever possibly enter into our reasonings concerning actions. I ask, therefore, if a man in this situation, and guilty of these two errors, is to be regarded as vicious and criminal, however unavoidable they might have been? Or if it be possible to imagine that such errors are the sources of all immorality?

And here it may be proper to observe, that if moral distinctions be derived from the truth or falsehood of those judgments, they must take place wherever we form the judgments; nor will there be any difference, whether the question be concerning an apple or a kingdom, or whether the error be avoidable or unavoidable.

For as the very essence of morality is supposed to consist in an agreement or disagreement to reason, the other circumstances are entirely arbitrary, and can never either bestow on any action the character of virtuous or vicious, or deprive it of that character. To which we may add, that this agreement or disagreement, not admitting of degrees, all virtues and vices would of course be equal.

Should it be pretended, that though a mistake of *fact* be not criminal, yet a mistake of *right* often is; and that this may be the source of immorality: I would answer, that it is impossible such a mistake can ever be the original source of immorality, since it supposes a real right and wrong; that is, a real distinction in morals, independent of these judgments. A mistake, therefore, of right, may become a species of immorality; but it is only a secondary one, and is founded on some other antecedent to it.

As to those judgments which are the *effects* of our actions, and which, when false, give occasion to pronounce the actions contrary to truth and reason; we may observe, that our actions never cause any judgment, either true or false, in ourselves, and that it is only on others they have such an influence. It is certain that an action, on many occasions, may give rise to false conclusions in others; and that a person, who, through a window, sees any lewd behaviour of mine with my neighbour's wife, may be so simple as to imagine she is certainly my own. In this respect my action resembles somewhat a lie or falsehood; only with this difference, which is material, that I perform not the action with any intention of giving rise to a false judgment in another, but merely to satisfy my lust and passion. It causes, however, a mistake and false judgment by accident; and the falsehood of its effects may be ascribed, by some odd figurative way of speaking, to the action itself. But still I can see no pretext of reason for asserting, that the tendency to cause such an error is the first spring or original source of all immorality.[2]

2. One might think it were entirely superfluous to prove this, if a late author, who has had the good fortune to obtain some reputation, had not seriously affirmed, that such a falsehood is the foundation of all guilt and moral deformity. That we may discover the fallacy of his hypothesis, we need only consider, that a false conclusion is drawn from an action, only by means of an obscurity of natural principles, which makes a cause be secretly interrupted in its operation, by contrary causes, and renders the connexion betwixt two objects uncertain and variable. Now, as a like uncertainty and variety of causes take place, even in natural objects, and produce a like error in our judgment, if that tendency to produce error

Thus, upon the whole, it is impossible that the distinction betwixt moral good and evil can be made by reason; since that distinction has an influence upon our actions, of which reason alone is incapable. Reason and judgment may, indeed, be the mediate cause of an action, by prompting or by directing a passion; but it is not pretended that a judgment of this kind, either in its truth or falsehood, is attended with virtue or vice. And as to the judgments, which are caused by our judgments, they can still less bestow those moral qualities on the actions which are their causes.

But, to be more particular, and to shew that those eternal immutable fitnesses and unfitnesses of things cannot be defended by sound philosophy, we may weigh the following considerations.

If the thought and understanding were alone capable of fixing the boundaries of right and wrong, the character of virtuous and vicious either must lie in some relations of objects, or must be a matter of fact which is discovered by our reasoning. This consequence is evident. As the operations of human understanding divide themselves into two kinds, the comparing of ideas, and the inferring of matter of fact, were virtue discovered by the understanding, it must be an object of one of these operations; nor is there any third operation of the understanding which can discover it. There has been an opinion very industriously propagated by certain philosophers, that morality is susceptible of demonstration; and though no one has ever been able to advance a single step in those demonstrations, yet it is taken for granted that this science may be brought to an equal certainty with geometry or algebra. Upon this supposition, vice

---

were the very essence of vice and immorality, it should follow, that even inanimate objects might be vicious and immoral.

It is in vain to urge, that inanimate objects act without liberty and choice. For as liberty and choice are not necessary to make an action produce in us an erroneous conclusion, they can be, in no respect essential to morality; and I do not readily perceive, upon this system how they can ever come to be regarded by it. If the tendency to cause error be the origin of immorality, that tendency and immorality would in every case be inseparable.

Add to this, that if I had used the precaution of shutting the window while I indulged myself in those liberties with my neighbour's wife, I should have been guilty of no immorality; and that because my action, being perfectly concealed, would have had no tendency to produce any false conclusion.

For the same reason, a thief, who steals in by a ladder at a window, and takes all imaginable care to cause no disturbance, is in no respect criminal. For either he will not be perceived, or if he be it is impossible he can produce any error, nor will any one, from these circumstances, take him to be other than what he really is.

It is well known, that those who are squint-sighted do very readily cause mistakes in others, and that we imagine they salute or are talking to one person, while they address themselves to another. Are they, therefore, upon that account, immoral?

Besides, we may easily observe, that in all those arguments there is an evident reasoning in a circle. A person who takes possession of *another's* goods, and uses them as his *own*, in a manner declares them to be his own; and this falsehood is the source of the immorality of injustice. But is property, or right, or obligation, intelligible without an antecedent morality?

A man that is ungrateful to his benefactor, in a manner affirms that he never received any favours from him. But in what manner? Is it because it is his duty to be grateful? But this supposes that there is some antecedent rule of duty and morals. Is it because human nature is generally grateful, and makes us conclude that a man who does any harm, never receives any favour from the person he harmed? But human nature is not so generally grateful as to justify such a conclusion; or, if it were, is an exception to a general rule in every case criminal, for no other reason than because it is an exception?

But what may suffice entirely to destroy this whimsical system is, that it leaves us under the same difficulty to give a reason why truth is virtuous and falsehood vicious, as to account for the merit or turpitude of any other action. I shall allow, if you please, that all immorality is derived from this supposed falsehood in action, provided you can give me any plausible reason why such a falsehood is immoral. If you consider rightly of the matter, you will find yourself in the same difficulty as at the beginning.

This last argument is very conclusive; because, if there be not an evident merit or turpitude annexed to this species of truth or falsehood, it can never have any influence upon our actions. For who ever thought of forbearing any action, because others might possibly draw false conclusions from it? Or who ever performed any, that he might give rise to true conclusions?

and virtue must consist in some relations; since it is allowed on all hands, that no matter of fact is capable of being demonstrated. Let us therefore begin with examining this hypothesis, and endeavour, if possible, to fix those moral qualities which have been so long the objects of our fruitless researches; point out distinctly the relations which constitute morality or obligation, that we may know wherein they consist, and after what manner we must judge of them.

If you assert that vice and virtue consist in relations susceptible of certainty and demonstration, you must confine yourself to those *four* relations which alone admit of that degree of evidence; and in that case you run into absurdities from which you will never be able to extricate yourself. For as you make the very essence of morality to lie in the relations, and as there is no one of these relations but what is applicable, not only to an irrational but also to an inanimate object, it follows that even such objects must be susceptible of merit or demerit. *Resemblance*, *contrariety*, *degrees in quality*, *and proportions in quantity and number*; all these relations belong as properly to matter as to our actions, passions, and volitions. It is unquestionable, therefore, that morality lies not in any of these relations, nor the sense of it in their discovery.[3]

3. As a proof how confused our way of thinking on this subject commonly is, we may observe, that those who assert that morality is demonstrable, do not say that morality lies in the relations, and that the relations are distinguishable by reason. They only say, that reason can discover such an action, in such relations, to be virtuous, and such another vicious. It seems they thought it sufficient if they could bring the word Relation into the proposition, without troubling themselves whether it was to the purpose or not. But here, I think, is plain argument. Demonstrative reason discovers only relations. But that reason, according to this hypothesis, discovers also vice and virtue. These moral qualities, therefore, must be relations. When we blame any action, in any situation, the whole complicated object of action and situation must form certain relations, wherein the essence of vice consists. This hypothesis is not otherwise intelligible. For what does reason discover, when it pronounces any action vicious? Does it discover a relation or a matter of fact? These questions are decisive, and must not be eluded.

Should it be asserted, that the sense of morality consists in the discovery of some relation distinct from these, and that our enumeration was not complete when we comprehended all demonstrable relations under four general heads; to this I know not what to reply, till some one be so good as to point out to me this new relation. It is impossible to refute a system which has never yet been explained. In such a manner of fighting in the dark, a man loses his blows in the air, and often places them where the enemy is not present.

I must therefore, on this occasion, rest contented with requiring the two following conditions of any one that would undertake to clear up this system. *First*, as moral good and evil belong only to the actions of the mind, and are derived from our situation with regard to external objects, the relations from which these moral distinctions arise must lie only betwixt internal actions and external objects, and must not be applicable either to internal actions, compared among themselves, or to external objects, when placed in opposition to other external objects. For as morality is supposed to attend certain relations, if these relations could belong to internal actions considered singly, it would follow, that we might be guilty of crimes in ourselves, and independent of our situation with respect to the universe; and in like manner, if these moral relations could be applied to external objects, it would follow that even inanimate beings would be susceptible of moral beauty and deformity. Now, it seems difficult to imagine that any relation can be discovered betwixt our passions, volitions, and actions, compared to external objects, which relation might not belong either to these passions and volitions, or to these external objects, compared among *themselves*.

But it will be still more difficult to fulfil the *second* condition, requisite to justify this system. According to the principles of those who maintain an abstract rational difference betwixt moral good and evil, and a natural fitness and unfitness of things, it is not only supposed, that these relations, being eternal and immutable, are the same, when considered by every rational creature, but their *effects* are also supposed to be necessarily the same; and it is concluded they have no less, or rather a greater, influence in directing the will of the Deity, than in governing the rational

and virtuous of our own species. These two particulars are evidently distinct. It is one thing to know virtue, and another to conform the will to it. In order, therefore, to prove that the measures of right and wrong are eternal laws, *obligatory* on every rational mind, it is not sufficient to shew the relations upon which they are founded: we must also point out the connexion betwixt the relation and the will; and must prove that this connexion is so necessary, that in every well-disposed mind, it must take place and have its influence; though the difference betwixt these minds be in other respects immense and infinite. Now, besides what I have already proved, that even in human nature no relation can ever alone produce any action; besides this, I say, it has been shewn, in treating of the understanding, that there is no connexion of cause and effect, such as this is supposed to be, which is discoverable otherwise than by experience, and of which we can pretend to have any security by the simple consideration of the objects. All beings in the universe, considered in themselves, appear entirely loose and independent of each other. It is only by experience we learn their influence and connexion; and this influence we ought never to extend beyond experience.

Thus it will be impossible to fulfil the *first* condition required to the system of eternal rational measures of right and wrong; because it is impossible to shew those relations, upon which such a distinction may be founded: and it is as impossible to fulfil the *second* condition; because we cannot prove *a priori*, that these relations, if they really existed and were perceived, would be universally forcible and obligatory.

But to make these general reflections more clear and convincing, we may illustrate them by some particular instances, wherein this character of moral good or evil is the most universally acknowledged. Of all crimes that human creatures are capable of committing, the most horrid and unnatural is ingratitude, especially when it is committed against parents, and appears in the more flagrant instances of wounds and death. This is acknowledged by all mankind, philosophers as well as the people: the question only arises among philosophers, whether the guilt or moral deformity of this action be discovered by demonstrative reasoning, or be felt by an internal sense, and by means of some sentiment, which the reflecting on such an action naturally occasions. This question will soon be decided against the former opinion, if we can shew the same relations in other objects, without the notion of any guilt or iniquity attending them. Reason or science is nothing but the comparing of ideas, and the discovery of their relations; and if the same relations have different characters, it must evidently follow, that those characters are not discovered merely by reason. To put the affair, therefore, to this trial, let us choose any inanimate object, such as an oak or elm; and let us suppose, that, by the dropping of its seed, it produces a sapling below it, which, springing up by degrees, at last overtops and destroys the parent tree: I ask, if, in this instance, there be wanting any relation which is discoverable in parricide or ingratitude? Is not the one tree the cause of the other's existence, and the latter the cause of the destruction of the former, in the same manner as when a child murders his parent? It is not sufficient to reply, that a choice or will is wanting. For in the case of parricide, a will does not give rise to any *different* relations, but is only the cause from which the action is derived; and consequently produces the *same* relations, that in the oak or elm arise from some other principles. It is a will or choice that determines a man to kill his parent: and they are the laws of matter and motion that determine a sapling to destroy the oak from which it sprung. Here then the same relations have different causes; but still the relations are the same: and as their discovery is not in both cases attended with a notion of immorality, it follows, that that notion does not arise from such a discovery.

But to choose an instance still more resembling; I would fain ask any one, why incest in the human species is criminal, and why the very same action, and the same relations in animals, have not the smallest moral turpitude and deformity? If it be answered, that this action is innocent in animals, because they have not reason sufficient to discover its turpitude; but that man, being endowed with that faculty, which *ought* to restrain him to his duty, the same action instantly becomes criminal to him. Should this be said, I would reply, that this is evidently arguing in a circle. For, before reason can perceive this turpitude, the turpitude must exist; and consequently is independent of the decisions of our reason, and is their object more properly than their effect. Accord-

ing to this system, then, every animal that has sense and appetite and will, that is, every animal must be susceptible of all the same virtues and vices, for which we ascribe praise and blame to human creatures. All the difference is, that our superior reason may serve to discover the vice or virtue, and by that means may augment the blame or praise: but still this discovery supposes a separate being in these moral distinctions, and a being which depends only on the will and appetite, and which, both in thought and reality, may be distinguished from the reason. Animals are susceptible of the same relations with respect to each other as the human species, and therefore would also be susceptible of the same morality, if the essence of morality consisted in these relations. Their want of a sufficient degree of reason may hinder them from perceiving the duties and obligations of morality, but can never hinder these duties from existing; since they must antecedently exist, in order to their being perceived. Reason must find them, and can never produce them. This argument deserves to be weighed, as being, in my opinion, entirely decisive.

Nor does this reasoning only prove, that morality consists not in any relations that are the objects of science; but if examined, will prove with equal certainty, that it consists not in any *matter of fact*, which can be discovered by the understanding. This is the *second* part of our argument; and if it can be made evident, we may conclude that morality is not an object of reason. But can there be any difficulty in proving that vice and virtue are not matters of fact, whose existence we can infer by reason? Take any action allowed to be vicious; wilful murder, for instance. Examine it in all lights, and see if you can find that matter of fact, or real existence, which you call *vice*. In whichever way you take it, you find only certain passions, motives, volitions, and thoughts. There is no other matter of fact in the case. The vice entirely escapes you, as long as you consider the object. You never can find it, till you turn your reflection into your own breast, and find a sentiment of disapprobation, which arises in you, towards this action. Here is a matter of fact; but it is the object of feeling, not of reason. It lies in yourself, not in the object. So that when you pronounce any action or character to be vicious, you mean nothing, but that from the constitution of your nature you have a feeling or sentiment of blame from the contemplation of it. Vice and virtue, therefore, may be compared to sounds, colours, heat, and cold, which, according to modern philosophy, are not qualities in objects, but perceptions in the mind: and this discovery in morals, like that other in physics, is to be regarded as a considerable advancement of the speculative sciences; though, like that too, it has little or no influence on practice. Nothing can be more real, or concern us more, than our own sentiments of pleasure and uneasiness; and if these be favourable to virtue, and unfavourable to vice, no more can be requisite to the regulation of our conduct and behaviour.

I cannot forbear adding to these reasonings an observation, which may, perhaps, be found of some importance. In every system of morality which I have hitherto met with, I have always remarked, that the author proceeds for some time in the ordinary way of reasoning, and establishes the being of a God, or makes observations concerning human affairs; when of a sudden I am surprized to find, that instead of the usual copulations of propositions, *is*, and *is not*, I meet with no proposition that is not connected with an *ought*, or an *ought not*. This change is imperceptible; but is, however, of the last consequence. For as this *ought*, or *ought not*, expresses some new relation or affirmation, it is necessary that it should be observed and explained; and at the same time that a reason should be given, for what seems altogether inconceivable, how this new relation can be a deduction from others, which are entirely different from it. But as authors do not commonly use this precaution, I shall presume to recommend it to the readers; and am persuaded, that this small attention would subvert all the vulgar systems of morality, and let us see that the distinction of vice and virtue is not founded merely on the relations of objects, nor is perceived by reason.

Section II

Moral Distinctions Derived from a Moral Sense

Thus the course of the argument leads us to conclude, that since vice and virtue are not discoverable merely by reason, or the comparison of ideas, it must be by means of some impression or sentiment they

occasion, that we are able to mark the difference betwixt them. Our decisions concerning moral rectitude and depravity are evidently perceptions; and as all perceptions are either impressions or ideas, the exclusion of the one is a convincing argument for the other. Morality therefore, is more properly felt than judged of; though this feeling or sentiment is commonly so soft and gentle that we are apt to confound it with an idea, according to our common custom of taking all things for the same which have any near resemblance to each other.

The next question is, of what nature are these impressions, and after what manner do they operate upon us? Here we cannot remain long in suspense, but must pronounce the impression arising from virtue to be agreeable, and that proceeding from vice to be uneasy. Every moment's experience must convince us of this. There is no spectacle so fair and beautiful as a noble and generous action; nor any which gives us more abhorrence than one that is cruel and treacherous. No enjoyment equals the satisfaction we receive from the company of those we love and esteem; as the greatest of all punishments is to be obliged to pass our lives with those we hate or contemn. A very play or romance may afford us instances of this pleasure which virtue conveys to us; and pain, which arises from vice.

Now, since the distinguishing impressions by which moral good or evil is known, are nothing but *particular* pains or pleasures, it follows, that in all enquiries concerning these moral distinctions, it will be sufficient to shew the principles which make us feel a satisfaction or uneasiness from the survey of any character, in order to satisfy us why the character is laudable or blamable. An action, or sentiment, or character, is virtuous or vicious; why? because its view causes a pleasure or uneasiness of a particular kind. In giving a reason, therefore, for the pleasure or uneasiness, we sufficiently explain the vice or virtue. To have the sense of virtue, is nothing but to *feel* a satisfaction of a particular kind from the contemplation of a character. The very *feeling* constitutes our praise or admiration. We go no further; nor do we enquire into the cause of the satisfaction. We do not infer a character to be virtuous, because it pleases; but in feeling that it pleases after such a particular manner, we in effect feel that it is virtuous. The case is the same as in our judgments concerning all kinds of beauty, and tastes, and sensations. Our approbation is implied in the immediate pleasure they convey to us.

I have objected to the system which establishes eternal rational measures of right and wrong, that it is impossible to shew, in the actions of reasonable creatures, any relations which are not found in external objects; and therefore, if morality always attended these relations, it were possible for inanimate matter to become virtuous or vicious. Now it may, in like manner, be objected to the present system, that if virtue and vice be determined by pleasure and pain, these qualities must, in every case, arise from the sensations; and consequently any object, whether animate or inanimate, rational or irrational, might become morally good or evil, provided it can excite a satisfaction or uneasiness. But though this objection seems to be the very same, it has by no means the same force in the one case as in the other. For, *first*, it is evident that, under the term *pleasure*, we comprehend sensations, which are very different from each other, and which have only such a distant resemblance as is requisite to make them be expressed by the same abstract term. A good composition of music and a bottle of good wine equally produce pleasure; and, what is more, their goodness is determined merely by the pleasure. But shall we say, upon that account, that the wine is harmonious, or the music of a good flavour? In like manner, an inanimate object, and the character or sentiments of any person, may, both of them, give satisfaction; but, as the satisfaction is different, this keeps our sentiments concerning them from being confounded, and makes us ascribe virtue to the one and not to the other. Nor is every sentiment of pleasure or pain, which arises from characters and actions, of that *peculiar* kind which makes us praise or condemn. The good qualities of an enemy are hurtful to us, but may still command our esteem and respect. It is only when a character is considered in general, without reference to our particular interest, that it causes such a feeling or sentiment as denominates it morally good or evil. It is true, those sentiments from interest and morals are apt to be confounded, and naturally run into one another. It seldom happens that we do not think an enemy vicious, and can distinguish betwixt his opposition to our interest and real villainy or baseness.

But this hinders not but that the sentiments are in themselves distinct; and a man of temper and judgment may preserve himself from these illusions. In like manner, though it is certain a musical voice is nothing but one that naturally gives a *particular* kind of pleasure; yet it is difficult for a man to be sensible that the voice of an enemy is agreeable, or to allow it to be musical. But a person of a fine ear, who has the command of himself, can separate these feelings, and give praise to what deserves it.

Secondly, we may call to remembrance the preceding system of the passions, in order to remark a still more considerable difference among our pains and pleasures. Pride and humility, love and hatred, are excited, when there is any thing presented to us that both bears a relation to the object of the passion, and produces a separate sensation, related to the sensation of the passion. Now, virtue and vice are attended with these circumstances. They must necessarily be placed either in ourselves or others, and excite either pleasure or uneasiness; and therefore must give rise to one of these four passions, which clearly distinguishes them from the pleasure and pain arising from inanimate objects, that often bear no relation to us; and this is, perhaps, the most considerable effect that virtue and vice have upon the human mind.

It may now be asked, *in general*, concerning this pain or pleasure that distinguishes moral good and evil, *From what principles is it derived, and whence does it arise in the human mind?* To this I reply, *first*, that it is absurd to imagine that, in every particular instance, these sentiments are produced by an *original* quality and *primary* constitution. For as the number of our duties is in a manner infinite, it is impossible that our original instincts should extend to each of them, and from our very first infancy impress on the human mind all that multitude of precepts which are contained in the completest system of ethics. Such a method of proceeding is not conformable to the usual maxims by which nature is conducted, where a few principles produce all that variety we observe in the universe, and every thing is carried on in the easiest and most simple manner. It is necessary, therefore, to abridge these primary impulses, and find some more general principles upon which all our notions of morals are founded.

But, in the *second* place, should it be asked, whether we ought to search for these principles in *nature*, or whether we must look for them in some other origin? I would reply, that our answer to this question depends upon the definition of the word Nature, than which there is none more ambiguous and equivocal. If *nature* be opposed to miracles, not only the distinction betwixt vice and virtue is natural, but also every event which has ever happened in the world, *excepting those miracles on which our religion is founded*. In saying, then, that the sentiments of vice and virtue are natural in this sense, we make no very extraordinary discovery.

But *nature* may also be opposed to rare and unusual; and in this sense of the word, which is the common one, there may often arise disputes concerning what is natural or unnatural; and one may in general affirm, that we are not possessed of any very precise standard by which these disputes can be decided. Frequent and rare depend upon the number of examples we have observed; and as this number may gradually encrease or diminish, it will be impossible to fix any exact boundaries betwixt them. We may only affirm on this head, that if ever there was any thing which could be called natural in this sense, the sentiments of morality certainly may; since there never was any nation of the world, nor any single person in any nation, who was utterly deprived of them, and who never, in any instance, showed the least approbation or dislike of manners. These sentiments are so rooted in our constitution and temper, that, without entirely confounding the human mind by disease or madness, it is impossible to extirpate and destroy them.

But *nature* may also be opposed to artifice, as well as to what is rare and unusual; and in this sense it may be disputed, whether the notions of virtue be natural or not. We readily forget that the designs, and projects, and views of men are principles as necessary in their operation as heat and cold, moist and dry; but, taking them to be free and entirely our own, it is usual for us to set them in opposition to the other principles of nature. Should it therefore be demanded, whether the sense of virtue be natural or artificial, I am of opinion that it is impossible for me at present to give any precise answer to this question. Perhaps it will appear afterwards that our sense of some virtues is artificial, and that of others natural.

The discussion of this question will be more proper, when we enter upon an exact detail of each particular vice and virtue.[4]

Mean while, it may not be amiss to observe, from these definitions of *natural* and *unnatural*, that nothing can be more unphilosophical than those systems which assert that virtue is the same with what is natural, and vice with what is unnatural. For, in the first sense of the word, nature, as opposed to miracles, both vice and virtue are equally natural; and, in the second sense, as opposed to what is unusual, perhaps virtue will be found to be the most unnatural. At least it must be owned, that heroic virtue, being as unusual, is as little natural as the most brutal barbarity. As to the third sense of the word, it is certain that both vice and virtue are equally artificial and out of nature. For, however it may be disputed, whether the notion of a merit or demerit in certain actions, be natural or artificial, it is evident that the actions themselves are artificial, and are performed with a certain design and intention; otherwise they could never be ranked under any of these denominations. It is impossible, therefore, that the character of natural and unnatural can ever, in any sense, mark the boundaries of vice and virtue.

Thus we are still brought back to our first position, that virtue is distinguished by the pleasure, and vice by the pain, that any action, sentiment, or character, gives us by the mere view and contemplation. This decision is very commodious; because it reduces us to this simple question, *Why any action or sentiment, upon the general view or survey, gives a certain satisfaction or uneasiness*, in order to shew the origin of its moral rectitude or depravity, without looking for any incomprehensible relations and qualities, which never did exist in nature, nor even in our imagination, by any clear and distinct conception. I flatter myself I have executed a great part of my present design by a state of the question, which appears to me so free from ambiguity and obscurity.

4. In the following discourse, *natural* is also opposed sometimes to *civil*, sometimes to *moral*. The opposition will always discover the sense in which it is taken.

PART II
Of justice and injustice

Section I

Justice, Whether a Natural or Artificial Virtue?

I have already hinted, that our sense of every kind of virtue is not natural; but that there are some virtues that produce pleasure and approbation by means of an artifice or contrivance, which arises from the circumstances and necessity of mankind. Of this kind I assert *justice* to be; and shall endeavour to defend this opinion by a short, and, I hope, convincing argument, before I examine the nature of the artifice, from which the sense of that virtue is derived.

It is evident that, when we praise any actions, we regard only the motives that produced them, and consider the actions as signs or indications of certain principles in the mind and temper. The external performance has no merit. We must look within to find the moral quality. This we cannot do directly; and therefore fix our attention on actions, as on external signs. But these actions are still considered as signs; and the ultimate object of our praise and approbation is the motive that produced them.

After the same manner, when we require any action, or blame a person for not performing it, we always suppose that one in that situation should be influenced by the proper motive of that action, and we esteem it vicious in him to be regardless of it. If we find, upon enquiry, that the virtuous motive was still powerful over his breast, though checked in its operation by some circumstances unknown to us, we retract our blame, and have the same esteem for him, as if he had actually performed the action which we require of him.

It appears, therefore, that all virtuous actions derive their merit only from virtuous motives, and are considered merely as signs of those motives. From this principle I conclude, that the first virtuous motive which bestows a merit on any action, can never be a regard to the virtue of that action, but must be some other natural motive or principle. To suppose that the mere regard to the virtue of the action, may be the first motive which produced the action, and rendered it virtuous, is to reason in a circle. Before we can have such a regard, the action must be really virtuous; and

this virtue must be derived from some virtuous motive: and, consequently, the virtuous motive must be different from the regard to the virtue of the action. A virtuous motive is requisite to render an action virtuous. An action must be virtuous before we can have a regard to its virtue. Some virtuous motive, therefore, must be antecedent to that regard.

Nor is this merely a metaphysical subtilty; but enters into all our reasonings in common life, though perhaps we may not be able to place it in such distinct philosophical terms. We blame a father for neglecting his child. Why? because it shews a want of natural affection, which is the duty of every parent. Were not natural affection a duty, the care of children could not be a duty; and it were impossible we could have the duty in our eye in the attention we give to our offspring. In this case, therefore, all men suppose a motive to the action distinct from a sense of duty.

Here is a man that does many benevolent actions; relieves the distressed, comforts the afflicted, and extends his bounty even to the greatest strangers. No character can be more amiable and virtuous. We regard these actions as proofs of the greatest humanity. This humanity bestows a merit on the actions. A regard to this merit is, therefore, a secondary consideration, and derived from the antecedent principle of humanity, which is meritorious and laudable.

In short, it may be established as an undoubted maxim, *that no action can be virtuous, or morally good, unless there be in human nature some motive to produce it distinct from the sense of its morality.*

But may not the sense of morality or duty produce an action, without any other motive? I answer, it may: but this is no objection to the present doctrine. When any virtuous motive or principle is common in human nature, a person who feels his heart devoid of that motive, may hate himself upon that account, and may perform the action without the motive, from a certain sense of duty, in order to acquire, by practice, that virtuous principle, or at least to disguise to himself, as much as possible, his want of it. A man that really feels no gratitude in his temper, is still pleased to perform grateful actions, and thinks he has, by that means, fulfilled his duty. Actions are at first only considered as signs of motives: but it is usual, in this case, as in all others, to fix our attention on the signs, and neglect, in some measure, the thing signified. But though, on some occasions, a person may perform an action merely out of regard to its moral obligation, yet still this supposes in human nature some distinct principles, which are capable of producing the action, and whose moral beauty renders the action meritorious.

Now, to apply all this to the present case; I suppose a person to have lent me a sum of money, on condition that it be restored in a few days; and also suppose, that after the expiration of the term agreed on, he demands the sum: I ask, *What reason or motive have I to restore the money?* It will perhaps be said, that my regard to justice, and abhorrence of villainy and knavery, are sufficient reasons for me, if I have the least grain of honesty, or sense of duty and obligation. And this answer, no doubt, is just and satisfactory to man in his civilized state, and when trained up according to a certain discipline and education. But in his rude and more natural condition, if you are pleased to call such a condition natural, this answer would be rejected as perfectly unintelligible and sophistical. For one in that situation would immediately ask you, *Wherein consists this honesty and justice, which you find in restoring a loan, and abstaining from the property of others?* It does not surely lie in the external action. It must, therefore, be placed in the motive from which the external action is derived. This motive can never be a regard to the honesty of the action. For it is a plain fallacy to say, that a virtuous motive is requisite to render an action honest, and, at the same time, that a regard to the honesty is the motive of the action. We can never have a regard to the virtue of an action, unless the action be antecedently virtuous. No action can be virtuous, but so far as it proceeds from a virtuous motive. A virtuous motive, therefore, must precede the regard to the virtue; and it is impossible that the virtuous motive and the regard to the virtue can be the same.

It is requisite, then, to find some motive to acts of justice and honesty, distinct from our regard to the honesty; and in this lies the great difficulty. For should we say, that a concern for our private interest or reputation, is the legitimate motive to all honest actions: it would follow that wherever that concern ceases, honesty can no longer have place. But it is certain that self-love, when it acts at its liberty, instead of engaging us to honest actions, is the source of all injustice and violence; nor can a man ever correct

those vices, without correcting and restraining the *natural* movements of that appetite.

But should it be affirmed that the reason or motive of such actions is the *regard to public interest*, to which nothing is more contrary than examples of injustice and dishonesty; should this be said, I would propose the three following considerations as worthy of our attention. *First*, Public interest is not naturally attached to the observation of the rules of justice; but is only connected with it, after an artificial convention for the establishment of these rules, as shall be shewn more at large hereafter. *Secondly*, If we suppose that the loan was secret, and that it is necessary for the interest of the person, that the money be restored in the same manner (as when the lender would conceal his riches), in that case the example ceases, and the public is no longer interested in the actions of the borrower; though I suppose there is no moralist who will affirm that the duty and obligation ceases. *Thirdly*, Experience sufficiently proves that men, in the ordinary conduct of life, look not so far as the public interest, when they pay their creditors, perform their promises, and abstain from theft, and robbery, and injustice of every kind. That is a motive too remote and too sublime to affect the generality of mankind, and operate with any force in actions so contrary to private interest as are frequently those of justice and common honesty.

In general, it may be affirmed, that there is no such passion in human minds as the love of mankind, merely as such, independent of personal qualities, of services, or of relation to ourself. It is true, there is no human, and indeed no sensible creature, whose happiness or misery does not, in some measure, affect us, when brought near to us, and represented in lively colours: but this proceeds merely from sympathy, and is no proof of such an universal affection to mankind, since this concern extends itself beyond our own species. An affection betwixt the sexes is a passion evidently implanted in human nature; and this passion not only appears in its peculiar symptoms, but also in inflaming every other principle of affection, and raising a stronger love from beauty, wit, kindness, than what would otherwise flow from them. Were there an universal love among all human creatures, it would appear after the same manner. Any degree of a good quality would cause a stronger affection than the same degree of a bad quality would cause hatred; contrary to what we find by experience. Men's tempers are different, and some have a propensity to the tender, and others to the rougher affections: but in the main, we may affirm, that man in general, or human nature, is nothing but the object both of love and hatred, and requires some other cause, which, by a double relation of impressions and ideas, may excite these passions. In vain would we endeavour to elude this hypothesis. There are no phenomena that point out any such kind affection to men, independent of their merit, and every other circumstance. We love company in general; but it is as we love any other amusement. An Englishman in Italy is a friend; a European in China; and perhaps a man would be beloved as such, were we to meet him in the moon. But this proceeds only from the relation to ourselves; which in these cases gathers force by being confined to a few persons.

If public benevolence, therefore, or a regard to the interests of mankind, cannot be the original motive to justice, much less can *private benevolence, or a regard to the interests of the party concerned*, be this motive. For what if he be my enemy, and has given me just cause to hate him? What if he be a vicious man, and deserves the hatred of all mankind? What if he be a miser, and can make no use of what I would deprive him of? What if he be a profligate debauchee, and would rather receive harm than benefit from large possessions? What if I be in necessity, and have urgent motives to acquire something to my family? In all these cases, the original motive to justice would fail; and consequently the justice itself, and along with it all property, right, and obligation.

A rich man lies under a moral obligation to communicate to those in necessity a share of his superfluities. Were private benevolence the original motive to justice a man would not be obliged to leave others in the possession of more than he is obliged to give them. At least, the difference would be very inconsiderable. Men generally fix their affections more on what they are possessed of, than on what they never enjoyed: for this reason, it would be greater cruelty to dispossess a man of any thing, than not to give it him. But who will assert that this is the only foundation of justice?

Besides, we must consider, that the chief reason why men attach themselves so much to their possessions,

is, that they consider them as their property, and as secured to them inviolably by the laws of society. But this is a secondary consideration, and dependent on the preceding notions of justice and property.

A man's property is supposed to be fenced against every mortal, in every possible case. But private benevolence is, and ought to be, weaker in some persons than in others: and in many, or indeed in most persons, must absolutely fail. Private benevolence, therefore, is not the original motive of justice.

From all this it follows, that we have no real or universal motive for observing the laws of equity, but the very equity and merit of that observance; and as no action can be equitable or meritorious, where it cannot arise from some separate motive, there is here an evident sophistry and reasoning in a circle. Unless, therefore, we will allow that nature has established a sophistry, and rendered it necessary and unavoidable, we must allow, that the sense of justice and injustice is not derived from nature, but arises artificially, though necessarily, from education and human conventions.

I shall add, as a corollary to this reasoning, that since no action can be laudable or blamable, without some motives or impelling passions, distinct from the sense of morals, these distinct passions must have a great influence on that sense. It is according to their general force in human nature that we blame or praise. In judging of the beauty of animal bodies, we always carry in our eye the economy of a certain species; and where the limbs and features observe that proportion which is common to the species, we pronounce them handsome and beautiful. In like manner, we always consider the *natural* and *usual* force of the passions, when we determine concerning vice and virtue; and if the passions depart very much from the common measures on either side, they are always disapproved as vicious. A man naturally loves his children better than his nephews, his nephews better than his cousins, his cousins better than strangers, where every thing else is equal. Hence arise our common measures of duty, in preferring the one to the other. Our sense of duty always follows the common and natural course of our passions.

To avoid giving offence, I must here observe, that when I deny justice to be a natural virtue, I make use of the word *natural*, only as opposed to *artificial*. In another sense of the word, as no principle of the human mind is more natural than a sense of virtue, so no virtue is more natural than justice. Mankind is an inventive species; and where an invention is obvious and absolutely necessary, it may as properly be said to be natural as any thing that proceeds immediately from original principles, without the intervention of thought or reflection. Though the rules of justice be *artificial*, they are not *arbitrary*. Nor is the expression improper to call them *Laws of Nature*; if by natural we understand what is common to any species, or even if we confine it to mean what is inseparable from the species.

Section II

Of the Origin of Justice and Property

We now proceed to examine two questions, viz. *concerning the manner in which the rules of justice are established by the artifice of men*; and *concerning the reasons which determine us to attribute to the observance or neglect of these rules a moral beauty and deformity*. These questions will appear afterwards to be distinct. We shall begin with the former.

Of all the animals with which this globe is peopled, there is none towards whom nature seems, at first sight, to have exercised more cruelty than towards man, in the numberless wants and necessities with which she has loaded him, and in the slender means which she affords to the relieving these necessities. In other creatures, these two particulars generally compensate each other. If we consider the lion as a voracious and carnivorous animal, we shall easily discover him to be very necessitous; but if we turn our eye to his make and temper, his agility, his courage, his arms, and his force, we shall find that his advantages hold proportion with his wants. The sheep and ox are deprived of all these advantages; but their appetites are moderate, and their food is of easy purchase. In man alone this unnatural conjunction of infirmity and of necessity may be observed in its greatest perfection. Not only the food which is required for his sustenance flies his search and approach, or at least requires his labour to be produced, but he must be possessed of cloaths and lodging to defend him against the injuries of the weather; though, to consider him only in himself, he is provided neither

with arms, nor force, nor other natural abilities which are in any degree answerable to so many necessities.

It is by society alone he is able to supply his defects, and raise himself up to an equality with his fellow-creatures, and even acquire a superiority above them. By society all his infirmities are compensated; and though in that situation his wants multiply every moment upon him, yet his abilities are still more augmented, and leave him in every respect more satisfied and happy than it is possible for him, in his savage and solitary condition, ever to become. When every individual person labours apart, and only for himself, his force is too small to execute any considerable work; his labour being employed in supplying all his different necessities, he never attains a perfection in any particular art; and as his force and success are not at all times equal, the least failure in either of these particulars must be attended with inevitable ruin and misery. Society provides a remedy for these three inconveniences. By the conjunction of forces, our power is augmented; by the partition of employments, our ability encreases; and by mutual succour, we are less exposed to fortune and accidents. It is by this additional *force*, *ability*, and *security*, that society becomes advantageous.

But, in order to form society, it is requisite not only that it be advantageous, but also that men be sensible of these advantages; and it is impossible, in their wild uncultivated state, that by study and reflection alone they should ever be able to attain this knowledge. Most fortunately, therefore, there is conjoined to those necessities, whose remedies are remote and obscure, another necessity, which, having a present and more obvious remedy, may justly be regarded as the first and original principle of human society. This necessity is no other than that natural appetite betwixt the sexes, which unites them together, and preserves their union, till a new tie takes place in their concern for their common offspring. This new concern becomes also a principle of union betwixt the parents and offspring, and forms a more numerous society, where the parents govern by the advantage of their superior strength and wisdom, and at the same time are restrained in the exercise of their authority by that natural affection which they bear their children. In a little time, custom and habit, operating on the tender minds of the children, makes them sensible of the advantages which they may reap from society, as well as fashions them by degrees for it, by rubbing off those rough corners and untoward affections which prevent their coalition.

For it must be confessed, that however the circumstances of human nature may render a union necessary, and however those passions of lust and natural affection may seem to render it unavoidable, yet there are other particulars in our *natural temper*, and in our *outward circumstances*, which are very incommodious, and are even contrary to the requisite conjunction. Among the former we may justly esteem our *selfishness* to be the most considerable. I am sensible that, generally speaking, the representations of this quality have been carried much too far; and that the descriptions which certain philosophers delight so much to form of mankind in this particular, are as wide of nature as any accounts of monsters which we meet with in fables and romances. So far from thinking that men have no affection for any thing beyond themselves, I am of opinion that, though it be rare to meet with one who loves any single person better than himself, yet it is as rare to meet with one in whom all the kind affections, taken together, do not overbalance all the selfish. Consult common experience; do you not see, that though the whole expence of the family be generally under the direction of the master of it, yet there are few that do not bestow the largest part of their fortunes on the pleasures of their wives and the education of their children, reserving the smallest portion for their own proper use and entertainment. This is what we may observe concerning such as have those endearing ties; and may presume, that the case would be the same with others, were they placed in a like situation.

But though this generosity must be acknowledged to the honour of human nature, we may at the same time remark, that so noble an affection, instead of fitting men for large societies, is almost as contrary to them as the most narrow selfishness. For while each person loves himself better than any other single person, and in his love to others bears the greatest affection to his relations and acquaintance, this must necessarily produce an opposition of passions, and a consequent opposition of actions, which cannot but be dangerous to the new-established union.

It is, however, worth while to remark, that this

contrariety of passions would be attended with but small danger, did it not concur with a peculiarity in our *outward circumstances*, which affords it an opportunity of exerting itself. There are three different species of goods which we are possessed of; the internal satisfaction of our minds; the external advantages of our body; and the enjoyment of such possessions as we have acquired by our industry and good fortune. We are perfectly secure in the enjoyment of the first. The second may be ravished from us, but can be of no advantage to him who deprives us of them. The last only are both exposed to the violence of others, and may be transferred without suffering any loss or alteration; while at the same time there is not a sufficient quantity of them to supply every one's desires and necessities. As the improvement, therefore, of these goods is the chief advantage of society, so the *instability* of their possession, along with their *scarcity*, is the chief impediment.

In vain should we expect to find, in *uncultivated nature*, a remedy to this inconvenience; or hope for any inartificial principle of the human mind which might control those partial affections, and make us overcome the temptations arising from our circumstances. The idea of justice can never serve to this purpose, or be taken for a natural principle, capable of inspiring men with an equitable conduct towards each other. That virtue, as it is now understood, would never have been dreamed of among rude and savage men. For the notion of injury or injustice implies an immorality or vice committed against some other person: And as every immorality is derived from some defect or unsoundness of the passions, and as this defect must be judged of, in a great measure, from the ordinary course of nature in the constitution of the mind, it will be easy to know whether we be guilty of any immorality with regard to others, by considering the natural and usual force of those several affections which are directed towards them. Now, it appears that, in the original frame of our mind, our strongest attention is confined to ourselves; our next is extended to our relations and acquaintance; and it is only the weakest which reaches to strangers and indifferent persons. This partiality, then, and unequal affection, must not only have an influence on our behaviour and conduct in society, but even on our ideas of vice and virtue; so as to make us regard any remarkable transgression of such a degree of partiality, either by too great an enlargement or contraction of the affections, as vicious and immoral. This we may observe in our common judgments concerning actions, where we blame a person who either centers all his affections in his family, or is so regardless of them as, in any opposition of interest, to give the preference to a stranger or mere chance acquaintance. From all which it follows, that our natural uncultivated ideas of morality, instead of providing a remedy for the partiality of our affections, do rather conform themselves to that partiality, and give it an additional force and influence.

The remedy, then, is not derived from nature, but from *artifice*; or, more properly speaking, nature provides a remedy, in the judgment and understanding, for what is irregular and incommodious in the affections. For when men, from their early education in society, have become sensible of the infinite advantages that result from it, and have besides acquired a new affection to company and conversation, and when they have observed that the principal disturbance in society arises from those goods, which we call external, and from their looseness and easy transition from one person to another, they must seek for a remedy, by putting these goods, as far as possible, on the same footing with the fixed and constant advantages of the mind and body. This can be done after no other manner, than by a convention entered into by all the members of the society to bestow stability on the possession of those external goods, and leave every one in the peaceable enjoyment of what he may acquire by his fortune and industry. By this means every one knows what he may safely possess; and the passions are restrained in their partial and contradictory motions. Nor is such a restraint contrary to these passions; for, if so, it could never be entered into nor maintained; but it is only contrary to their heedless and impetuous movement. Instead of departing from our own interest, or from that of our nearest friends, by abstaining from the possessions of others, we cannot better consult both these interests than by such a convention; because it is by that means we maintain society, which is so necessary to their well-being and subsistence, as well as to our own.

This convention is not of the nature of a *promise*; for even promises themselves, as we shall see afterwards,

arise from human conventions. It is only a general sense of common interest; which sense all the members of the society express to one another, and which induces them to regulate their conduct by certain rules. I observe, that it will be for my interest to leave another in the possession of his goods, *provided* he will act in the same manner with regard to me. He is sensible of a like interest in the regulation of his conduct. When this common sense of interest is mutually expressed, and is known to both, it produces a suitable resolution and behaviour. And this may properly enough be called a convention or agreement betwixt us, though without the interposition of a promise; since the actions of each of us have a reference to those of the other, and are performed upon the supposition that something is to be performed on the other part. Two men who pull the oars of a boat, do it by an agreement or convention, though they have never given promises to each other. Nor is the rule concerning the stability of possession the less derived from human conventions, that it arises gradually, and acquires force by a slow progression, and by our repeated experience of the inconveniences of transgressing it. On the contrary, this experience assures us still more, that the sense of interest has become common to all our fellows, and gives us a confidence of the future regularity of their conduct; and it is only on the expectation of this, that our moderation and abstinence are founded. In like manner are languages gradually established by human conventions, without any promise. In like manner do gold and silver become the common measures of exchange, and are esteemed sufficient payment for what is of a hundred times their value.

After this convention, concerning abstinence from the possessions of others, is entered into, and every one has acquired a stability in his possessions, there immediately arise the ideas of justice and injustice; as also those of *property*, *right*, and *obligation*. The latter are altogether unintelligible, without first understanding the former. Our property is nothing but those goods, whose constant possession is established by the laws of society; that is, by the laws of justice. Those, therefore, who make use of the words *property*, or *right*, or *obligation*, before they have explained the origin of justice, or even make use of them in that explication, are guilty of a very gross fallacy, and can never reason upon any solid foundation. A man's property is some object related to him. This relation is not natural, but moral, and founded on justice. It is very preposterous, therefore, to imagine that we can have any idea of property, without fully comprehending the nature of justice, and shewing its origin in the artifice and contrivance of men. The origin of justice explains that of property. The same artifice gives rise to both. As our first and most natural sentiment of morals is founded on the nature of our passions, and gives the preference to ourselves and friends above strangers, it is impossible there can be naturally any such thing as a fixed right or property, while the opposite passions of men impel them in contrary directions, and are not restrained by any convention or agreement.

No one can doubt that the convention for the distinction of property, and for the stability of possession, is of all circumstances the most necessary to the establishment of human society, and that, after the agreement for the fixing and observing of this rule, there remains little or nothing to be done towards settling a perfect harmony and concord. All the other passions, beside this of interest, are either easily restrained, or are not of such pernicious consequence when indulged. *Vanity* is rather to be esteemed a social passion, and a bond of union among men. *Pity* and *love* are to be considered in the same light. And as to *envy* and *revenge*, though pernicious, they operate only by intervals, and are directed against particular persons, whom we consider as our superiors or enemies. This avidity alone, of acquiring goods and possessions for ourselves and our nearest friends, is insatiable, perpetual, universal, and directly destructive of society. There scarce is any one who is not actuated by it; and there is no one who has not reason to fear from it, when it acts without any restraint, and gives way to its first and most natural movements. So that, upon the whole, we are to esteem the difficulties in the establishment of society to be greater or less, according to those we encounter in regulating and restraining this passion.

It is certain, that no affection of the human mind has both a sufficient force and a proper direction to counterbalance the love of gain, and render men fit members of society, by making them abstain from the possessions of others. Benevolence to strangers is too weak for this purpose; and as to the other passions, they

rather inflame this avidity, when we observe, that the larger our possessions are, the more ability we have of gratifying all our appetites. There is no passion, therefore, capable of controlling the interested affection, but the very affection itself, by an alteration of its direction. Now, this alteration must necessarily take place upon the least reflection, since it is evident that the passion is much better satisfied by its restraint than by its liberty, and that, in preserving society, we make much greater advances in the acquiring possessions, than in the solitary and forlorn condition which must follow upon violence and an universal licence. The question, therefore, concerning the wickedness or goodness of human nature, enters not in the least into that other question concerning the origin of society; nor is there any thing to be considered but the degrees of men's sagacity or folly. For whether the passion of self-interest be esteemed vicious or virtuous, it is all a case, since itself alone restrains it; so that if it be virtuous, men become social by their virtue; if vicious, their vice has the same effect.

Now, as it is by establishing the rule for the stability of possession that this passion restrains itself, if that rule be very abstruse and of difficult invention, society must be esteemed in a manner accidental, and the effect of many ages. But if it be found that nothing can be more simple and obvious than that rule; that every parent, in order to preserve peace among his children, must establish it; and that these first rudiments of justice must every day be improved, as the society enlarges: if all this appear evident, as it certainly must, we may conclude that it is utterly impossible for men to remain any considerable time in that savage condition which precedes society, but that his very first state and situation may justly be esteemed social. This, however, hinders not but that philosophers may, if they please, extend their reasoning to the supposed *state of nature*; provided they allow it to be a mere philosophical fiction, which never had, and never could have, any reality. Human nature being composed of two principal parts, which are requisite in all its actions, the affections and understanding, it is certain that the blind motions of the former, without the direction of the latter, incapacitate men for society; and it may be allowed us to consider separately the effects that result from the separate operations of these two component parts of the mind. The same liberty may be permitted to moral, which is allowed to natural philosophers; and it is very usual with the latter to consider any motion as compounded and consisting of two parts separate from each other, though at the same time they acknowledge it to be in itself uncompounded and inseparable.

This *state of nature*, therefore, is to be regarded as a mere fiction, not unlike that of the *golden age* which poets have invented; only with this difference, that the former is described as full of war, violence, and injustice; whereas the latter is painted out to us as the most charming and most peaceable condition that can possibly be imagined. The seasons, in that first age of nature, were so temperate, if we may believe the poets, that there was no necessity for men to provide themselves with cloaths and houses as a security against the violence of heat and cold. The rivers flowed with wine and milk; the oaks yielded honey; and nature spontaneously produced her greatest delicacies. Nor were these the chief advantages of that happy age. The storms and tempests were not alone removed from nature; but those more furious tempests were unknown to human breasts, which now cause such uproar, and engender such confusion. Avarice, ambition, cruelty, selfishness, were never heard of: cordial affection, compassion, sympathy, were the only movements with which the human mind was yet acquainted. Even the distinction of *mine* and *thine* was banished from that happy race of mortals, and carried with them the very notions of property, and obligation, justice and injustice.

This, no doubt, is to be regarded as an idle fiction; but yet deserves our attention, because nothing can more evidently shew the origin of those virtues, which are the subjects of our present enquiry. I have already observed, that justice takes its rise from human conventions; and that these are intended as a remedy to some inconveniences, which proceed from the concurrence of certain *qualities* of the human mind with the *situation* of external objects. The qualities of the mind are *selfishness* and *limited generosity*: and the situation of external objects is their *easy change*, joined to their *scarcity* in comparison of the wants and desires of men. But however philosophers may have been bewildered in those speculations, poets have been guided more infallibly, by a certain taste or common instinct, which, in most kinds of reasoning,

goes further than any of that art and philosophy with which we have been yet acquainted. They easily perceived, if every man had a tender regard for another, or if nature supplied abundantly all our wants and desires, that the jealousy of interest, which justice supposes, could no longer have place; nor would there be any occasion for those distinctions and limits of property and possession, which at present are in use among mankind. Encrease to a sufficient degree the benevolence of men, or the bounty of nature, and you render justice useless, by supplying its place with much nobler virtues, and more valuable blessings. The selfishness of men is animated by the few possessions we have, in proportion to our wants; and it is to restrain this selfishness, that men have been obliged to separate themselves from the community, and to distinguish betwixt their own goods and those of others.

Nor need we have recourse to the fictions of poets to learn this; but, beside the reason of the thing, may discover the same truth by common experience and observation. It is easy to remark, that a cordial affection renders all things common among friends; and that married people, in particular, mutually lose their property, and are unacquainted with the mine and thine, which are so necessary, and yet cause such disturbance in human society. The same effect arises from any alteration in the circumstances of mankind; as when there is such a plenty of any thing as satisfies all the desires of men: in which case the distinction of property is entirely lost, and every thing remains in common. This we may observe with regard to air and water, though the most valuable of all external objects; and may easily conclude, that if men were supplied with every thing in the same abundance, or if *every one* had the same affection and tender regard for *every one* as for himself, justice and injustice would be equally unknown among mankind.

Here then is a proposition, which, I think, may be regarded as certain, *that it is only from the selfishness and confined generosity of men, along with the scanty provision nature has made for his wants, that justice derives its origin*. If we look backward we shall find, that this proposition bestows an additional force on some of those observations which we have already made on this subject.

First, We may conclude from it, that a regard to public interest, or a strong extensive benevolence, is not our first and original motive for the observation of the rules of justice; since it is allowed, that if men were endowed with such a benevolence, these rules would never have been dreamed of.

Secondly, We may conclude from the same principle, that the sense of justice is not founded on reason, or on the discovery of certain connexions and relations of ideas, which are eternal, immutable, and universally obligatory. For since it is confessed, that such an alteration as that above mentioned, in the temper and circumstances of mankind, would entirely alter our duties and obligations, it is necessary upon the common system, *that the sense of virtue is derived from reason*, to shew the change which this must produce in the relations and ideas. But it is evident, that the only cause why the extensive generosity of man, and the perfect abundance of every thing, would destroy the very idea of justice, is, because they render it useless; and that, on the other hand, his confined benevolence, and his necessitous condition, give rise to that virtue, only by making it requisite to the public interest, and to that of every individual. It was therefore a concern for our own and the public interest which made us establish the laws of justice; and nothing can be more certain, than that it is not any relation of ideas which gives us this concern, but our impressions and sentiments, without which every thing in nature is perfectly indifferent to us, and can never in the least affect us. The sense of justice, therefore, is not founded on our ideas, but on our impressions.

Thirdly, We may further confirm the foregoing proposition, *that those impressions, which give rise to this sense of justice, are not natural to the mind of man, but arise from artifice and human conventions*. For, since any considerable alteration of temper and circumstances destroys equally justice and injustice; and since such an alteration has an effect only by changing our own and the public interest, it follows that the first establishment of the rules of justice depends on these different interests. But if men pursued the public interest naturally, and with a hearty affection, they would have never dreamed of restraining each other by these rules; and if they pursued their own interest, without any precaution, they would run headlong into every kind of injustice and violence. These rules, therefore, are artificial, and seek their end in an oblique and indirect manner; nor is the interest which gives rise to them

of a kind that could be pursued by the natural and inartificial passions of men.

To make this more evident, consider, that, though the rules of justice are established merely by interest, their connexion with interest is somewhat singular, and is different from what may be observed on other occasions. A single act of justice is frequently contrary to *public interest*; and were it to stand alone, without being followed by other acts, may, in itself, be very prejudicial to society. When a man of merit, of a beneficent disposition, restores a great fortune to a miser, or a seditious bigot, he has acted justly and laudably; but the public is a real sufferer. Nor is every single act of justice, considered apart, more conducive to private interest than to public; and it is easily conceived how a man may impoverish himself by a signal instance of integrity, and have reason to wish, that, with regard to that single act, the laws of justice were for a moment suspended in the universe. But, however single acts of justice may be contrary, either to public or private interest, it is certain that the whole plan or scheme is highly conducive, or indeed absolutely requisite, both to the support of society, and the well-being of every individual. It is impossible to separate the good from the ill. Property must be stable, and must be fixed by general rules. Though in one instance the public be a sufferer, this momentary ill is amply compensated by the steady prosecution of the rule, and by the peace and order which it establishes in society. And even every individual person must find himself a gainer on balancing the account; since, without justice, society must immediately dissolve, and every one must fall into that savage and solitary condition, which is infinitely worse than the worst situation that can possibly be supposed in society. When, therefore, men have had experience enough to observe, that, whatever may be the consequence of any single act of justice, performed by a single person, yet the whole system of actions concurred in by the whole society, is infinitely advantageous to the whole, and to every part, it is not long before justice and property take place. Every member of society is sensible of this interest: every one expresses this sense to his fellows, along with the resolution he has taken of squaring his actions by it, on condition that others will do the same. No more is requisite to induce any one of them to perform an act of justice, who has the first opportunity. This becomes an example to others; and thus justice establishes itself by a kind of convention or agreement, that is, by a sense of interest, supposed to be common to all, and where every single act is performed in expectation that others are to perform the like. Without such a convention, no one would ever have dreamed that there was such a virtue as justice, or have been induced to conform his actions to it. Taking any single act, my justice may be pernicious in every respect; and it is only upon the supposition that others are to imitate my example, that I can be induced to embrace that virtue; since nothing but this combination can render justice advantageous, or afford me any motives to conform myself to its rules.

We come now to the *second* question we proposed, viz. *Why we annex the idea of virtue to justice, and of vice to injustice.* This question will not detain us long after the principles which we have already established. All we can say of it at present will be despatched in a few words: and for further satisfaction, the reader must wait till we come to the third part of this book. The *natural* obligation to justice, viz. interest, has been fully explained; but as to the *moral* obligation, or the sentiment of right and wrong, it will first be requisite to examine the natural virtues, before we can give a full and satisfactory account of it.

After men have found by experience, that their selfishness and confined generosity, acting at their liberty, totally incapacitate them for society; and at the same time have observed that society is necessary to the satisfaction of those very passions, they are naturally induced to lay themselves under the restraint of such rules, as may render their commerce more safe and commodious. To the imposition, then, and observance of these rules, both in general, and in every particular instance, they are at first induced only by a regard to interest; and this motive, on the first formation of society, is sufficiently strong and forcible. But when society has become numerous, and has encreased to a tribe or nation, this interest is more remote; nor do men so readily perceive that disorder and confusion follow upon every breach of these rules, as in a more narrow and contracted society. But though, in our own actions, we may frequently lose sight of that interest which we have in maintaining order, and may follow a lesser and more

present interest, we never fail to observe the prejudice we receive, either mediately or immediately, from the injustice of others; as not being in that case either blinded by passion, or biassed by any contrary temptation. Nay, when the injustice is so distant from us as no way to affect our interest, it still displeases us; because we consider it as prejudicial to human society, and pernicious to every one that approaches the person guilty of it. We partake of their uneasiness by *sympathy*; and as every thing which gives uneasiness in human actions, upon the general survey, is called Vice, and whatever produces satisfaction, in the same manner, is denominated Virtue, this is the reason why the sense of moral good and evil follows upon justice and injustice. And though this sense, in the present case, be derived only from contemplating the actions of others, yet we fail not to extend it even to our own actions. The *general rule* reaches beyond those instances from which it arose; while, at the same time, we naturally *sympathize* with others in the sentiments they entertain of us. *Thus self-interest is the original motive to the* establishment *of justice: but a sympathy with public interest is the source of the* moral approbation, *which attends that virtue.*

Though this progress of the sentiments be *natural*, and even necessary, it is certain that it is here forwarded by the artifice of politicians, who, in order to govern men more easily, and preserve peace in human society, have endeavoured to produce an esteem for justice, and an abhorrence of injustice. This, no doubt, must have its effect; but nothing can be more evident than that the matter has been carried too far by certain writers on morals, who seem to have employed their utmost efforts to extirpate all sense of virtue from among mankind. Any artifice of politicians may assist nature in the producing of those sentiments, which she suggests to us, and may even, on some occasions, produce alone an approbation or esteem for any particular action; but it is impossible it should be the sole cause of the distinction we make betwixt vice and virtue. For if nature did not aid us in this particular, it would be in vain for politicians to talk of *honourable* or *dishonourable*, *praiseworthy* or *blamable*. These words would be perfectly unintelligible, and would no more have any idea annexed to them, than if they were of a tongue perfectly unknown to us. The utmost politicians can perform, is to extend the natural sentiments beyond their original bounds; but still nature must furnish the materials, and give us some notion of moral distinctions.

As public praise and blame encrease our esteem for justice, so private education and instruction contribute to the same effect. For as parents easily observe, that a man is the more useful, both to himself and others, the greater degree of probity and honour he is endowed with, and that those principles have greater force when custom and education assist interest and reflection: for these reasons they are induced to inculcate on their children, from their earliest infancy, the principles of probity, and teach them to regard the observance of those rules by which society is maintained, as worthy and honourable, and their violation as base and infamous. By this means the sentiments of honour may take root in their tender minds, and acquire such firmness and solidity, that they may fall little short of those principles which are the most essential to our natures, and the most deeply radicated in our internal constitution.

What further contributes to encrease their solidity, is the interest of our reputation, after the opinion, *that a merit or demerit attends justice or injustice*, is once firmly established among mankind. There is nothing which touches us more nearly than our reputation, and nothing on which our reputation more depends than our conduct with relation to the property of others. For this reason, every one who has any regard to his character, or who intends to live on good terms with mankind, must fix an inviolable law to himself, never, by any temptation, to be induced to violate those principles which are essential to a man of probity and honour.

I shall make only one observation before I leave this subject, viz. that, though I assert that, in the *state of nature*, or that imaginary state which preceded society, there be neither justice nor injustice, yet I assert not that it was allowable, in such a state, to violate the property of others. I only maintain, that there was no such thing as property; and consequently could be no such thing as justice or injustice. I shall have occasion to make a similar reflection with regard to *promises*, when I come to treat of them; and I hope this reflection, when duly weighed, will suffice to remove all odium from the foregoing opinions, with regard to justice and injustice.

JEAN-JACQUES ROUSSEAU

Writing in 1764, Immanuel Kant acknowledged his debt to Jean-Jacques Rousseau (1712–1778), whose "noble sweep of genius" had uncovered for Kant "the deeply hidden nature of man." This debt is not surprising. Kant was only one among many who benefitted from Rousseau's critique of culture, his commitment to freedom and the natural character of human goodness, and his respect for the new science. Flamboyant, controversial, unorthodox, complex, and brilliant, Rousseau employed his self-taught intelligence in diverse ways and for diverse purposes, from musical theory, drama, and operatic composition, to cultural criticism and political analysis. His mind wandered as he himself did, and while his heart remained bound to Geneva, his birthplace, it was as ambivalent a fidelity as that which characterized many other relationships of his life.

Born in Geneva in 1712, Rousseau had an unhappy childhood. His mother died a week after his birth, and his father, ambitious but irresponsible, was eventually forced to leave Geneva. His younger son, whom his father had educated at home, was at thirteen apprenticed to a harsh, insensitive engraver. In 1728, returning late from a country walk, Rousseau found the city gates locked and, rather than face the man's anger, fled Geneva.

By 1742 Rousseau had become richly educated, encouraged by Madame de Warens, with whom he lived as a guest and then as a lover. In that year he moved to Paris and became secretary to the Comte de Montaigu, the French ambassador to Venice. After a bitter dispute with the ambassador in Venice, Rousseau returned to Paris and was befriended by Denis Diderot, Jean Le Rond d'Alembert, and other *philosophes* of the French Enlightenment. They recognized in Rousseau a rare intellect, with range and fascinating depth. He had already written a play, developed a new system of musical notation, and begun a major work on political institutions.

In 1750, ironically at the urging of Diderot, Rousseau submitted an essay for the prize of the Academy of Dijon on the question: "Has the progress of the sciences and arts contributed to the purification of morals?" In his *Discourse on the Sciences and the Arts*, which won the competition, Rousseau extolled those in antiquity who, like the Spartans, were strong as a result of military discipline, and he assailed moderns who were weak and effeminate because of their lack of such discipline. Furthermore, Rousseau praised the modern scientists, like Francis Bacon and Isaac Newton, who remained independent of court intrigue and corruption and were capable of employing modern science for public benefit. He developed similar themes in a political context and by means of a *scientific* examination of people living in primitive, natural societies in his *Discourse on the Origin of Inequality*, published in 1755.

This second Discourse failed to win the Dijon prize, but it did win Rousseau international fame and recognition. But not by all. By the mid-1750s Rousseau had become estranged from many of his intellectual friends, in part as a result of his vigorous attack on modern culture and the scientific spirit that supported it. At about this time, he converted back to Protestantism and returned to Geneva, only to be compelled to return to France by a dispute with Voltaire and fears of repression in Geneva. It is ironic that for all his devotion to the ideal of Geneva as a small participatory democracy, he never enjoyed life in his birthplace. In 1755 he had dedicated his *Discourse on the Origin of Inequality* to the sovereign citizens of Geneva, but by the 1760s he was to indict the city as an "odious and lawless despotism."

In 1762 Rousseau published *Émile*, his famous account of a mode of education consonant with natural growth and conducted with respect for the child's kinship with nature. In the same year, drawing on his long-term project on political institutions, Rousseau published *On The Social Contract*. In this short work, he grounded sovereignty in the freedom of the citizen and the general will that expresses the common well-being of the people. Both works generated great debate until, on June 9, 1762, the Parlemant of Paris authorized

Rousseau's arrest, and, a short time later, both books were condemned. Simultaneously, the two books were burned in Geneva and his arrest was decreed. From then until his death in 1778, Rousseau lived a fitful life, in ill health, constantly moving, and forever defending his views on the corrupting influence of culture, the purity of nature, and the centrality of freedom and equality. It was during this period that Rousseau wrote his famous autobiographical *Confessions*, a work which was completed by 1775 but which remained unpublished until after his death.

Discourse on the Origin and Foundations of Inequality Among Men

by
Jean-Jacques Rousseau,
Citizen of Geneva

"Not in depraved things but in those well oriented according to nature, are we to consider what is natural."
—Aristotle, *Politics*, II.

To The Republic of Geneva

Magnificent, Most Honored and Sovereign Lords:

Convinced that only a virtuous man may bestow on his homeland those honors which it can acknowledge, I have labored for thirty years to earn the right to offer you public homage. And since this happy occasion supplements to some extent what my efforts have been unable to accomplish, I believed I might be allowed here to give heed to the zeal that urges me on, instead of the right that ought to have given me authorization. Having had the good fortune to be born among you, how could I meditate on the equality which nature has established among men and upon the inequality they have instituted without thinking of the profound wisdom with which both, felicitously combined in this state, cooperate in the manner that most closely approximates the natural law and that is most favorable to society, to the maintenance of public order and to the happiness of private individuals? In searching for the best maxims that good sense could dictate concerning the constitution of a government, I have been so struck on seeing them all in operation in your own, that even if I had not been born within your walls, I would have believed myself incapable of dispensing with offering this picture of human society to that people which, of all peoples, seems to me to be in possession of the greatest advantages, and to have best prevented its abuses.

If I had had to choose my birthplace, I would have chosen a society of a size limited by the extent of human faculties, that is to say, limited by the possibility of being well governed, and where, with each being sufficient to his task, no one would have been forced to relegate to others the functions with which he was charged; a state where, with all private individuals being known to one another, neither the obscure maneuvers of vice nor the modesty of virtue could be hidden from the notice and the judgment of the public, and where that pleasant habit of seeing and knowing one another turned love of homeland into love of the citizens rather than into love of the land.

I would have wanted to be born in a country where the sovereign and the people could have but one and the same interest, so that all the movements of the machine always tended only to the common happiness. Since this could not have taken place unless the people and the sovereign were one and the same person, it follows that I would have wished to be born under a democratic government, wisely tempered.

I would have wanted to live and die free, that is

From *The Basic Political Writings*, translated by Donald A. Cress (Indianapolis: Hackett Publishing Company, 1987). Copyright © 1987. Re printed by permission of the publisher.

to say, subject to the laws in such wise that neither I nor anyone else could shake off their honorable yoke: that pleasant and salutary yoke, which the most arrogant heads bear with all the greater docility, since they are made to bear no other.

I would therefore have wanted it to be impossible for anyone in the state to say that he was above the law and for anyone outside to demand that the state was obliged to give him recognition. For whatever the constitution of a government may be, if a single man is found who is not subject to the law, all the others are necessarily at his discretion.[1] And if there is a national leader and a foreign leader as well, whatever the division of authority they may make, it is impossible for both of them to be strictly obeyed and for the state to be well governed.

I would not have wanted to dwell in a newly constituted republic, however good its laws may be, out of fear that, with the government perhaps constituted otherwise than would be required for the moment and being unsuited to the new citizens or the citizens to the new government, the state would be subject to being overthrown and destroyed almost from its inception. For liberty is like those solid and tasty foods or those full-bodied wines which are appropriate for nourishing and strengthening robust constitutions that are used to them, but which overpower, ruin and intoxicate the weak and delicate who are not suited for them. Once peoples are accustomed to masters, they are no longer in a position to get along without them. If they try to shake off the yoke, they put all the more distance between themselves and liberty, because, in mistaking for liberty an unbridled license which is its opposite, their revolutions nearly always deliver them over to seducers who simply make their chains heavier. The Roman people itself—that model of all free peoples—was in no position to govern itself when it emerged from the oppression of the Tarquins. Debased by slavery and the ignominious labors the Tarquins had imposed on it, at first it was but a stupid rabble that needed to be managed and governed with the greatest wisdom, so that, as it gradually became accustomed to breathe the salutary air of liberty, these souls, enervated or rather brutalized under tyranny, acquired by degrees that severity of mores and that high-spirited courage which eventually made them, of all the peoples, most worthy of respect. I would therefore have sought for my homeland a happy and tranquil republic, whose antiquity was somehow lost in the dark recesses of time, which had experienced only such attacks as served to manifest and strengthen in its inhabitants courage and love of homeland, and where the citizens, long accustomed to a wise independence, were not only free but worthy of being so.

I would have wanted to choose for myself a homeland diverted by a fortunate impotence from the fierce love of conquest, and protected by an even more fortunate position from the fear of becoming itself the conquest of another state; a free city, situated among several peoples none of whom had any interest in invading it, while each had an interest in preventing the others from invading it themselves; in a word, a republic that did not tempt the ambition of its neighbors and that could reasonably count on their assistance in time of need. It follows that in so fortunate a position, it would have had nothing to fear except from itself; and that, if its citizens were trained in the use of arms, it would have been more to maintain in them that martial fervor and that high-spirited courage that suit liberty so well and whet the appetite for it, than out of the necessity to provide for their defense.

I would have searched for a country where the right of legislation was common to all citizens, for who can know better than they the conditions under which it suits them to live together in a single society? But I would not have approved of plebiscites like those of the Romans where the state's leaders and those most interested in its preservation were excluded from the deliberations on which its safety often depended, and where, by an absurd inconsistency, the magistrates were deprived of the rights enjoyed by ordinary citizens.

On the contrary, I would have desired that, in order to stop the self-centered and ill-conceived projects and the dangerous innovations that finally ruined Athens, no one would have the power to propose new laws according to his fancy; that this right belonged exclusively to the magistrates; that even they used it with such caution that the populace, for its part, was so hesitant about giving its consent to these laws, and that their promulgation could only be done with such solemnity that before the constitution was overturned one had time to be convinced that it is above all the

great antiquity of the laws that makes them holy and venerable; that the populace soon holds in contempt those laws that it sees change daily; and that in becoming accustomed to neglect old usages on the pretext of making improvements, great evils are often introduced in order to correct the lesser ones.

Above all, I would have fled, as necessarily ill-governed, a republic where the people, believing it could get along without its magistrates or permit them but a precarious authority, would imprudently have held on to the administration of civil affairs and the execution of its own laws. Such must have been the rude constitution of the first governments immediately emerging from the state of nature, and such too was one of the vices which ruined the republic of Athens.

But I would have chosen that republic where private individuals, being content to give sanction to the laws and to decide as a body and upon the recommendation of their leaders the most important public affairs, would establish respected tribunals, distinguish with care their various departments, annually elect the most capable and most upright of their fellow citizens to administer justice and to govern the state; and where, with the virtue of the magistrates thus bearing witness to the wisdom of the people, they would mutually honor one another. Thus if some fatal misunderstandings were ever to disturb public concord, even those periods of blindness and errors were marked by indications of moderation, reciprocal esteem, and a common respect for the laws: presages and guarantees of a sincere and perpetual reconciliation.

Such, MAGNIFICENT, MOST HONORED, AND SOVEREIGN LORDS, are the advantages that I would have sought in the homeland that I would have chosen for myself. And if in addition providence had joined to it a charming location, a temperate climate, a fertile country and the most delightful appearance there is under the heavens, to complete my happiness I would have desired only to enjoy all these goods in the bosom of that happy homeland, living peacefully in sweet society with my fellow citizens, and practicing toward them (following their own example), humanity, friendship, and all the virtues; and leaving behind me the honorable memory of a good man and a decent and virtuous patriot.

If, less happy or too late grown wise, I had seen myself reduced to end an infirm and languishing career in other climates, pointlessly regretting the repose and peace of which an imprudent youth deprived me, I would at least have nourished in my soul those same sentiments I could not have used in my native country; and penetrated by a tender and disinterested affection for my distant fellow citizens, I would have addressed them from the bottom of my heart more or less along the following lines:

My dear fellow citizens, or rather my brothers, since the bonds of blood as well as the laws unite almost all of us, it gives me pleasure to be incapable of thinking of you without at the same time thinking of all the good things you enjoy, and of which perhaps none of you appreciates the value more deeply than I who have lost them. The more I reflect upon your political and civil situation, the less I am capable of imagining that the nature of human affairs could admit of a better one. In all other governments, when it is a question of assuring the greatest good of the state, everything is always limited to imaginary projects, and at most to simple possibilities. As for you, your happiness is complete; it remains merely to enjoy it. And to become perfectly happy you are in need of nothing more than to know how to be satisfied with being so. Your sovereignty, acquired or recovered at the point of a sword, and preserved for two centuries by dint of valor and wisdom, is at last fully and universally recognized. Honorable treaties fix your boundaries, secure your rights and strengthen your repose. Your constitution is excellent, since it is dictated by the most sublime reason and is guaranteed by friendly powers deserving of respect. Your state is tranquil; you have neither wars nor conquerors to fear. You have no other masters but the wise laws you have made, administered by upright magistrates of your own choosing. You are neither rich enough to enervate yourself with softness and to lose in vain delights the taste for true happiness and solid virtues, nor poor enough to need more foreign assistance than your industry procures for you. And this precious liberty, which in large nations is maintained only by exorbitant taxes, costs you almost nothing to pursue.

For the happiness of its citizens and the examples of the peoples, may a republic so wisely and so happily constituted last forever! This is the only wish left for

you to make, and the only precaution left for you to take. From here on, it is for you alone, not to bring about your own happiness, your ancestors having saved you the trouble, but to render it lasting by the wisdom of using it well. It is upon your perpetual union, your obedience to the laws, your respect for their ministers that your preservation depends. If there remains among you the slightest germ of bitterness or distrust, hasten to destroy it as a ruinous leaven that sooner or later results in your misfortunes and the ruin of the state. I beg you all to look deep inside your hearts and to heed the secret voice of your conscience. Is there anyone among you who knows of a body that is more upright, more enlightened, more worthy of respect than that of your magistracy? Do not all its members give you the example of moderation, of simplicity of mores, of respect for the laws, and of the most sincere reconciliation? Then freely give such wise chiefs that salutary confidence that reason owes to virtue. Bear in mind that they are of your choice, that they justify it, and that the honors due to those whom you have established in dignity necessarily reflect back upon yourselves. None of you is so unenlightened as to be ignorant of the fact that where the vigor of laws and the authority of their defenders cease, there can be neither security nor freedom for anyone. What then is the point at issue among you except to do wholeheartedly and with just confidence what you should always be obliged to do by a true self-interest, by duty and for the sake of reason? May a sinful and ruinous indifference to the maintenance of the constitution never make you neglect in time of need the wise teachings of the most enlightened and most zealous among you. But may equity, moderation, and the most respectful firmness continue to regulate all your activities and display in you, to the entire universe, the example of a proud and modest people, as jealous of its glory as of its liberty. Above all, beware (and this will be my last counsel) of ever listening to sinister interpretations and venomous speeches, whose secret motives are often more dangerous than the actions that are their object. An entire household awakens and takes warning at the first cries of a good and faithful watchdog who never barks except at the approach of burglars. But people hate the nuisance caused by those noisy animals that continually disturb the public repose and whose continual and ill-timed warnings are not heeded even at the moment when they are necessary.

And you, MAGNIFICENT AND MOST HONORED LORDS, you upright and worthy magistrates of a free people, permit me to offer you in particular my compliments and my respects. If there is a rank in the world suited to conferring honor on those who hold it, it is without doubt the one that is given by talents and virtue, that of which you have made yourselves worthy, and to which your fellow citizens have raised you. Their own merit adds still a new luster to yours. And I that find you, who were chosen by men capable of governing others in order that they themselves may be governed, are as much above other magistrates as a free people; and above all that the one which you have the honor of leading, is, by its enlightenment and reason, above the populace of the other states.

May I be permitted to cite an example of which better records ought to remain, and which will always be near to my heart. I never call to mind without the sweetest emotion the memory of the virtuous citizen to whom I owe my being, and who often spoke to me in my childhood of the respect that was owed you. I still see him living from the work of his hands, and nourishing his soul on the most sublime truths. I see Tacitus, Plutarch and Grotius mingled with the instruments of his craft before him. I see at his side a beloved son receiving with too little profit the tender instruction of the best of fathers. But if the aberrations of foolish youth made me forget such wise lessons for a time, I have the happiness to sense at last that whatever the inclination one may have toward vice, it is difficult for an education in which the heart is involved to remain forever lost.

Such, MAGNIFICENT AND MOST HONORED LORDS, are the citizens and even the simple inhabitants born in the state you govern. Such are those educated and sensible men concerning whom, under the name of workers and people, such base and false ideas are entertained in other nations. My father, I gladly acknowledge, was in no way distinguished among his fellow citizens; he was only what they all are; and such as he was, there was no country where his company would not have been sought after, cultivated, and profitably too, by the most upright men. It does not behoove me, nor, thank heaven, is

it necessary to speak to you of the regard which men of that stamp can expect from you: your equals by education as well as by the rights of nature and of birth; your inferiors by their will and by the preference they owe your merit, which they have granted to it, and for which you in turn owe them some sort of gratitude. It is with intense satisfaction that I learn how much, in your dealings with them, you temper with gentleness and cooperativeness the gravity suited to the ministers of the law; how much you repay them in esteem and attention for the obedience and respect they owe you; conduct full of justice and wisdom, suited to putting at a greater and greater distance the memory of unhappy events which must be forgotten so as never to see them again; conduct all the more judicious because this equitable and generous people makes a pleasure out of its duty, because it naturally loves to honor you, and because those who are most zealous in upholding their rights are the ones who are most inclined to respect yours.

It should not be surprising that the leaders of a civil society love its glory and happiness; but, unfortunately for the tranquility of men, that those who consider themselves as the magistrates, or rather as the masters, of a more holy and more sublime homeland manifest some love for the earthly homeland which nourishes them. How sweet it is for me to be able to make such a rare exception in our favor, and to place in the rank of our best citizens those zealous trustees of the sacred dogmas authorized by the laws, those venerable pastors of souls, whose lively and sweet eloquence the better instills the maxims of the Gospel into people's hearts as they themselves always begin by practicing them. Everyone knows the success with which the great art of preaching is cultivated in Geneva. But since people are too accustomed to seeing things said in one way and done in another, few of them know the extent to which the spirit of Christianity, the saintliness of mores, severity to oneself and gentleness to others reign in the body of our ministers. Perhaps it behooves only the city of Geneva to provide the edifying example of such a perfect union between a society of theologians and of men of letters. It is in large part upon their wisdom and their acknowledged moderation and upon their zeal for the prosperity of the state that I base my hopes for its eternal tranquility. And I note, with a pleasure mixed with amazement and respect, how much they abhor the atrocious maxims of those sacred and barbarous men of whom history provides more than one example, and who, in order to uphold the alleged rights of God—that is to say, their own interests—were all the less sparing of human blood because they hoped their own would always be respected.

Could I forget that precious half of the republic which produces the happiness of the other and whose gentleness and wisdom maintain peace and good mores? Amiable and virtuous women citizens, it will always be the fate of your sex to govern ours. Happy it is when your chaste power, exercised only within the conjugal union, makes itself felt only for the glory of the state and the public happiness! Thus it was that in Sparta women were in command, and thus it is that you deserve to be in command in Geneva. What barbarous man could resist the voice of honor and reason in the mouth of an affectionate wife? And who would not despise vain luxury on seeing your simple and modest attire, which, from the luster it derives from you, seems the most favorable to beauty? It is for you to maintain always, by your amiable and innocent dominion and by your insinuating wit, the love of laws in the state and concord among the citizens; to reunite, by happy marriages, divided families; and above all, to correct, by the persuasive sweetness of your lessons and by the modest graces of your conversation, those extravagances which our young people come to acquire in other countries, whence, instead of the many useful things they could profit from, they bring back, with a childish manner and ridiculous airs adopted among fallen women, nothing more than an admiration for who knows what pretended grandeurs, frivolous compensations for servitude, which will never be worth as much as august liberty. Therefore always be what you are, the chaste guardians of mores and the gentle bonds of peace; and continue to assert on every occasion the rights of the heart and of nature for the benefit of duty and virtue.

I flatter myself that events will not prove me wrong in basing upon such guarantees hope for the general happiness of the citizens and for the glory of the republic. I admit that with all these advantages it will not shine with that brilliance which dazzles most eyes; and the childish and fatal taste for this is the

deadliest enemy of happiness and liberty. Let a dissolute youth go elsewhere in search of easy pleasures and lengthy repentances. Let the alleged men of taste admire someplace else the grandeur of palaces, the beauty of carriages, the sumptuous furnishings, the pomp of spectacles, and all the refinements of softness and luxury. In Geneva we will find only men; but such a sight has a value of its own, and those who seek it are well worth the admirers of the rest.

May you all, MAGNIFICENT, MOST HONORED AND SOVEREIGN LORDS, deign to receive with the same goodness the respectful testimonies of the interest I take in your common prosperity. If I were unfortunate enough to be guilty of some indiscreet rapture in this lively effusion of my heart, I beg you to pardon it as the tender affection of a true patriot, and to the ardent and legitimate zeal of a man who envisages no greater happiness for himself than that of seeing all of you happy.

With the most profound respect, I am, MAGNIFICENT, MOST HONORED AND SOVEREIGN LORDS, your most humble and most obedient servant and fellow citizen.

Jean-Jacques Rousseau
Chambéry
12 June 1754

PREFACE

Of all the branches of human knowledge, the most useful and the least advanced seems to me to be that of man;[2] and I dare say that the inscription on the temple at Delphi alone contained a precept more important and more difficult than all the huge tomes of the moralists. Thus I regard the subject of this discourse as one of the most interesting questions that philosophy is capable of proposing, and unhappily for us, one of the thorniest that philosophers can attempt to resolve. For how can the source of the inequality among men be known unless one begins by knowing men themselves? And how will man be successful in seeing himself as nature formed him, through all the changes that the succession of time and things must have produced in his original constitution, and in separating what he derives from his own wherewithal from what circumstances and his progress have added to or changed in his primitive state? Like the statue of Glaucus, which time, sea and storms had disfigured to such an extent that it looked less like a god than a wild beast, the human soul, altered in the midst of society by a thousand constantly recurring causes, by the acquisition of a multitude of bits of knowledge and of errors, by changes that took place in the constitution of bodies, by the constant impact of the passions, has, as it were, changed its appearance to the point of being nearly unrecognizable. And instead of a being active always by certain and invariable principles, instead of that heavenly and majestic simplicity whose mark its author had left on it, one no longer finds anything but the grotesque contrast of passion which thinks it reasons and an understanding in a state of delirium.

What is even more cruel is that, since all the progress of the human species continually moves away from its primitive state, the more we accumulate new knowledge, the more we deprive ourselves of the means of acquiring the most important knowledge of all. Thus, in a sense, it is by dint of studying man that we have rendered ourselves incapable of knowing him.

It is easy to see that it is in these successive changes of the human constitution that we must seek the first origin of the differences that distinguish men, who, by common consensus, are naturally as equal among themselves as were the animals of each species before various physical causes had introduced into certain species the varieties we now observe among some of them. In effect, it is inconceivable that these first changes, by whatever means they took place, should have altered all at once and in the same manner all the individuals of the species. But while some improved or declined and acquired various good or bad qualities which were not inherent in their nature, the others remained longer in their original state. And such was the first source of inequality among men, which it is easier to demonstrate thus in general than to assign with precision its true causes.

Let my readers not imagine, then, that I dare flatter myself with having seen what appears to me so difficult to see. I have begun some lines of reasoning; I have hazarded some guesses, less in the hope of resolv-

ing the question than with the intention of clarifying it and of reducing it to its true state. Others will easily be able to go farther on this same route, though it will not be easy for anyone to reach the end of it. For it is no light undertaking to separate what is original from what is artificial in the present nature of man, and to have a proper understanding of a state which no longer exists, which perhaps never existed, which probably never will exist, and yet about which it is necessary to have accurate notions in order to judge properly our own present state. He who would attempt to determine precisely which precautions to take in order to make solid observations on this subject would need even more philosophy than is generally supposed; and a good solution of the following problem would not seem to me unworthy of the Aristotles and Plinys of our century: *What experiments would be necessary to achieve knowledge of natural man? And what are the means of carrying out these experiments in the midst of society?* Far from undertaking to resolve this problem, I believe I have meditated sufficiently on the subject to dare respond in advance that the greatest philosophers will not be too good to direct these experiments, nor the most powerful sovereigns to carry them out. It is hardly reasonable to expect such a combination, especially with the perseverance or rather the succession of understanding and good will needed on both sides in order to achieve success.

These investigations, so difficult to carry out and so little thought about until now, are nevertheless the only means we have left of removing a multitude of difficulties that conceal from us the knowledge of the real foundations of human society. It is this ignorance of the nature of man which throws so much uncertainty and obscurity on the true definition of natural right. For the idea of right, says M. Burlamaqui, and even more that of natural right, are manifestly ideas relative to the nature of man. Therefore, he continues, the principles of this science must be deduced from this very nature of man, from man's constitution and state.

It is not without surprise and a sense of outrage that one observes the paucity of agreement that prevails among the various authors who have treated it. Among the most serious writers one can hardly find two who are of the same opinion on this point. The Roman jurists—not to mention the ancient philosophers who seem to have done their best to contradict each other on the most fundamental principles—subject man and all other animals indifferently to the same natural law, because they take this expression to refer to the law that nature imposes on itself rather than the law she prescribes, or rather because of the particular sense in which those jurists understood the word "law," which on this occasion they seem to have taken only for the expression of the general relations established by nature among all animate beings for their common preservation. The moderns, in acknowledging under the word "law" merely a rule prescribed to a moral being, that is to say, intelligent, free and considered in his relations with other beings, consequently limit the competence of the natural law to the only animal endowed with reason, that is, to man. But with each one defining this law in his own fashion, they all establish it on such metaphysical principles that even among us there are very few people in a position to grasp these principles, far from being able to find them by themselves. So that all the definitions of these wise men, otherwise in perpetual contradiction with one another, agree on this alone, that it is impossible to understand the law of nature and consequently to obey it without being a great reasoner and a profound metaphysician, which means precisely that for the establishment of society, men must have used enlightenment which develops only with great difficulty and by a very small number of people within the society itself.

Knowing nature so little and agreeing so poorly on the meaning of the word "law," it would be quite difficult to come to some common understanding regarding a good definition of natural law. Thus all those definitions that are found in books have, over and above a lack of uniformity, the added fault of being drawn from several branches of knowledge which men do not naturally have, and from advantages the idea of which they cannot conceive until after having left the state of nature. Writers begin by seeking the rules on which, for the common utility, it would be appropriate for men to agree among themselves; and then they give the name *natural law* to the collection of these rules, with no other proof than the good which presumably would result from their universal observance. Surely this is a very convenient way to compose definitions and to explain the nature of things by virtually arbitrary views of what is seemly.

But as long as we are ignorant of natural man, it is futile for us to attempt to determine the law he has received or which is best suited to his constitution. All that we can see very clearly regarding this law is that, for it to be law, not only must the will of him who is obliged by it be capable of knowing submission to it, but also, for it to be natural, it must speak directly by the voice of nature.

Leaving aside therefore all the scientific books which teach us only to see men as they have made themselves, and meditating on the first and most simple operations of the human soul, I believe I perceive in it two principles that are prior to reason, of which one makes us ardently interested in our well-being and our self-preservation, and the other inspires in us a natural repugnance to seeing any sentient being, especially our fellow man, perish or suffer. It is from the conjunction and combination that our mind is in a position to make regarding these two principles, without the need for introducing that of sociability, that all the rules of natural right appear to me to flow; rules which reason is later forced to reestablish on other foundations, when, by its successive developments, it has succeeded in smothering nature.

In this way one is not obliged to make a man a philosopher before making him a man. His duties toward others are not uniquely dictated to him by the belated lessons of wisdom; and as long as he does not resist the inner impulse of compassion, he will never harm another man or even another sentient being, except in the legitimate instance where, if his preservation were involved, he is obliged to give preference to himself. By this means, an end can also be made to the ancient disputes regarding the participation of animals in the natural law. For it is clear that, lacking intelligence and liberty, they cannot recognize this law; but since they share to some extent in our nature by virtue of the sentient quality with which they are endowed, one will judge that they should also participate in natural right, and that man is subject to some sort of duties toward them. It seems, in effect, that if I am obliged not to do any harm to my fellow man, it is less because he is a rational being than because he is a sentient being: a quality that, since it is common to both animals and men, should at least give the former the right not to be needlessly mistreated by the latter.

This same study of original man, of his true needs and the fundamental principles of his duties, is also the only good means that can be used to remove those multitudes of difficulties which present themselves regarding the origin of moral inequality, the true foundations of the body politic, the reciprocal rights of its members, and a thousand other similar questions that are as important as they are poorly explained.

In considering human society from a tranquil and disinterested point of view it seems at first to manifest merely the violence of powerful men and the oppression of the weak. The mind revolts against the harshness of the former; one is inclined to deplore the blindness of the latter. And since nothing is less stable among men than those external relationships which chance brings about more often than wisdom, and which are called weakness or power, wealth or poverty, human establishments appear at first glance to be based on piles of shifting sand. It is only in examining them closely, only after having cleared away the dust and sand that surround the edifice, that one perceives the unshakeable base on which it is raised and one learns to respect its foundations. Now without a serious study of man, of his natural faculties and their successive developments, one will never succeed in making these distinctions and in separating, in the present constitution of things, what the divine will has done from what human art has pretended to do. The political and moral investigations occasioned by the important question I am examining are therefore useful in every way; and the hypothetical history of governments is an instructive lesson for man in every respect. In considering what we would have become, left to ourselves, we ought to learn to bless him whose beneficent hand, in correcting our institutions and giving them an unshakeable foundation, has prevented the disorders that must otherwise result from them, and has brought about our happiness from the means that seemed likely to add to our misery.

Learn whom God has ordered you to be, and in what part of human affairs you have been placed.

Notice on the Notes

I have added some notes to this work, following my indolent custom of working in fits and starts. Occasionally these notes wander so far from the subject that

they are not good to read with the text. I therefore have consigned them to the end of the Discourse, in which I have tried my best to follow the straightest path. Those who have the courage to begin again will be able to amuse themselves the second time as they beat the bushes and try to run through the notes. There will be little harm done if others do not read them at all.

[Translator's note: These notes are presented on p. 755. Additions to the text, made by Rousseau in the 1782 edition, are translated here and enclosed by brackets.]

QUESTION

Proposed by the Academy of Dijon What is the Origin of Inequality Among Men, and is it Authorized by the Natural Law?

DISCOURSE ON THE ORIGIN AND FOUNDATIONS OF INEQUALITY AMONG MEN

It is of man that I have to speak, and the question I am examining indicates to me that I am going to be speaking to men, for such questions are not proposed by those who are afraid to honor the truth. I will therefore confidently defend the cause of humanity before the wise men who invite me to do so, and I will not be displeased with myself if I make myself worthy of my subject and my judges.

I conceive of two kinds of inequality in the human species: one which I call natural or physical, because it is established by nature and consists in the difference of age, health, bodily strength, and qualities of mind or soul. The other may be called moral or political inequality, because it depends on a kind of convention and is established, or at least authorized, by the consent of men. This latter type of inequality consists in the different privileges enjoyed by some at the expense of others, such as being richer, more honored, more powerful than they, or even causing themselves to be obeyed by them.

There is no point in asking what the source of natural inequality is, because the answer would be found enunciated in the simple definition of the word. There is still less of a point in asking whether there would not be some essential connection between the two inequalities, for that would amount to asking whether those who command are necessarily better than those who obey, and whether strength of body or mind, wisdom or virtue are always found in the same individuals in proportion to power or wealth. Perhaps this is a good question for slaves to discuss within earshot of their masters, but it is not suitable for reasonable and free men who seek the truth.

Precisely what, then, is the subject of this discourse? To mark, in the progress of things, the moment when, right taking the place of violence, nature was subjected to the law. To explain the sequence of wonders by which the strong could resolve to serve the weak, and the people to buy imaginary repose at the price of real felicity.

The philosophers who have examined the foundations of society have all felt the necessity of returning to the state of nature, but none of them has reached it. Some have not hesitated to ascribe to man in that state the notion of just and unjust, without bothering to show that he had to have that notion, or even that it was useful to him. Others have spoken of the natural right that everyone has to preserve what belongs to him, without explaining what they mean by "belonging." Others started out by giving authority to the stronger over the weaker, and immediately brought about government, without giving any thought to the time that had to pass before the meaning of the words "authority" and "government" could exist among men. Finally, all of them, speaking continually of need, avarice, oppression, desires, and pride, have transferred to the state of nature the ideas they acquired in society. They spoke about savage man, and it was civil man they depicted. It did not even occur to most of our philosophers to doubt that the state of nature had existed, even though it is evident from reading the Holy Scriptures that the first man, having received enlightenment and precepts immediately from God, was not himself in that state; and if we give the writings of Moses the credence that every

Christian owes them, we must deny that, even before the flood, men were ever in the pure state of nature, unless they had fallen back into it because of some extraordinary event: a paradox that is quite awkward to defend and utterly impossible to prove.

Let us therefore begin by putting aside all the facts, for they have no bearing on the question. The investigations that may be undertaken concerning this subject should not be taken for historical truths, but only for hypothetical and conditional reasonings, better suited to shedding light on the nature of things than on pointing out their true origin, like those our physicists make everyday with regard to the formation of the world. Religion commands us to believe that since God himself drew men out of the state of nature, they are unequal because he wanted them to be so; but it does not forbid us to form conjectures, drawn solely from the nature of man and the beings that surround him, concerning what the human race could have become, if it had been left to itself. That is what I am asked, and what I propose to examine in this discourse. Since my subject concerns man in general, I will attempt to speak in terms that suit all nations, or rather, forgetting times and places in order to think only of the men to whom I am speaking, I will imagine I am in the Lyceum in Athens, reciting the lessons of my masters, having men like Plato and Xenocrates for my judges, and the human race for my audience.

O man, whatever country you may be from, whatever your opinions may be, listen: here is your history, as I have thought to read it, not in the books of your fellowmen, who are liars, but in nature, who never lies. Everything that comes from nature will be true; there will be nothing false except what I have unintentionally added. The times about which I am going to speak are quite remote: how much you have changed from what you were! It is, as it were, the life of your species that I am about to describe to you according to the qualities you have received, which your education and your habits have been able to corrupt but have been unable to destroy. There is, I feel, an age at which an individual man would want to stop. You will seek the age at which you would want your species to have stopped. Dissatisfied with your present state for reasons that portend even greater grounds for dissatisfaction for your unhappy posterity, perhaps you would like to be able to go backwards in time. This feeling should be a hymn in praise of your first ancestors, the criticism of your contemporaries, and the dread of those who have the unhappiness of living after you.

Part One

However important it may be, in order to render sound judgments regarding the natural state of man, to consider him from his origin and to examine him, so to speak, in the first embryo of the species, I will not follow his nature through its successive developments. I will not stop to investigate in the animal kingdom what he might have been at the beginning so as eventually to become what he is. I will not examine whether, as Aristotle thinks, man's elongated nails were not at first hooked claws, whether man was not furry like a bear, and whether, if man walked on all fours,[3] his gaze, directed toward the ground and limited to a horizon of a few steps—did not provide an indication of both the character and the limits of his ideas. On this subject I could form only vague and almost imaginary conjectures. Comparative anatomy has as yet made too little progress; the observations of naturalists are as yet too uncertain for one to be able to establish the basis of solid reasoning on such foundations. Thus, without having recourse to the supernatural knowledge we have on this point, and without taking note of the changes that must have occurred in the internal as well as the external conformation of man, as he applied his limbs to new purposes and nourished himself on new foods, I will suppose him to have been formed from all time as I see him today: walking on two feet, using his hands as we use ours, directing his gaze over all of nature, and measuring with his eyes the vast expanse of the heavens.

When I strip that being, thus constituted, of all the supernatural gifts he could have received and of all the artificial faculties he could have acquired only through long progress; when I consider him, in a word, as he must have left the hands of nature, I see an animal less strong than some, less agile than others, but all in all, the most advantageously organized of all. I see him satisfying his hunger under an oak tree, quenching his thirst at the first stream, finding his

bed at the foot of the same tree that supplied his meal; and thus all his needs are satisfied.

When the earth is left to its natural fertility[4] and covered with immense forests that were never mutilated by the axe, it offers storehouses and shelters at every step to animals of every species. Men, dispersed among the animals, observe and imitate their industry, and thereby raise themselves to the level of animal instinct, with the advantage that, whereas each species has only its own instincts, man, who may perhaps have none that belongs to him, appropriates all of them to himself, feeds himself equally well on most of the various foods[5] which the other animals divide among themselves, and consequently finds his sustenance more easily than any of the rest can.

Accustomed from childhood to inclement weather and the rigors of the seasons, acclimated to fatigue, and forced, naked and without arms, to defend their lives and their prey against other ferocious beasts, or to escape them by taking flight, men develop a robust and nearly unalterable temperament. Children enter the world with the excellent constitution of their parents and strengthen it with the same exercises that produced it, thus acquiring all the vigor that the human race is capable of having. Nature treats them precisely the way the law of Sparta treated the children of its citizens: it renders strong and robust those who are well constituted and makes all the rest perish, thereby differing from our present-day societies, where the state, by making children burdensome to their parents, kills them indiscriminately before their birth.

Since the savage man's body is the only instrument he knows, he employs it for a variety of purposes that, for lack of practice, ours are incapable of serving. And our industry deprives us of the force and agility that necessity obliges him to acquire. If he had had an axe, would his wrists break such strong branches? If he had had a sling, would he throw a stone with so much force? If he had had a ladder, would he climb a tree so nimbly? If he had had a horse, would he run so fast? Give a civilized man time to gather all his machines around him, and undoubtedly he will easily overcome a savage man. But if you want to see an even more unequal fight, pit them against each other naked and disarmed, and you will soon realize the advantage of constantly having all of one's forces at one's disposal, of always being ready for any event, and of always carrying one's entire self, as it were, with one.[6]

Hobbes maintains that man is naturally intrepid and seeks only to attack and to fight. On the other hand, an illustrious philosopher thinks, and Cumberland and Pufendorf also affirm, that nothing is as timid as man in the state of nature, and that he is always trembling and ready to take flight at the slightest sound he hears or at the slightest movement he perceives. That may be the case with regard to objects with which he is not acquainted. And I do not doubt that he is frightened by all the new sights that present themselves to him every time he can neither discern the physical good and evil he may expect from them nor compare his forces with the dangers he must run: rare circumstances in the state of nature, where everything takes place in such a uniform manner and where the face of the earth is not subject to those sudden and continual changes caused by the passions and inconstancy of peoples living together. But since a savage man lives dispersed among the animals and, finding himself early on in a position to measure himself against them, he soon makes the comparison; and, aware that he surpasses them in skillfulness more than they surpass him in strength, he learns not to fear them any more. Pit a bear or a wolf against a savage who is robust, agile, and courageous, as they all are, armed with stones and a hefty cudgel, and you will see that the danger will be at least equal on both sides, and that after several such experiences, ferocious beasts, which do not like to attack one another, will be quite reluctant to attack a man, having found him to be as ferocious as themselves. With regard to animals that actually have more strength than man has skillfulness, he is in the same position as other weaker species, which nevertheless subsist. Man has the advantage that, since he is no less adept than they at running and at finding almost certain refuge in trees, he always has the alternative of accepting or leaving the encounter and the choice of taking flight or entering into combat. Moreover, it appears that no animal naturally attacks man, except in the case of self-defense or extreme hunger, or shows evidence of those violent antipathies toward him that seem to indicate that one species is destined by nature to serve as food for another.

[No doubt these are the reasons why negroes and savages bother themselves so little about the ferocious beasts they may encounter in the woods. In this respect, the Caribs of Venezuela, among others, live in the most profound security and without the slightest inconvenience. Although they are practically naked, says Francisco Coreal, they boldly expose themselves in the forest, armed only with bow and arrow, but no one has ever heard of one of them being devoured by animals.]

There are other, more formidable enemies, against which man does not have the same means of self-defense: natural infirmities, childhood, old age, and illnesses of all kinds—sad signs of our weakness, of which the first two are common to all animals, with the last belonging principally to man living in society. On the subject of childhood, I even observe that a mother, by carrying her child everywhere with her, can feed it much more easily than females of several animal species, which are forced to be continually coming and going, with great fatigue, to seek their food and to suckle or feed their young. It is true that if a woman were to perish, the child runs a considerable risk of perishing with her. But this danger is common to a hundred other species, whose young are for quite some time incapable of going off to seek their nourishment for themselves. And although childhood is longer among us, our lifespan is also longer; thus things are more or less equal in this respect,[7] although there are other rules, not relevant to my subject, which are concerned with the duration of infancy and the number of young.[8] Among the elderly, who are less active and perspire little, the need for food diminishes with the faculty of providing for it. And since savage life shields them from gout and rheumatism, and since old age is, of all ills, the one that human assistance can least alleviate, they eventually die without anyone being aware that they are ceasing to exist, and almost without being aware of it themselves.

With regard to illnesses, I will not repeat the vain and false pronouncements made against medicine by the majority of people in good health. Rather, I will ask whether there is any solid observation on the basis of which one can conclude that the average lifespan is shorter in those countries where the art of medicine is most neglected than in those where it is cultivated most assiduously. And how could that be the case, if we give ourselves more ills than medicine can furnish us remedies? The extreme inequality in our lifestyle: excessive idleness among some, excessive labor among others; the ease with which we arouse and satisfy our appetites and our sensuality; the overly refined foods of the wealthy, which nourish them with irritating juices and overwhelm them with indigestion; the bad food of the poor, who most of the time do not have even that, and who, for want of food, are inclined to stuff their stomachs greedily whenever possible; staying up until all hours, excesses of all kinds, immoderate outbursts of every passion, bouts of fatigue and mental exhaustion; countless sorrows and afflictions which are felt in all levels of society and which perpetually gnaw away at souls: these are the fatal proofs that most of our ills are of our own making, and that we could have avoided nearly all of them by preserving the simple, regular and solitary lifestyle prescribed to us by nature. If nature has destined us to be healthy, I almost dare to affirm that the state of reflection is a state contrary to nature and that the man who meditates is a depraved animal. When one thinks about the stout constitutions of the savages, at least of those whom we have not ruined with our strong liquors; when one becomes aware of the fact that they know almost no illnesses but wounds and old age, one is strongly inclined to believe that someone could easily write the history of human maladies by following the history of civil societies. This at least was the opinion of Plato, who believed that, from certain remedies used or approved by Podalirius and Machaon at the siege of Troy, various illnesses which these remedies should exacerbate were as yet unknown among men. [And Celsus reports that diet, so necessary today, was only an invention of Hippocrates.]

With so few sources of ills, man in the state of nature hardly has any need therefore of remedies, much less of physicians. The human race is in no worse condition than all the others in this respect; and it is easy to learn from hunters whether in their chases they find many sick animals. They find quite a few that have received serious wounds that healed quite nicely, that have had bones or even limbs broken and reset with no other surgeon than time, no other regimen than their everyday life, and that are no less

perfectly cured for not having been tormented with incisions, poisoned with drugs, or exhausted with fasting. Finally, however correctly administered medicine may be among us, it is still certain that although a sick savage, abandoned to himself, has nothing to hope for except from nature, on the other hand, he has nothing to fear except his illness. This frequently makes his situation preferable to ours.

Therefore we must take care not to confuse savage man with the men we have before our eyes. Nature treats all animals left to their own devices with a partiality that seems to show how jealous she is of that right. The horse, the cat, the bull, even the ass, are usually taller, and all of them have a more robust constitution, more vigor, more strength, and more courage in the forests than in our homes. They lose half of these advantages in becoming domesticated; it might be said that all our efforts at feeding them and treating them well only end in their degeneration. It is the same for man himself. In becoming habituated to the ways of society and a slave, he becomes weak, fearful, and servile; his soft and effeminate lifestyle completes the enervation of both his strength and his courage. Let us add that the difference between the savage man and the domesticated man should be still greater than that between the savage animal and the domesticated animal; for while animal and man have been treated equally by nature, man gives more comforts to himself than to the animals he tames, and all of these comforts are so many specific causes that make him degenerate more noticeably.

It is therefore no great misfortune for those first men, nor, above all, such a great obstacle to their preservation, that they are naked, that they have no dwelling, and that they lack all those useful things we take to be so necessary. If they do not have furry skin, they have no need for it in warm countries, and in cold countries they soon learn to help themselves to the skins of animals they have vanquished. If they have but two feet to run with, they have two arms to provide for their defense and for their needs. Perhaps their children learn to walk late and with difficulty, but mothers carry them easily: an advantage that is lacking in other species, where the mother, on being pursued, finds herself forced to abandon her young or to conform her pace to theirs. [It is possible there are some exceptions to this. For example, the animal from the province of Nicaragua which resembles a fox and which has feet like a man's hands, and, according to Coreal, has a pouch under its belly in which the mother places her young when she is forced to take flight. No doubt this is the same animal that is called *tlaquatzin* in Mexico; the female of the species Laët describes as having a similar pouch for the same purpose.] Finally, unless we suppose those singular and fortuitous combinations of circumstances of which I will speak later, and which might very well have never taken place, at any rate it is clear that the first man who made clothing or a dwelling for himself was giving himself things that were hardly necessary, since he had done without them until then and since it is not clear why, as a grown man, he could not endure the kind of life he had endured ever since he was a child.

Alone, idle, and always near danger, savage man must like to sleep and be a light sleeper like animals which do little thinking and, as it were, sleep the entire time they are not thinking. Since his self-preservation was practically his sole concern, his best trained faculties ought to be those that have attack and defense as their principal object, either to subjugate his prey or to prevent his becoming the prey of another animal. On the other hand, the organs that are perfected only by softness and sensuality must remain in a state of crudeness that excludes any kind of refinement in him. And with his senses being divided in this respect, he will have extremely crude senses of touch and taste; those of sight, hearing and smell will have the greatest subtlety. Such is the state of animals in general, and, according to the reports of travellers, such also is that of the majority of savage peoples. Thus we should not be surprised that the Hottentots of the Cape of Good Hope can sight ships with the naked eye as far out at sea as the Dutch can with telescopes; or that the savages of America were as capable of trailing Spaniards by smell as the best dogs could have done; or that all these barbarous nations endure their nakedness with no discomfort, whet their appetites with hot peppers, and drink European liquors like water.

So far I have considered only physical man. Let us now try to look at him from a metaphysical and moral point of view.

In any animal I see nothing but an ingenious

machine to which nature has given senses in order for it to renew its strength and to protect itself, to a certain point, from all that tends to destroy or disturb it. I am aware of precisely the same things in the human machine, with the difference that nature alone does everything in the operations of an animal, whereas man contributes, as a free agent, to his own operations. The former chooses or rejects by instinct and the later by an act of freedom. Hence an animal cannot deviate from the rule that is prescribed to it, even when it would be advantageous to do so, while man deviates from it, often to his own detriment. Thus a pigeon would die of hunger near a bowl filled with choice meats, and so would a cat perched atop a pile of fruit or grain, even though both could nourish themselves quite well with the food they disdain, if they were of a mind to try some. And thus dissolute men abandon themselves to excesses which cause them fever and death, because the mind perverts the senses and because the will still speaks when nature is silent.

Every animal has ideas, since it has senses; up to a certain point it even combines its ideas, and in this regard man differs from an animal only in degree. Some philosophers have even suggested that there is a greater difference between two given men than between a given man and an animal. Therefore it is not so much understanding which causes the specific distinction of man from all other animals as it is his being a free agent. Nature commands every animal, and beasts obey. Man feels the same impetus, but he knows he is free to go along or to resist; and it is above all in the awareness of this freedom that the spirituality of his soul is made manifest. For physics explains in some way the mechanism of the senses and the formation of ideas; but in the power of willing, or rather of choosing, and in the feeling of this power, we find only purely spiritual acts, about which the laws of mechanics explain nothing.

But if the difficulties surrounding all these questions should leave some room for dispute on this difference between man and animal, there is another very specific quality which distinguishes them and about which there can be no argument: the faculty of self-perfection, a faculty which, with the aid of circumstances, successively develops all the others, and resides among us as much in the species as in the individual. On the other hand, an animal, at the end of a few months, is what it will be all its life; and its species, at the end of a thousand years, is what it was in the first of those thousand years. Why is man alone subject to becoming an imbecile? Is it not that he thereby returns to his primitive state, and that, while the animal which has acquired nothing and which also has nothing to lose, always retains its instinct, man, in losing through old age or other accidents all that his *perfectibility* has enabled him to acquire, thus falls even lower than the animal itself? It would be sad for us to be forced to agree that this distinctive and almost unlimited faculty is the source of all man's misfortunes; that this is what, by dint of time, draws him out of that original condition in which he would pass tranquil and innocent days; that this is what, through centuries of giving rise to his enlightenment and his errors, his vices and his virtues, eventually makes him a tyrant over himself and nature.[9] It would be dreadful to be obliged to praise as a beneficent being the one who first suggested to the inhabitant on the banks of the Orinoco the use of boards which he binds to his children's temples, and which assure them of at least part of their imbecility and their original happiness.

Savage man, left by nature to instinct alone, or rather compensated for the instinct he is perhaps lacking by faculties capable of first replacing them and then of raising him to the level of instinct, will therefore begin with purely animal functions.[10] Perceiving and feeling will be his first state, which he will have in common with all animals. Willing and not willing, desiring, and fearing will be the first and nearly the only operations of his soul until new circumstances bring about new developments in it.

Whatever the moralists may say about it, human understanding owes much to the passions, which, by common consensus, also owe a great deal to it. It is by their activity that our reason is perfected. We seek to know only because we desire to find enjoyment; and it is impossible to conceive why someone who had neither desires nor fears would go to the bother of reasoning. The passions in turn take their origin from our needs, and their progress from our knowledge. For one can desire or fear things only by virtue of the ideas one can have of them, or from the simple impulse of nature; and savage man, deprived of every

sort of enlightenment, feels only the passion of this latter sort. His desires do not go beyond his physical needs.[11] The only goods he knows in the universe are nourishment, a woman and rest; the only evils he fears are pain and hunger. I say pain and not death because an animal will never know what it is to die; and knowledge of death and its terrors is one of the first acquisitions that man has made in withdrawing from the animal condition.

Were it necessary, it would be easy for me to support this view with facts and to demonstrate that, among all the nations of the world, the progress of the mind has been precisely proportionate to the needs received by peoples from nature or to those needs to which circumstances have subjected them, and consequently to the passions which inclined them to provide for those needs. I would show the arts coming into being in Egypt and spreading with the flooding of the Nile. I would follow their progress among the Greeks, where they were seen to germinate, grow and rise to the heavens among the sands and rocks of Attica, though never being able to take root on the fertile banks of the Eurotas. I would point out that in general the peoples of the north are more industrious than those of the south, because they cannot get along as well without being so, as if nature thereby wanted to equalize things by giving to their minds the fertility it refuses their soil.

But without having recourse to the uncertain testimony of history, does anyone fail to see that everything seems to remove savage man from the temptation and the means of ceasing to be savage? His imagination depicts nothing to him; his heart asks nothing of him. His modest needs are so easily found at hand, and he is so far from the degree of knowledge necessary to make him desire to acquire greater knowledge, that he can have neither foresight nor curiosity. The spectacle of nature becomes a matter of indifference to him by dint of its becoming familiar to him. It is always the same order, always the same succession of changes. He does not have a mind for marveling at the greatest wonders; and we must not seek in him the philosophy that a man needs in order to know how to observe once what he has seen everyday. His soul, agitated by nothing, is given over to the single feeling of his own present existence, without any idea of the future, however, near it may be, and his projects, as limited as his views, hardly extend to the end of the day. Such is, even today, the extent of the Carib's foresight. In the morning he sells his bed of cotton and in the evening he returns in tears to buy it back, for want of having foreseen that he would need it that night.

The more one meditates on this subject, the more the distance from pure sensations to the simplest knowledge increases before our eyes; and it is impossible to conceive how a man could have crossed such a wide gap by his forces alone, without the aid of communication and without the provocation of necessity. How many centuries have perhaps gone by before men were in a position to see any fire other than that from the heavens? How many different risks did they have to run before they learned the most common uses of that element? How many times did they let it go out before they had acquired the art of reproducing it? And how many times perhaps did each of these secrets die with the one who had discovered it? What will we say about agriculture, an art that requires so much labor and foresight, that depends on so many other arts, that quite obviously is practicable only in a society which is at least in its beginning stages, and that serves us not so much to derive from the earth food it would readily provide without agriculture, as to force from it those preferences that are most to our taste? But let us suppose that men multiplied to the point where the natural productions were no longer sufficient to nourish them: a supposition which, it may be said in passing, would show a great advantage for the human species in that way of life. Let us suppose that, without forges or workshops, farm implements had fallen from the heavens into the hands of the savages; that these men had conquered the mortal hatred they all have for continuous work; that they had learned to foresee their needs far enough in advance; that they had guessed how the soil is to be cultivated, grains sown, and trees planted; that they had discovered the arts of grinding wheat and fermenting grapes: all things they would need to have been taught by the gods, for it is inconceivable how they could have picked these things up on their own. Yet, after all this, what man would be so foolish as to tire himself out cultivating a field that will be plundered by the first comer, be it man or beast, who takes a fancy to the crop? And how could each man

resolve to spend his life in hard labor, when, the more necessary to him the fruits of his labor may be, the surer he is of not realizing them? In a word, how could this situation lead men to cultivate the soil as long as it is not divided among them, that is to say, as long as the state of nature is not wiped out?

Were we to want to suppose a savage man as skilled in the art of thinking as our philosophers make him out to be; were we, following their example, to make him a full-fledged philosopher, discovering by himself the most sublime truths, and, by chains of terribly abstract reasoning, forming for himself maxims of justice and reason drawn from the love of order in general or from the known will of his creator; in a word, were we to suppose there was in his mind as much intelligence and enlightenment as he needs, and is in fact found to have dullness and stupidity, what use would the species have for all that metaphysics, which could not be communicated and which would perish with the individual who would have invented it? What progress could the human race make, scattered in the woods among the animals? And to what extent could men mutually perfect and enlighten one another, when, with neither a fixed dwelling nor any need for one another, they would hardly encounter one another twice in their lives, without knowing or talking to one another.

Let us consider how many ideas we owe to the use of speech; how much grammar trains and facilitates the operations of the mind. And let us think of the inconceivable difficulties and the infinite amount of time that the first invention of languages must have cost. Let us join their reflections to the preceding ones, and we will be in a position to judge how many thousands of centuries would have been necessary to develop successively in the human mind the operations of which it was capable.

May I be permitted to consider for a moment the obstacles to the origin of languages. I could be content here to cite or repeat the investigations that the Abbé de Condillac has made on this matter, all of which completely confirm my view, and may perhaps have given me the idea in the first place. But since the way in which this philosopher resolves the difficulties he himself raises concerning the origin of conventional signs shows that he assumed what I question (namely, a kind of society already established among the inventors of language), I believe that, in referring to his reflections, I must add to them my own, in order to present the same difficulties from a standpoint that is pertinent to my subject. The first that presents itself is to imagine how languages could have become necessary; for since men had no communication among themselves nor any need for it, I fail to see either the necessity of this invention or its possibility, if it were not indispensable. I might well say, as do many others, that languages were born in the domestic intercourse among fathers, mothers, and children. But aside from the fact that this would not resolve the difficulties, it would make the mistake of those who, reasoning about the state of nature, intrude into it ideas taken from society. They always see the family gathered in one and the same dwelling, with its members maintaining among themselves a union as intimate and permanent as exists among us, where so many common interests unite them. But the fact of the matter is that in that primitive state, since nobody had houses or huts or property of any kind, each one bedded down in some random spot and often for only one night. Males and females came together fortuitously as a result of chance encounters, occasion, and desire, without there being any great need for words to express what they had to say to one another. They left one another with the same nonchalance.[12] The mother at first nursed her children for her own need; then, with habit having endeared them to her, she later nourished them for their own need. Once they had the strength to look for their food, they did not hesitate to leave the mother herself. And since there was practically no other way of finding one another than not to lose sight of one another, they were soon at the point of not even recognizing one another. It should also be noted that, since the child had all his needs to explain and consequently more things to say to the mother than the mother to the child, it is the child who must make the greatest effort toward inventing a language, and that the language he uses should in large part be of his own making, which multiplies languages as many times as there are individuals to speak them. This tendency was abetted by a nomadic and vagabond life, which does not give any idiom time to gain a foothold. For claiming that the mother teaches her child the words he ought to use in asking her for this or that is a good

way of showing how already formed languages are taught, but it does not tell us how languages are formed.

Let us suppose this first difficulty has been overcome. Let us disregard for a moment the immense space that there must have been between the pure state of nature and the need for languages. And, on the supposition that they are necessary,[13] let us inquire how they might have begun to be established. Here we come to a new difficulty, worse still than the preceding one. For if men needed speech in order to learn to think, they had a still greater need for knowing how to think in order to discover the art of speaking. And even if it were understood how vocal sounds had been taken for the conventional expressions of our ideas, it would still remain for us to determine what could have been the conventional expressions for ideas that, not having a sensible object, could not be indicated either by gesture or by voice. Thus we are scarcely able to form tenable conjectures regarding the birth of this art of communicating thoughts and establishing intercourse between minds, a sublime art which is already quite far from its origin, but which the philosopher still sees at so prodigious a distance from its perfection that there is no man so foolhardy as to claim that it will ever achieve it, even if the sequences of change that time necessarily brings were suspended in its favor, even if prejudices were to be barred from the academies or be silent before them, and even if they were able to occupy themselves with that thorny problem for whole centuries without interruption.

Man's first language, the most universal, the most energetic and the only language he needed before it was necessary to persuade men assembled together, is the cry of nature. Since this cry was elicited only by a kind of instinct in pressing circumstances, to beg for help in great dangers, or for relief of violent ills, it was not used very much in the ordinary course of life, where more moderate feelings prevail. When the ideas of men begin to spread and multiply, and closer communication was established among them, they sought more numerous signs and a more extensive language. They multiplied vocal inflections and combined them with gestures, which, by their nature, are more expressive, and whose meaning is less dependent on a prior determination. They therefore signified visible and mobile objects by means of gestures, and audible ones by imitative sounds. But since a gesture indicates hardly anything more than present or easily described objects and visible actions; since its use is not universal, because darkness or the interposition of a body renders it useless; and since it requires rather than stimulates attention, men finally thought of replacing them with vocal articulations, which, while not having the same relationship to certain ideas, were better suited to represent all ideas as conventional signs. Such a substitution could only be made by a common consent and in a way rather difficult to practice for men whose crude organs had as yet no exercise, and still more difficult to conceive in itself, since that unanimous agreement had to have had a motive, and speech appears to have been necessary in order to establish the use of speech.

We must infer that the first words men used had a much broader meaning in their mind than do those used in languages that are already formed; and that, being ignorant of the division of discourse into its constitutive parts, at first they gave each word the meaning of a whole sentence. When they began to distinguish subject from attribute and verb from noun, which was no mean effort of genius, substantives were at first only so many proper nouns; the [present] infinitive was the only verb tense; and the notion of adjectives must have developed only with considerable difficulty, since every adjective is an abstract word, and abstractions are difficult and not particularly natural operations.

At first each object was given a particular name, without regard to genus and species which those first founders were not in a position to distinguish; and all individual things presented themselves to their minds in isolation, as they are in the spectacle of nature. If one oak tree was called A, another was called B. [For the first idea one draws from two things is that they are not the same; and it often requires quite some time to observe what they have in common.] Thus the more limited the knowledge, the more extensive becomes the dictionary. The difficulty inherent in all this nomenclature could not easily be alleviated, for in order to group beings under various common and generic denominations, it was necessary to know their properties and their differences. Observations and definitions were necessary, that is to say,

natural history and metaphysics, and far more than men of those times could have had.

Moreover, general ideas can be introduced into the mind only with the aid of words, and the understanding grasps them only through sentences. That is one reason why animals cannot form such ideas or even acquire the perfectibility that depends on them. When a monkey moves unhesitatingly from one nut to another, does anyone think the monkey has the general idea of that type of fruit and that he compares its archetype with these two individuals? Undoubtedly not; but the sight of one of these nuts recalls to his memory the sensations he received of the other; and his eyes, modified in a certain way, announce to his sense of taste the modification it is about to receive. Every general idea is purely intellectual. The least involvement of the imagination thereupon makes the idea particular. Try to draw for yourself the image of a tree in general; you will never succeed in doing it. In spite of yourself, it must be seen as small or large, barren or leafy, light or dark; and if you were in a position to see in it nothing but what you see in every tree, this image would no longer resemble a tree. Purely abstract beings are perceived in the same way, or are conceived only through discourse. The definition of a triangle alone gives you the true idea of it. As soon as you behold one in your mind, it is a particular triangle and not some other one, and you cannot avoid making its lines to be perceptible or its plane to have color. It is therefore necessary to utter sentences, and thus to speak, in order to have general ideas. For as soon as the imagination stops, the mind proceeds no further without the aid of discourse. If, then, the first inventors of language could give names only to ideas they already had, it follows that the first substantives could not have been anything but proper nouns.

But when, by means I am unable to conceive, our new grammarians began to extend their ideas and to generalize their words, the ignorance of the inventors must have subjected this method to very strict limitations. And just as they had at first unduly multiplied the names of individual things, owing to their failure to know the genera and species, they later made too few species and genera, owing to their failure to have considered beings in all their differences. Pushing these divisions far enough would have required more experience and enlightenment than they could have had, and more investigations and work than they were willing to put into it. Now if even today new species are discovered everyday that until now had escaped all our observations, just imagine how many species must have escaped the attention of men who judged things only on first appearance! As for primary classes and the most general notions, it is superfluous to add that they too must have escaped them. How, for example, would they have imagined or understood the words "matter," "mind," "substance," "mode," "figure," and "movement," when our philosophers, who for so long have been making use of them, have a great deal of difficulty understanding them themselves; and when, since the ideas attached to these words are purely metaphysical, they found no model of them in nature?

I stop with these first steps, and I implore my judges to suspend their reading here to consider, concerning the invention of physical substantives alone, that is to say, concerning the easiest part of the language to discover, how far language still had to go in order to express all the thoughts of men, assume a durable form, be capable of being spoken in public, and influence society. I implore them to reflect upon how much time and knowledge were needed to discover numbers,[14] abstract words, aorists, and all the tenses of verbs, particles, syntax, the connecting of sentences, reasoning, and the forming of all the logic of discourse. As for myself, being shocked by the unending difficulties and convinced of the almost demonstrable impossibility that languages could have arisen and been established by merely human means, I leave to anyone who would undertake it the discussion of the following difficult problem: which was the more necessary: an already formed society for the invention of languages, or an already invented language for the establishment of society?

Whatever these origins may be, it is clear, from the little care taken by nature to bring men together through mutual needs and to facilitate their use of speech, how little she prepared them for becoming habituated to the ways of society, and how little she contributed to all that men have done to establish the bonds of society. In fact, it is impossible to imagine why, in that primitive state, one man would have a greater need for another man than a monkey or a

wolf has for another of its respective species; or, assuming this need, what motive could induce the other man to satisfy it; or even, in this latter instance, how they could be in mutual agreement regarding the conditions. I know that we are repeatedly told that nothing would have been so miserable as man in that state; and if it is true, as I believe I have proved, that it is only after many centuries that men could have had the desire and the opportunity to leave that state, that would be a charge to bring against nature, not against him whom nature has thus constituted. But if we understand the word *miserable* properly, it is a word which is without meaning or which signifies merely a painful privation and suffering of the body or the soul. Now I would very much like someone to explain to me what kind of misery can there be for a free being whose heart is at peace and whose body is in good health? I ask which of the two, civil or natural life, is more likely to become insufferable to those who live it? We see about us practically no people who do not complain about their existence; many even deprive themselves of it to the extent they are able, and the combination of divine and human laws is hardly enough to stop this disorder. I ask if anyone has ever heard tell of a savage who was living in liberty ever dreaming of complaining about his life and of killing himself. Let the judgment therefore be made with less pride on which side real misery lies. On the other hand, nothing would have been so miserable as savage man, dazzled by enlightenment, tormented by passions, and reasoning about a state different from his own. It was by a very wise providence that the latent faculties he possessed should develop only as the occasion to exercise them presents itself, so that they would be neither superfluous nor troublesome to him beforehand, nor underdeveloped and useless in time of need. In instinct alone, man had everything he needed in order to live in the state of nature; in a cultivated reason, he has only what he needs to live in society.

At first it would seem that men in that state, having among themselves no type of moral relations or acknowledged duties, could be neither good nor evil, and had neither vices nor virtues, unless, if we take these words in a physical sense, we call those qualities that can harm an individual's preservation "vices" in him, and those that can contribute to it "virtues." In that case it would be necessary to call the one who least resists the simple impulses of nature the most virtuous. But without departing from the standard meaning of these words, it is appropriate to suspend the judgment we could make regarding such a situation and to be on our guard against our prejudices, until we have examined with scale in hand whether there are more virtues than vices among civilized men; or whether their virtues are more advantageous than their vices are lethal; or whether the progress of their knowledge is sufficient compensation for ills they inflict on one another as they learn of the good they ought to do; or whether, all things considered, they would not be in a happier set of circumstances if they had neither evil to fear nor good to hope for from anyone, rather than subjecting themselves to a universal dependence and obliging themselves to receive everything from those who do not oblige themselves to give them anything.

Above all, let us not conclude with Hobbes that because man has no idea of goodness he is naturally evil; that he is vicious because he does not know virtue; that he always refuses to perform services for his fellow men he does not believe he owes them; or that, by virtue of the right, which he reasonably attributes to himself, to those things he needs, he foolishly imagines himself to be the sole proprietor of the entire universe. Hobbes has very clearly seen the defect of all modern definitions of natural right, but the consequences he draws from his own definition show that he takes it in a sense that is no less false. Were he to have reasoned on the basis of the principles he establishes, this author should have said that since the state of nature is the state in which the concern for our self-preservation is the least prejudicial to that of others, that state was consequently the most appropriate for peace and the best suited for the human race. He says precisely the opposite, because he had wrongly injected into the savage man's concern for self-preservation the need to satisfy a multitude of passions which are the product of society and which have made laws necessary. The evil man, he says, is a robust child. It remains to be seen whether savage man is a robust child. Were we to grant him this, what would we conclude from it? That if this man were as dependent on others when he is robust as he is when he is weak, there is no type of excess

to which he would not tend: he would beat his mother if she were too slow in offering him her breast; he would strangle one of his younger brothers, should he find him annoying; he would bite someone's leg, should he be assaulted or aggravated by him. But being robust and being dependent are two contradictory suppositions in the state of nature. Man is weak when he is dependent, and he is emancipated from that dependence before he is robust. Hobbes did not see that the same cause preventing savages from using their reason, as our jurists claim, is what prevents them at the same time from abusing their faculties, as he himself maintains. Hence we could say that savages are not evil precisely because they do not know what it is to be good; for it is neither the development of enlightenment nor the restraint imposed by the law, but the calm of the passions and the ignorance of vice which prevents them from doing evil. *So much more profitable to these is the ignorance of vice than the knowledge of virtue is to those.* Moreover, there is another principle that Hobbes failed to notice, and which, having been given to man in order to mitigate, in certain circumstances, the ferocity of his egocentrism or the desire for self-preservation before this egocentrism of his came into being,[15] tempers the ardor he has for his own well-being by an innate repugnance to seeing his fellow men suffer. I do not believe I have any contradiction to fear in granting the only natural virtue that the most excessive detractor of human virtues was forced to recognize. I am referring to pity, a disposition that is fitting for beings that are as weak and as subject to ills as we are; a virtue all the more universal and all the more useful to man in that it precedes in him any kind of reflection, and so natural that even animals sometimes show noticeable signs of it. Without speaking of the tenderness of mothers for their young and of the perils they have to brave in order to protect them, one daily observes the repugnance that horses have for trampling a living body with their hooves. An animal does not go undisturbed past a dead animal of its own species. There are even some animals that give them a kind of sepulchre; and the mournful lowing of cattle entering a slaughterhouse voices the impression they receive of the horrible spectacle that strikes them. One notes with pleasure the author of *The Fable of the Bees*, having been forced to acknowledge man as a compassionate and sensitive being, departing from his cold and subtle style in the example he gives, to offer us the pathetic image of an imprisoned man who sees outside his cell a ferocious animal tearing a child from its mother's breast, mashing its frail limbs with its murderous teeth, and ripping with its claws the child's quivering entrails. What horrible agitation must be felt by this witness of an event in which he has no personal interest! What anguish must he suffer at this sight, being unable to be of any help to the fainting mother or to the dying child?

Such is the pure movement of nature prior to all reflection. Such is the force of natural pity, which the most depraved mores still have difficulty destroying, since everyday one sees in our theaters someone affected and weeping at the ills of some unfortunate person, and who, were he in the tyrant's place, would intensify the torments of his enemy still more; [like the bloodthirsty Sulla, so sensitive to ills he had not caused, or like Alexander of Pherae, who did not dare attend the performance of any tragedy, for fear of being seen weeping with Andromache and Priam, and yet who listened impassively to the cries of so many citizens who were killed everyday on his orders. *Nature, in giving men tears, bears witness that she gave the human race the softest hearts.*] Mandeville has a clear awareness that, with all their mores, men would never have been anything but monsters, if nature had not given them pity to aid their reason; but he has not seen that from this quality alone flow all the social virtues that he wants to deny in men. In fact, what are generosity, mercy, and humanity, if not pity applied to the weak, to the guilty, or to the human species in general. Benevolence and even friendship are, properly understood, the products of a constant pity fixed on a particular object; for is desiring that someone not suffer anything but desiring that he be happy? Were it true that commiseration were merely a sentiment that puts us in the position of the one who suffers, a sentiment that is obscure and powerful in savage man, developed but weak in man dwelling in civil society, what importance would this idea have to the truth of what I say, except to give it more force? In fact, commiseration will be all the more energetic as the witnessing animal identifies itself more intimately with the suffering animal. Now it is evident that this identification must have been

infinitely closer in the state of nature than in the state of reasoning. Reason is what engenders egocentrism, and reflection strengthens it. Reason is what turns man in upon himself. Reason is what separates him from all that troubles him and afflicts him. Philosophy is what isolates him and what moves him to say in secret, at the sight of a suffering man, "Perish if you will; I am safe and sound." No longer can anything but danger to the entire society trouble the tranquil slumber of the philosopher and yank him from his bed. His fellow man can be killed with impunity underneath his window. He has merely to place his hands over his ears and argue with himself a little in order to prevent nature, which rebels within him, from identifying him with the man being assassinated. Savage man does not have this admirable talent, and for lack of wisdom and reason he is always seen thoughtlessly giving in to the first sentiment of humanity. When there is a riot or a street brawl, the populace gathers together; the prudent man withdraws from the scene. It is the rabble, the women of the marketplace, who separate the combatants and prevent decent people from killing one another.

It is therefore quite certain that pity is a natural sentiment, which, by moderating in each individual the activity of the love of oneself, contributes to the mutual preservation of the entire species. Pity is what carries us without reflection to the aid of those we see suffering. Pity is what, in the state of nature, takes the place of laws, mores, and virtue, with the advantage that no one is tempted to disobey its sweet voice. Pity is what will prevent every robust savage from robbing a weak child or an infirm old man of his hard-earned subsistence, if he himself expects to be able to find his own someplace else. Instead of the sublime maxim of reasoned justice, *Do unto others as you would have them do unto you*, pity inspires all men with another maxim of natural goodness, much less perfect but perhaps more useful than the preceding one: *Do what is good for you with as little harm as possible to others.* In a word, it is in this natural sentiment, rather than in subtle arguments, that one must search for the cause of the repugnance at doing evil that every man would experience, even independently of the maxims of education. Although it might be appropriate for Socrates and minds of his stature to acquire virtue through reason, the human race would long ago have ceased to exist, if its preservation had depended solely on the reasonings of its members.

With passions so minimally active and such a salutary restraint, being more wild than evil, and more attentive to protecting themselves from the harm they could receive than tempted to do harm to others, men were not subject to very dangerous conflicts. Since they had no sort of intercourse among themselves; since, as a consequence, they knew neither vanity, nor deference, nor esteem, nor contempt; since they had not the slightest notion of mine and thine, nor any true idea of justice; since they regarded the acts of violence that could befall them as an easily redressed evil and not as an offense that must be punished; and since they did not even dream of vengeance except perhaps as a knee-jerk response right then and there, like the dog that bites the stone that is thrown at him, their disputes would rarely have had bloody consequences, if their subject had been no more sensitive than food. But I see a more dangerous matter that remains for me to discuss.

Among the passions that agitate the heart of man, there is an ardent, impetuous one that renders one sex necessary to the other; a terrible passion which braves all dangers, overcomes all obstacles, and which, in its fury, seems fitted to destroy the human race it is destined to preserve. What would become of men, victimized by this unrestrained and brutal rage, without modesty and self-control, fighting everyday over the object of their passion at the price of their blood?

There must first be agreement that the more violent the passions are, the more necessary the laws are to contain them. But over and above the fact that the disorders and the crimes these passions cause daily in our midst show quite well the insufficiency of the laws in this regard, it would still be good to examine whether these disorders did not come into being with the laws themselves; for then, even if they were capable of repressing them, the least one should expect of them would be that they call a halt to an evil that would not exist without them.

Let us begin by distinguishing between the moral and the physical aspects of the sentiment of love. The physical aspect is that general desire which inclines one sex to unite with another. The moral aspect is what determines this desire and fixes it exclusively

on one single object, or which at least gives it a greater degree of energy for this preferred object. Now it is easy to see that the moral aspect of love is an artificial sentiment born of social custom, and extolled by women with so much skill and care in order to establish their hegemony and make dominant the sex that ought to obey. Since this feeling is founded on certain notions of merit or beauty that a savage is not in a position to have, and on comparisons he is incapable of making, it must be almost non-existent for him. For since his mind could not form abstract ideas of regularity and proportion, his heart is not susceptible to sentiments of admiration and love, which, even without its being observed come into being from the application of these ideas. He pays exclusive attention to the temperament he has received from nature, and not the taste [aversion] he has been unable to acquire; any woman suits his purpose.

Limited merely to the physical aspect of love, and fortunate enough to be ignorant of those preferences which stir up the feeling and increase the difficulties in satisfying it, men must feel the ardors of their temperament less frequently and less vividly, and consequently have fewer and less cruel conflicts among themselves. Imagination, which wreaks so much havoc among us, does not speak to savage hearts; each man peacefully awaits the impetus of nature, gives himself over to it without choice, and with more pleasure than frenzy; and once the need is satisfied, all desire is snuffed out.

Hence it is incontestable that love itself, like all other passions, had acquired only in society that impetuous ardor which so often makes it lethal to men. And it is all the more ridiculous to represent savages as continually slaughtering each other in order to satisfy their brutality, since this opinion is directly contrary to experience; and since the Caribs, of all existing peoples, are the people that until now has wandered least from the state of nature, they are the people least subject to jealousy, even though they live in a hot climate which always seems to occasion greater activity in these passions.

As to any inferences that could be drawn, in the case of several species of animals, from the clashes between males that bloody our poultry yards throughout the year, and which make our forests resound in the spring with their cries as they quarrel over a female, it is necessary to begin by excluding all species in which nature has manifestly established, in the relative power of the sexes, relations other than those that exist among us. Hence cockfights do not form the basis for an inference regarding the human species. In species where the proportion is more closely observed, these fights can have for their cause only the scarcity of females in relation to the number of males, or the exclusive intervals during which the female continually rejects the advances of the male, which adds up to the cause just cited. For if each female receives the male for only two months a year, in this respect it is as if the number of females were reduced by five-sixths. Now neither of these two cases is applicable to the human species where the number of females generally surpasses the number of males, and where human females, unlike those of other species, have never been observed to have periods of heat and exclusion, even among savages. Moreover, among several of these animal species, where the entire species goes into heat simultaneously, there comes a terrible moment of common ardor, tumult, disorder and combat: a moment that does not happen in the human species where love is never periodic. Therefore one cannot conclude from the combats of certain animals for the possession of females that the same thing would happen to man in the state of nature. And even if one could draw that conclusion, given that these conflicts do not destroy the other species, one should conclude that they would not be any more lethal for ours. And it is quite apparent that they would wreak less havoc in the state of nature than in society, especially in countries where mores still count for something and where the jealousy of lovers and the vengeance of husbands every day give rise to duels, murders and still worse things; where the duty of eternal fidelity serves merely to create adulterers; and where even the laws of continence and honor necessarily spread debauchery and multiply the number of abortions.

Let us conclude that, wandering in the forests, without industry, without speech, without dwelling, without war, without relationships, with no need for his fellow men, and correspondingly with no desire to do them harm, perhaps never even recognizing any of them individually, savage man, subject to few passions and self-sufficient, had only the sentiments

and enlightenment appropriate to that state; he felt only his true needs, took notice of only what he believed he had an interest in seeing; and that his intelligence made no more progress than his vanity. If by chance he made some discovery, he was all the less able to communicate it to others because he did not even know his own children. Art perished with its inventor. There was neither education nor progress; generations were multiplied to no purpose. Since each one always began from the same point, centuries went by with all the crudeness of the first ages; the species was already old, and man remained ever a child.

If I have gone on at such length about the supposition of that primitive condition, it is because, having ancient errors and inveterate prejudices to destroy, I felt I should dig down to the root and show, in the depiction of the true state of nature, how far even natural inequality is from having as much reality and influence in that state as our writers claim.

In fact, it is easy to see that, among the differences that distinguish men, several of them pass for natural ones which are exclusively the work of habit and of the various sorts of life that men adopt in society. Thus a robust or delicate temperament, and the strength or weakness that depend on it, frequently derive more from the harsh or effeminate way in which one has been raised than from the primitive constitution of bodies. The same holds for mental powers; and not only does education make a difference between cultivated minds and those that are not, it also augments the difference among the former in proportion to their culture; for were a giant and a dwarf walking on the same road, each step they both take would give a fresh advantage to the giant. Now if one compares the prodigious diversity of educations and lifestyles in the different orders of the civil state with the simplicity and uniformity of animal and savage life, where all nourish themselves from the same foods live in the same manner, and do exactly the same things, it will be understood how much less the difference between one man and another must be in the state of nature than in that of society, and how much natural inequality must increase in the human species through inequality occasioned by social institutions.

But even if nature were to affect, in the distribution of her gifts, as many preferences as is claimed, what advantage would the most favored men derive from them, to the detriment of others, in a state of things that allowed practically no sort of relationships among them? Where there is no love, what use is beauty? What use is wit for people who do not speak, and ruse to those who have no dealing with others? I always hear it repeated that the stronger will oppress the weaker. But let me have an explanation of the meaning of the word "oppression." Some will dominate with violence; others will groan, enslaved to all their caprices. That is precisely what I observe among us; but I do not see how this could be said of savage men, to whom it would be difficult even to explain what servitude and domination are. A man could well lay hold of the fruit another has gathered, the game he has killed, the cave that served as his shelter. But how will he ever succeed in making himself be obeyed? And what can be the chains of dependence among men who possess nothing? If someone chases me from one tree, I am free to go to another; if someone torments me in one place, who will prevent me from going elsewhere? Is there a man with strength sufficiently superior to mine and who is, moreover, sufficiently depraved, sufficiently lazy and sufficiently ferocious to force me to provide for his subsistence while he remains idle? He must resolve not to take his eyes off me for a single instant, to keep me carefully tied down while he sleeps, for fear that I may escape or that I would kill him. In other words, he is obliged to expose himself voluntarily to a much greater hardship than the one he wants to avoid and gives me. After all that, were his vigilance to relax for an instant, were an unforeseen noise to make him turn his head, I take twenty steps into the forest; my chains are broken, and he never sees me again for the rest of his life.

Without needlessly prolonging these details, anyone should see that, since the bonds of servitude are formed merely from the mutual dependence of men and the reciprocal needs that unite them, it is impossible to enslave a man without having first put him in the position of being incapable of doing without another. This being a situation that did not exist in the state of nature, it leaves each person free of the yoke, and renders pointless the law of the strongest.

After having proved that inequality is hardly observable in the state of nature, and that its influence there

is almost nonexistent, it remains for me to show its origin and progress in the successive developments of the human mind. After having shown that *perfectibility*, social virtues, and the other faculties that natural man had received in a state of potentiality could never develop by themselves, that to achieve this development they required the chance coming together of several unconnected causes that might never have come into being and without which he would have remained eternally in his primitive constitution, it remains for me to consider and to bring together the various chance happenings that were able to perfect human reason while deteriorating the species, make a being evil while rendering it habituated to the ways of society, and, from so distant a beginning, finally bring man and the world to the point where we see them now.

I admit that, since the events I have to describe could have taken place in several ways, I cannot make a determination among them except on the basis of conjecture. But over and above the fact that these conjectures become reasons when they are the most probable ones that a person can draw from the nature of things and the sole means that a person can have of discovering the truth, the consequences I wish to deduce from mine will not thereby be conjectural, since, on the basis of the principles I have just established, no other system is conceivable that would not furnish me with the same results, and from which I could not draw the same conclusions.

This will excuse me from expanding my reflections on the way in which the lapse of time compensates for the slight probability of events; concerning the surprising power that quite negligible causes may have when they act without interruption; concerning the impossibility, on the one hand, of a person's destroying certain hypotheses, even though, on the other hand, one is not in a position to accord them the level of factual certitude; concerning a situation in which two facts given as real are to be connected by a series of intermediate facts that are unknown or regarded as such, it belongs to history, when it exists, to provide the facts that connect them; it belongs to philosophy, when history is unavailable, to determine similar facts that can connect them; finally, concerning how, with respect to events, similarity reduces the facts to a much smaller number of different classes than one might imagine. It is enough for me to offer these objects to the consideration of my judges; it is enough for me to have seen to it that ordinary readers would have no need to consider them.

Part Two

The first person who, having enclosed a plot of land, took it into his head to say *this is mine* and found people simple enough to believe him, was the true founder of civil society. What crimes, wars, murders, what miseries and horrors would the human race have been spared, had someone pulled up the stakes or filled in the ditch and cried out to his fellow men: "Do not listen to this impostor. You are lost if you forget that the fruits of the earth belong to all and the earth to no one!" But it is quite likely that by then things had already reached the point where they could no longer continue as they were. For this idea of property, depending on many prior ideas which could only have arisen successively, was not formed all at once in the human mind. It was necessary to make great progress, to acquire much industry and enlightenment, and to transmit and augment them from one age to another, before arriving at this final stage in the state of nature. Let us therefore take things farther back and try to piece together under a single viewpoint that slow succession of events and advances in knowledge in their most natural order.

Man's first sentiment was that of his own existence; his first concern was that of his preservation. The products of the earth provided him with all the help he needed; instinct led him to make use of them. With hunger and other appetites making him experience by turns various ways of existing, there was one appetite that invited him to perpetuate his species; and this blind inclination, devoid of any sentiment of the heart, produced a purely animal act. Once this need had been satisfied, the two sexes no longer took cognizance of one another, and even the child no longer meant anything to the mother once it could do without her.

Such was the condition of man in his nascent stage; such was the life of an animal limited at first to pure sensations, and scarcely profiting from the gifts nature offered him, far from dreaming of extracting anything from her. But difficulties soon presented themselves

to him; it was necessary to learn to overcome them. The height of trees, which kept him from reaching their fruits, the competition of animals that sought to feed themselves on these same fruits, the ferocity of those animals that wanted to take his own life: everything obliged him to apply himself to bodily exercises. It was necessary to become agile, fleet-footed and vigorous in combat. Natural arms, which are tree branches and stones, were soon found ready at hand. He learned to surmount nature's obstacles, combat other animals when necessary, fight for his subsistence even with men, or compensate for what he had to yield to those stronger than himself.

In proportion as the human race spread, difficulties multiplied with the men. Differences in soils, climates and seasons could force them to inculcate these differences in their lifestyles. Barren years, long and hard winters, hot summers that consume everything required new resourcefulness from them. Along the seashore and the riverbanks they invented the fishing line and hook, and became fishermen and fish-eaters. In the forests they made bows and arrows, and became hunters and warriors. In cold countries they covered themselves with the skins of animals they had killed. Lightning, a volcano, or some fortuitous chance happening acquainted them with fire: a new resource against the rigors of winter. They learned to preserve this element, then to reproduce it, and finally to use it to prepare meats that previously they devoured raw.

This repeated appropriation of various beings to himself, and of some beings to others, must naturally have engendered in man's mind the perceptions of certain relations. These relationships which we express by the words "large," "small," "strong," "weak," "fast," "slow," "timorous," "bold," and other similar ideas, compared when needed and almost without thinking about it, finally produced in him a kind of reflection, or rather a mechanical prudence which pointed out to him the precautions that were most necessary for his safety.

The new enlightenment which resulted from this development increased his superiority over the other animals by making him aware of it. He trained himself to set traps for them; he tricked them in a thousand different ways. And although several surpassed him in fighting strength or in swiftness in running, of those that could serve him or hurt him, he became in time the master of the former and the scourge of the latter. Thus the first glance he directed upon himself produced within him the first stirring of pride; thus, as yet hardly knowing how to distinguish the ranks, and contemplating himself in the first rank by virtue of his species, he prepared himself from afar to lay claim to it in virtue of his individuality.

Although his fellowmen were not for him what they are for us, and although he had hardly anything more to do with them than with other animals, they were not forgotten in his observations. The conformities that time could make him perceive among them, his female, and himself, made him judge those he did not perceive. And seeing that they all acted as he would have done under similar circumstances, he concluded that their way of thinking and feeling was in complete conformity with his own. And this important truth, well established in his mind, made him follow, by a presentiment as sure as dialectic and more prompt, the best rules of conduct that it was appropriate to observe toward them for his advantage and safety.

Taught by experience that love of well-being is the sole motive of human actions, he found himself in a position to distinguish the rare occasions when common interest should make him count on the assistance of his fellowmen, and those even rarer occasions when competition ought to make him distrust them. In the first case, he united with them in a herd, or at most in some sort of free association, that obligated no one and that lasted only as long as the passing need that had formed it. In the second case, everyone sought to obtain his own advantage, either by overt force, if he believed he could, or by cleverness and cunning, if he felt himself to be the weaker.

This is how men could imperceptibly acquire some crude idea of mutual commitments and of the advantages to be had in fulfilling them, but only insofar as present and perceptible interests could require it, since foresight meant nothing to them, and far from concerning themselves about a distant future, they did not even give a thought to the next day. Were it a matter of catching a deer, everyone was quite aware that he must faithfully keep to his post in order to achieve this purpose; but if a hare happened to pass within reach of one of them, no doubt he would have pursued it without giving it a second thought, and

that, having obtained his prey, he cared very little about causing his companions to miss theirs.

It is easy to understand that such intercourse did not require a language much more refined than that of crows or monkeys, which flock together in practically the same way. Inarticulate cries, many gestures, and some imitative noises must for a long time have made up the universal language. By joining to this in each country a few articulate and conventional sounds, whose institution, as I have already said, is not too easy to explain, there were individual languages, but crude and imperfect ones, quite similar to those still spoken by various savage nations today. Constrained by the passing of time, the abundance of things I have to say, and the practically imperceptible progress of the beginnings, I am flying like an arrow over the multitudes of centuries. For the slower events were in succeeding one another, the quicker they can be described.

These first advances enabled man to make more rapid ones. The more the mind was enlightened, the more industry was perfected. Soon they ceased to fall asleep under the first tree or to retreat into caves, and found various types of hatchets made of hard, sharp stones, which served to cut wood, dig up the soil, and make huts from branches they later found it useful to cover with clay and mud. This was the period of a first revolution which formed the establishment of the distinction among families and which introduced a kind of property, whence perhaps there already arose many quarrels and fights. However, since the strongest were probably the first to make themselves lodgings they felt capable of defending, presumably the weak found it quicker and safer to imitate them than to try to dislodge them; and as for those who already had huts, each of them must have rarely sought to appropriate that of his neighbor, less because it did not belong to him than because it was of no use to him, and because he could not seize it without exposing himself to a fierce battle with the family that occupied it.

The first developments of the heart were the effect of a new situation that united the husbands and wives, fathers and children in one common habitation. The habit of living together gave rise to the sweetest sentiments known to men: conjugal love and paternal love. Each family became a little society all the better united because mutual attachment and liberty were its only bonds; and it was then that the first difference was established in the lifestyle of the two sexes, which until then had had only one. Women became more sedentary and grew accustomed to watch over the hut and the children, while the man went to seek their common subsistence. With their slightly softer life the two sexes also began to lose something of their ferocity and vigor. But while each one separately became less suited to combat savage beasts, on the other hand it was easier to assemble in order jointly to resist them.

In this new state, with a simple and solitary life, very limited needs, and the tools they had invented to provide for them, since men enjoyed a great deal of leisure time, they used it to procure for themselves many types of conveniences unknown to their fathers; and that was the first yoke they imposed on themselves without realizing it, and the first source of evils they prepared for their descendants. For in addition to their continuing thus to soften body and mind (those conveniences having through habit lost almost all their pleasure, and being at the same time degenerated into true needs), being deprived of them became much more cruel than possessing them was sweet; and they were unhappy about losing them without being happy about possessing them.

At this point we can see a little better how the use of speech was established or imperceptibly perfected itself in the bosom of each family; and one can further conjecture how various particular causes could have extended the language and accelerated its progress by making it more necessary. Great floods or earthquakes surrounded the inhabited areas with water or precipices. Upheavals of the globe detached parts of the mainland and broke them up into islands. Clearly among men thus brought together and forced to live together, a common idiom must have been formed sooner than among those who wandered freely about the forests of the mainland. Thus it is quite possible that after their first attempts at navigation, the islanders brought the use of speech to us; and it is at least quite probable that society and languages came into being on islands and were perfected there before they were known on the mainland.

Everything begins to take on a new appearance. Having previously wandered about the forests and

having assumed a more fixed situation, men slowly came together and united into different bands, eventually forming in each country a particular nation, united by mores and characteristic features, not by regulations and laws, but by the same kind of life and foods and by the common influence of the climate. Eventually a permanent proximity cannot fail to engender some intercourse among different families. Young people of different sexes live in neighboring huts; the passing intercourse demanded by nature soon leads to another, through frequent contact with one another, no less sweet and more permanent. People become accustomed to consider different objects and to make comparisons. Imperceptibly they acquire the ideas of merit and beauty which produce feelings of preference. By dint of seeing one another, they can no longer get along without seeing one another again. A sweet and tender feeling insinuates itself into the soul and at the least opposition becomes an impetuous fury. Jealousy awakens with love; discord triumphs, and the sweetest passion receives sacrifices of human blood.

In proportion as ideas and sentiments succeed one another and as the mind and heart are trained, the human race continues to be tamed, relationships spread and bonds are tightened. People grew accustomed to gather in front of their huts or around a large tree; song and dance, true children of love and leisure, became the amusement or rather the occupation of idle men and women who had flocked together. Each one began to look at the others and to want to be looked at himself, and public esteem had a value. The one who sang or danced the best, the handsomest, the strongest, the most adroit or the most eloquent became the most highly regarded. And this was the first step toward inequality and, at the same time, toward vice. From these first preferences were born vanity and contempt on the one hand, and shame and envy on the other. And the fermentation caused by these new leavens eventually produced compounds fatal to happiness and innocence.

As soon as men had begun mutually to value one another, and the idea of esteem was formed in their minds, each one claimed to have a right to it, and it was no longer possible for anyone to be lacking it with impunity. From this came the first duties of civility, even among savages; and from this every voluntary wrong became an outrage, because along with the harm that resulted from the injury, the offended party saw in it contempt for his person, which often was more insufferable than the harm itself. Hence each man punished the contempt shown him in a manner proportionate to the esteem in which he held himself; acts of revenge became terrible, and men became bloodthirsty and cruel. This is precisely the stage reached by most of the savage people known to us; and it is for want of having made adequate distinctions among their ideas or of having noticed how far these peoples already were from the original state of nature that many have hastened to conclude that man is naturally cruel, and that he needs civilization in order to soften him. On the contrary, nothing is so gentle as man in his primitive state, when, placed by nature at an equal distance from the stupidity of brutes and the fatal enlightenment of civil man, and limited equally by instinct and reason to protecting himself from the harm that threatens him, he is restrained by natural pity from needlessly harming anyone himself, even if he has been harmed. For according to the axiom of the wise Locke, *where there is no property, there is no injury.*

But it must be noted that society in its beginning stages and the relations already established among men required in them qualities different from those they derived from their primitive constitution; that, with morality beginning to be introduced into human actions, and everyone, prior to the existence of laws, being sole judge and avenger of the offenses he had received, the goodness appropriate to the pure state of nature was no longer what was appropriate to an emerging society; that it was necessary for punishments to become more severe in proportion as the occasions for giving offense became more frequent; and it remained for the fear of vengeance to take the place of the deterrent character of laws. Hence although men had become less forebearing, and although natural pity had already undergone some alteration, this period of the development of human faculties, maintaining a middle position between the indolence of our primitive state and the petulant activity of our egocentrism, must have been the happiest and most durable epoch. The more one reflects on it, the more one finds that this state was the least subject to upheavals and the best for man,[16] and that

he must have left it only by virtue of some fatal chance happening that, for the common good, ought never have happened. The example of savages, almost all of whom have been found in this state, seems to confirm that the human race had been made to remain in it always; that this state is the veritable youth of the world; and that all the subsequent progress has been in appearance so many steps toward the perfection of the individual, and in fact toward the decay of the species.

As long as men were content with the rustic huts, as long as they were limited to making their clothing out of skins sewn together with thorns or fish bones, adorning themselves with feathers and shells, painting their bodies with various colors, perfecting or embellishing their bows and arrows, using sharp-edged stones to make some fishing canoes or some crude musical instruments; in a word, as long as they applied themselves exclusively to tasks that a single individual could do and to the arts that did not require the cooperation of several hands, they lived as free, healthy, good and happy as they could in accordance with their nature; and they continued to enjoy among themselves the sweet rewards of independent intercourse. But as soon as one man needed the help of another, as soon as one man realized that it was useful for a single individual to have provisions for two, equality disappeared, property came into existence, labor became necessary. Vast forests were transformed into smiling fields which had to be watered with men's sweat, and in which slavery and misery were soon seen to germinate and grow with the crops.

Metallurgy and agriculture were the two arts whose invention produced this great revolution. For the poet, it is gold and silver; but for the philosopher, it is iron and wheat that have civilized men and ruined the human race. Thus they were both unknown to the savages of America, who for that reason have always remained savages. Other peoples even appear to have remained barbarous, as long as they practiced one of those arts without the other. And perhaps one of the best reasons why Europe has been, if not sooner, at least more constantly and better governed than the other parts of the world, is that it is at the same time the most abundant in iron and the most fertile in wheat.

It is very difficult to guess how men came to know and use iron, for it is incredible that by themselves they thought of drawing the ore from the mine and performing the necessary preparations on it for smelting it before they knew what would result. From another point of view, it is even less plausible to attribute this discovery to some accidental fire, because mines are set up exclusively in arid places devoid of trees and plants, so that one would say that nature had taken precautions to conceal this deadly secret from us. Thus there remains only the extraordinary circumstance of some volcano that, in casting forth molten metal, would have given observers the idea of imitating this operation of nature. Even still we must suppose them to have had a great deal of courage and foresight to undertake such a difficult task and to have envisaged so far in advance the advantages they could derive from it. This is hardly suitable for minds already better trained than theirs must have been.

As for agriculture, its principle was known long before its practice was established, and it is hardly possible that men, constantly preoccupied with deriving their subsistence from trees and plants, did not rather quickly get the idea of the methods used by nature to grow plant life. But their industry probably did not turn in that direction until very late either because trees, which, along with hunting and fishing, provided their nourishment, had no need of their care; or for want of knowing how to use wheat; or for want of tools with which to cultivate it; or for want of foresight regarding future needs; or, finally, for want of the means of preventing others from appropriating the fruits of their labors. Having become more industrious, it is believable that, with sharp stones and pointed sticks, they began by cultivating some vegetables or roots around their huts long before they knew how to prepare wheat and had the tools necessary for large-scale cultivation. Moreover, to devote oneself to that occupation and to sow the lands, one must be resolved to lose something at first in order to gain a great deal later: a precaution quite far removed from the mind of the savage man, who, as I have said, finds it quite difficult to give thought in the morning to what he will need at night.

The invention of the other arts was therefore necessary to force the human race to apply itself to that of agriculture. Once men were needed in order to smelt

and forge the iron, other men were needed in order to feed them. The more the number of workers increased, the fewer hands there were to obtain food for the common subsistence, without there being fewer mouths to consume it; and since some needed foodstuffs in exchange for their iron, the others finally found the secret of using iron to multiply foodstuffs. From this there arose farming and agriculture, on the one hand, and the art of working metals and multiplying their uses, on the other.

From the cultivation of land, there necessarily followed the division of land; and from property once recognized, the first rules of justice. For in order to render everyone what is his, it is necessary that everyone can have something. Moreover, as men began to look toward the future and as they saw that they all had goods to lose, there was not one of them who did not have to fear reprisals against himself for wrongs he might do to another. This origin is all the more natural as it is impossible to conceive of the idea of property arising from anything but manual labor, for it is not clear what man can add, beyond his own labor, in order to appropriate things he has not made. It is labor alone that, in giving the cultivator a right to the product of the soil he has tilled, consequently gives him this right, at least until the harvest, and thus from year to year. With this possession continuing uninterrupted, it is easily transformed into property. When the ancients, says Grotius, gave Ceres the epithet of legislatrix, gave the name Thesmophories to a festival celebrated in her honor, they thereby made it apparent that the division of lands has produced a new kind of right: namely, the right of property, different from that which results from the natural law.

Things in this state could have remained equal, if talents had been equal, and if the use of iron and the consumption of foodstuffs had always been in precise balance. But this proportion, which was not maintained by anything, was soon broken. The strongest did the most work; the most adroit turned theirs to better advantage: the most ingenious found ways to shorten their labor. The farmer had a greater need for iron, or the blacksmith had a greater need for wheat; and in laboring equally, the one earned a great deal while the other barely had enough to live. Thus it is that natural inequality imperceptibly manifests itself together with inequality occasioned by the socialization process. Thus it is that the differences among men, developed by those of circumstances, make themselves more noticeable, more permanent in their effects, and begin to influence the fate of private individuals in the same proportion.

With things having reached this point, it is easy to imagine the rest. I will not stop to describe the successive invention of the arts, the progress of languages, the testing and use of talents, the inequality of fortunes, the use or abuse of wealth, nor all the details that follow these and that everyone can easily supply. I will limit myself exclusively to taking a look at the human race placed in this new order of things.

Thus we find here all our faculties developed, memory and imagination in play, egocentrism looking out for its interests, reason rendered active, and the mind having nearly reached the limit of the perfection of which it is capable. We find here all the natural qualities put into action, the rank and fate of each man established not only on the basis of the quantity of goods and the power to serve or harm, but also on the basis of mind, beauty, strength or skill, on the basis of merit or talents. And since these qualities were the only ones that could attract consideration, he was soon forced to have them or affect them. It was necessary, for his advantage, to show himself to be something other than what he in fact was. Being something and appearing to be something became two completely different things; and from this distinction there arose grand ostentation, deceptive cunning, and all the vices that follow in their wake. On the other hand, although man had previously been free and independent, we find him, so to speak, subject, by virtue of a multitude of fresh needs, to all of nature and particularly to his fellowmen, whose slave in a sense he becomes even in becoming their master; rich, he needs their services; poor, he needs their help; and being midway between wealth and poverty does not put him in a position to get along without them. It is therefore necessary for him to seek incessantly to interest them in his fate and to make them find their own profit, in fact or in appearance, in working for his. This makes him two-faced and crooked with some, imperious and harsh with others, and puts him in the position of having to abuse everyone he needs when he cannot make them fear them and does not find it in his interests to be of useful

service to them. Finally, consuming ambition, the zeal for raising the relative level of his fortune, less out of real need than in order to put himself above others, inspires in all men a wicked tendency to harm one another, a secret jealousy all the more dangerous because, in order to strike its blow in greater safety, it often wears the mask of benevolence; in short, competition and rivalry on the one hand, opposition of interest[s] on the other, and always the hidden desire to profit at the expense of someone else. All these ills are the first effect of property and the inseparable offshoot of incipient inequality.

Before representative signs of wealth had been invented, it could hardly have consisted of anything but lands and livestock, the only real goods men can possess. Now when inheritances had grown in number and size to the point of covering the entire landscape and of all bordering on one another, some could no longer be enlarged except at the expense of others; and the supernumeraries, whom weakness or indolence had prevented from acquiring an inheritance in their turn, became poor without having lost anything, because while everything changed around them, they alone had not changed at all. Thus they were forced to receive or steal their subsistence from the hands of the rich. And from that there began to arise, according to the diverse characters of the rich and the poor, domination and servitude, or violence and thefts. For their part, the wealthy had no sooner known the pleasure of domination, than before long they disdained all others, and using their old slaves to subdue new ones, they thought of nothing but the subjugation and enslavement of their neighbors, like those ravenous wolves which, on having once tasted human flesh, reject all other food and desire to devour only men.

Thus, when both the most powerful or the most miserable made of their strength or their needs a sort of right to another's goods, equivalent, according to them, to the right of property, the destruction of equality was followed by the most frightful disorder. Thus the usurpations of the rich, the acts of brigandage by the poor, the unbridled passions of all, stifling natural pity and the still weak voice of justice, made men greedy, ambitious and wicked. There arose between the right of the strongest and the right of the first occupant a perpetual conflict that ended only in fights and murders.[17] Emerging society gave way to the most horrible state of war; since the human race, vilified and desolated, was no longer able to retrace its steps or give up the unfortunate acquisitions it had made, and since it labored only toward its shame by abusing the faculties that honor it, it brought itself to the brink of its ruin. *Horrified by the newness of the ill, both the poor man and the rich man hope to flee from wealth, hating what they once had prayed for.*

It is not possible that men should not have eventually reflected upon so miserable a situation and upon the calamities that overwhelm them. The rich in particular must have soon felt how disadvantageous to them it was to have a perpetual war in which they alone paid all the costs, and in which the risk of losing one's life was common to all and the risk of losing one's goods was personal. Moreover, regardless of the light in which they tried to place their usurpations, they knew full well that they were established on nothing but a precarious and abusive right, and that having been acquired merely by force, force might take them away from them without their having any reason to complain. Even those enriched exclusively by industry could hardly base their property on better claims. They could very well say: "I am the one who built that wall; I have earned this land with my labor." In response to them it could be said: "Who gave you the boundary lines? By what right do you claim to exact payment at our expense for labor we did not impose upon you? Are you unaware that a multitude of your brothers perish or suffer from need of what you have in excess, and that you needed explicit and unanimous consent from the human race for you to help yourself to anything from the common subsistence that went beyond your own?" Bereft of valid reasons to justify himself and sufficient forces to defend himself; easily crushing a private individual, but himself crushed by troops of bandits; alone against all and unable on account of mutual jealousies to unite with his equals against enemies united by the common hope of plunder, the rich, pressed by necessity, finally conceived the most thought-out project that ever entered the human mind. It was to use in his favor the very strength of those who attacked him, to turn his adversaries into his defenders, to instill in them other maxims, and to give them other institutions which were as favorable to him as natural right was unfavorable to him.

With this end in mind, after having shown his neighbors the horror of a situation which armed them all against each other and made their possessions as burdensome as their needs, and in which no one could find safety in either poverty or wealth, he easily invented specious reasons to lead them to his goal. "Let us unite," he says to them, "in order to protect the weak from oppression, restrain the ambitious, and assure everyone of possessing what belongs to him. Let us institute rules of justice and peace to which all will be obliged to conform, which will make special exceptions for no one, and which will in some way compensate for the caprices of fortune by subjecting the strong and the weak to mutual obligations. In short, instead of turning our forces against ourselves, let us gather them into one supreme power that governs us according to wise laws, that protects and defends all the members of the association, repulses common enemies, and maintains us in an eternal concord."

Considerably less than the equivalent of this discourse was needed to convince crude, easily seduced men who also had too many disputes to settle among themselves to be able to get along without arbiters, and too much greed and ambition to be able to get along without masters for long. They all ran to chain themselves, in the belief that they secured their liberty, for although they had enough sense to realize the advantages of a political establishment, they did not have enough experience to foresee its dangers. Those most capable of anticipating the abuses were precisely those who counted on profiting from them; and even the wise saw the need to be resolved to sacrifice one part of their liberty to preserve the other, just as a wounded man has his arm amputated to save the rest of his body.

Such was, or should have been, the origin of society and laws, which gave new fetters to the weak and new forces to the rich,[18] irretrievably destroyed natural liberty, established forever the law of property and of inequality, changed adroit usurpation into an irrevocable right, and for the profit of a few ambitious men henceforth subjected the entire human race to labor, servitude and misery. It is readily apparent how the establishment of a single society rendered indispensable that of all the others, and how, to stand head to head against the united forces, it was necessary to unite in turn. Societies, multiplying or spreading rapidly, soon covered the entire surface of the earth; and it was no longer possible to find a single corner in the universe where someone could free himself from the yoke and withdraw his head from the often ill-guided sword which everyone saw perpetually hanging over his own head. With civil right thus having become the common rule of citizens, the law of nature no longer was operative except between the various societies, when, under the name of the law of nations, it was tempered by some tacit conventions in order to make intercourse possible and to serve as a substitute for natural compassion which, losing between one society and another nearly all the force it had between one man and another, no longer resides anywhere but in a few great cosmopolitan souls, who overcome the imaginary barriers that separate peoples, and who, following the example of the sovereign being who has created them, embrace the entire human race in their benevolence.

Remaining thus among themselves in the state of nature, the bodies politic soon experienced the inconveniences that had forced private individuals to leave it; and that state became even more deadly among these great bodies than that state had been among the private individuals of whom they were composed. Whence came the national wars, battles, murders, and reprisals that make nature tremble and offend reason, and all those horrible prejudices that rank the honor of shedding human blood among the virtues. The most decent people learned to consider it one of their duties to kill their fellow men. Finally, men were seen massacring one another by the thousands without knowing why. More murders were committed in a single day of combat and more horrors in the capture of a single city than were committed in the state of nature during entire centuries over the entire face of the earth. Such are the first effects one glimpses of the division of mankind into different societies. Let us return to the founding of these societies.

I know that many have ascribed other origins to political societies, such as conquests by the most powerful, or the union of the weak; and the choice among these causes is indifferent to what I want to establish. Nevertheless, the one I have just described seems to me the most natural, for the following reasons. 1. In

the first case, the right of conquest, since it is not a right, could not have founded any other, because the conqueror and conquered peoples always remain in a state of war with one another, unless the nation, returned to full liberty, were to choose voluntarily its conqueror as its leader. Until then, whatever the capitulations that may have been made, since they have been founded on violence alone and are consequently null by this very fact, on this hypothesis there can be neither true society nor body politic, nor any other law than that of the strongest. 2. These words *strong* and *weak* are equivocal in the second case, because in the interval between the establishment of the right of property or of the first occupant and that of political governments, the meaning of these terms is better rendered by the words *poor* and *rich*, because, before the laws, man did not in fact have any other means of placing his equals in subjection except by attacking their goods or by giving them part of his. 3. Since the poor had nothing to lose but their liberty, it would have been utter folly for them to have voluntarily surrendered the only good remaining to them, gaining nothing in return. On the contrary, since the rich men were, so to speak, sensitive in all parts of their goods, it was much easier to do them harm, and consequently they had to take greater precautions to protect themselves. And finally it is reasonable to believe that a thing was invented by those to whom it is useful rather than by those to whom it is harmful.

Incipient government did not have a constant and regular form. The lack of philosophy and experience permitted only present inconveniences to be perceived, and there was thought of remedying the others only as they presented themselves. Despite all the labors of the wisest legislators, the political state always remained imperfect, because it was practically the work of chance; and, because it had been badly begun, time, in discovering faults and suggesting remedies, could never repair the vices of the constitution. People were continually patching it up, whereas they should have begun by clearing the air and putting aside all the old materials, as Lycurgus did in Sparta, in order to raise a good edifice later on. At first, society consisted merely of some general conventions that all private individuals promised to observe, and concerning which the community became the guarantor for each of them. Experience had to demonstrate how weak such a constitution was, and how easy it was for lawbreakers to escape conviction or punishment for faults of which the public alone was to be witness and judge. The law had to be evaded in a thousand ways; inconveniences and disorders had to multiply continually in order to make them finally give some thought to confiding to private individuals the dangerous trust of public authority, and to make them entrust to magistrates the care of enforcing the observance of the deliberations of the people. For to say that the leaders were chosen before the confederation was brought about and that the ministers of the laws existed before the laws themselves is a supposition that does not allow of serious debate.

It would be no more reasonable to believe that initially the peoples threw themselves unconditionally and for all time into the arms of an absolute master, and that the first means of providing for the common security dreamed up by proud and unruly men was to rush headlong into slavery. In fact, why did they give themselves over to superiors, if not to defend themselves against oppression and to protect their goods, their liberties and their lives, which are, as it were, the constitutive elements of their being? Now, since, in relations between men, the worst that can happen to someone is for him to see himself at the discretion of someone else, would it not have been contrary to good sense to begin by surrendering into the hands of a leader the only things for whose preservation they needed his help? What equivalent could he have offered them for the concession of so fine a right? And if he had dared to demand it on the pretext of defending them, would he not have immediately received the reply given in the fable: "what more will the enemy do to us?" It is therefore incontestable, and it is a fundamental maxim of all political right, that peoples have given themselves leaders in order to defend their liberty and not to enslave themselves. *If we have a prince*, Pliny said to Trajan, *it is so that he may preserve us from having a master.*

[Our] political theorists produce the same sophisms about the love of liberty that [our] philosophers have made about the state of nature. By the things they see they render judgments about very different things they have not seen; and they attribute to men a natural inclination to servitude owing to the patience with

which those who are before their eyes endure their servitude, without giving a thought to the fact that it is the same for liberty as it is for innocence and virtue: their value is felt only as long as one has them oneself, and the taste for them is lost as soon as one has lost them. "I know the delights of your country," said Brasidas to a satrap who compared the life of Sparta to that of Persepolis, "but you cannot know the pleasures of mine."

As an unbroken steed bristles his mane, paws the ground with his hoof, and struggles violently at the mere approach of the bit, while a trained horse patiently endures the whip and the spur, barbarous man does not bow his head for the yoke that civilized man wears without a murmur, and he prefers the most stormy liberty to tranquil subjection. Thus it is not by the degradation of enslaved peoples that man's natural dispositions for or against servitude are to be judged, but by the wonders that all free peoples have accomplished to safeguard themselves from oppression. I know that enslaved peoples do nothing but boast of the peace and tranquillity they enjoy in their chains and that *they give the name 'peace' to the most miserable slavery*. But when I see free peoples sacrificing pleasures, tranquillity, wealth, power, and life itself for the preservation of this sole good which is regarded so disdainfully by those who have lost it; when I see animals born free and abhorring captivity break their heads against the bars of their prison; when I see multitudes of utterly naked savages scorn European pleasures and brave hunger, fire, sword and death, simply to preserve their independence, I sense that it is inappropriate for slaves to reason about liberty.

As for paternal authority, from which several have derived absolute government and all society, it is enough, without having recourse to the contrary proofs of Locke and Sidney, to note that nothing in the world is farther from the ferocious spirit of despotism than the gentleness of that authority which looks more to the advantage of the one who obeys than to the utility of the one who commands; that by the law of nature, the father is master of the child as long as his help is necessary for him; that beyond this point they become equals, and the son, completely independent of the father, then owes him merely respect and not obedience; for gratitude is clearly a duty that must be rendered, but not a right that can be demanded. Instead of saying that civil society derives from paternal power, on the contrary it must be said that it is from civil society that this power draws its principal force. An individual was not recognized as the father of several children until the children remained gathered about him. The goods of the father, of which he is truly the master, are the goods that keep his children in a state of dependence toward him, and he can cause their receiving a share in his estate to be consequent upon the extent to which they will have well merited it from him by continuous deference to his wishes. Now, far from having some similar favor to expect from their despot (since they belong to him as personal possessions—they and all they possess—or at least he claims this to be the case), subjects are reduced to receiving as a favor what he leaves them of their goods. He does what is just when he despoils them; he does them a favor when he allows them to live.

In continuing thus to examine facts from the viewpoint of right, no more solidity than truth would be found in the belief that the establishment of tyranny was voluntary; and it would be difficult to show the validity of a contract that would obligate only one of the parties, where all the commitments would be placed on one side with none on the other, and that would turn exclusively to the disadvantage of the one making the commitments. This odious system is quite far removed from being, even today, that of wise and good monarchs, and especially of the kings of France, as may be seen in various places in their edicts, and particularly in the following passage of a famous writing published in 1667 in the name of and by order of Louis XIV: *Let it not be said therefore that the sovereign is not subject to the laws of his state, for the contrary statement is a truth of the law of nations, which flattery has on occasion attacked, but which good princes have always defended as a tutelary divinity of their states. How much more legitimate is it to say, with the wise Plato, that the perfect felicity of a kingdom is that a prince be obeyed by his subjects, that the prince obey the law, and that the law be right and always directed to the public good.* I will not stop to investigate whether, with liberty being the most noble of man's faculties, he degrades his nature, places

himself on the level of animals enslaved by instinct, offends even his maker, when he unreservedly renounces the most precious of all his gifts, and allows himself to commit all the crimes he forbids us to commit, in order to please a ferocious or crazed master; nor whether this sublime workman should be more irritated at seeing his finest work destroyed rather than at seeing it dishonored. [I will disregard, if you will, the authority of Barbeyrac, who flatly declares, following Locke, that no one can sell his liberty to the point of submitting himself to an arbitrary power that treats him according to its fancy. *For*, he adds, *this would be selling his own life, of which he is not the master.*] I will merely ask by what right those who have not been afraid of debasing themselves to this degree have been able to subject their posterity to the same ignominy and to renounce for it goods that do not depend on their liberality, and without which life itself is burdensome to all who are worthy of it.

Pufendorf says that just as one transfers his goods to another by conventions and contracts, one can also divest himself of his liberty in favor of someone. That, it seems to me, is very bad reasoning; for, in the first place, the goods I give away become something utterly foreign to me, and it is a matter of indifference to me whether or not these goods are abused; but it is important to me that my liberty is not abused, and I cannot expose myself to becoming the instrument of crime without making myself guilty of the evil I will be forced to commit. Moreover, since the right of property is merely the result of convention and human institution, every man can dispose of what he possesses as he sees fit. But it is not the same for the essential gifts of nature such as life and liberty, which everyone is allowed to enjoy, and of which it is at least doubtful that one has the right to divest himself. In giving up the one he degrades his being; in giving up the other he annihilates that being insofar as he can. And because no temporal goods can compensate for the one or the other, it would offend at the same time both nature and reason to renounce them, regardless of the price. But even if one could give away his liberty as he does his goods, the difference would be very great for the children who enjoy the father's goods only by virtue of a transmission of his right; whereas, since liberty is a gift they receive from nature in virtue of being men, their parents had no right to divest them of it. Thus, just as violence had to be done to nature in order to establish slavery, nature had to be changed in order to perpetuate this right. And the jurists, who have gravely pronounced that the child of a slave woman is born a slave, have decided, in other words, that a man is not born a man.

Thus it appears certain to me not only that governments did not begin with arbitrary power, which is but their corruption and extreme limit, and which finally brings them back simply to the law of the strongest, for which they were initially to have been the remedy; but also that even if they had begun thus, this power, being illegitimate by its nature, could not have served as a foundation for the rights of society, nor, as a consequence, for the inequality occasioned by social institutions.

Without entering at present into the investigations that are yet to be made into the nature of the fundamental compact of all government, I restrict myself, in following common opinion, to considering here the establishment of the body politic as a true contract between the populace and the leaders it chooses for itself: a contract by which the two parties obligate themselves to observe the laws that are stipulated in it and that form the bonds of their union. Since, with respect to social relations, the populace has united all its wills into a single one, all the articles on which this will is explicated become so many fundamental laws obligating all the members of the state without exception, and one of these regulates the choice and power of the magistrates charged with watching over the execution of the others. This power extends to everything that can maintain the constitution, without going so far as to change it. To it are joined honors that make the laws and their ministers worthy of respect, and, for the ministers personally, prerogatives that compensate them for the troublesome labors that a good administration requires. The magistrate, for his part, obligates himself to use the power entrusted to him only in accordance with the intention of the constituents, to maintain each one in the peaceful enjoyment of what belongs to him, and to prefer on every occasion the public utility to his own interest.

Before experience had shown or knowledge of the human heart had made men foresee the inevitable abuses of such a constitution, it must have seemed

all the better because those who were charged with watching over its preservation were themselves the ones who had the greatest interest in it. For since the magistracy and its rights were established exclusively on fundamental laws, were they to be destroyed, the magistracy would immediately cease to be legitimate; the people would no longer be bound to obey them. And since it was not the magistrate but the law that had constituted the essence of the state, everyone would rightfully return to his natural liberty.

The slightest attentive reflection on this point would confirm this by new reasons, and by the nature of the contract it would be seen that it could not be irrevocable. For were there no superior power that could guarantee the fidelity of the contracting parties or force them to fulfill their reciprocal commitments, the parties would remain sole judges in their own case, and each of them would always have the right to renounce the contract as soon as he should find that the other party violated the conditions of the contract, or as soon as the conditions should cease to suit him. It is on this principle that it appears the right to abdicate can be founded. Now to consider, as we are doing, only what is of human institution, if the magistrate, who has all the power in his hands and who appropriates to himself all the advantages of the contract, nevertheless had the right to renounce the authority, a fortiori the populace, which pays for all the faults of the leaders, should have the right to renounce their dependence. But the horrible dissensions, the infinite disorders that this dangerous power would necessarily bring in its wake, demonstrate more than anything else how much need human governments had for a basis more solid than reason alone, and how necessary it was for public tranquillity that the divine will intervened to give to sovereign authority a sacred and inviolable character which took from the subjects the fatal right to dispose of it. If religion had brought about this good for men, it would be enough to oblige them to cherish and adopt it, even with its abuses, since it spares even more blood than fanaticism causes to be shed. But let us follow the thread of our hypothesis.

The various forms of government take their origin from the greater or lesser differences that were found among private individuals at the moment of institution. If a man were eminent in power, virtue, wealth or prestige, he alone was elected magistrate, and the state became monarchical. If several men, more or less equal among themselves, stood out over all the others, they were elected jointly, and there was an aristocracy. Those whose fortune or talents were less disproportionate, and who least departed from the state of nature, kept the supreme administration and formed a democracy. Time made evident which of these forms was the most advantageous to men. Some remained in subjection only to the laws; the others soon obeyed masters. Citizens wanted to keep their liberty; the subjects thought only of taking it away from their neighbors, since they could not endure others enjoying a good they themselves no longer enjoyed. In a word, on the one hand were riches and conquests, and on the other were happiness and virtue.

In these various forms of government all the magistratures were at first elective; and when wealth did not prevail, preference was given to merit, which gives a natural ascendancy, and to age, which gives experience in conducting business and cool-headedness in deliberation. The elders of the Hebrews, the gerontes of Sparta, the senate of Rome, and even the etymology of our word *seigneur* show how much age was respected in former times. The more elections fell upon men of advanced age, the more frequent elections became, and the more their difficulties were made to be felt. Intrigues were introduced; factions were formed; parties became embittered; civil wars flared up. Finally, the blood of citizens was sacrificed to the alleged happiness of the state, and people were on the verge of falling back into the anarchy of earlier times. The ambition of the leaders profited from these circumstances to perpetuate their offices within their families. The people, already accustomed to dependence, tranquillity and the conveniences of life, and already incapable of breaking their chains, consented to let their servitude increase in order to secure their tranquillity. Thus it was that the leaders, having become hereditary, grew accustomed to regard their magistratures as family property, to regard themselves as the proprietors of the state (of which at first they were but the officers), to call their fellow citizens their slaves, to count them like cattle in the number of things that belonged to them, and to call themselves equals of the gods and kings of kings.

If we follow the progress of inequality in these various revolutions, we will find that the first stage was the establishment of the law and of the right of property, the second stage was the institution of the magistracy, and the third and final stage was the transformation of legitimate power into arbitrary power. Thus the class of rich and poor was authorized by the first epoch, that of the strong and the weak by the second, and that of master and slave by the third: the ultimate degree of inequality and the limit to which all the others finally lead, until new revolutions completely dissolve the government or bring it nearer to its legitimate institution.

To grasp the necessity of this progress, we must consider less the motives for the establishment of the body politic than the form it takes in its execution and the disadvantages that follow in its wake. For the vices that make social institutions necessary are the same ones that make their abuses inevitable. And with the sole exception of Sparta, where the law kept watch chiefly over the education of children, and where Lycurgus established mores that nearly dispensed with having to add laws to them, since laws are generally less strong than passions and restrain men without changing them, it would be easy to prove that any government that always moved forward in conformity with the purpose for which it was founded without being corrupted or altered, would have been needlessly instituted, and that a country where no one eluded the laws and abused the magistrature would need neither magistracy nor laws.

Political distinctions necessarily lend themselves to civil distinctions. The growing inequality between the people and its leaders soon makes itself felt among private individuals, and is modified by them in a thousand ways according to passions, talents and events. The magistrate cannot usurp illegitimate power without producing protégés for himself to whom he is forced to yield some part of it. Moreover, citizens allow themselves to be oppressed only insofar as they are driven by blind ambition; and looking more below than above them, domination becomes more dear to them than independence, and they consent to wear chains in order to be able to give them in turn to others. It is very difficult to reduce to obedience someone who does not seek to command; and the most adroit politician would never succeed in subjecting men who wanted merely to be free. But inequality spreads easily among ambitious and cowardly souls always ready to run the risks of fortune and, almost indifferently, to dominate or serve, according to whether it becomes favorable or unfavorable to them. Thus it is that there must have come a time when the eyes of people were beguiled to such an extent that its leaders merely had to say to the humblest of men, "Be great, you and all your progeny," and he immediately appeared great to everyone as well as in his own eyes, and his descendants were elevated even more in proportion as they were at some remove from him. The more remote and uncertain the cause, the more the effect increased; the more loafers one could count in a family, the more illustrious it became.

If this were the place to go into detail, I would easily explain how [even without government involvement] the inequality of prestige and authority becomes inevitable among private individuals,[19] as soon as they are united in one single society and are forced to make comparisons among themselves and to take into account the differences they discover in the continual use they have to make of one another. These differences are of several sorts, but in general, since wealth, nobility or rank, power and personal merit are the principal distinctions by which someone is measured in society, I would prove that the agreement or conflict of these various forces is the surest indication of a well- or ill-constituted state. I would make it apparent that among these four types of inequality, since personal qualities are the origin of all the others, wealth is the last to which they are ultimately reduced, because it readily serves to buy all the rest, since it is the most immediately useful to well-being and the easiest to communicate. This observation enables one to judge rather precisely the extent to which each people is removed from its primitive institution, and of the progress it has made toward the final stage of corruption. I would note how much that universal desire for reputation, honors, and preferences, which devours us all, trains and compares our talents and strengths; how much it excites and multiplies the passions; and, by making all men competitors, rivals, or rather enemies, how many setbacks, successes and catastrophes of every sort it causes every day, by making so many contenders run the same course. I would

show that it is to this ardor for making oneself the topic of conversation, to this furor to distinguish oneself which nearly always keeps us outside ourselves, that we owe what is best and worst among men, our virtues and vices, our sciences and our errors, our conquerors and our philosophers, that is to say, a multitude of bad things against a small number of good ones. Finally, I would prove that if one sees a handful of powerful and rich men at the height of greatness and fortune while the mob grovels in obscurity and misery, it is because the former prize the things they enjoy only to the extent that the others are deprived of them; and because, without changing their position, they would cease to be happy, if the people ceased to be miserable.

But these details alone would be the subject of a large work in which one would weigh the advantages and the disadvantages of every government relative to the rights of the state of nature, and where one would examine all the different faces under which inequality has appeared until now and may appear in [future] ages, according to the nature of these governments and the upheavals that time will necessarily bring in its wake. We would see the multitude oppressed from within as a consequence of the very precautions it had taken against what menaced it from without. We would see oppression continually increase, without the oppressed ever being able to know where it would end or what legitimate means would be left for them to stop it. We would see the rights of citizens and national liberties gradually die out, and the protests of the weak treated like seditious murmurs. We would see politics restrict the honor of defending the common cause to a mercenary portion of the people. We would see arising from this the necessity for taxes, the discouraged farmer leaving his field, even during peacetime, and leaving his plow in order to gird himself with a sword. We would see the rise of fatal and bizarre rules in the code of honor. We would see the defenders of the homeland sooner or later become its enemies, constantly holding a dagger over their fellow citizens, and there would come a time when we would hear them say to the oppressor of their country: "*If you order me to plunge my sword into my brother's breast or my father's throat, and into my pregnant wife's entrails, I will do so, even though my right hand is unwilling.*"

From the extreme inequality of conditions and fortunes, from the diversity of passions and talents, from useless arts, from pernicious arts, from frivolous sciences there would come a pack of prejudices equally contrary to reason, happiness and virtue. One would see the leaders fomenting whatever can weaken men united together by disuniting them; whatever can give society an air of apparent concord while sowing the seeds of real division; whatever can inspire defiance and hatred in the various classes through the opposition of their rights and interests, and can as a consequence strengthen the power that contains them all.

It is from the bosom of this disorder and these upheavals that despotism, by gradually raising its hideous head and devouring everything it had seen to be good and healthy in every part of the state, would eventually succeed in trampling underfoot the laws and the people, and in establishing itself on the ruins of the republic. The times that would precede this last transformation would be times of troubles and calamities; but in the end everything would be swallowed up by the monster, and the peoples would no longer have leader or laws, but only tyrants. Also, from that moment on, there would no longer be any question of mores and virtue, for wherever despotism, *in which decency affords no hope*, reigns, it tolerates no other master. As soon as it speaks, there is neither probity nor duty to consult, and the blindest obedience is the only virtue remaining for slaves.

Here is the final stage of inequality, and the extreme point that closes the circle and touches the point from which we started. Here all private individuals become equals again, because they are nothing. And since subjects no longer have any law other than the master's will, nor the master any rule other than his passions, the notions of good and the principles of justice again vanish. Here everything is returned solely to the law of the strongest, and consequently to a new state of nature different from the one with which we began, in that the one was the state of nature in its purity, and this last one is the fruit of an excess of corruption. Moreover, there is so little difference between these two states, and the governmental contract is so utterly dissolved by despotism, that the despot is master only as long as he is the strongest; and as soon as he can be ousted, he has

no cause to protest against violence. The uprising that ends in the strangulation or the dethronement of a sultan is as lawful an act as those by which he disposed of the lives and goods of his subjects the day before. Force alone maintained him; force alone brings him down. Thus everything happens in accordance with the natural order, and whatever the outcome of these brief and frequent upheavals may be, no one can complain about someone else's injustice, but only of his own imprudence or his misfortune.

In discovering and following thus the forgotten and lost routes that must have led man from the natural state to the civil state; in reestablishing, with the intermediate positions I have just taken note of, those that time constraints on me have made me suppress or that the imagination has not suggested to me, no attentive reader can fail to be struck by the immense space that separates these two states. It is in this slow succession of things that he will see the solution to an infinity of moral and political problems which the philosophers are unable to resolve. He will realize that, since the human race of one age is not the human race of another age, the reason why Diogenes did not find his man is because he searched among his contemporaries for a man who no longer existed. Cato, he will say, perished with Rome and liberty because he was out of place in his age; and this greatest of men merely astonished the world, which five hundred years earlier he would have governed. In short, he will explain how the soul and human passions are imperceptibly altered and, as it were, change their nature; why, in the long run, our needs and our pleasures change their objects; why, with original man gradually disappearing, society no longer offers to the eyes of the wise man anything but an assemblage of artificial men and factitious passions which are the work of all these new relations and have no true foundation in nature. What reflection teaches us on this subject is perfectly confirmed by observation: savage man and civilized man differ so greatly in the depths of their hearts and in their inclinations, that what constitutes the supreme happiness of the one would reduce the other to despair. Savage man breathes only tranquillity and liberty; he wants simply to live and rest easy; and not even the unperturbed tranquillity of the Stoic approaches his profound indifference for any other objects. On the other hand, the citizen is always active and in a sweat, always agitated, and unceasingly tormenting himself in order to seek still more laborious occupations. He works until he dies; he even runs to his death in order to be in a position to live, or renounces life in order to acquire immortality. He pays court to the great whom he hates and to the rich whom he scorns. He stops at nothing to obtain the honor of serving them. He proudly crows about his own baseness and their protection; and proud of his slavery, he speaks with disdain about those who do not have the honor of taking part in it. What a spectacle for the Carib are the difficult and envied labors of the European minister! How many cruel deaths would that indolent savage not prefer to the horror of such a life, which often is not mollified even by the pleasure of doing good. But in order to see the purpose of so many cares, the words *power* and *reputation* would have to have a meaning in his mind; he would have to learn that there is a type of men who place some value on the regard the rest of the world has for them, and who know how to be happy and content with themselves on the testimony of others rather than on their own. Such, in fact, is the true cause of all these differences; the savage lives in himself; the man accustomed to the ways of society is always outside himself and knows how to live only in the opinion of others. And it is, as it were, from their judgment alone that he draws the sentiment of his own existence. It is not pertinent to my subject to show how, from such a disposition, so much indifference for good and evil arises, along with such fine discourse on morality; how, with everything reduced to appearances, everything becomes factitious and bogus: honor, friendship, virtue, and often even our vices, about which we eventually find the secret of boasting; how, in a word, always asking others what we are and never daring to question ourselves on this matter, in the midst of so much philosophy, humanity, politeness, and sublime maxims, we have merely a deceitful and frivolous exterior: honor without virtue, reason without wisdom, and pleasure without happiness. It is enough for me to have proved that this is not the original state of man, and that this is only the spirit of society, and the inequality that society engenders, which thus change and alter all our natural inclinations.

I have tried to set forth the origin and progress of

inequality, the establishment and abuse of political societies, to the extent that these things can be deduced from the nature of man by the light of reason alone, and independently of the sacred dogmas that give to sovereign authority the sanction of divine right. It follows from this presentation that, since inequality is practically non-existent in the state of nature, it derives its force and growth from the development of our faculties and the progress of the human mind, and eventually becomes stable and legitimate through the establishment of property and laws. Moreover, it follows that moral inequality, authorized by positive right alone, is contrary to natural right whenever it is not combined in the same proportion with physical inequality: a distinction that is sufficient to determine what one should think in this regard about the sort of inequality that reigns among all civilized people, for it is obviously contrary to the law of nature, however it may be defined, for a child to command an old man, for an imbecile to lead a wise man, and for a handful of people to gorge themselves on superfluities while the starving multitude lacks necessities.

Rousseau's Notes to *Discourse on the Origin of Inequality*

1. Herodotus relates that after the murder of the false Smerdis, the seven liberators of Persia being assembled to deliberate on the form of government they would give the state, Otanes was fervently in support of a republic: an opinion all the more extraordinary in the mouth of a satrap, since, over and above the claim he could have to the empire, a grandee fears more than death a type of government that forces him to respect men. Otanes, as may readily be believed, was not listened to; and seeing that things were progressing toward the election of a monarch, he, who wanted neither to obey nor command, voluntarily yielded to the other rivals his right to the crown, asking as his sole compensation that he and his descendants be free and independent. This was granted him. If Herodotus did not inform us of the restriction that was placed on this privilege, it would be necessary to suppose it, otherwise Otanes, not acknowledging any sort of law and not being accountable to anyone, would have been all powerful in the state and more powerful than the king himself. But there was hardly any likelihood that a man capable of contenting himself, in similar circumstances, with such a privilege, was capable of abusing it. In fact, there is no evidence that this right ever caused the least trouble in the kingdom, either from wise Otanes or from any of his descendants.

2. From the start I rely with confidence on one of those authorities that are respectable for philosophers, because they come from a solid and sublime reason, which they alone know how to find and perceive.

"Whatever interest we may have in knowing ourselves, I do not know whether we do not have a better knowledge of everything that is not us. Provided by nature with organs uniquely destined for our preservation, we use them merely to receive impressions of external things; we seek merely to extend ourselves outward and to exist outside ourselves. Too much taken with multiplying the functions of our senses and with increasing the external range of our being, we rarely make use of that internal sense which reduces us to our true dimensions, and which separates us from all that is not us. Nevertheless, this is the sense we must use if we wish to know ourselves. It is the only one by which we can judge ourselves. But how can this sense be activated and given its full range? How can our soul, in which it resides, be rid of all the illusions of our mind? We have lost the habit of using it; it has remained unexercised in the midst of the tumult of our bodily sensations; it has been dried out by the fire of our passions; the heart, the mind, the senses, everything has worked against it." *Hist. Nat.*, Vol. IV: *de la Nat. de l'homme*, p. 151.

3. The changes that a long-established habit of walking on two feet could have brought about in the conformation of man, the relations that are still observed between his arms and the forelegs of quadrupeds, and the induction drawn from their manner of walking, could have given rise to doubts about the manner that must have been the most natural to us. All children begin by walking on all fours, and need our example and our lessons to learn to stand upright. There are even savage nations, such as the Hottentots, who, greatly neglecting their children, allow them to walk on their hands for so long that they then have a great deal of trouble getting them to straighten up. The children of the Caribs of the Antilles do the same thing. There are various examples of quadruped men, and I could cite among others that of the child who was found in 1344 near Hesse, where he had been raised by wolves, and who said afterward at the court of Prince Henry that, had the decision been left exclusively to him, he would have preferred to return to the wolves than to live among men. He had embraced to such an extent the habit of walking like those animals, that wooden boards had to be attached to him to force him to stand upright and maintain his balance on two feet.

It was the same with the child who was found in 1694, in the forests of Lithuania, and who lived among bears. He did not give, says M. de Condillac, any sign of reason, walked on his hands and feet, had no language, and formed sounds that bore no resemblance whatever to those of a man. The little savage of Hanover, who was brought to the court of England several years ago, had all sorts of trouble getting himself to walk on two feet. And in 1719, two other savages, who were found in the Pyrenees, ran about the mountains in the manner of quadrupeds. As for the objection one might make that this deprives one of the use of one's hands from which we derive so many advantages, over and above the fact that the example of monkeys shows that the hand can be used quite well in both ways, this would prove only that man can give his limbs a destination more congenial than that of nature, and not that nature has destined man to walk otherwise than it teaches him.

But there are, it seems to me, much better reasons to state in support of the claim that man is a biped. First, if it were shown that he could have originally been formed otherwise than we see him and yet finally become what he is, this would not suffice to conclude that this is how it happened; for, after having shown the possibility of these changes, it would still be necessary, prior to granting them, to demonstrate at least their probability. Moreover, if man's arms seem as if they could have served as legs when needed, it is the sole observation favorable to that system, out of a great number of others which are contrary to it. The chief ones are that the manner in which man's head is attached to his body, instead of directing his view horizontally (as is the case for all other animals and for man himself when he walks upright), would have kept him, while walking on all fours, with his eyes fixed directly on the ground, a situation hardly conducive to the preservation of the individual; that the tail he is lacking, and for which he has no use when walking on two feet, is useful to quadrupeds, and none of them is deprived of one; that the breast of a woman, very well located for a biped who holds her child in her arms, is so poorly located for a quadruped that none has it located in that way; that, since the hind part is of an excessive height in proportion to the forelegs (which causes us to crawl on our knees when walking on all fours), the whole would have made an animal that was poorly proportioned and that walked uncomfortably; that if he had placed his foot as well as his hand down flat, he would have had one less articulation in the hind leg than do other animals, namely the one that joins canon to the tibia; and that by setting down only the tip of the foot, as doubtlessly he would have been forced to do, the tarsus (not to mention the plurality of bones that make it up) appears too large to take the place of the canon, and its articulations with the metatarsus and the tibia too close together to give the human leg in this situation the same flexibility as those of quadrupeds. Since the example of children is taken from an age when natural forces are not yet developed nor the members strengthened, it proves nothing whatever. I might just as well say that dogs are not destined to walk because several weeks after their birth they merely crawl. Particular facts also have little force against the universal practice of all men; even nations that have had no communication with others could not have imitated anything about them. A child abandoned in a forest before he is able to walk, and nourished by some beast, will have followed the example of his nurse in training himself to walk like her. Habit could have given him capabilities he did not have from nature, and just as one-armed men are successful, by dint of exercise, at doing with their feet whatever we do with our hands, he will finally have succeeded in using his hands as feet.

4. Should there be found among my readers a scientist nasty enough to cause me difficulties regarding the supposition of this natural fertility of the earth, I am going to answer him with the following passage:

"As plants derive much more substance from air and water for their sustenance than they do from the earth, it happens that when they rot they return to the earth more than they have derived from it. Moreover, a forest determines the amount of rainwater by stopping vapors. Thus, in a wooded area that was preserved for a long time without being touched, the bed of earth that serves for vegetation would increase considerably. But since animals return to the soil less than they derive from it, and since men take in huge quantities of wood and plants for fire and other uses, it follows that the bed of vegetative earth of an inhabited country must always diminish and finally become like the terrain of Arabia Petraea, and like that of so many other provinces of the Orient (which in fact is the region that has been inhabited from the most ancient times), where only salt and sand are found. For the fixed salt of plants and animals remains, while all the other parts are volatized." M. de Buffon, *Hist. Nat.*

To this can be added the factual proof based on the quantity of trees and plants of every sort, which filled almost all the uninhabited islands that have been discovered in the last few centuries, and on what history teaches us about the immense forests all over the earth that had to be cut down to the degree that it was populated or civilized. On this I will also make the following three

remarks. First, if there is a kind of vegetation that can make up for the loss of vegetative matter which was occasioned by animals, according to M. de Buffon's reasoning, it is above all the wooded areas, where the treetops and the leaves gather and appropriate more water and vapors than do other plants. Second, the destruction of the soil, that is, the loss of the substance that is appropriate for vegetation, should accelerate in proportion as the earth is more cultivated and as the more industrious inhabitants consume in greater abundance its products of every sort. My third and most important remark is that the fruits of trees supply animals with more abundant nourishment than is possible for other forms of vegetation: an experiment I made myself, by comparing the products of two land masses of equal size and quality, the one covered with chestnut trees and the other sown with wheat.

5. Among the quadrupeds, the two most universal distinguishing traits of voracious species are derived, on the one hand, from the shape of the teeth, and, on the other, from the conformation of the intestines. Animals that live solely on vegetation have all flat teeth, like the horse, ox, sheep and hare, but voracious animals have pointed teeth, like the cat, dog, wolf and fox. And as for the intestines, the frugivorous ones have some, such as the colon, which are not found in voracious animals. It appears therefore that man, having teeth and intestines like frugivorous animals, should naturally be placed in that class. And not only do anatomical observations confirm this opinion, but the monuments of antiquity are also very favorable to it. "Dicaearchus," says St. Jerome, "relates in his books on Greek antiquities that under the reign of Saturn, when the earth was still fertile by itself, no man ate flesh, but that all lived on fruits and vegetables that grew naturally." (*Adv. Jovinian.*, Bk. II) [This opinion can also be supported by the reports of several modern travelers. François Corréal, among others, testifies that the majority of inhabitants of the Lucayes, whom the Spaniards transported to the islands of Cuba, Santo Domingo, and elsewhere, died from having eaten flesh.] From this one can see that I am neglecting several advantageous considerations that I could turn to account. For since prey is nearly the exclusive subject of fighting among carnivorous animals, and since frugivorous animals live among themselves in continual peace, if the human species were of this latter genus, it is clear that it would have had a much easier time subsisting in the state of nature, and much less need and occasion to leave it.

6. All the kinds of knowledge that demand reflection, all those acquired only by the concatenation of ideas and perfected only successively, appear to be utterly beyond the grasp of savage man, owing to the lack of communication with his fellow-men, that is to say, owing to the lack of the instrument which is used for that communication, and to the lack of the needs that make it necessary. His understanding and his industry are limited to jumping, running, fighting, throwing a stone, climbing a tree. But if he knows only those things, in return he knows them much better than we, who do not have the same need for them as he. And since they depend exclusively on bodily exercise and are not capable of any communication or progress from one individual to another, the first man could have been just as adept at them as his last descendants.

The reports of travelers are full of examples of the force and vigor of men of barbarous and savage nations. They praise scarcely less their adroitness and nimbleness. And since eyes alone are needed to observe these things, nothing hinders us from giving credence to what eyewitnesses certify on the matter. I draw some random examples from the first books that fall into my hands.

"The Hottentots," says Kolben, "understand fishing better than the Europeans at the Cape. Their skill is equal when it comes to the net, the hook and the spear, in coves as well as in rivers. They catch fish by hand no less skillfully. They are incomparably good at swimming. Their style of swimming has something surprising about it, something entirely unique to them. They swim with their body upright and their hands stretched out of the water, so that they appear to be walking on land. In the greatest agitation of the sea, when the waves form so many mountains, they somehow dance on the top of the waves, rising and falling like a piece of cork.

"The Hottentots," says the same author further, "are surprisingly good at hunting, and the nimbleness of their running surpasses the imagination." He is amazed that they did not put their agility to ill use more often, which, however, sometimes happens, as can be judged from the example he gives. "A Dutch sailor," he says, "on disembarking at the Cape, charged a Hottentot to follow him to the city with a roll of tobacco that weighed about twenty pounds. When they were both some distance from the crew, the Hottentot asked the sailor if he knew how to run. Run! answered the Dutchman; yes, very well. Let us see, answered the African. And fleeing with the tobacco, he disappeared almost immediately. The sailor, confounded by such marvelous quickness, did not think of following him, and he never again saw either his tobacco or his porter.

"They have such quick sight and such a sure hand that Europeans cannot go near them. At a hundred paces

they will hit with a stone a mark the size of a halfpenny. And what is more amazing, instead of fixing their eyes on the target as we do, they make continuous movements and contortions. It appears that their stone is carried by an invisible hand."

Father du Tertre says about the savages of the Antilles nearly the same things that have just been read about the Hottentots of the Cape of Good Hope. He praises, above all, their accuracy in shooting with their arrows birds in flight and swimming fish, which they then catch by diving for them. The savages of North America are no less famous for their strength and adroitness, and here is an example that will lead us to form a judgment about those qualities in the Indians of South America.

In the year 1746, an Indian from Buenos Aires, having been condemned to the galleys of Cadiz, proposed to the governor that he buy back his liberty by risking his life at a public festival. He promised that by himself he would attack the fiercest bull with no other weapon in his hand but a rope; that he would bring him to the ground, seize him with his rope by whatever part they would indicate, saddle him, bridle him, mount him, and so mounted he would fight two other of the fiercest bulls to be released from the Torillo, and that he would put all of them to death, one after the other, the moment they would command him to do so, and without anyone's help. This was granted him. The Indian kept his word and succeeded in everything he had promised. On the way in which he did it and on the details of the fight, one can consult M. Gautier, *Observations sur l'Histoire Naturelle*, Vol. I (in-12°), p. 262, whence this fact is taken.

7. "The lifespan of horses," says M. de Buffon, "is, as in all other species of animals, proportionate to the length of their growth period. Man, who takes fourteen years to grow, can live six or seven times as long, that is to say, ninety or a hundred years. The horse, whose growth period is four years, can live six or seven times as long, that is to say, twenty-five or thirty years. The examples that could be contrary to this rule are so rare, that they should not even be regarded as an exception from which conclusions can be drawn. And just as large horses achieve their growth in less time than slender horses, they also have a shorter lifespan and are old from the age of fifteen."

8. I believe I see another difference between carnivorous and frugivorous animals still more general than the one I have remarked upon in Note 5, since this one extends to birds. This difference consists in the number of young, which never exceeds two in each litter for the species that lives exclusively on plant life, and which ordinarily exceeds this number for voracious animals. It is easy to know nature's plan in this regard by the number of teats, which is only two in each female of the first species, like the mare, the cow, the goat, the doe, the ewe, etc., and which is always six or eight in the other females, such as the dog, the cat, the wolf, the tigress, etc. The hen, the goose, the duck, which are all voracious birds (as are the eagle, the sparrow hawk, the screech owl), also lay and hatch a large number of eggs, which never happens to the pigeon, the turtle-dove, or to birds that eat nothing but grain, which lay and hatch scarcely more than two eggs at a time. The reason that can be given for this difference is that the animals that live exclusively on grass and plants, remaining nearly the entire day grazing and being forced to spend considerable time feeding themselves, could not be up to the task of nursing several young; whereas the voracious animals, taking their meal almost in an instant, can more easily and more often return to their young and to their hunting, and can compensate for the loss of so large a quantity of milk. There would be many particular observations and reflections to make on all this, but this is not the place to make them, and it is enough for me to have shown in this part the most general system of nature, a system which furnishes a new reason to remove man from the class of carnivorous animals and to place him among the frugivorous species.

9. A famous author, on calculating the goods and evils of human life and comparing the two sums, has found that the latter greatly exceeded the former, and that, all things considered, life was a pretty poor present for man. I am not surprised by his conclusion; he has drawn all of his arguments from the constitution of civil man. Had he gone back as far as natural man, the judgment can be made that he would have found very different results, that he would have realized that man has scarcely any evils other than those he has given himself, and that nature would have been justified. It is not without trouble that we have managed to make ourselves so unhappy. When, on the one hand, one considers the immense labors of men, so many sciences searched into, so many arts invented, and so many forces employed, abysses filled up, mountains razed, rocks broken, rivers made navigable, lands cleared, lakes dug, marshes drained, enormous buildings raised upon the earth, the sea covered with ships and sailors; and when, on the other hand, one searches with a little meditation for the true advantages that have resulted from all this for the happiness of the human species, one cannot help being struck by the astonishing disproportion that obtains between these things, and to deplore man's

blindness, which, to feed his foolish pride and who knows what vain sense of self-importance, makes him run ardently after all the miseries to which he is susceptible, and which beneficent nature has taken pains to keep from him.

Men are wicked; a sad and continual experience dispenses us from having to prove it. Nevertheless, man is naturally good; I believe I have demonstrated it. What therefore can have depraved him to this degree, if not the changes that have befallen his constitution, the progress he has made, and the sorts of knowledge he has acquired? Let human society be admired as much as one wants; it will be no less true for it that it necessarily brings men to hate one another to the extent that their interests are at cross-purposes with one another, to render mutually to one another apparent services and in fact do every evil imaginable to one another. What is one to think of an interaction where the reason of each private individual dictates to him maxims directly contrary to those that public reason preaches to the body of society, and where each finds his profit in the misfortune of another? Perhaps there is not a wealthy man whose death is not secretly hoped for by greedy heirs and often by his own children; not a ship at sea whose wreck would not be good news to some merchant; not a firm that a debtor of bad faith would not wish to see burn with all the papers it contains; not a people that does not rejoice at the disasters of its neighbors. Thus it is that we find our advantage in the setbacks of our fellow-men, and that one person's loss almost always brings about another's prosperity. But what is even more dangerous is that public calamities are anticipated and hoped for by a multitude of private individuals. Some want diseases, others death, others war, others famine. I have seen ghastly men weep with the sadness at the likely prospects of a fertile year. And the great and deadly fire of London, which cost the life or the goods of so many unfortunate people, made the fortunes of perhaps more than ten thousand people. I know that Montaigne blames the Athenian Demades for having had a worker punished, who, by selling coffins at a high price, made a great deal from the death of the citizens. But since the reason Montaigne proposes is that everyone would have to be punished, it is evident that it confirms my own. Let us therefore penetrate, through our frivolous demonstration of good will, to what happens at the bottom of our hearts; and let us reflect on what the state of things must be where all men are forced to caress and destroy one another, and where they are born enemies by duty and crooks by interest. If someone answers me by claiming that society is constituted in such a manner that each man gains by serving others, I will reply that this would be very well and good, provided he did not gain still more by harming them. There is no profit, however legitimate, that is not surpassed by one that can be made illegitimately, and wrong done to a neighbor is always more lucrative than services. It is therefore no longer a question of anything but finding the means of being assured of impunity. And this is what the powerful spend all their forces on, and the weak all their ruses.

Savage man, when he has eaten, is at peace with all nature, and the friend of all his fellow-men. Is it sometimes a question of his disputing over his meal? He never comes to blows without having first compared the difficulty of winning with that of finding his sustenance elsewhere. And since pride is not involved in the fight, it is ended by a few swings of the fist. The victor eats; the vanquished is on his way to seek his fortune, and everything is pacified. But for man in society, these are quite different affairs. It is first of all a question of providing for the necessary and then for the superfluous; next come delights, and then immense riches, and then subjects, and then slaves. He has not a moment's respite. What is most singular is that the less natural and pressing the needs, the more the passions increase and, what is worse, the power to satisfy them; so that after long periods of prosperity, after having swallowed up many treasures and ruined many men, my hero will end by butchering everything until he is the sole master of the universe. Such in brief is the moral portrait, if not of human life, then at least of the secret pretensions of the heart of every civilized man.

Compare, without prejudices, the state of civil man with that of savage man and seek, if you can, how many new doors to suffering and death (other than his wickedness, his needs and his miseries) the former has opened. If you consider the emotional turmoil that consumes us, the violent passions that exhaust and desolate us, the excessive labors with which the poor are overburdened, the still more dangerous softness to which the rich abandon themselves, and which cause the former to die of their needs and the latter of their excesses; if you call to mind the monstrous combinations of foods, their pernicious seasonings, the corrupted foodstuffs, tainted drugs, the knavery of those who sell them, the errors of those who administer them, the poison of the vessels in which they are prepared; if you pay attention to the epidemic diseases engendered by the bad air among the multitudes of men gathered together, to the illnesses occasioned by the effeminacy of our lifestyle, by the coming and going from the inside of our houses to the open air, the use of garments put on or taken off with

too little precaution, and all the cares that our excessive sensuality has turned into necessary habits, the neglect or privation of which then costs us our life or our health; if you take into account fires and earthquakes, which, in consuming or turning upside down whole cities, cause their inhabitants to die by the thousands; in a word, if you unite the dangers that all these causes continually gather over our heads, you will realize how dearly nature makes us pay for the scorn we have shown for its lessons.

I will not repeat here what I have said elsewhere about war, but I wish that informed men would, for once, want or dare to give the public the detail of the horrors that are committed in armies by provisions and hospital suppliers. One would see that their not too secret maneuvers, on account of which the most brilliant armies dissolve into less than nothing, cause more soldiers to perish than are cut down by enemy swords. Moreover, no less surprising is the calculation of the number of men swallowed up by the sea every year, either by hunger, or scurvy, or pirates, or fire, or shipwrecks. It is clear that we must also put to the account of established property, and consequently to that of society, the assassinations, the poisonings, the highway robberies, and even the punishments of these crimes, punishments necessary to prevent greater ills, but which, costing the lives of two or more for the murder of one man, do not fail really to double the loss to the human species. How many are the shameful ways to prevent the birth of men or to fool nature: either by those brutal and depraved tastes which insult its most charming work, tastes that neither savages nor animals ever knew, and that have arisen in civilized countries only as the result of a corrupt imagination; or by those secret abortions, worthy fruits of debauchery and vicious honor; or by the exposure or the murder of a multitude of infants, victims of the misery of their parents or of the barbarous shame of their mothers; or, finally by the mutilation of those unfortunates, part of whose existence and all of whose posterity are sacrificed to vain songs, or what is worse still, to the brutal jealousy of a few men: a mutilation which, in this last case, doubly outrages nature, both by the treatment received by those who suffer it and by the use to which they are destined.

[But are there not a thousand more frequent and even more dangerous cases where paternal rights overtly offend humanity? How many talents are buried and inclinations are forced by the imprudent constraint of fathers! How many men would have distinguished themselves in a suitable station who die unhappy and dishonored in another station for which they have no taste! How many happy but unequal marriages have been broken or disturbed, and how many chaste wives dishonored by this order of conditions always in contradiction with that of nature! How many other bizarre unions formed by interests and disavowed by love and by reason! How many even honest and virtuous couples cause themselves torment because they were ill-matched! How many young and unhappy victims of their parent's greed plunge into vice or pass their sorrowful days in tears, and moan in indissoluble chains which the heart rejects and which gold alone has formed! Happy sometimes are those whose courage and even virtue tear them from life before a barbarous violence forces them into crime or despair. Forgive me, father and mother forever deplorable. I regrettably worsen your sorrows; but may they serve as an eternal and terrible example to whoever dares, in the name of nature, to violate the most sacred of its rights!

If I have spoken only of those ill-formed relationships that are the result of our civil order, is one to think that those where love and sympathy have presided are themselves exempt from drawbacks?]

What would happen if I were to undertake to show the human species attacked in its very source, and even in the most holy of all bonds, where one no longer dares to listen to nature until after having consulted fortune, and where, with civil disorder confounding virtues and vices, continence becomes a criminal precaution, and the refusal to give life to one's fellow-man an act of humanity? But without tearing away the veil that covers so many horrors, let us content ourselves with pointing out the evil, for which others must supply the remedy.

Let us add to all this that quantity of unwholesome trades which shorten lives or destroy one's health, such as work in mines, various jobs involving the processing of metals, minerals, and especially lead, copper, mercury, cobalt, arsenic, realgar; those other perilous trades which everyday cost the lives of a number of workers, some of them roofers, others carpenters, others masons, others working in quarries; let us bring all of these objects together, I say, and we will be able to see in the establishment and the perfection of societies the reasons for the diminution of the species, observed by more than one philosopher.

Luxury, impossible to prevent among men who are greedy for their own conveniences and for the esteem of others, soon completes the evil that societies have begun; and on the pretext of keeping the poor alive (which it was not necessary to do), luxury impoverishes everyone else, and sooner or later depopulates the state.

Luxury is a remedy far worse than the evil it means to cure; or rather it is itself the worst of all evils in any state, however large or small it may be, and which, in

order to feed the hordes of lackeys and wretches it has produced, crushes and ruins the laborer and the citizen—like those scorching south winds that, by covering grass and greenery with devouring insects, take sustenance away from useful animals, and bring scarcity and death to all the places where they make themselves felt.

From society and the luxury it engenders, arise the liberal and mechanical arts, commerce, letters, and all those useless things that make industry flourish, enriching and ruining states. The reason for this decay is quite simple. It is easy to see that agriculture, by its nature, must be the least lucrative of all the arts, because, with its product being of the most indispensable use to all men, its price must be proportionate to the abilities of the poorest. From the same principle can be drawn this rule: that, in general, the arts are lucrative in inverse proportion to their usefulness, and that the most necessary must finally become the most neglected. From this it is clear what must be thought of the true advantages of industry and of the real effect that results from its progress.

Such are the discernible causes of all the miseries into which opulence finally brings down the most admired nations. To the degree that industry and the arts expand and flourish, the scorned farmer, burdened with taxes necessary to maintain luxury and condemned to spend his life between toil and hunger, abandons his fields to go to the cities in search of the bread he ought to be carrying there. The more the capital cities strike the stupid eyes of the people as wonderful, the more it will be necessary to groan at the sight of countrysides abandoned, fields fallow, and main roads jammed with unhappy citizens who have become beggars or thieves, destined to end their misery one day on the rack or on a dung-heap. Thus it is that the state, enriching itself on the one hand, weakens and depopulates itself on the other; and that the most powerful monarchies, after much labor to become opulent and deserted, end by becoming the prey of poor nations which succumb to the deadly temptation to invade them, and which enrich and enfeeble themselves in their turn, until they are themselves invaded and destroyed by others.

Let someone deign to explain to us for once what could have produced those hordes of barbarians which for so many centuries have overrun Europe, Asia and Africa. Was it to the industry of their arts, the wisdom of their laws, the excellence of their civil order that they owed that prodigious population? Would our learned ones be so kind as to tell us why, far from multiplying to that degree, those ferocious and brutal men, without enlightenment, without restraint, without education, did not all kill one another at every moment to argue with one another over their food or game? Let them explain to us how these wretches even had the gall to look right in the eye such capable people as we were, with such fine military discipline, such fine codes, and such wise laws, and why, finally, after society was perfected in the countries of the north, and so many pains were taken there to teach men their mutual duties and the art of living together agreeably and peaceably, nothing more is seen to come from them like those multitudes of men it produced formerly. I am very much afraid that someone might finally get it into his head to reply to me that all these great things, namely the arts, sciences, and laws, have been very wisely invented by men as a salutary plague to prevent the excessive multiplication of the species, out of fear that this world, which is destined for us, might finally become too small for its inhabitants.

What then! Must we destroy societies, annihilate thine and mine, and return to live in the forests with bears?—a conclusion in the style of my adversaries, which I prefer to anticipate, rather than leave to them the shame of drawing it. Oh you, to whom the heavenly voice has not made itself heard, and who recognize for your species no other destination except to end this brief life in peace; you who can leave in the midst of the cities your deadly acquisitions, your troubled minds, your corrupt hearts and your unbridled desires. Since it depends on you, retake your ancient and first innocence; go into the woods to lose sight and memory of the crimes of your contemporaries, and have no fear of cheapening your species in renouncing its enlightenment in order to renounce its vices. As for men like me, whose passions have forever destroyed their original simplicity, who can no longer feed on grass and acorn[s], nor get by without laws and chiefs; those who were honored in their first father with supernatural lessons; those who will see, in the intention of giving human actions from the beginning a morality they would not have acquired for a long time, the reason for a precept indifferent in itself and inexplicable in any other system; those, in a word, who are convinced that the divine voice called the entire human race to the enlightenment and the happiness of the celestial intelligences; all those latter ones will attempt, through the exercise of virtues they oblige themselves to practice while learning to know them, to merit the eternal reward that they ought to expect for them. They will respect the sacred bonds of the societies of which they are members; they will love their fellowmen and will serve them with all their power; they will scrupulously obey the laws and the men who are their

authors and their ministers; they will honor above all the good and wise princes who will know how to prevent, cure or palliate that pack of abuses and evils always ready to overpower us; they will animate the zeal of these worthy chiefs by showing them without fear or flattery the greatness of their task and the rigor of their duty. But they will despise no less for it a constitution that can be maintained only with the help of so many respectable people, who are desired more often than they are obtained, and from which, despite all their care, always arise more real calamities than apparent advantages.

10. Among the men we know, whether by ourselves, or from historians, or from travelers, some are black, others white, others red. Some wear their hair long; others have merely curly wool. Some are almost entirely covered with hair; others do not even have a beard. There have been and perhaps there still are nations of men of gigantic size; and apart from the fable of the Pygmies (which may well be merely an exaggeration), we know that the Laplanders and above all the Greenlanders are considerably below the average size of man. It is even maintained that there are entire peoples who have tails like quadrupeds. And without putting blind faith in the accounts of Herodotus and Ctesias, we can at least draw from them the very likely opinion that had one been able to make good observations in those ancient times when various peoples followed lifestyles differing more greatly among themselves than do those of today, one would have also noted in the shape and posture of the body, much more striking varieties. All these facts, for which it is easy to furnish incontestable proofs, are capable of surprising only those who are accustomed to look solely at the objects that surround them and who are ignorant of the powerful effects of the diversity of climates, air, foods, lifestyle, habits in general, and especially the astonishing force of the same causes when they act continually for long successions of generations. Today, when commerce, voyages and conquests reunite various peoples further, and their lifestyles are constantly approximating one another through frequent communication, it is evident that certain national differences have diminished; and, for example, everyone can take note of the fact that today's Frenchmen are no longer those large, colorless and blond-haired bodies described by Latin historians, although time, together with the mixture of the Franks and the Normans, themselves colorless and blond-haired, should have reestablished what commerce with the Romans could have removed from the influence of the climate in the natural constitution and complexion of the inhabitants. All of these observations on the varieties that a thousand causes can produce and have in fact produced in the human species cause me to wonder whether the various animals similar to men, taken without much scrutiny by travelers for beasts, either because of some differences they noticed in their outward structure or simply because these animals did not speak, would not in fact be veritable savage men, whose race, dispersed in the woods during olden times, had not had an occasion to develop any of its virtual faculties, had not acquired any degree of perfection, and was still found in the primitive state of nature. Let us give an example of what I mean.

"There are found in the kingdom of the Congo," says the translator of the *Histoire des Voyages*, "many of those large animals called *orangutans* in the East Indies, which occupy a middle ground between the human species and the baboons. Battel relates that in the forests of Mayomba, in the kingdom of Loango, one sees two kinds of monsters, the larger of which are called *pongos* and the others *enjocos*. The former bear an exact resemblance to man, except they are much larger and very tall. With a human face, they have very deep-set eyes. Their hands, cheeks and ears are without hair, except for their eyebrows, which are very long. Although the rest of their body is quite hairy, the hair is not very thick; the color of the hair is brown. Finally, the only part that distinguishes them from men is their leg, which has no calf. They walk upright, grasping the hair of their neck with their hand. Their retreat is in the woods. They sleep in the trees, and there they make a kind of roof which offers them shelter from the rain. Their foods are fruits or wild nuts; they never eat flesh. The custom of the Negroes who cross the forests is to light fires during the night. They note that in the morning, at their departure, the pongos take their place around the fire, and do not withdraw until it is out; because, for all their cleverness, they do not have enough sense to lay wood on the fire to keep it going.

"They occasionally walk in groups and kill the Negroes who cross the forests. They even fall upon elephants who come to graze in the places they inhabit, and they irritate the elephants so much with punches or with whacks of a stick that they force them howling to take flight. Pongos are never taken alive, because they are so strong that ten men would not be enough to stop them. But the Negroes take a good many young ones after having killed the mother, to whose body the young stick very closely. When one of these animals dies, the others cover its body with a pile of branches or leaves. Purchass adds that, in the conversations he has had with Battel, he had learned from him also that a pongo abducted a little Negro who passed an entire month in the society

of these animals, for they do not harm men they take by surprise, at least when these men do not pay any attention to them, as the little Negro had observed. Battel had not described the second species of monster.

"Dapper confirms that the kingdom of the Congo is filled with those animals which in the Indies bear the name orangutans, that is to say, inhabitants of the woods, and which the Africans call *quojas-morros*. This beast, he says, is so similar to man, that it has occurred to some travelers that it could have issued from a woman and a monkey: a myth which even the Negroes reject. One of these animals was transported from the Congo to Holland and presented to the Prince of Orange, Frederick Henry. It was the height of a three-year old child, moderately stocky, but square and well-proportioned, very agile and lively; its legs fleshy and robust; the entire front of the body naked, but the rear covered with black hairs. At first sight, its face resembled that of a man, but it had a flat and turned up nose; its ears were also those of the human species; its breast (for it was a female), was plump, its navel sunken, its shoulders very well joined, its hands divided into fingers and thumbs, its calves and heels fat and fleshy. It often walked upright on its legs; it was capable of lifting and carrying heavy burdens. When it wanted to drink, it took the cover of the pot in one hand, and held the base with the other; afterward it graciously wiped its lips. It lay down to sleep with its head on a cushion, covering itself with such skill that it would have been taken for a man in bed. The Negroes tell strange stories about this animal. They assert not only that it takes women and girls by force, but that it dares to attack armed men. In a word, there is great likelihood that it is the satyr of the ancients. Perhaps Merolla is speaking only of these animals whom he relates that Negroes sometimes lay hold of savage men and women in their hunts."

These species of anthropomorphic animals are again discussed in the third volume of the same *Histoire des Voyages* under the name of *beggos* and *mandrills*. But sticking to the preceding accounts, we find in the description of these alleged monsters striking points of conformity with the human species and lesser differences than those that would be assigned between one man and another. From these pages it is not clear what the reasons are that the authors have for refusing to give the animals in question the name "savage men"; but it is easy to conjecture that it is on account of their stupidity and also because they did not speak—feeble reasons for those who know that although the organ of speech is natural to man, nevertheless speech itself is not natural to him, and who knows to what point his perfectibility can have elevated civil man above his original state. The small number of lines these descriptions contain can cause us to judge how badly these animals have been observed and with what prejudices they have been viewed. For example, they are categorized as monsters, and yet there is agreement that they reproduce. In one place, Battel says that the pongos kill the Negroes who cross the forests; in another place, Purchass adds that they do not do any harm, even when they surprise them, at least when the Negroes do not fix their gaze upon them. The pongos gather around fires lit by the Negroes upon the Negroes' withdrawal, and withdraw in their turn when the fire is out. There is the fact. Here now is the commentary of the observer: *because, for all their cleverness, they do not have enough sense to lay wood on the fire to keep it going*. I would like to hazard a guess how Battel, or Purchass, his compiler, could have known that the withdrawal of the pongos was an effect of their stupidity rather than their will. In a climate such as Loango, fire is not something particularly necessary for the animals; and if the Negroes light a fire, it is less against the cold than to frighten ferocious beasts. It is therefore a very simple matter that, after having been for some time delighted with the flame or being well warmed, the pongos grow tired of always remaining in the same place and go off to graze, which requires more time than if they ate flesh. Moreover, we know that most animals, man not excluded, are naturally lazy, and that they refuse all sorts of cares which are not absolutely necessary. Finally, it seems very strange that pongos, whose adroitness and strength are praised, the pongos who know how to bury their dead and to make themselves roofs out of branches, should not know how to push fagots into the fire I recall having seen a monkey perform the same maneuver that people deny the pongos can do. It is true that since my ideas were not oriented in this direction, I myself committed the mistake for which I reproach our travelers; I neglected to examine whether the intention of the monkey was actually to sustain the fire or simply, as I believe is the case, to imitate the actions of a man. Whatever the case may be, it is well demonstrated that the monkey is not a variety of man: not only because he is deprived of the faculty of speech, but above all because it is certain that his species does not have the faculty of perfecting itself, which is the specific characteristic of the human species: experiments that do not seem to have been made on the pongos and the orangutan with sufficient care to enable one to draw the same conclusion in their case. However, there would be a means by which, if the orangutan or others were of the human species, even the least sophisticated observers could assure themselves of it by means of demonstration.

But beyond the fact that a single generation would not be sufficient for this experiment, it should pass as unworkable, since it would be necessary that what is merely a supposition be demonstrated to be true, before the test that should establish the fact could be innocently tried.

Precipitous judgments, which are not the fruit of an enlightened reason, are prone to be excessive. Without any fanfare, our travelers made into beasts, under the names *pongos*, *mandrills*, *orangutans*, the same beings that the ancients, under the names *satyrs*, *fauns*, *sylvans*, made into divinities. Perhaps, after more precise investigations it will be found that they are [neither beasts nor gods but] men. Meanwhile, it would seem to me that there is as much reason to defer on this point to Merolla, an educated monk, an eyewitness, and one who, with all his naïveté, did not fail to be a man of wit, as to the merchant Battel, Dapper, Purchass, and the other compilers.

What judgment do we think such observers would have made regarding the child found in 1694, of whom I have spoken before, who gave no indication of reason, walked on his feet and hands, had no language, and made sounds that bore no resemblance whatever to those of a man? It took a long time, continues the same philosopher who provided me with this fact, before he could utter a few words, and then he did it in a barbarous manner. Once he could speak, he was questioned about his first state, but he did not recall it any more than we recall what happened to us in the cradle. If, unhappily* for him, this child had fallen into the hands of our travelers, there can be no doubt that after having observed his silence and stupidity, they would have resolved to send him back to the woods or lock him up in a menagerie; after which they would have spoken eruditely about him in their fine accounts as a very curious beast who looked rather like a man.

For the three or four hundred years since the inhabitants of Europe inundated the other parts of the world and continually published new collections of travels and stories, I am convinced that we know no other men but the Europeans alone. Moreover, it would appear, from the ridiculous prejudices that have not been extinguished even among men of letters, that everybody does hardly anything under the pompous name of "the study of man" except study the men of his country. Individuals may well come and go; it seems that philosophy travels nowhere; moreover, the philosophy of one people is little suited to another. The reason for this is manifest, at least for distant countries. There are hardly more than four sorts of men who make long voyages: sailors, merchants, soldiers, and missionaries. Now we can hardly expect the first three classes to provide good observers; and as for those in the fourth, occupied by the sublime vocation that calls them, even if they were not subject to the prejudices of social position as are all the rest, we must believe that they would not voluntarily commit themselves to investigations that would appear to be sheer curiosity, and which would sidetrack them from the more important works to which they are destined. Besides, to preach the Gospel in a useful manner, zeal alone is needed, and God gives the rest. But to study men, talents are needed which God is not required to give anyone, and which are not always the portion of saints. One does not open a book of voyages where one does not find descriptions of characters and mores. But one is utterly astonished to see that these people who have described so many things have said merely what everyone already knew, that, at the end of the world, they knew how to understand only what it was for them to notice without leaving their street; and that those true qualities which characterize nations and strike eyes made to see have almost always escaped theirs. Whence this fine moral slogan, so bandied about by the philosophizing rabble: that men are everywhere the same; that, since everywhere they have the same passions and the same vices, it is rather pointless to seek to characterize different peoples—which is about as well reasoned as it would be for someone to say that Peter and James cannot be distinguished from one another, because they both have a nose, a mouth and eyes.

Will we never see those happy days reborn when the people did not dabble in philosophizing, but when a Plato, a Thales, a Pythagoras, taken with an ardent desire to know, undertook the greatest voyages merely to inform themselves, and went far away to shake off the yoke of national prejudices, in order to learn to know men by their similarities and their differences, and to acquire those sorts of universal knowledge that are exclusively those of a single century or country, but which, since they are of all times and all places, are, as it were, the common science of the wise?

We admire the splendor of some curious men who, at great expense, made or caused to be made voyages to the Orient with learned men and painters, in order to sketch hovels and to decipher or copy inscriptions. But I have trouble conceiving how, in a century where people take pride in fine sorts of knowledge, there are not to be found two closely united men—rich, one in money, the other in genius, both loving glory and aspiring for

[**In the copy of the* Discourse *sent to Richard Davenport, Rousseau inserts here:* or perhaps happily.]

immortality—one of whom sacrifices twenty thousand crowns of his goods and the other ten years of his life for a famous voyage around the world, in order to study, not always rocks and plants, but, for once, men and mores, and who, after so many centuries used to measure and examine the house, would finally be of a mind to want to know its inhabitants.

The academicians who have traveled through the northern parts of Europe and the southern parts of America had for their object to visit them more as geometers than as philosophers. Nevertheless, since they were both simultaneously, we cannot regard as utterly unknown the regions that have been seen and described by La Condamine and Maupertuis. The jeweler Chardin, who has traveled like Plato, has left nothing to be said about Persia. China appeared to have been well observed by the Jesuits. Kempfer gives a passable idea of what little he has seen in Japan. Except for these reports, we know nothing about the peoples of the East Indies, who have been visited exclusively by Europeans interested more in filling their purses than their heads. All of Africa and its numerous inhabitants, as unique in character as in color, are yet to be examined. The entire earth is covered with nations of which we know only the names, and we dabble in judging the human race! Let us suppose a Montesquieu, a Buffon, a Diderot, a Duclos, a d'Alembert, a Condillac, or men of that ilk traveling in order to inform their compatriots, observing and describing as they know how to do, Turkey, Egypt, Barbary, the empire of Morocco, Guinea, the land of the Bantus, the interior of Africa and its eastern coastlines, the Malabars, Mogul, the banks of the Ganges, the kingdoms of Siam, Pegu, and Ava, China, Tartary, and especially Japan; then in the other hemisphere, Mexico, Peru, Chile, the straits of Magellan, not to forget the Patagonias true or false, Tucuman, Paraguay (if possible), Brazil; finally the Caribbean Islands, Florida, and all the savage countries—the most important voyage of all and the one that should be embarked upon with the greatest care. Let us suppose that these new Hercules, back from these memorable treks, then wrote at leisure the natural, moral, and political history of what they would have seen; we ourselves would see a new world sally forth from their pen, and we would thus learn to know our own. I say that when such observers will affirm of an animal that it is a man and of another that it is a beast, we will have to believe them. But it would be terribly simpleminded to defer in this to unsophisticated travelers, concerning whom we will sometimes be tempted to put the same question that they dabble at resolving concerning other animals.

11. That appears utterly evident to me and I am unable to conceive whence our philosophers can derive all the passions they ascribe to natural man. With the single exception of the physically necessary which nature itself demands, all our other needs are such merely out of habit (previous to which they were not needs), or by our own desires; and we do not desire what we are not in a position to know. Whence it follows that since savage man desires only the things he knows and knows only those things whose possession is in his power or easily acquired, nothing should be so tranquil as his soul and nothing so limited as his mind.

12. I find in Locke's *Civil Government* an objection which seems to me too specious for me to be permitted to hide it. "Since the purpose of the society between male and female," says this philosopher, "is not merely to procreate, but to continue the species, this society should last, even after procreation, at least as long as it is necessary for the nurture and support of the procreated, that is to say, until they are capable of seeing to their needs on their own. This rule, which the infinite wisdom of the creator has established upon the works of his hands, we see creatures inferior to man observing constantly and strictly. In those animals which live on grass, the society between male and female lasts no longer than each act of copulation, because, the teats of the mother being sufficient to feed the young until they are able to feed on grass, the male is content to beget and no longer mingles with the female or the young, to whose sustenance he has nothing to contribute. But as far as beasts of prey are concerned, the society lasts longer, because, with the mother being unable to see to her own sustenance and at the same time feed her young by means of her prey alone (which is a more laborious and more dangerous way of taking in nourishment than by feeding on grass), the assistance of the male is utterly necessary for the maintenance of their common family (if one may use that term), which is able to subsist to the point where it can go hunt for prey only through the efforts of the male and the female. We note the same thing in all the birds (with the exception of some domestic birds which are found in places where the continual abundance of nourishment exempts the male from the effort of feeding the young). It is clear that when the young in their nest need food, the male and female bring it to them until the young there are capable of flying and seeing to their own sustenance.

"And, in my opinion, herein lies the principal, if not the only reason why the male and the female in mankind are bound to a longer period of society than is undertaken by other creatures: namely, that the female is capable

of conceiving and is ordinarily pregnant again and has a new child long before the previous child is in a position to do without the help of its parents and can take care of itself. Thus, since the father is bound to take care of those he has produced, and to take that care for a long time, he is also under an obligation to continue in conjugal society with the same woman by whom he has had them, and to remain in that society much longer than other creatures, whose young being capable of subsisting by themselves before the time comes for a new procreation, the bond of the male and female breaks of its own accord, and they are both at complete liberty, until such time as that season, which usually solicits the animals to join with one another, obliges them to choose new mates. And here we cannot help admiring the wisdom of the creator, who, having given to man the qualities needed to provide for the future as well as for the present, has willed and has brought it about that the society of man should last longer than that of the male and female among other creatures, so that thereby the industry of man and woman might be stimulated more, and that their interests might be better united, with a view to making provisions for their children and to leaving them their goods—nothing being more to the detriment of the children than an uncertain and vague conjunction, or an easy and frequent dissolution of the conjugal society."*

The same love of truth which has made me to set forth sincerely this objection, moves me to accompany it with some remarks, if not to resolve it, at least to clarify it.

1. I will observe first that moral proofs do not have great force in matters of physics, and that they serve more to explain existing facts than to establish the real existence of those facts. Now such is the type of proof that M. Locke employs in the passage I have just quoted; for although it may be advantageous to the human species for the union between man and woman to be permanent, it does not follow that it has been thus established by nature; otherwise it would be necessary to say that it also instituted civil society, the arts, commerce, and all that is asserted to be useful to men.

2. I do not know where M. Locke has found that among animals of prey, the society of the male and female lasts longer than does the society of those that live on grass, and that the former assists the latter to feed the young; for it is not manifest that the dog, the cat, the bear, or the wolf recognize their female better than the horse, the ram, the bull, the stag, or all the other quadruped animals do theirs. On the contrary, it seems that if the assistance of the male were necessary to the female to preserve her young, it would be particularly in the species that live only on grass, because a long period of time is needed by the mother to graze, and during that entire interval she is forced to neglect her brood, whereas the prey of a female bear or wolf is devoured in an instant, and, without suffering hunger, she has more time to nurse her young. This line of reasoning is confirmed by an observation upon the relative number of teats and young which distinguishes carnivorous from frugivorous species, and of which I have spoken in Note 8. If this observation is accurate and general, since a woman has only two teats and rarely has more than one child at a time, this is one more strong reason for doubting that the human species is naturally carnivorous. Thus it seems that, in order to draw Locke's conclusion, it would be necessary to reverse completely his reasoning. There is no more solidity in the same distinction when it is applied to birds. For who could be persuaded that the union of the male and the female is more durable among vultures and crows than among turtle-doves? We have two species of domestic birds, the duck and the pigeon, which furnish us with examples directly contrary to the system of this author. The pigeon, which lives solely on grain, remains united to its female, and they feed their young in common. The duck, whose voraciousness is known, recognizes neither his female nor his young, and provides no help in their sustenance. And among hens, a species hardly less carnivorous, we do not observe that the rooster bothers himself in the least with the brood. And if in the other species the male shares with the female the care of feeding the young, it is because birds, which at first are unable to fly and which the mother cannot nurse, are much less in a position to get along without the help of the father than are quadrupeds, for which the mother's teat is sufficient, at least for a time.

3. There is much uncertainty about the principal fact that serves as a basis for all of M. Locke's reasoning; for in order to know whether, as he asserts, in the pure state of nature the female ordinarily is pregnant again and has a new child long before the preceding one could see to its needs for itself, it would be necessary to perform experiments that M. Locke surely did not perform and that no one is in a position to perform.

[**Translator's note: This is a translation of the French rendering of Locke's text.*]

The continual cohabitation of husband and wife is so near an occasion for being exposed to a new pregnancy that it is very difficult to believe that the chance encounter or the mere impulsion of temperament produced such frequent effects in the pure state of nature as in that of conjugal society: a slowness that would contribute perhaps toward making the children more robust, and that, moreover, might be compensated by the power to conceive, prolonged to a greater age in the women who would have abused it less in their youth. As to children, there are several reasons for believing that their forces and their organs develop much later among us than they did in the primitive state of which I am speaking. The original weakness which they derive from the constitution of the parents, the cares taken to envelop and constrain all of their members, the softness in which they are raised, perhaps the use of milk other than that of their mother, everything contradicts and slows down in them the initial progress of nature. The heed they are forced to pay to a thousand things on which their attention is continually fixed, while no exercise is given to their bodily forces, can also bring about considerable deflection from their growth. Thus, if, instead of first overworking and exhausting their minds in a thousand ways, their bodies were allowed to be exercised by the continual movements that nature seems to demand of them, it is to be believed that they would be in a much better position to walk and to provide for their needs by themselves.

4. Finally, M. Locke at most proves that there could well be in a man a motive for remaining attached to a woman when she has a child but in no way does he prove that the man must have been attached to her before the childbirth and during the nine months of pregnancy. If a given woman is indifferent to the man during those nine months, if she even becomes unknown to him, why will he help her after childbirth? Why will he help her to raise a child that he does not know belongs to him alone, and whose birth he has neither decided upon nor foreseen? Evidently M. Locke presumes what is in question, for it is not a matter of knowing why the man will remain attached to the woman after childbirth, but why he will be attached to her after conception. Once his appetite is satisfied, the man has no further need for a given woman, nor the woman for a given man. The man does not have the least care or perhaps the least idea of the consequences of his action. The one goes off in one direction, the other in another, and there is no likelihood that at the end of nine months they have the memory of having known one another. For this type of memory, by which one individual gives preference to another for the act of generation, requires, as I prove in the text, more progress or corruption in human understanding than may be supposed in man in the state of animality we are dealing with here. Another woman can therefore satisfy the new desires of the man as congenially as the one he has already known, and another man in the same manner satisfy the woman, supposing she is impelled by the same appetite during the time of pregnancy, about which one can reasonably be in doubt. And if in the state of nature the woman no longer feels the passion of love after the conception of the child, the obstacle to her society with the man thus becomes much greater still, since she then has no further need either for the man who has made her pregnant or for anyone else. There is not, therefore, in the man any reason to seek the same woman, or in the woman any reason to seek the same man. Thus Locke's reasoning falls in ruin, and all the dialectic of this philosopher has not shielded him from the mistake committed by Hobbes and others. They had to explain a fact of the state of nature, that is to say, of a state where men lived in isolation and where a given man did not have any motive for living in proximity to another given man, nor perhaps did a given group of men have a motive for living in proximity to another given group of men, which is much worse. And they gave no thought to transporting themselves beyond the centuries of society, that is to say, of those times when men always have a reason for living in proximity to one another, and when a given man often has a reason for living in proximity to a given man or woman.

13. I will hold back from embarking on the philosophical reflections that there would be to engage in concerning the advantages and disadvantages of this institution of languages. It is not for me to be permitted to attack vulgar errors; and educated people respect their prejudices too much to abide patiently my alleged paradoxes. Let us therefore allow men to speak, to whom it has not been made a crime to risk sometimes taking the part of reason against the opinion of the multitude. *Nor would anything disappear from the happiness of the human race, if, when the disaster and confusion of so many languages has been cast out, mortals should cultivate one art, and if it should be allowed to explain anything by means of signs, movements and gestures. But now it has been so established that the condition of animals commonly believed to be brutes is considerably better than ours in this respect, inasmuch as they articulate their*

*feelings and their thoughts without an interpreter more readily and perhaps more felicitously than any mortals can, especially if they use a foreign language.** Is. Vossius *de Poëmat. Cant. et Viribus Rythmi*, p. 66.

14. In showing how ideas of discrete quantity and its relationships are necessary in the humblest of the arts, Plato mocks with good reason the authors of his time who alleged that Palamedes had invented numbers at the siege of Troy, as if, says this philosopher, Agamemnon could have been ignorant until then of how many legs he had. In fact, one senses the impossibility that society and the arts should have arrived at the point where they already were at the time of the siege of Troy, unless men had the use of numbers and arithmetic. But the necessity for knowing numbers, before acquiring other types of knowledge, does not make their invention easier to imagine. Once the names of the numbers are known, it is easy to explain their meaning and to elicit the ideas which these names represent; but in order to invent them, it was necessary, prior to conceiving of these same ideas, to be, as it were, on familiar terms with philosophical meditations, to be trained to consider beings by their essence alone and independently of all other perception—a very difficult, very metaphysical, hardly natural abstraction, and yet one without which these ideas could never have been transported from one species or genus to another, nor could numbers have become universal. A savage could consider separately his right leg and his left leg, or look at them together under the indivisible idea of a pair without ever thinking that he had two of them; for the representative idea that portrays for us an object is one thing, and the numerical idea which determines it is another. Even less was he able to count to five. And although, by placing his hands one on top of the other, he could have noticed that the fingers corresponded exactly, he was far from thinking of their numerical equality. He did not know the sum of his fingers any more than that of his hairs. And if, after having made him understand what numbers are, someone had said to him that he had as many fingers as toes, he perhaps would have been quite surprised, in comparing them, to find that this was true.

15. We must not confuse egocentrism with love of oneself, two passions very different by virtue of both their nature and their effects. Love of oneself is a natural sentiment which moves every animal to be vigilant in its own preservation and which, directed in man by reason and modified by pity, produces humanity and virtue. Egocentrism is merely a sentiment that is relative, artificial and born in society, which moves each individual to value himself more than anyone else, which inspires in men all the evils they cause one another, and which is the true source of honor.

With this well understood, I say that in our primitive state, in the veritable state of nature, egocentrism does not exist; for since each particular man regards himself as the only spectator who observes him, as the only being in the universe that takes an interest in him, as the only judge of his own merit, it is impossible that a sentiment which has its source in comparisons that he is not in a position to make could germinate in his soul. For the same reason, this man could not have either hatred or desire for revenge, passions which can arise only from the belief that offense has been received. And since what constitutes the offense is scorn or the intention to harm and not the harm, men who know neither how to appraise nor to compare themselves can do considerable violence to one another when it returns them some advantage for doing it, without ever offending one another. In a word, on seeing his fellow-men hardly otherwise than he would see animals of another species, each man can carry away the prey of the weaker or yield his own to the stronger, viewing these lootings as merely natural events, without the least stirring of insolence or resentment, and without any other passion but the sadness or the joy of a good or bad venture.

16. It is something extremely remarkable that, for the many years that the Europeans torment themselves in order to acclimate the savages of various countries to their lifestyle, they have not yet been able to win over a single one of them, not even by means of Christianity; for our missionaries sometimes turn them into Christians, but never into civilized men. Nothing can overcome the invincible repugnance they have against appropriating our mores and living in our way. If these poor savages are as unhappy as is alleged, by what inconceivable depravity of judgment do they constantly refuse to civilize themselves in imitation of us, or to learn to live happily among us; whereas one reads in a thousand places that the French and other Europeans have voluntarily taken refuge among those nations, and have spent their entire lives there, no longer able to leave so strange a lifestyle; and whereas we even see level-headed missionaries regret with tenderness the calm and innocent days they have spent among those much scorned peoples? If one replies that they do not have enough enlightenment to make a sound judgment about their state and ours, I will reply that the reckoning of happiness is less an affair of reason than of sentiment. Moreover, this reply can be turned against us with still greater force; for there is

[**Translator's note: Rousseau here quotes the Latin text.*]

a greater distance between our ideas and the frame of mind one needed to be in in order to conceive the taste which the savages find in their lifestyle, than between the ideas of savages and those that can make them conceive our lifestyle. In fact, after a few observations it is easy for them to see that all our labors are directed toward but two objects: namely, the conveniences of life for oneself and esteem among others. But what are the means by which we are to imagine the sort of pleasure a savage takes in spending his life alone amidst the woods, or fishing, or blowing into a sorry-looking flute, without ever knowing how to derive a single tone from it and without bothering himself to learn?

Savages have frequently been brought to Paris, London and other cities; people have been eager to display our luxury, our wealth, and all our most useful and curious arts. None of this has ever excited in them anything but a stupid admiration, without the least stirring of covetousness. I recall, among others, the story of a chief of some North Americans who was brought to the court of England about thirty years ago. A thousand things were made to pass before his eye in an attempt to give him some present that could please him, but nothing was found about which he seemed to care. Our weapons seemed heavy and cumbersome to him, our shoes hurt his feet, our clothes restricted him; he rejected everything. Finally, it was noticed that, having taken a wool blanket, he seemed to take some pleasure in wrapping it around his shoulders. You will agree at least, someone immediately said to him, on the usefulness of this furnishing? Yes, he replies, this seems to me to be nearly as good as an animal skin. However, he would not have said that, had he worn them both in the rain.

Perhaps someone will say to me that it is habit which, in attaching everyone to his lifestyle, prevents savages from realizing what is good in ours. And at that rate, it must at least appear quite extraordinary that habit has more force in maintaining the savages in the taste for their misery than the Europeans in the enjoyment of their felicity. But to give to this last objection a reply to which there is not a word to make in reply, without adducing all the young savages that people have tried in vain to civilize, without speaking of the Greenlanders and the inhabitants of Iceland, whom people have tried to raise and feed in Denmark, and all of whom sadness and despair caused to perish, whether from languor or in the sea when they attempted to regain their homeland by swimming back to it, I will be content to cite a single, well-documented example, which I give to the admirers of European civilization to examine.

"All the efforts of the Dutch missionaries at the Cape of Good Hope have never been able to convert a single Hottentot. Van der Stel, Governor of the Cape, having taken one from infancy, had raised him in the principles of the Christian religion and in the practice of the customs of Europe. He was richly clothed; he was taught several languages and his progress corresponded very closely to the care that was taken for his education. Having great hopes for his wit, the Governor sent him to the Indies with a commissioner general who employed him usefully in the affairs of the company. He returned to the Cape after the death of the commissioner. A few days after his return, on a visit he made to some of his Hottentot relatives, he made the decision to strip himself of his European dress in order to clothe himself with a sheepskin. He returned to the fort in this new outfit, carrying a bundle containing his old clothes, and, on presenting them to the Governor, he made the following speech to him: *Please, sir, be so kind as to pay heed to the fact that I forever renounce this clothing. I also renounce the Christian religion for the rest of my life. My resolution is to live and die in the religion, ways and customs of my ancestors. The only favor I ask of you is that you let me keep the necklace and cutlass I am wearing. I will keep them for love of you.* Thereupon, without waiting for Van der Stel's reply, he escaped by taking flight and was never seen again at the Cape." *Histoire des Voyages*, Vol. V, p. 175.

17. One could raise against me the objection that, in such a disorder, men, instead of willfully murdering one another, would have dispersed, had there been no limits to their dispersion. But first, these limits would at least have been those of the world. And if one thinks about the excessive population that results from the state of nature, one will judge that the earth in that state would not have taken long to be covered with men thus forced to keep together. Besides, they would have dispersed, had the evil been rapid, and had it been an overnight change. But they were born under the yoke; they were in the habit of carrying it when they felt its weight, and they were content to wait for the opportunity to shake it off. Finally, since they were already accustomed to a thousand conveniences which forced them to keep together, dispersion was no longer so easy as in the first ages, when, since no one had need for anyone but himself, everyone made his decision without waiting for someone else's consent.

18. Marshal de V*** related that, on one of his campaigns, when the excessive knavery of a provisions supplier had made the army suffer and complain, he gave him a severe dressing down and threatened to have him hanged. "This threat has no effect on me," the knave

boldly replied to him, "and I am quite pleased to tell you that nobody hangs a man with a hundred thousand crowns at his disposal." I do not know how it happened, the Marshal added naïvely, but in fact he was not hanged, even though he deserved to be a hundred times over.

19. Distributive justice would still be opposed to this rigorous equality of the state of nature, if it were workable in civil society. And since all the members of the state owe it services proportionate to their talents and forces, the citizens for their part should be distinguished and favored in proportion to their services. It is in this sense that one must understand a passage of Isocrates, in which he praises the first Athenians for having known well how to distinguish which of the two sorts of equality was the more advantageous, one of which consists in portioning out indifferently to all citizens the same advantages, and the other in distributing them according to each one's merit. These able politicians, adds the orator, in banishing that unjust equality that makes no differentiation between wicked and good men, adhered inviolably to that equality which rewards and punishes each according to one's merit. But first, no society has ever existed, regardless of the degree of corruption they could have achieved, in which no differentiation between wicked and good men was made. And in the matter of mores, where the law cannot set a sufficiently precise measurement to serve as a rule for the magistrate, the law very wisely prohibits him from the judgment of persons, leaving him merely the judgment of actions, in order not to leave the fate or the rank of citizens to his discretion. Only mores as pure as those of the ancient Romans could withstand censors; such tribunals would soon have overturned everything among us. It is for public esteem to differentiate between wicked and good men. The magistrate is judge only of strict law [*droit*]; but the populace is the true judge of mores—an upright and even enlightened judge on this point, occasionally deceived but never corrupted. The ranks of citizens ought therefore to be regulated not on the basis of their personal merit, which would be to leave to the magistrate the means of making an almost arbitrary application of the law, but upon the real services which they render to the state and which lend themselves to a more precise reckoning.

On the Social Contract, or Principles of Political Right

by J.-J. Rousseau,
Citizen of Geneva

—foederis aequas
Dicamus leges
—*Aeneid*, XI

FOREWORD

This little treatise is part of a longer work I undertook some time ago without taking stock of my abilities, and have long since abandoned. Of the various selections that could have been drawn from what had been completed, this is the most considerable, and, it appears to me, the one least unworthy of being offered to the public. The rest no longer exists.

On the Social Contract

BOOK I

I want to inquire whether there can be some legitimate and sure rule of administration in the civil order, taking men as they are and laws as they might be.

From *The Basic Political Writings*, translated by Donald A. Cress (Indianapolis: Hackett Publishing Company, 1987). Copyright © 1987. Re printed by permission of the publisher.

I will always try in this inquiry to bring together what right permits with what interest prescribes, so that justice and utility do not find themselves at odds with one another.

I begin without demonstrating the importance of my subject. It will be asked if I am a prince or a legislator that I should be writing about politics. I answer that I am neither, and that is why I write about politics. Were I a prince or a legislator, I would not waste my time saying what ought to be done. I would do it or keep quiet.

Born a citizen of a free state and a member of the sovereign, the right to vote is enough to impose upon me the duty to instruct myself in public affairs, however little influence my voice may have in them. Happy am I, for every time I meditate on governments, I always find new reasons in my inquiries for loving that of my country.

Chapter 1

Subject of the First Book

Man is born free, and everywhere he is in chains. He who believes himself the master of others does

not escape being more of a slave than they. How did this change take place? I have no idea. What can render it legitimate? I believe I can answer this question.

Were I to consider only force and the effect that flows from it, I would say that so long as a people is constrained to obey and does obey, it does well. As soon as it can shake off the yoke and does shake it off, it does even better. For by recovering its liberty by means of the same right that stole it, either the populace is justified in getting it back or else those who took it away were not justified in their actions. But the social order is a sacred right which serves as a foundation for all other rights. Nevertheless, this right does not come from nature. It is therefore founded upon conventions. The task at hand is to know what these conventions are. Before coming to that, I ought to substantiate what I just claimed.

Chapter 2

Of the First Societies

The most ancient of all societies and the only natural one, is that of the family. Even so children remain bound to their father only so long as they need him to take care of them. As soon as the need ceases, the natural bond is dissolved. Once the children are freed from the obedience they owed the father and their father is freed from the care he owed his children, all return equally to independence. If they continue to remain united, this no longer takes place naturally but voluntarily, and the family maintains itself only by means of convention.

This common liberty is one consequence of the nature of man. Its first law is to see to his maintenance; its first concerns are those he owes himself; and, as soon as he reaches the age of reason, since he alone is the judge of the proper means of taking care of himself, he thereby becomes his own master.

The family therefore is, so to speak, the prototype of political societies; the leader is the image of the father, the populace is the image of the children, and, since all are born equal and free, none give up their liberty except for their utility. The entire difference consists in the fact that in the family the love of the father for his children repays him for the care he takes for them, while in the state, where the leader does not have love for his peoples, the pleasure of commanding takes the place of this feeling.

Grotius denies that all human power is established for the benefit of the governed, citing slavery as an example. His usual method of reasoning is always to present fact as a proof of right.[1] A more logical method could be used, but not one more favorable to tyrants.

According to Grotius, it is therefore doubtful whether the human race belongs to a hundred men, or whether these hundred men belong to the human race. And throughout his book he appears to lean toward the former view. This is Hobbes' position as well. On this telling, the human race is divided into herds of cattle, each one having its own leader who guards it in order to devour it.

Just as a herdsman possesses a nature superior to that of his herd, the herdsmen of men who are the leaders, also have a nature superior to that of their peoples. According to Philo, Caligula reasoned thus, concluding quite properly from this analogy that kings were gods, or that the peoples were beasts.

Caligula's reasoning coincides with that of Hobbes and Grotius. Aristotle, before all the others, had also said that men are by no means equal by nature, but that some were born for slavery and others for domination.

Aristotle was right, but he took the effect for the cause. Every man born in slavery is born for slavery; nothing is more certain. In their chains slaves lose everything, even the desire to escape. They love their servitude the way the companions of Ulysses loved their degradation.[2] If there are slaves by nature, it is because there have been slaves against nature. Force has produced the first slaves; their cowardice has perpetuated them.

I have said nothing about King Adam or Emperor Noah, father of three great monarchs who partitioned

1. "Learned research on public right is often nothing more than the history of ancient abuses, and taking a lot of trouble to study them too closely gets one nowhere." *Treatise on the Interests of France Along With Her Neighbors,* by the Marquis d'Argenson. This is just what Grotius has done.

2. See a short treatise of Plutarch entitled "That Animals Reason."

the universe, as did the children of Saturn, whom some have believed they recognize in them. I hope I will be appreciated for this moderation, for since I am a direct descendent of these princes, and perhaps of the eldest branch, how am I to know whether, after the verification of titles, I might not find myself the legitimate king of the human race? Be that as it may, we cannot deny that Adam was the sovereign of the world, just as Robinson Crusoe was sovereign of his island, so long as he was its sole inhabitant. And the advantage this empire had was that the monarch, securely on his throne, had no rebellions, wars or conspirators to fear.

Chapter 3

On the Right of the Strongest

The strongest is never strong enough to be master all the time, unless he transforms force into right and obedience into duty. Hence the right of the strongest, a right that seems like something intended ironically and is actually established as a basic principle. But will no one explain this word to me? Force is a physical power; I fail to see what morality can result from its effects. To give in to force is an act of necessity, not of will. At most, it is an act of prudence. In what sense could it be a duty?

Let us suppose for a moment that there is such a thing as this alleged right. I maintain that all that results from it is an inexplicable mish-mash. For once force produces the right, the effect changes places with the cause. Every force that is superior to the first succeeds to its right. As soon as one can disobey with impunity, one can do so legitimately; and since the strongest is always right, the only thing to do is to make oneself the strongest. For what kind of right is it that perishes when the force on which it is based ceases? If one must obey because of force, one need not do so out of duty; and if one is no longer forced to obey one is no longer obliged. Clearly then, this word "right" adds nothing to force. It is utterly meaningless here.

Obey the powers that be. If that means giving in to force, the precept is sound, but superfluous. I reply it will never be violated. All power comes from God—I admit it—but so does every disease. Does this mean that calling in a physician is prohibited? If a brigand takes me by surprise at the edge of a wooded area, is it not only the case that I must surrender my purse, but even that I am in good conscience bound to surrender it, if I were able to withhold it? After all, the pistol he holds is also a power.

Let us then agree that force does not bring about right, and that one is obliged to obey only legitimate powers. Thus my original question keeps returning.

Chapter 4

On Slavery

Since no man has a natural authority over his fellow man, and since force does not give rise to any right, conventions therefore remain the basis of all legitimate authority among men.

If, says Grotius, a private individual can alienate his liberty and turn himself into the slave of a master, why could not an entire people alienate its liberty and turn itself into the subject of a king? There are many equivocal words here which need explanation, but let us confine ourselves to the word *alienate.* To alienate is to give or to sell. A man who makes himself the slave of someone else does not give himself; he sells himself, at least for his subsistence. But why does a people sell itself? Far from furnishing his subjects with their subsistence, a king derives his own from them alone, and, according to Rabelais, a king does not live cheaply. Do subjects then give their persons on the condition that their estate will also be taken? I fail to see what remains for them to preserve.

It will be said that the despot assures his subjects of civil tranquility. Very well. But what do they gain, if the wars his ambition drags them into, if his insatiable greed, if the oppressive demands caused by his ministers occasion more grief for his subjects than their own dissensions would have done? What do they gain, if this very tranquility is one of their miseries? A tranquil life is also had in dungeons; is that enough to make them desirable? The Greeks who were locked up in the Cyclops' cave lived a tranquil existence as they awaited their turn to be devoured.

To say that a man gives himself gratuitously is to

say something absurd and inconceivable. Such an act is illegitimate and null, if only for the fact that he who commits it does not have his wits about him. To say the same thing of an entire populace is to suppose a populace composed of madmen. Madness does not bring about right.

Even if each person can alienate himself, he cannot alienate his children. They are born men and free. Their liberty belongs to them; they alone have the right to dispose of it. Before they have reached the age of reason, their father can, in their name, stipulate conditions for their maintenance and for their well-being. But he cannot give them irrevocably and unconditionally, for such a gift is contrary to the ends of nature and goes beyond the rights of paternity. For an arbitrary government to be legitimate, it would therefore be necessary in each generation for the people to be master of its acceptance or rejection. But in that event this government would no longer be arbitrary.

Renouncing one's liberty is renouncing one's dignity as a man, the rights of humanity and even its duties. There is no possible compensation for anyone who renounces everything. Such a renunciation is incompatible with the nature of man. Taking away all liberty from his will is tantamount to removing all morality from his actions. Finally, it is a vain and contradictory convention to stipulate absolute authority on one side and a limitless obedience on the other. Is it not clear that no commitments are made to a person from whom one has the right to demand everything? And does this condition alone not bring with it, without equivalent or exchange, the nullity of the act? For what right would my slave have against me, given that all he has belongs to me, and that, since his right is my right, my having a right against myself makes no sense?

Grotius and others derive from war another origin for the alleged right of slavery. Since, according to them, the victor has the right to kill the vanquished, these latter can repurchase their lives at the price of their liberty—a convention all the more legitimate, since it turns a profit for both of them.

But clearly this alleged right to kill the vanquished does not in any way derive from the state of war. Men are not naturally enemies, for the simple reason that men living in their original state of independence do not have sufficiently constant relationships among themselves to bring about either a state of peace or a state of war. It is the relationship between things and not that between men that brings about war. And since this state of war cannot come into existence from simple personal relations, but only from real [proprietary] relations, a private war between one man and another can exist neither in the state of nature, where there is no constant property, nor in the social state, where everything is under the authority of the laws.

Fights between private individuals, duels, encounters are not acts which produce a state. And with regard to private wars, authorized by the ordinances of King Louis IX of France and suspended by the Peace of God, they are abuses of feudal government, an absurd system if there ever was one, contrary to the principles of natural right and to all sound polity.

War is not therefore a relationship between one man and another, but a relationship between one state and another. In war private individuals are enemies only incidentally: not as men or even as citizens,[3] but as soldiers; not as members of the homeland but as its defenders. Finally, each state can have as enemies only other states and not men, since there can be no real relationship between things of disparate natures.

3. [*At this point the following passage was added to the 1782 edition:* The Romans, who had a better understanding of and a greater respect for the right of war than any other nation, carried their scruples so far in this regard that a citizen was not allowed to serve as a volunteer unless he had expressly committed himself against the enemy and against a specifically named enemy. When a legion in which Cato the Younger first served had been reorganized, Cato the Elder wrote Popilius that if he wanted his son to continue to serve under him, he would have to make him swear the military oath afresh, since, with the first one having been annulled, he could no longer take up arms against the enemy. And this very same Cato wrote his son to take care to avoid going into battle without swearing this military oath afresh. I know the siege of Clusium and other specific cases can be raised as counter-examples to this, but for my part I cite laws and customs. The Romans were the ones who transgressed their laws least often, and are the only ones to have had such noble laws.]

This principle is even in conformity with the established maxims of all times and with the constant practice of all civilized peoples. Declarations of war are warnings not so much to powers as to their subjects. The foreigner (be he king, private individual, or a people) who robs, kills or detains subjects of another prince without declaring war on the prince, is not an enemy but a brigand. Even in the midst of war a just prince rightly appropriates to himself everything in an enemy country belonging to the public, but respects the person and goods of private individuals. He respects the rights upon which his own rights are founded. Since the purpose of war is the destruction of the enemy state, one has the right to kill the defenders of that state so long as they bear arms. But as soon as they lay down their arms and surrender, they cease to be enemies or instruments of the enemy. They return to being simply men; and one no longer has a right to their lives. Sometimes a state can be killed without a single one of its members being killed. For war does not grant a right that is unnecessary to its purpose. These principles are not those of Grotius. They are not based on the authority of poets. Rather they are derived from the nature of things; they are based on reason.

As to the right of conquest, the only basis it has is the law of the strongest. If war does not give the victor the right to massacre the vanquished peoples, this right (which he does not have) cannot be the basis for the right to enslave them. One has the right to kill the enemy only when one cannot enslave him. The right to enslave him does not therefore derive from the right to kill him. Hence it is an iniquitous exchange to make him buy his life, to which no one has any right, at the price of his liberty. In establishing the right of life and death on the right of slavery, and the right of slavery on the right of life and death, is it not clear that one falls into a vicious circle?

Even if we were to suppose that there were this terrible right to kill everyone, I maintain that neither a person enslaved during wartime nor a conquered people bears any obligation whatever toward its master, except to obey him for as long as it is forced to do so. In taking the equivalent of his life, the victor has done him no favor. Instead of killing him unprofitably he kills him usefully. Hence, far from the victor having acquired any authority over him beyond force, the state of war subsists between them just as before. Their relationship itself is the effect of war, and the usage of the right to war does not suppose any peace treaty. They have made a convention. Fine. But this convention, far from destroying the state of war, presupposes its continuation.

Thus, from every point of view, the right of slavery is null, not simply because it is illegitimate, but because it is absurd and meaningless. These words, *slavery* and *right*, are contradictory. They are mutually exclusive. Whether it is the statement of one man to another man, or one man to a people, the following sort of talk will always be equally nonsensical. *I make a convention with you which is wholly at your expense and wholly to my advantage; and, for as long as it pleases me, I will observe it and so will you.*

Chapter 5

That It Is Always Necessary to Return to a First Convention

Even if I were to grant all that I have thus far refuted, the supporters of despotism would not be any better off. There will always be a great difference between subduing a multitude and ruling a society. If scattered men, however many they may be, were successively enslaved by a single individual, I see nothing there but a master and slaves; I do not see a people and its leader. It is, if you will, an aggregation, but not an association. There is neither a public good nor a body politic there. Even if that man had enslaved half the world, he is always just a private individual. His interest, separated from that of others, is never anything but a private interest. If this same man is about to die, after his passing his empire remains scattered and disunited, just as an oak tree dissolves and falls into a pile of ashes after fire has consumed it.

A people, says Grotius, can give itself to a king. According to Grotius, therefore, a people is a people before it gives itself to a king. This gift itself is a civil act; it presupposes a public deliberation. Thus, before examining the act whereby a people chooses a king, it would be well to examine the act whereby a people is a people. For since this act is necessarily prior to the other, it is the true foundation of society.

In fact, if there were no prior convention, then, unless the vote were unanimous, what would become of the minority's obligation to submit to the majority's choice, and where do one hundred who want a master get the right to vote for ten who do not? The law of majority rule is itself an established convention, and presupposes unanimity on at least one occasion.

Chapter 6

On the Social Compact

I suppose that men have reached the point where obstacles that are harmful to their maintenance in the state of nature gain the upper hand by their resistance to the forces that each individual can bring to bear to maintain himself in that state. Such being the case, that original state cannot subsist any longer, and the human race would perish if it did not alter its mode of existence.

For since men cannot engender new forces, but merely unite and direct existing ones, they have no other means of maintaining themselves but to form by aggregation a sum of forces that could gain the upper hand over the resistance, so that their forces are directed by means of a single moving power and made to act in concert.

This sum of forces cannot come into being without the cooperation of many. But since each man's force and liberty are the primary instruments of his maintenance, how is he going to engage them without hurting himself and without neglecting the care that he owes himself? This difficulty, seen in terms of my subject, can be stated in the following terms:

"Find a form of association which defends and protects with all common forces the person and goods of each associate, and by means of which each one, while uniting with all, nevertheless obeys only himself and remains as free as before?" This is the fundamental problem for which the social contract provides the solution.

The clauses of this contract are so determined by the nature of the act that the least modification renders them vain and ineffectual, that, although perhaps they have never been formally promulgated, they are everywhere the same, everywhere tacitly accepted and acknowledged. Once the social compact is violated, each person then regains his first rights and resumes his natural liberty, while losing the conventional liberty for which he renounced it.

These clauses, properly understood, are all reducible to a single one, namely the total alienation of each associate, together with all of his rights, to the entire community. For first of all, since each person gives himself whole and entire, the condition is equal for everyone; and since the condition is equal for everyone, no one has an interest in making it burdensome for the others.

Moreover, since the alienation is made without reservation, the union is as perfect as possible, and no associate has anything further to demand. For if some rights remained with private individuals, in the absence of any common superior who could decide between them and the public, each person would eventually claim to be his own judge in all things, since he is on some point his own judge. The state of nature would subsist and the association would necessarily become tyrannical or hollow.

Finally, in giving himself to all, each person gives himself to no one. And since there is no associate over whom he does not acquire the same right that he would grant others over himself, he gains the equivalent of everything he loses, along with a greater amount of force to preserve what he has.

If, therefore, one eliminates from the social compact whatever is not essential to it, one will find that it is reducible to the following terms. Each of us places his person and all his power in common under the supreme direction of the general will; and as one we receive each member as an indivisible part of the whole.

At once, in place of the individual person of each contracting party, this act of association produces a moral and collective body composed of as many members as there are voices in the assembly, which receives from this same act its unity, its common *self,* its life and its will. This public person, formed thus by union of all the others formerly took the name *city,*[4] and at present takes the name *republic* or *body*

4. The true meaning of this word is almost entirely lost on modern men. Most of them mistake a town for a city and a townsman for a citizen. They do not know

politic, which is called *state* by its members when it is passive, *sovereign* when it is active, *power* when compared to others like itself. As to the associates, they collectively take the name *people;* individually they are called *citizens*, insofar as participants in the sovereign authority, and *subjects*, insofar as they are subjected to the laws of the state. But these terms are often confused and mistaken for one another. It is enough to know how to distinguish them when they are used with absolute precision.

Chapter 7

On the Sovereign

This formula shows that the act of association includes a reciprocal commitment between the public and private individuals, and that each individual, contracting, as it were, with himself, finds himself under a twofold commitment: namely as a member of the sovereign to private individuals, and as a member of the state toward the sovereign. But the maxim of civil law that no one is held to commitments made to himself cannot be applied here, for there is a considerable difference between being obligated to oneself, or to a whole of which one is a part.

It must be further noted that the public deliberation that can obligate all the subjects to the sovereign, owing to the two different relationships in which each of them is viewed, cannot, for the opposite reason, obligate the sovereign to itself, and that consequently it is contrary to the nature of the body politic that the sovereign impose upon itself a law it could not break. Since the sovereign can be considered under but one single relationship, it is then in the position of a private individual contracting with himself. Whence it is apparent that there neither is nor can be any type of fundamental law that is obligatory for the people as a body, not even the social contract. This does not mean that the whole body cannot perfectly well commit itself to another body with respect to things that do not infringe on this contract. For in regard to the foreigner, it becomes a simple being, an individual.

However, since the body politic or the sovereign derives its being exclusively from the sanctity of the contract, it can never obligate itself, not even to another power, to do anything that derogates from the original act, such as alienating some portion of itself or submitting to another sovereign. Violation of the act whereby it exists would be self-annihilation, and whatever is nothing produces nothing.

As soon as this multitude is thus united in a body, one cannot harm one of the members without attacking the whole body. It is even less likely that the body can be harmed without the members feeling it. Thus duty and interest equally obligate the two parties to come to one another's aid, and the same men should seek to combine in this two-fold relationship all the advantages that result from it.

For since the sovereign is formed entirely from the private individuals who make it up, it neither has nor could have an interest contrary to theirs. Hence, the sovereign power has no need to offer a guarantee to its subjects, since it is impossible for a body to want to harm all of its members, and, as we will see later, it cannot harm any one of them in particular. The sovereign, by the mere fact that it exists, is always all that it should be.

But the same thing cannot be said of the subjects in relation to the sovereign, for which, despite their common interest, their commitments would be without substance if it did not find ways of being assured of their fidelity.

---

that houses make a town but citizens make a city. Once this mistake cost the Carthaginians dearly. I have not found in my reading that the title of *citizen* has ever been given to the subjects of a prince, not even in ancient times to the Macedonians or in our own time to the English, although they are closer to liberty than all the others. Only the French adopt this name *citizen* with complete familiarity, since they have no true idea of its meaning, as can be seen from their dictionaries. If this were not the case, they would become guilty of treason for using it. For them, this name expresses a virtue and not a right. When Bodin wanted to speak about our citizens and townsmen, he committed a terrible blunder when he mistook the one group for the other. M. d'Alembert was not in error, and in his article entitled *Geneva* he has carefully distinguished the four orders of men (even five, counting ordinary foreigners) who are in our towns, and of whom only two make up the republic. No other French author I am aware of has grasped the true meaning of the word *citizen*.

In fact, each individual can, as a man, have a private will contrary to or different from the general will that he has as a citizen. His private interest can speak to him in an entirely different manner than the common interest. His absolute and naturally independent existence can cause him to envisage what he owes the common cause as a gratuitous contribution, the loss of which will be less harmful to others than its payment is burdensome to him. And in viewing the moral person which constitutes the state as a being of reason because it is not a man, he would enjoy the rights of a citizen without wanting to fulfill the duties of a subject, an injustice whose growth would bring about the ruin of the body politic.

Thus, in order for the social compact to avoid being an empty formula, it tacitly entails the commitment—which alone can give force to the others—that whoever refuses to obey the general will will be forced to do so by the entire body. This means merely that he will be forced to be free. For this is the sort of condition that, by giving each citizen to the homeland, guarantees him against all personal dependence—a condition that produces the skill and the performance of the political machine, and which alone bestows legitimacy upon civil commitments. Without it such commitments would be absurd, tyrannical and subject to the worst abuses.

Chapter 8

On the Civil State

This passage from the state of nature to the civil state produces quite a remarkable change in man, for it substitutes justice for instinct in his behavior and gives his actions a moral quality they previously lacked. Only then, when the voice of duty replaces physical impulse and right replaces appetite, does man, who had hitherto taken only himself into account, find himself forced to act upon other principles and to consult his reason before listening to his inclinations. Although in this state he deprives himself of several of the advantages belonging to him in the state of nature, he regains such great ones. His faculties are exercised and developed, his ideas are broadened, his feelings are ennobled, his entire soul is elevated to such a height that, if the abuse of this new condition did not often lower his status to beneath the level he left, he ought constantly to bless the happy moment that pulled him away from it forever and which transformed him from a stupid, limited animal into an intelligent being and a man.

Let us summarize this entire balance sheet so that the credits and debits are easily compared. What man loses through the social contract is his natural liberty and an unlimited right to everything that tempts him and that he can acquire. What he gains is civil liberty and the proprietary ownership of all he possesses. So as not to be in error in these compensations, it is necessary to draw a careful distinction between natural liberty (which is limited solely by the force of the individual involved) and civil liberty (which is limited by the general will), and between possession (which is merely the effect of the force or the right of the first occupant) and proprietary ownership (which is based solely on a positive title).

To the preceding acquisitions could be added the acquisition in the civil state of moral liberty, which alone makes man truly the master of himself. For to be driven by appetite alone is slavery, and obedience to the law one has prescribed for oneself is liberty. But I have already said too much on this subject, and the philosophical meaning of the word *liberty* is not my subject here.

Chapter 9

On the Real [i.e., Proprietary] Domain

Each member of the community gives himself to it at the instant of its constitution, just as he actually is, himself and all his forces, including all the goods in his possession. This is not to say that by this act possession changes its nature as it changes hands and becomes property in the hands of the sovereign. Rather, since the forces of the city are incomparably greater than those of a private individual, public possession is by that very fact stronger and more irrevocable, without being more legitimate, at least to strangers. For with regard to its members, the state is master of all their goods in virtue of the social contract, which serves in the state as the basis of all rights. But with regard to other

powers, the state is master only in virtue of the right of the first occupant, which it derives from private individuals.

The right of first occupant, though more real than the right of the strongest, does not become a true right until after the establishment of the right of property. Every man by nature has a right to everything he needs; however, the positive act whereby he becomes a proprietor of some goods excludes him from all the rest. Once his lot has been determined, he should limit himself thereto, no longer having any right against the community. This is the reason why the right of the first occupant, so weak in the state of nature, is able to command the respect of every man living in the civil state. In this right, one respects not so much what belongs to others as what does not belong to oneself.

In general, the following rules must obtain in order to authorize the right of the first occupant on any land. First, this land may not already be occupied by anyone. Second, no one may occupy more than the amount needed to subsist. Third, one is to take possession of it not by an empty ceremony, but by working and cultivating it—the only sign of property that ought, in the absence of legal titles, to be respected by others.

In fact, by according to need and work the right of the first occupant, is it not extended as far as it can go? Is it possible to avoid setting limits to this right? Will setting one's foot on a piece of common land be sufficient to claim it at once as one's own? Will having the force for a moment to drive off other men be sufficient to deny them the right ever to return? How can a man or a people seize a vast amount of territory and deprive the entire human race of it except by a punishable usurpation, since this seizure deprives all other men of the shelter and sustenance that nature gives them in common? When Nuñez Balboa stood on the shoreline and took possession of the South Sea and all of South America in the name of crown of Castille, was this enough to dispossess all the inhabitants and to exclude all the princes of the world? On that basis, those ceremonies would be multiplied quite in vain. All the Catholic King had to do was to take possession of the universe all at once from his private room, excepting afterwards from his empire only what already belonged to other princes.

One can imagine how the combined and contiguous lands of private individuals became public territory; and how the right of sovereignty, extending from subjects to the land they occupied, becomes at once real and personal. This places its owners in a greater dependence, turning their very own forces into guarantees of their loyalty. This advantage does not seem to have been fully appreciated by the ancient monarchs, who, calling themselves merely King of the Persians, the Scythians, and the Macedonians, appeared to regard themselves merely as the leaders of men rather than the masters of the country. Today's monarchs more shrewdly call themselves King of France, Spain, England, and so on. In holding the land thus, they are quite sure of holding the inhabitants.

What is remarkable about this alienation is that, in accepting the goods of private individuals, the community is far from despoiling them; rather, in so doing, it merely assures them of legitimate possession, changing usurpation into a true right, and enjoyment into proprietary ownership. In that case, since owners are considered trustees of the public good, and since their rights are respected by all members of the state and maintained with all its force against foreigners, through an advantageous surrender to the public and still more so to themselves, they have, so to speak, acquired all they have given. This paradox is easily explained by the distinction between the rights of the sovereign and those of the proprietor to the same store, as will be seen later.

It can also happen, as men begin to unite before possessing anything and later appropriate a piece of land sufficient for everyone, that they enjoy it in common or divide it among themselves either in equal shares or according to proportions laid down by the sovereign. In whatever way this acquisition is accomplished, each private individual's right to his very own store is always subordinate to the community's right to all, without which there could be neither solidity in the social fabric nor real force in the exercise of sovereignty.

I will end this chapter and this book with a remark that should serve as a basis for every social system. It is that instead of destroying natural equality, the fundamental compact, on the contrary, substitutes a moral and legitimate equality to whatever physical

inequality nature may have been able to impose upon men, and that, however, unequal in force or intelligence they may be, men all become equal by convention and by right.[5]

End of the First Book

BOOK II

Chapter 1

That Sovereignty Is Inalienable

The first and most important consequence of the principles established above is that only the general will can direct the forces of the state according to the purpose for which it was instituted, which is the common good. For if the opposition of private interests made necessary the establishment of societies, it is the accord of these same interests that made it possible. It is what these different interests have in common that forms the social bond, and, were there no point of agreement among all these interests, no society could exist. For it is utterly on the basis of this common interest that society ought to be governed.

I therefore maintain that since sovereignty is merely the exercise of the general will, it can never be alienated, and that the sovereign, which is only a collective being, cannot be represented by anything but itself. Power can perfectly well be transmitted, but not the will.

In fact, while it is not impossible for a private will to be in accord on some point with the general will, it is impossible at least for this accord to be durable and constant. For by its nature the private will tends toward having preferences, and the general will tends toward equality. It is even more impossible for there to be a guarantee of this accord even if it ought always to exist. This is not the result of art but of chance. The sovereign may well say, "Right now I want what a certain man wants or at least what he says he wants." But it cannot say, "What this man will want tomorrow I too will want," since it is absurd for the will to tie its hands for the future and since it does not depend upon any will's consenting to anything contrary to the good of the being that wills. If, therefore, the populace promises simply to obey, it dissolves itself by this act, it loses its standing as a people. The very moment there is a master, there no longer is a sovereign, and thenceforward the body politic is destroyed.

This is not to say that the commands of the leaders could not pass for manifestations of the general will, so long as the sovereign, who is free to oppose them, does not do so. In such a case, the consent of the people ought to be presumed on the basis of universal silence. This will be explained at greater length.

Chapter 2

That Sovereignty Is Indivisible

Sovereignty is indivisible for the same reason that it is inalienable. For either the will is general,[6] or it is not. It is the will of either the people as a whole or of only a part. In the first case, this declared will is an act of sovereignty and constitutes law. In the second case, it is merely a private will, or an act of magistracy. At most it is a decree.

However, our political theorists, unable to divide sovereignty in its principle, divide it in its object. They divide it into force and will, into legislative and executive power, into rights of imposing taxes, of justice and of war, into internal administration and power to negotiate with foreigners. Occasionally they confuse all these parts and sometimes they separate them. They turn the sovereign into a fantastic being made of interconnected pieces. It is as if they built a man out of several bodies, one of which had eyes,

5. Under bad governments this equality is only apparent and illusory. It serves merely to maintain the poor man in his misery and the rich man in his usurpation. In actuality, laws are always useful to those who have possessions and harmful to those who have nothing. Whence it follows that the social state is advantageous to men only insofar as they all have something and none of them has too much.

6. For a will to be general, it need not always be unanimous; however, it is necessary for all the votes to be counted. Any formal exclusion is a breach of generality.

another had arms, another feet, and nothing more. Japanese sleight-of-hand artists are said to dismember a child before the eyes of spectators, then, throwing all the parts in the air one after the other, they make the child fall back down alive and all in one piece. These conjuring acts of our political theorists are more or less like these performances. After having taken apart the social body by means of a sleight-of-hand worthy of a carnival, they put the pieces back together who knows how.

This error comes from not having formed precise notions of sovereign authority, and from having taken for parts of that authority what were merely emanations from it. Thus, for example, the acts of declaring war and making peace have been viewed as acts of sovereignty, which they are not, since each of these acts is not a law but merely an application of the law, a particular act determining the legal circumstances, as will be clearly seen when the idea attached to the word *law* comes to be defined.

In reviewing the other divisions in the same way, one would find that one is mistaken every time one believes one sees sovereignty divided, and that the rights one takes to be the parts of this sovereignty are all subordinated to it and always presuppose supreme wills which these rights merely put into effect.

It would be impossible to say how much this lack of precision has obscured the decisions of authors who have written about political right when they wanted to judge the respective rights of kings and peoples on the basis of the principles they had established. Anyone can see, in Chapters III and IV of Book I of Grotius, how this learned man and his translator, Barbeyrac, become entangled and caught up in their sophisms, for fear of either saying too much or too little according to their perspectives, and of offending the interests they needed to reconcile. Grotius, taking refuge in France, unhappy with his homeland and desirous of paying court to Louis XIII (to whom his book is dedicated), spares no pain to rob the people of all their rights and to invest kings with them by every possible artifice. This would also have been the wish of Barbeyrac, who dedicated his translation to King George I of England. But unfortunately the expulsion of James II (which he calls an abdication) forced him to be evasive and on his guard and to beat around the bush, in order to avoid making William out to be a usurper. If these two writers had adopted the true principles, all their difficulties would have been alleviated and they would always have been consistent. However, sad to say, they would have told the truth and paid court only to the people. For truth does not lead to fortune, and the populace grants neither ambassadorships, university chairs nor pensions.

Chapter 3

Whether the General Will Can Err

It follows from what has preceded that the general will is always right and always tends toward the public utility. However, it does not follow that the deliberations of the people always have the same rectitude. We always want what is good for us, but we do not always see what it is. The populace is never corrupted, but it is often tricked, and only then does it appear to want what is bad.

There is often a great deal of difference between the will of all and the general will. The latter considers only the general interest, whereas the former considers private interest and is merely the sum of private wills. But remove from these same wills the pluses and minuses that cancel each other out,[7] and what remains as the sum of the differences is the general will.

If, when a sufficiently informed populace deliberates, the citizens were to have no communication among themselves, the general will would always result from the large number of small differences, and the deliberation would always be good. But when intrigues and partial associations come into being at the expense of the large association, the will of each of these associations becomes general in relation to its members and particular in relation to the state. It

7. *Each interest*, says the Marquis d'Argenson, *has different principles. The accord of two private interests is formed in opposition to that of a third.* He could have added that the accord of all the interests is found in the opposition to that of each. If there were no different interests, the common interest, which would never encounter any obstacle, would scarcely be felt. Everything would proceed on its own and politics would cease being an art.

can be said, then, that there are no longer as many voters as there are men, but merely as many as there are associations. The differences become less numerous and yield a result that is less general. Finally, when one of these associations is so large that it dominates all the others, the result is no longer a sum of minor differences, but a single difference. Then there is no longer a general will, and the opinion that dominates is merely a private opinion.

For the general will to be well articulated, it is therefore important that there should be no partial society in the state and that each citizen make up his own mind.[8] Such was the unique and sublime institution of the great Lycurgus. If there are partial societies, their number must be multiplied and inequality among them prevented, as was done by Solon, Numa and Servius. These precautions are the only effective way of bringing it about that the general will is always enlightened and that the populace is not tricked.

Chapter 4

On the Limits of Sovereign Power

If the state or the city is merely a moral person whose life consists in the union of its members, and if the most important of its concerns is that of its own conservation, it ought to have a universal compulsory force to move and arrange each part in the manner best suited to the whole. Just as nature gives each man an absolute power over all his members, the social compact gives the body politic an absolute power over all its members, and it is the same power which, as I have said, is directed by the general will and bears the name sovereignty.

But over and above the public person, we need to consider the private persons who make it up and whose life and liberty are naturally independent of it. It is, therefore, a question of making a rigorous distinction between the respective rights of the citizens and the sovereign,[9] and between the duties the former have to fulfill as subjects and the natural right they should enjoy as men.

We grant that each person alienates, by the social compact, only that portion of his power, his goods, and liberty whose use is of consequence to the community; but we must also grant that only the sovereign is the judge of what is of consequence.

A citizen should render to the state all the services he can as soon as the sovereign demands them. However, for its part, the sovereign cannot impose on the subjects any fetters that are of no use to the community. It cannot even will to do so, for under the law of reason nothing takes place without a cause, any more than under the law of nature.

The commitments that bind us to the body politic are obligatory only because they are mutual, and their nature is such that in fulfilling them one cannot work for someone else without also working for oneself. Why is the general will always right, and why do all constantly want the happiness of each of them, if not because everyone applies the word *each* to himself and thinks of himself as he votes for all? This proves that the quality of right and the notion of justice it produces are derived from the preference each person gives himself, and thus from the nature of man; that the general will, to be really such, must be general in its object as well as in its essence; that it must derive from all in order to be applied to all; and that it loses its natural rectitude when it tends toward any individual, determinate object. For then, judging what is foreign to us, we have no true principle of equity to guide us.

In effect, once it is a question of a state of affairs or a particular right concerning a point that has not been regulated by a prior, general convention, the issue becomes contentious. It is a suit in which the interested private individuals are one of the parties and the public the other, but in which I fail to see either what law should be followed or what judge

8. *"It is true,"* says Machiavelli, *"that some divisions are harmful to the republic while others are helpful to it. Those that are accompanied by sects and partisan factions are harmful. Since, therefore, a ruler of a republic cannot prevent enmities from arising within it, he at least ought to prevent them from becoming sects," The History of Florence,* Book VII. [Rousseau here quotes the Italian.]

9. Attentive readers, please do not rush to accuse me of contradiction here. I have been unable to avoid it in my choice of words, given the poverty of the language. But wait.

should render the decision. In these circumstances it would be ridiculous to want to defer to an express decision of the general will, which can only be the conclusion reached by one of its parts, and which, for the other party, therefore, is merely an alien, particular will, inclined on this occasion to injustice and subject to error. Thus, just as a private will cannot represent the general will, the general will, for its part, alters its nature when it has a particular object; and as general, it is unable to render a decision on either a man or a state of affairs. When, for example, the populace of Athens appointed or dismissed its leaders, decreed that honors be bestowed on one or inflicted penalties on another, and by a multitude of particular decrees, indiscriminately exercised all the acts of government, the people in this case no longer had a general will in the strict sense. It no longer functioned as sovereign but as magistrate. This will appear contrary to commonly held opinions, but I must be given time to present my own.

It should be seen from this that what makes the will general is not so much the number of votes as the common interest that unites them, for in this institution each person necessarily submits himself to the conditions he imposes on others, an admirable accord between interest and justice which bestows on common deliberations a quality of equity that disappears when any particular matter is discussed, for lack of a common interest uniting and identifying the role of the judge with that of the party.

From whatever viewpoint one approaches this principle, one always arrives at the same conclusion, namely that the social compact establishes among the citizens an equality of such a kind that they all commit themselves under the same conditions and should all enjoy the same rights. Thus by the very nature of the compact, every act of sovereignty (that is, every authentic act of the general will) obligates or favors all citizens equally, so that the sovereign knows only the nation as a body and does not draw distinctions between any of those members that make it up. Strictly speaking, then, what is an act of sovereignty? It is not a convention between a superior and an inferior, but a convention of the body with each of its members. This convention is legitimate, because it has the social contract as a basis; equitable, because it is common to all; useful, because it can have only the general good for its object; and solid, because it has the public force and the supreme power as a guarantee. So long as the subjects are subordinated only to such convention, they obey no one but their own will alone. And asking how far the respective rights of the sovereign and the citizens extend is asking how far the latter can commit themselves to one another, each to all and all to each.

We can see from this that the sovereign power, absolute, wholly sacred and inviolable as it is, does not and cannot exceed the limits of general conventions, and that every man can completely dispose of such goods and freedom as has been left to him by these conventions. This results in the fact that the sovereign never has the right to lay more charges on one subject than on another, because in that case the matter becomes particular, no longer within the range of the sovereign's competence.

Once these distinctions are granted, it is so false that there is, in the social contract, any genuine renunciation on the part of private individuals that their situation, as a result of this contract, is really preferable to what it was beforehand; and, instead of an alienation, they have merely made an advantageous exchange of an uncertain and precarious mode of existence for another that is better and surer. Natural independence is exchanged for liberty; the power to harm others is exchanged for their own security; and their force, which others could overcome, for a right which the social union renders invincible. Their life itself, which they have devoted to the state, is continually protected by it; and when they risk their lives for its defense, what are they then doing but returning to the state what they have received from it? What are they doing, that they did not do more frequently and with greater danger in the state of nature, when they would inevitably have to fight battles, defending at the peril of their lives the means of their preservation? It is true that everyone has to fight, if necessary, for the homeland; but it also is the case that no one ever has to fight on his own behalf. Do we not still gain by running, for something that brings about our security, a portion of the risks we would have to run for ourselves once our security is taken away?

Chapter 5

On the Right of Life or Death

The question arises how private individuals who have no right to dispose of their own lives can transfer to the sovereign this very same right which they do not have. This question seems difficult to resolve only because it is poorly stated. Every man has the right to risk his own life in order to preserve it. Has it ever been said that a person who jumps out a window to escape a fire is guilty of committing suicide? Has this crime ever been imputed to someone who perishes in a storm, unaware of its danger when he embarked?

The social treaty has as its purpose the conservation of the contracting parties. Whoever wills the end also wills the means, and these means are inseparable from some risks, even from some losses. Whoever wishes to preserve his life at the expense of others should also give it up for them when necessary. For the citizen is no longer judge of the peril to which the law wishes he be exposed, and when the prince has said to him, "it is expedient for the state that you should die," he should die. Because it is under this condition alone that he has lived in security up to then, and because his life is not only a kindness of nature, but a conditional gift of the state.

The death penalty inflicted on criminals can be viewed from more or less the same point of view. It is in order to avoid being the victim of an assassin that a person consents to die, were he to become one. According to this treaty, far from disposing of his own life, one thinks only of guaranteeing it. And it cannot be presumed that any of the contracting parties is then planning to get himself hanged.

Moreover, every malefactor who attacks the social right becomes through his transgressions a rebel and a traitor to the homeland; in violating its laws, he ceases to be a member, and he even wages war with it. In that case the preservation of the state is incompatible with his own. Thus one of the two must perish; and when the guilty party is put to death, it is less as a citizen than as an enemy. The legal proceeding and the judgment are the proofs and the declaration that he has broken the social treaty, and consequently that he is no longer a member of the state. For since he has acknowledged himself to be such, at least by his living there, he ought to be removed from it by exile as a violator of the compact, or by death as a public enemy. For such an enemy is not a moral person, but a man, and in this situation the right of war is to kill the vanquished.

But it will be said that the condemnation of a criminal is a particular act. Fine. So this condemnation is not a function of the sovereign. It is a right the sovereign can confer without itself being able to exercise it. All of my opinions are consistent, but I cannot present them all at once.

In addition, frequency of physical punishment is always a sign of weakness or of torpor in the government. There is no wicked man who could not be made good for something. One has the right to put to death, even as an example, only someone who cannot be preserved without danger.

With regard to the right of pardon, or of exempting a guilty party from the penalty decreed by the law and pronounced by the judge, this belongs only to one who is above the judge and the law, that is, to the sovereign. Still its right in this regard is not clearly defined, and the cases in which it is used are quite rare. In a well governed state, there are few punishments, not because many pardons are granted, but because there are few criminals. When a state is in decline, the sheer number of crimes insures impunity. Under the Roman Republic, neither the senate nor the consuls ever tried to grant pardons. The people itself did not do so, even though it sometimes revoked its own judgment. Frequent pardons indicate that transgressions will eventually have no need of them, and everyone sees where that leads. But I feel that my heart murmurs and holds back my pen. Let us leave these questions to be discussed by a just man who has not done wrong and who himself never needed pardon.

Chapter 6

On Law

Through the social compact we have given existence and life to the body politic. It is now a matter of giving it movement and will through legislation. For

the primitive act whereby this body is formed and united still makes no determination regarding what it should do to preserve itself.

Whatever is good and in conformity with order is such by the nature of things and independently of human conventions. All justice comes from God; he alone is its source. But if we knew how to receive it from so exalted a source, we would have no need for government or laws. Undoubtedly there is a universal justice emanating from reason alone; but this justice, to be admitted among us, ought to be reciprocal. Considering things from a human standpoint, the lack of a natural sanction causes the laws of justice to be without teeth among men. They do nothing but good to the wicked and evil to the just, when the latter observes them in his dealings with everyone while no one observes them in their dealings with him. There must therefore be conventions and laws to unite rights and duties and to refer justice back to its object. In the state of nature where everything is commonly held, I owe nothing to those to whom I have promised nothing. I recognize as belonging to someone else only what is not useful to me. It is not this way in the civil state where all rights are fixed by law.

But what then is a law? So long as we continue to be satisfied with attaching only metaphysical ideas to this word, we will continue to reason without coming to any understanding. And when they have declared what a law of nature is, they will not thereby have a better grasp of what a law of the state is.

I have already stated that there is no general will concerning a particular object. In effect, this particular object is either within or outside of the state. If it is outside of the state, a will that is foreign to it is not general in relation to it. And if this object is within the state, that object is part of it; in that case, a relationship is formed between the whole and its parts which makes two separate beings, one of which is the part, and the other is the whole less that same part. But the whole less a part is not the whole, and so long as this relationship obtains, there is no longer a whole, but rather two unequal parts. Whence it follows that the will of the one is not more general in relation to the other.

But when the entire populace enacts a statute concerning the entire populace, it considers only itself, and if in that case a relationship is formed, it is between the entire object seen from one perspective and the entire object seen from another, without any division of the whole. Then the subject matter about which a statute is enacted is general like the will that enacts it. It is this act that I call a law.

When I say that the object of the laws is always general, I have in mind that the law considers subjects as a body and actions in the abstract, never a man as an individual or a particular action. Thus the law can perfectly well enact a statute to the effect that there be privileges, but it cannot bestow them by name on anyone. The law can create several classes of citizens, and even stipulate the qualifications that determine membership in these classes, but it cannot name specific persons to be admitted to them. It can establish a royal government and a hereditary line of succession, but it cannot elect a king or name a royal family. In a word, any function that relates to an individual does not belong to the legislative power. On this view, it is immediately obvious that it is no longer necessary to ask who is to make the laws, since they are the acts of the general will; nor whether the prince is above the laws, since he is a member of the state; nor whether the law can be unjust, since no one is unjust to himself; nor how one is both free and subject to the laws, since they are merely the record of our own wills.

Moreover, it is apparent that since the law combines the universality of the will and that of the object, what a man, whoever he may be, decrees on his own authority is not a law. What even the sovereign decrees concerning a particular object is no closer to being a law; rather, it is a decree. Nor is it an act of sovereignty but of magistracy.

I therefore call every state ruled by laws a republic, regardless of the form its administration may take. For only then does the public interest govern, and only then is the "public thing" [in Latin: *res publica*] something real. Every legitimate government is republican.[10] I will explain later on what government is.

10. By this word I do not have in mind merely an aristocracy or a democracy, but in general every government guided by the general will, which is the law. To be legitimate, the government need not be made indistinguishable from the sovereign, but it must be its minister.

Strictly speaking, laws are merely the conditions of civil association. The populace that is subjected to the laws ought to be their author. The regulating of the conditions of a society belongs to no one but those who are in association with one another. But how will they regulate these conditions? Will it be by a common accord, by a sudden inspiration? Does the body politic have an organ for making known its will? Who will give it the necessary foresight to formulate acts and to promulgate them in advance, or how will it announce them in time of need? How will a blind multitude, which often does not know what it wants (since it rarely knows what is good for it), carry out on its own an enterprise as great and as difficult as a system of legislation? By itself the populace always wants the good, but by itself it does not always see it. The general will is always right, but the judgment that guides it is not always enlightened. It must be made to see objects as they are, and sometimes as they ought to appear to it. The good path it seeks must be pointed out to it. It must be made safe from the seduction of private wills. It must be given a sense of time and place. It must weigh present, tangible advantages against the danger of distant, hidden evils. Private individuals see the good they reject. The public wills the good that it does not see. Everyone is equally in need of guides. The former must be obligated to conform their wills to their reason; the latter must learn to know what it wants. Then public enlightenment results in the union of the understanding and the will in the social body; hence the full cooperation of the parts, and finally the greatest force of the whole. Whence there arises the necessity of having a legislator.

Chapter 7

On the Legislator

Discovering the rules of society best suited to nations would require a superior intelligence that beheld all the passions of men without feeling any of them; who had no affinity with our nature, yet knew it through and through; whose happiness was independent of us, yet who nevertheless was willing to concern itself with ours; finally, who, in the passage of time, procures for himself a distant glory, being able to labor in one age and find enjoyment in another.[11] Gods would be needed to give men laws.

The same reasoning used by Caligula regarding matters of fact was used by Plato regarding right in defining the civil or royal man he looks for in his dialogue *The Statesman.* But if it is true that a great prince is a rare man, what about a great legislator? The former merely has to follow the model the latter should propose to him. The latter is the engineer who invents the machine; the former is merely the workman who constructs it and makes it run. At the birth of societies, says Montesquieu, it is the leaders of republics who bring about the institution, and thereafter it is the institution that forms the leaders of the republic.

He who dares to undertake the establishment of a people should feel that he is, so to speak, in a position to change human nature, to transform each individual (who by himself is a perfect and solitary whole), into a part of a larger whole from which this individual receives, in a sense, his life and his being; to alter man's constitution in order to strengthen it; to substitute a partial and moral existence for the physical and independent existence we have all received from nature. In a word, he must deny man his own forces in order to give him forces that are alien to him and that he cannot make use of without the help of others. The more these natural forces are dead and obliterated, and the greater and more durable are the acquired forces, the more too is the institution solid and perfect. Thus if each citizen is nothing and can do nothing except in concert with all the others, and if the force acquired by the whole is equal or superior to the sum of the natural forces of all the individuals, one can say that the legislation has achieved the highest possible point of perfection.

The legislator is in every respect an extraordinary

Then the monarchy itself is a republic. This will become clear in the next Book.

11. A people never becomes famous except when its legislation begins to decline. It is not known for how many centuries the institution established by Lycurgus caused the happiness of the Spartans before the rest of Greece took note of it.

man in the state. If he ought to be so by his genius, he is no less so by his office, which is neither magistracy nor sovereignty. This office, which constitutes the republic, does not enter into its constitution. It is a particular and superior function having nothing in common with the dominion over men. For if he who has command over men must not have command over laws, he who has command over the laws must no longer have any authority over men. Otherwise, his laws, ministers of his passions, would often only serve to perpetuate his injustices, and he could never avoid private opinions altering the sanctity of his work.

When Lycurgus gave laws to his homeland, he began by abdicating the throne. It was the custom of most Greek cities to entrust the establishment of their laws to foreigners. The modern republics of Italy often imitated this custom. The republic of Geneva did the same and things worked out well.[12] In its finest age Rome saw the revival within its midst of all the crimes of tyranny and saw itself on the verge of perishing as a result of having united the legislative authority and the sovereign power in the same hands.

Nevertheless, the decemvirs themselves never claimed the right to have any law passed on their authority alone. *Nothing we propose*, they would tell the people, *can become law without your consent. Romans, be yourselves the authors of the laws that should bring about your happiness.*

He who frames the laws, therefore, does not or should not have any legislative right. And the populace itself cannot, even if it wanted to, deprive itself of this incommunicable right, because, according to the fundamental compact, only the general will obligates private individuals, and there can never be any assurance that a private will is in conformity with the general will until it has been submitted to the free vote of the people. I have already said this, but it is not a waste of time to repeat it.

Thus we find together in the work of legislation two things that seem incompatible: an undertaking that transcends human force, and, to execute it, an authority that is nil.

Another difficulty deserves attention. The wise men who want to speak to the common masses in the former's own language rather than in the common vernacular cannot be understood by the masses. For there are a thousand kinds of ideas that are impossible to translate in the language of the populace. Overly general perspectives and overly distant objects are equally beyond its grasp. Each individual, in having no appreciation for any other plan of government but the one that relates to his own private interest, finds it difficult to realize the advantages he ought to draw from the continual privations that good laws impose. For an emerging people to be capable of appreciating the sound maxims of politics and to follow the fundamental rules of statecraft, the effect would have to become the cause. The social spirit which ought to be the work of that institution, would have to preside over the institution itself. And men would be, prior to the advent of laws, what they ought to become by means of laws. Since, therefore, the legislator is incapable of using either force or reasoning, he must of necessity have recourse to an authority of a different order, which can compel without violence and persuade without convincing.

This is what has always forced the fathers of nations to have recourse to the intervention of heaven and to credit the gods with their own wisdom, so that the peoples, subjected to the laws of the state as to those of nature and recognizing the same power in the formation of man and of the city, might obey with liberty and bear with docility the yoke of public felicity.

It is this sublime reason, which transcends the grasp of ordinary men, whose decisions the legislator puts in the mouth of the immortals in order to compel by divine authority those whom human prudence could not move.[13] But not everybody is capable of

12. Those who view Calvin simply as a theologian fail to grasp the extent of his genius. The codification of our wise edicts, in which he had a large role, does him as much honor as his *Institutes*. Whatever revolution time may bring out in our cult, so long as the love of homeland and of liberty is not extinguished among us, the memory of this great man will never cease to be held sacred.

13. *And in truth*, says Machiavelli, *there has never been among a people a single legislator who, in proposing extraordinary laws, did not have recourse to God, for otherwise they would not be accepted, since there are many benefits known to a prudent man that do not have in*

making the gods speak or of being believed when he proclaims himself their interpreter. The great soul of the legislator is the true miracle that should prove his mission. Any man can engrave stone tablets, buy an oracle, or feign secret intercourse with some divinity, or train a bird to talk in his ear, or find other crude methods of imposing his beliefs on the people. He who knows no more than this may perchance assemble a troupe of lunatics, but he will never found an empire and his extravagant work will soon die with him. Pointless sleights-of-hand form a fleeting connection; only wisdom can make it lasting. The Judaic Law, which still exists, and that of the child of Ishmael, which has ruled half the world for ten centuries, still proclaim today the great men who enunciated them. And while pride-ridden philosophy or the blind spirit of factionalism sees in them nothing but lucky impostors, the true political theoretician admires in their institutions that great and powerful genius which presides over establishments that endure.

We should not, with Warburton, conclude from this that politics and religion have a common object among us, but that in the beginning stages of nations the one serves as an instrument of the other.

Chapter 8

On the People

Just as an architect, before putting up a large building, surveys and tests the ground to see if it can bear the weight, the wise teacher does not begin by laying down laws that are good in themselves. Rather he first examines whether the people for whom they are destined are fitted to bear them. For this reason, Plato refused to give laws to the Arcadians and to the Cyrenians, knowing that these two peoples were rich and could not abide equality. For this reason, one finds good laws and evil men in Crete, because Minos had disciplined nothing but a vice-ridden people.

A thousand nations have achieved brilliant earthly success that could never have abided good laws; and even those that could have would have been able to have done so for a very short period of their entire existence. Peoples,[14] like men, are docile only in their youth. As they grow older they become incorrigible. Once customs are established and prejudices have become deeply rooted, it is a dangerous and vain undertaking to want to reform them. The people cannot abide having even their evils touched in order to eliminate them, just like those stupid and cowardly patients who quiver at the sight of a physician.

This is not to say that, just as certain maladies unhinge men's minds and remove from them the memory of the past, one does not likewise sometimes find in the period during which states have existed violent epochs when revolutions do to peoples what certain crises do to individuals, when the horror of the past takes the place of forgetfulness, and when the state, set afire by civil wars, is reborn, as it were, from its ashes and takes on again the vigor of youth as it escapes death's embrace. Such was Sparta at the time of Lycurgus; such was Rome after the Tarquins; and such in our time have been Holland and Switzerland after the expulsion of the tyrants.

But these events are rare. They are exceptions whose cause is always to be found in the particular constitution of the states in question. They cannot take place even twice to the same people, for it can make itself free so long as it is merely barbarous; but it can no longer do so when civil strength is exhausted. At that point troubles can destroy it with revolutions being unable to reestablish it. And as soon as its chains are broken, it falls apart and exists no longer. Henceforward a master is needed, not a liberator. Free peoples, remember this axiom: Liberty can be acquired, but it can never be recovered.

For nations, as for men, there is a time of maturity that must be awaited before subjecting them to the laws.[15] But the maturity of a people is not always easily recognized; and if it is foreseen, the work is ruined. One people lends itself to discipline at its

themselves evident reasons enabling him to persuade others. Discourses on Titus Livy, Book I, Ch. XI. [Rousseau here quotes the Italian.]

14. [*In the 1782 edition, this sentence was revised to read:* "Most people, like men. . . ."]

15. [*In the 1782 edition, this sentence was revised to read:* "Youth is not childhood. For nations, as for men, maturity must be awaited. . . ."]

inception; another, not even after ten centuries. The Russians will never be truly civilized, since they have been civilized too early. Peter had a genius for imitation. He did not have true genius, the kind that creates and makes everything out of nothing. Some of the things he did were good; most of them were out of place. He saw that his people was barbarous; he did not see that it was not ready for civilization. He wanted to civilize it when all it needed was toughening. First he wanted to make Germans and Englishmen, when he should have made Russians. He prevented his subjects from ever becoming what they could have been by persuading them that they were something they are not. This is exactly how a French tutor trains his pupil to shine for a short time in his childhood, and afterwards never to amount to a thing. The Russian Empire would like to subjugate Europe and will itself be subjugated. The Tartars, its subjects or its neighbors, will become its masters and ours. This revolution appears inevitable to me. All the kings of Europe are working in concert to hasten its occurrence.

Chapter 9

The People (continued)

Just as nature has set limits to the status of a well-formed man, beyond which there are but giants or dwarfs, so too, with regard to the best constitution of a state, there are limits to the size it can have, so as not to be too large to be capable of being well governed, nor too small to be capable of preserving itself on its own. In every body politic there is a *maximum* force that it cannot exceed, and which has often fallen short by increasing in size. The more the social bond extends the looser it becomes, and in general a small state is proportionately stronger than a large one.

A thousand reasons prove this maxim. First, administration becomes more difficult over great distances, just as a weight becomes heavier at the end of a longer lever. It also becomes more onerous as the number of administrative levels multiplies, because first each city has its own administration which the populace pays for; each district has its own, again paid for by the people; next each province has one and then the great governments, the satrapies and vice royalties, requiring a greater cost the higher you go, and always at the expense of the unfortunate people. Finally, there is the supreme administration which weights down on everyone. All these surcharges continually exhaust the subjects. Far from being better governed by these different orders, they are worse governed than if there were but one administration over them. Meanwhile, hardly any resources remain for meeting emergencies; and when recourse must be made to them, the state is always on the verge of its ruin.

This is not all. Not only does the government have less vigor and quickness in enforcing the observance of the laws, preventing nuisances, correcting abuses and foreseeing the seditious undertakings that can occur in distant places, but also the populace has less affection for its leaders when it never sees them, for the homeland, which, to its eyes, is like the world, and for its fellow citizens, the majority of whom are foreigners to it. The same laws cannot be suitable to so many diverse provinces which have different customs, live in contrasting climates, and which are incapable of enduring the same form of government. Different laws create only trouble and confusion among the peoples who live under the same rulers and are in continuous communication. They intermingle and intermarry, and, being under the sway of other customs, never know whether their patrimony is actually their own. Talents are hidden; virtues are unknown; vices are unpunished in this multitude of men who are unknown to one another which the seat of supreme administration brings together in one place. The leaders, overwhelmed with work, see nothing for themselves; clerks govern the state. Finally, the measures that need to be taken to maintain the general authority, which so many distant officials want to avoid or harass, absorb all the public attention. Nothing more remains for the people's happiness, and there barely remains enough for its defense in time of need. And thus a body which is too big for its constitution collapses and perishes, crushed by its own weight.

On the other hand, the state ought to provide itself with a firm foundation to give it solidity, to resist the shocks it is bound to experience, as well as the efforts it will have to make to sustain itself. For all the peoples have a kind of centrifugal force, by which they

continually act one against the other and tend to expand at the expense of their neighbors, like Descartes' vortices. Thus the weak risk being soon swallowed up; scarcely any people can preserve itself except by putting itself in a kind of equilibrium with all, which nearly equalizes the pressure on all sides.

It is clear from this that there are reasons for expanding and reasons for contracting, and it is not the least of the political theorist's talents to find, between these and other reasons, the proportion most advantageous to the preservation of the state. In general, it can be said that the former reasons, being merely external and relative, should be subordinated to the latter reasons, which are internal and absolute. A strong, healthy constitution is the first thing one needs to look for, and one should count more on the vigor born of a good government than on the resources furnished by a large territory.

Moreover, there have been states so constituted that the necessity for conquests entered into their very constitution, and that, to maintain themselves, they were forced to expand endlessly. Perhaps they congratulated themselves greatly on account of this happy necessity, which nevertheless showed them, together with the limit of their size, the inevitable moment of their fall.

Chapter 10

The People (continued)

A body politic can be measured in two ways: namely, by the size of its territory and by the number of its people. And between these measurements there is a relationship suitable for giving the state its true greatness. Men are what make up the state and land is what feeds men. This relationship therefore consists in there being enough land for the maintenance of its inhabitants and as many inhabitants as the land can feed. It is in this proportion that the *maximum* force of a given population size is found. For if there is too much land, its defense is onerous, its cultivation inadequate, and its yield surplus. This is the proximate cause of defensive wars. If there is not enough land, the state finds itself at the discretion of its neighbors for what it needs as a supplement. This is the proximate cause of offensive wars. Any people whose position provides it an alternative merely between commerce and war is inherently weak. It depends on its neighbors; it depends on events. It never has anything but an uncertain and brief existence. Either it conquers and changes the situation, or it is conquered and obliterated. It can keep itself free only by means of smallness or greatness.

No one can provide in mathematical terms a fixed relationship between the size of land and the population size which are sufficient for one another, as much because of the differences in the characteristics of the terrain, its degrees of fertility, the nature of its crops, the influence of its climates, as because of the differences to be noted in the temperaments of the men who inhabit them, some of whom consume little in a fertile country, while others consume a great deal on a barren soil. Again, attention must be given to the greater or lesser fertility of women, to what the country can offer that is more or less favorable to the population, to the number of people that the legislator can hope to bring together through his institutions. Thus, the legislator should not base his judgment on what he sees but on what he foresees. And he should dwell less upon the present state of the population as upon the state it should naturally attain. Finally, there are a thousand situations where the idiosyncracies of a place require or permit the assimilation of more land than appears necessary. Thus, there is considerable expansion in mountainous country, where the natural crops—namely, woods and pastures—demand less work; where experience shows that women are more fertile than on the plains; and where a large amount of sloping soil provides only a very small amount of flat land, the only thing that can be counted on for vegetation. On the other hand, people can draw closer to one another at the seashore, even on rocks and nearly barren sand, because fishing can make up to a great degree for the lack of land crops, since men should be more closely gathered together in order to repulse pirates, and since in addition it is easier to unburden the country of surplus inhabitants by means of colonies.

To these conditions for instituting a people must be added one that cannot be a substitute for any other, but without which all the rest are useless: the enjoyment of the fullness of peace. For the time when

a state is organized, like the time when a battalion is formed, is the instant when the body is the least capable of resisting and easiest to destroy. There would be better resistance at a time of absolute disorder than at a moment of fermentation, when each man is occupied with his own position rather than with the danger. Were a war, famine, or sedition to arise in this time of crisis the state inevitably is overthrown.

This is not to say that many governments are not established during such storms; but in these instances it is these governments themselves that destroy the state. Usurpers always bring about or choose these times of trouble to use public terror to pass destructive laws that the people never adopt when they have their composure. The choice of the moment of a government's institution is one of the surest signs by which the work of a legislator can be distinguished from that of a tyrant.

What people, therefore, is suited for legislation? One that, finding itself bound by some union of origin, interest or convention, has not yet felt the true yoke of laws. One that has no custom or superstitions that are deeply rooted. One that does not fear being overpowered by sudden invasion. One that can, without entering into the squabbles of its neighbors, resist each of them single-handed or use the help of one to repel another. One where each member can be known to all, and where there is no need to impose a greater burden on a man than a man can bear. One that can get along without peoples and without which every other people can get along.[16] One that is neither rich nor poor and can be sufficient unto itself; finally, one that brings together the stability of an ancient people and the docility of a new people. What makes the work of legislation trying is not so much what must be established as what must be destroyed. And what makes success so rare is the impossibility of finding the simplicity of nature together with the needs of society. All these conditions, it is true, are hard to find in combination. Hence few well constituted states are to be seen.

In Europe there is still one country capable of receiving legislation. It is the island of Corsica. The valor and constancy with which this brave people has regained and defended its liberty would well merit having some wise man teaching them how to preserve it. I have a feeling that some day that little island will astonish Europe.

Chapter 11

On the Various Systems of Legislation

If one enquires into precisely wherein the greatest good of all consists, which should be the purpose of every system of legislation, one will find that it boils down to the two principal objects, *liberty* and *equality*. Liberty, because all particular dependence is that much force taken from the body of the state; equality, because liberty cannot subsist without it.

I have already said what civil liberty is. Regarding equality, we need not mean by this word that degrees of power and wealth are to be absolutely the same, but rather that, with regard to power, it should transcend all violence and never be exercised except by virtue of rank and laws; and, with regard to wealth, no citizen should be so rich as to be capable of buying another citizen, and none so poor that he is forced to sell himself. This presupposes moderation in goods and credit on the part of the great, and moderation in avarice and covetousness[17] on the part of the lowly.

16. If there were two neighboring peoples, one being unable to get along without the other, it would be a very tough situation for the former and very dangerous for the latter. In such a case, every wise nation will work very quickly to free the other of its dependency. The republic of Thlascala, enclosed within the Mexican empire, preferred to do without salt, rather than buy it from the Mexicans or even take it from them for nothing. The wise Thlascalans saw the trap hidden beneath this generosity. They kept themselves free, and this small state, enclosed within this great empire, was finally the instrument of its ruin.

17. Do you therefore want to give constancy to the State? Bring the extremes as close together as possible. Tolerate neither rich men nor beggars. These two estates, which are naturally inseparable, are equally fatal to the common good. From the one come the fomenters of tyranny, and from the other the tyrants. It is always between them that public liberty becomes a matter of commerce. The one buys it and the other sells it.

This equality is said to be a speculative fiction that cannot exist in practice. But if abuse is inevitable, does it follow that it should not at least be regulated? It is precisely because the force of things tends always to destroy equality that the force of legislation should always tend to maintain it.

But these general objects of every good institution should be modified in each country in accordance with the relationships that arise as much from the local situation as from the temperament of the inhabitants. And it is on the basis of these relationships that each people must be assigned a particular institutional system that is the best, not perhaps in itself, but for the state for which it is destined. For example, is the soil barren and unproductive, or the country too confining for its inhabitants? Turn to industry and crafts, whose products you will exchange for the foodstuffs you lack. On the other hand, do you live in rich plains and fertile slopes? Do you lack inhabitants on a good terrain? Put all your effort into agriculture, which increases the number of men, and chase out the crafts that seem only to achieve the depopulation of the country by grouping in a few sectors what few inhabitants there are.[18] Do you occupy long, convenient coastlines? Cover the sea with vessels; cultivate commerce and navigation. You will have a brilliant and brief existence. Does the sea wash against nothing on your coasts but virtually inaccessible rocks? Remain barbarous and fish-eating. You will live in greater tranquillity, better perhaps and certainly happily. In a word, aside from the maxims common to all, each people has within itself some cause that organizes them in a particular way and renders its legislation proper for it alone. Thus it was that long ago the Hebrews and recently the Arabs have had religion as their main object; the Athenians had letters; Carthage and Tyre, commerce; Rhodes, seafaring; Sparta, war; and Rome, virtue. The author of *The Spirit of the Laws* has shown with a large array of examples the art by which the legislator directs the institution toward each of its objects.

18. Any branch of foreign trade, says the Marquis d'Argenson, creates hardly anything more than a false utility for a kingdom in general. It can enrich some private individuals, even some towns, but the nation as a whole gains nothing and the populace is none the better for it.

What makes the constitution of a state truly solid and lasting is that proprieties are observed with such fidelity that the natural relations and the laws are always in agreement on the same points, and that the latter serve only to assure, accompany and rectify them. But if the legislator is mistaken about his object and takes a principle different from the one arising from the nature of things (whether the one tends toward servitude and the other toward liberty; the one toward riches, the other toward increased population; the one toward peace, the other toward conquests), the laws will weaken imperceptibly, the constitution will be altered, and the state will not cease being agitated until it is destroyed or changed, and invincible nature has regained her empire.

Chapter 12

Classification of the Laws

To set the whole in order or to give the commonwealth the best possible form, there are various relations to consider. First, the action of the entire body acting upon itself, that is, the relationship of the whole to the whole, or of the sovereign to the state, and this relationship, as we will see later, is composed of relationships of intermediate terms.

The laws regulating this relationship bear the name political laws, and are also called fundamental laws, not without reason if these laws are wise. For there is only one way of organizing in each state. The people who have found it should stand by it. But if the established order is evil, why should one accept as fundamental, laws that prevent it from being good? Besides, a people is in any case always in a position to change its laws, even the best laws. For if it wishes to do itself harm, who has the right to prevent it from doing so?

The second relation is that of the members to each other or to the entire body. And this relationship should be as small as possible in regard to the former and as large as possible in regard to the latter, so that each citizen would be perfectly independent of all the others and excessively dependent upon the city. This always takes place by the same means, for only the force of the state brings about the liberty of its

members. It is from this second relationship that civil laws arise.

We may consider a third sort of relation between man and law, namely that of disobedience and penalty. And this gives rise to the establishment of criminal laws, which basically are not so much a particular kind of law as the sanction for all the others.

To these three sorts of law is added a fourth, the most important of all. It is not engraved on marble or bronze, but in the hearts of citizens. It is the true constitution of the state. Everyday it takes on new forces. When other laws grow old and die away, it revives and replaces them, preserves a people in the spirit of its institution and imperceptibly substitutes the force of habit for that of authority. I am speaking of mores, customs, and especially of opinion, a part of the law unknown to our political theorists but one on which depends the success of all the others; a part with which the great legislator secretly occupies himself, though he seems to confine himself to the particular regulations that are merely the arching of the vault, whereas mores, slower to arise, form in the end its immovable keystone.

Among these various classes, only political laws, which constitute the form of government, are relevant to my subject.

End of the Second Book

BOOK III

Before speaking of the various forms of government, let us try to determine the precise meaning of this word, which has not as yet been explained very well.

Chapter 1

On Government in General

I am warning the reader that this chapter should be read carefully and that I do not know the art of being clear to those who do not want to be attentive.

Every free action has two causes that come together to produce it. The one is moral, namely the will that determines the act; the other is physical, namely the power that executes it. When I walk toward an object, I must first want to go there. Second, my feet must take me there. A paralyzed man who wants to walk or an agile man who does not want to walk will both remain where they are. The body politic has the same moving causes. The same distinction can be made between force and the will; the one under the name *legislative power* and the other under the name *executive power*. Nothing is done and ought to be done without their concurrence.

We have seen that legislative power belongs to the people and can belong to it alone. On the contrary, it is easy to see, by the principles established above, that executive power cannot belong to the people at large in its role as legislator or sovereign, since this power consists solely of particular acts that are not within the province of the law, nor consequently of the sovereign, none of whose acts can avoid being laws.

Therefore the public force must have an agent of its own that unifies it and gets it working in accordance with the directions of the general will, that serves as a means of communication between the state and the sovereign, and that accomplishes in the public person just about what the union of soul and body accomplishes in man. This is the reason for having government in the state, something often badly confused with the sovereign, of which it is merely the minister.

What then is the government? An intermediate body established between the subjects and the sovereign for their mutual communication, and charged with the execution of the laws and the preservation of liberty, both civil and political.

The members of this body are called magistrates or *kings*, that is to say, *governors*, and the entire body bears the name *prince*.[19] Therefore those who claim that the act by which a people submits itself to leaders is not a contract are quite correct. It is absolutely nothing but a commission, an employment in which the leaders, as simple officials of the sovereign, exercise in its own name the power with which it has entrusted them. The sovereign can limit, modify, or appropriate this power as it pleases, since the

19. Thus in Venice the College is given the name *Most Serene Prince* even when the Doge is not present.

alienation of such a right is incompatible with the nature of the social body and contrary to the purpose of the association.

Therefore, I call *government* or supreme administration the legitimate exercise of executive power; I call prince or magistrate the man or the body charged with that administration.

In government one finds the intermediate forces whose relationships make up that of the whole to the whole or of the sovereign to the state. This last relationship can be represented as one between the extremes of a continuous proportion, whose proportional mean is the government. The government receives from the sovereign the orders it gives the people, and, for the state to be in good equilibrium, there must, all things considered, be an equality between the output or the power of the government, taken by itself, and the output or power of the citizens, who are sovereigns on the one hand and subjects on the other.

Moreover, none of these three terms could be altered without the simultaneous destruction of the proportion. If the sovereign wishes to govern, or if the magistrate wishes to give laws, or if the subjects refuse to obey, disorder replaces rule, force and will no longer act in concert, and thus the state dissolves and falls into despotism or anarchy. Finally, since there is only one proportional mean between each relationship, there is only one good government possible for a state. But since a thousand events can change the relationships of a people, not only can different governments be good for different peoples, but also for the same people at different times.

In trying to provide an idea of the various relationships that can obtain between these two extremes, I will take as an example the number of people, since it is a more easily expressed relationship.

Suppose the state is composed of ten thousand citizens. The sovereign can only be considered collectively and as a body. But each private individual in his position as a subject is regarded as an individual. Thus the sovereign is to the subject as ten thousand is to one. In other words, each member of the state has as his share only one ten-thousandth of the sovereign authority, even though he is totally in subjection to it. If the populace is made up of a hundred thousand men, the condition of the subjects does not change, and each bears equally the entire dominion of the laws, while his vote, reduced to one hundred-thousandth, has ten times less influence in the drafting of them. In that case, since the subject always remains one, the ratio of the sovereign to the subject increases in proportion to the number of citizens. Whence it follows that the larger the state becomes, the less liberty there is.

When I say that the ratio increases, I mean that it places a distance between itself and equality. Thus the greater the ratio is in the sense employed by geometricians, the less relationship there is in the everyday sense of the word. In the former sense, the ratio, seen in terms of quantity, is measured by the quotient; in the latter sense, ratio, seen in terms of identity, is reckoned by similarity.

Now the less relationship there is between private wills and the general will, that is, between mores and the laws, the more repressive force ought to increase. Therefore, in order to be good, the government must be relatively stronger in proportion as the populace is more numerous.

On the other hand, as the growth of the state gives the trustees of the public authority more temptations and the means of abusing their power, the more the force the government must have in order to contain the people, the more the force the sovereign must have in order to contain the government. I am speaking here not of an absolute force but of the relative force of the various parts of the state.

It follows from this twofold relationship that the continuous proportion between the sovereign, the prince and the people, is in no way an arbitrary idea, but a necessary consequence of the nature of the body politic. It also follows that since one of the extremes, namely the people as subject, is fixed and represented by unity, whenever the doubled ratio increases or decreases, the simple ratio increases or decreases in like fashion, and that as a consequence the middle term is changed. This makes it clear that there is no unique and absolute constitution of government, but that there can be as many governments of differing natures as there are states of differing sizes.

If, in ridiculing this system, someone were to say that in order to find this proportional mean and to form the body of the government, it is necessary merely, in my opinion, to derive the square root of the number of people, I would reply that here I am

taking this number only as an example; that the relationships I am speaking of are not measured solely by the number of men, but in general by the quantity of action, which is the combination of a multitude of causes; and that, in addition, if to express myself in fewer words I borrow for the moment the terminology of geometry, I nevertheless am not unaware of the fact that geometrical precision has no place in moral quantities.

The government is on a small scale what the body politic which contains it is on a large scale. It is a moral person endowed with certain faculties, active like the sovereign and passive like the state, and capable of being broken down into other similar relationships whence there arises as a consequence a new proportion and yet again another within this one according to the order of tribunals, until an indivisible middle term is reached; that is, a single leader or supreme magistrate, who can be represented in the midst of this progression as the unity between the series of fractions and that of whole numbers.

Without involving ourselves in this multiplication of terms, let us content ourselves with considering the government as a new body in the state, distinct from the people and sovereign, and intermediate between them.

The essential difference between these two bodies is that the state exists by itself, while the government exists only through the sovereign. Thus the dominant will of the prince is not and should not be anything other than the general will or the law. His force is merely the public force concentrated in him. As soon as he wants to derive from himself some absolute and independent act, the bond that links everything together begins to come loose. If it should finally happen that the prince had a private will more active than that of the sovereign, and that he had made use of some of the public force that is available to him in order to obey this private will, so that there would be, so to speak, two sovereigns—one de jure and the other de facto, at that moment the social union would vanish and the body politic would be dissolved.

However, for the body of the government to have an existence, a real life that distinguishes it from the body of the state, and for all its members to be able to act in concert and to fulfill the purpose for which it is instituted, there must be a particular *self,* a sensibility common to all its members, a force or will of its own that tends toward its preservation. This particular existence presupposes assemblies, councils, a power to deliberate and decide, rights, titles and privileges that belong exclusively to the prince and that render the condition of the magistrate more honorable in proportion as it is more onerous. The difficulties lie in the manner in which this subordinate whole is so organized within the whole, that it in no way alters the general constitution by strengthening its own, that it always distinguishes its particular force, which is intended for its own preservation, from the public force intended for the preservation of the state, and that, in a word, it is always ready to sacrifice the government to the people and not the people to the government.

In addition, although the artificial body of the government is the work of another artificial body and has, in a sense, only a borrowed and subordinate life, this does not prevent it from being capable of acting with more or less vigor or speed, or from enjoying, so to speak, more or less robust health. Finally, without departing directly from the purpose of its institution, it can deviate more or less from it, according to the manner in which it is constituted.

From all these differences arise the diverse relationships that the government should have with the body of the state, according to the accidental and particular relationships by which the state itself is modified. For often the government that is best in itself will become the most vicious, if its relationships are not altered according to the defects of the body politic to which it belongs.

Chapter 2

On the Principle That Constitutes the Various Forms of Government

In order to lay out the general cause of these differences, a distinction must be made here between the prince and the government, as I had done before between the state and the sovereign.

The body of the magistrates can be made up of a larger or smaller number of members. We have said that the ratio of the sovereign to the subjects was

greater in proportion as the populace was more numerous, and by a manifest analogy we can say the same thing about the government in relation to the magistrates.

Since the total force of the government is always that of the state, it does not vary. Whence it follows that the more of this force it uses on its own members, the less that is left to it for acting on the whole populace.

Therefore, the more numerous the magistrates, the weaker the government. Since this maxim is fundamental, let us attempt to explain it more clearly.

We can distinguish in the person of the magistrate three essentially different wills. First, the individual's own will, which tends only to its own advantage. Second, the common will of the magistrates which is uniquely related to the advantage of the prince. This latter can be called the corporate will, and is general in relation to the government, and particular in relation to the state, of which the government forms a part. Third, the will of the people or the sovereign will, which is general both in relation to the state considered as the whole and in relation to the government considered as a part of the whole.

In a perfect act of legislation, the private or individual will should be nonexistent; the corporate will proper to the government should be very subordinate; and consequently the general or sovereign will should always be dominant and the unique rule of all the others.

According to the natural order, on the contrary, these various wills become more active in proportion as they are the more concentrated. Thus the general will is always the weakest, the corporate will has second place, and the private will is first of all, so that in the government each member is first himself, then a magistrate, and then a citizen—a gradation directly opposite to the one required by the social order.

Granting this, let us suppose the entire government is in the hands of one single man. In that case the private will and the corporate will are perfectly united, and consequently the latter is at the highest degree of intensity it can reach. But since the use of force is dependent upon the degree of will, and since the absolute force of the government does not vary one bit, it follows that the most active of governments is that of one single man.

On the other hand, let us suppose we are uniting the government to the legislative authority. Let us make the sovereign the prince and all the citizens that many magistrates. Then the corporate will, confused with the general will, will have no more activity than the latter, and will leave the private will all its force. Thus the government, always with the same absolute force, will have its *minimum* relative force or activity.

These relationships are incontestable, and there are still other considerations that serve to confirm them. We see, for example, that each magistrate is more active in his body than each citizen is in his, and consequently that the private will has much more influence on the acts of the government than on those of the sovereign. For each magistrate is nearly always charged with the responsibility for some function of government, whereas each citizen, taken by himself, exercises no function of sovereignty. Moreover, the more the state is extended, the more its real force increases, although it does not increase in proportion to its size. But if the state remains the same, the magistrates may well be multiplied without the government acquiring any greater real force, since this force is that of the state, whose size is always equal. Thus the relative force or activity of the government diminishes without its absolute or real force being able to increase.

It is also certain that the execution of public business becomes slower in proportion as more people are charged with the responsibility for it; that in attaching too much importance to prudence, too little importance is attached to fortune, opportunities are missed, and the fruits of deliberation are often lost by dint of deliberation.

I have just proved that the government becomes slack in proportion as the magistrates are multiplied; and I have previously proved that the more numerous the people, the greater should be the increase of repressive force. Whence it follows that the ratio of the magistrate to the government should be the inverse of the ratio of the subjects to the sovereign; that is to say, the more the state increases in size, the more the government should shrink, so that the number of leaders decreases in proportion to the increase in the number of people.

I should add that I am speaking here only about the relative force of the government and not about

its rectitude. For, on the contrary, the more numerous the magistrates, the more closely the corporate will approaches the general will, whereas under a single magistrate, the same corporate will is, as I have said, merely a particular will. Thus what can be gained on the one hand is lost on the other, and the art of the legislator is to know how to determine the point at which the government's will and force, always in a reciprocal proportion, are combined in the relationship that is most advantageous to the state.

Chapter 3

Classification of Governments

We have seen in the previous chapter why the various kinds or forms of government are distinguished by the number of members that compose them. It remains to be seen in this chapter how this classification is made.

In the first place, the sovereign can entrust the government to the entire people or to the majority of the people, so that there are more citizens who are magistrates than who are ordinary private citizens. This form of government is given the name *democracy*.

Or else it can restrict the government to the hands of a small number, so that there are more ordinary citizens than magistrates; and this form is called *aristocracy*.

Finally, it can concentrate the entire government in the hands of a single magistrate from whom all the others derive their power. This third form is the most common and is called *monarchy* or royal government.

It should be noted that all these forms, or at least the first two, can be had in greater or lesser degrees, and even have a rather wide range. For democracy can include the entire populace or be restricted to half. Aristocracy, for its part, can be indeterminately restricted from half the people down to the smallest number. Even royalty can be had in varying levels of distribution. Sparta always had two kings, as required by its constitution; and the Roman Empire is known to have had up to eight emperors at a time, without it being possible to say that the empire was divided. Thus there is a point at which each form of government is indistinguishable from the next, and it is apparent that, under just three names, government can take on as many diverse forms as the state has citizens.

Moreover, since this same government can, in certain respects, be subdivided into other parts, one administered in one way, another in another, there can result from the combination of these three forms a multitude of mixed forms, each of which can be multiplied by all the simple forms.

There has always been a great deal of argument over the best form of government, without considering that each one of them is best in certain cases and the worst in others.

If the number of supreme magistrates in the different states ought to be in inverse ratio to that of the citizens, it follows that in general democratic government is suited to small states, aristocratic government to states of intermediate size, and monarchical government to large ones. This rule is derived immediately from the principle; but how is one to count the multitude of circumstances that can furnish exceptions?

Chapter 4

On Democracy

He who makes the law knows better than anyone else how it should be executed and interpreted. It seems therefore to be impossible to have a better constitution than one in which the executive power is united to the legislative power. But this is precisely what renders such a government inadequate in certain respects, since things that should be distinguished are not, and the prince and sovereign, being merely the same person, form, as it were, only a government without a government.

It is not good for the one who makes the laws to execute them, nor for the body of the people to turn its attention away from general perspectives in order to give it particular objects. Nothing is more dangerous than the influence of private interests on public affairs; and the abuse of the laws by the government is a lesser evil than the corruption of the legislator, which is the inevitable outcome of particular

perspectives. In such a situation, since the state is being substantially altered, all reform becomes impossible. A people that would never misuse the government would never misuse independence. A people that would always govern well would not need to be governed.

Taking the term in the strict sense, a true democracy has never existed and never will. It is contrary to the natural order that the majority govern and the minority is governed. It is unimaginable that the people would remain constantly assembled to handle public affairs; and it is readily apparent that it could not establish commissions for this purpose without changing the form of administration.

In fact, I believe I can lay down as a principle that when the functions of the government are shared among several tribunals, those with the fewest members sooner or later acquire the greatest authority, if only because of the facility in expediting public business which brings this about naturally.

Besides, how many things that are difficult to unite are presupposed by this government? First, a very small state where it is easy for the people to gather together and where each citizen can easily know all the others. Second, a great simplicity of mores, which prevents the multitude of public business and thorny discussions. Next, a high degree of equality in ranks and fortunes, without which equality in rights and authority cannot subsist for long. Finally, little or no luxury, for luxury either is the effect of wealth or it makes wealth necessary. It simultaneously corrupts both the rich and the poor, the one by possession, the other by covetousness. It sells the homeland to softness and vanity. It takes all its citizens from the state in order to make them slaves to one another, and all of them to opinion.

This is why a famous author has made virtue the principle of the republic. For all these conditions could not subsist without virtue. But owing to his failure to have made the necessary distinctions, this great genius often lacked precision and sometimes clarity. And he did not realize that since the sovereign authority is everywhere the same, the same principle should have a place in every well constituted state, though in a greater or lesser degree, it is true, according to the form of government.

Let us add that no government is so subject to civil wars and internal agitations as a democratic or popular one, since there is none that tends so forcefully and continuously to change its form, or that demands greater vigilance and courage to be maintained in its own form. Above all, it is under this constitution that the citizen ought to arm himself with force and constancy, and to say each day of his life from the bottom of his heart what a virtuous Palatine[20] said in the Diet of Poland: *Better to have liberty fraught with danger than servitude in peace.*

Were there a people of gods, it would govern itself democratically. So perfect a government is not suited to men.

Chapter 5

On Aristocracy

We have here two very distinct moral persons, namely the government and the sovereign, and consequently two general wills, one in relation to all the citizens, the other only for the members of the administration. Thus, although the government can regulate its internal administration as it chooses, it can never speak to the people except in the name of the sovereign, that is to say, in the name of the populace itself. This is something not to be forgotten.

The first societies governed themselves aristocratically. The leaders of families deliberated among themselves about public affairs. Young people deferred without difficulty to the authority of experience. This is the origin of the words *priests, ancients, senate* and *elders.* The savages of North America still govern themselves that way to this day, and are very well governed.

But to the extent that inequality occasioned by social institutions came to prevail over natural inequality, wealth or power[21] was preferred to age, and aristocracy became elective. Finally, the transmission

20. The Palatine of Posen, father of the King of Poland, Duke of Lorraine. [Rousseau quotes in Latin the maxim which follows.]

21. It is clear that among the ancients the word *optimates* does not mean the best, but the most powerful.

of the father's power, together with his goods, to his children created patrician families; the government was made hereditary, and we know of senators who were only twenty years old.

There are therefore three sorts of aristocracy: natural, elective and hereditary. The first is suited only to simple people; the third is the worst of any government. The second is the best; it is aristocracy properly so-called.

In addition to the advantage of the distinction between the two powers, aristocracy has that of the choice of its members. For in popular government all the citizens are born magistrates; however, this type of government limits them to a small number, and they become magistrates only through election,[22] a means by which probity, enlightenment, experience, and all the other reasons for public preference and esteem are so many new guarantees of being well governed.

Furthermore, assemblies are more conveniently held, public business better discussed and carried out with more orderliness and diligence, the reputation of the state is better sustained abroad by venerable senators than by a multitude that is unknown or despised.

In a word, it is the best and most natural order for the wisest to govern the multitude, when it is certain that they will govern for its profit and not for their own. There is no need for multiplying devices uselessly or for doing with twenty thousand men what one hundred hand-picked men can do even better. But it must be noted here that the corporate interest begins to direct the public force in less strict a conformity with the rule of the general will, and that another inevitable tendency removes from the laws a part of the executive power.

With regard to the circumstances that are specifically suitable, a state must not be so small, nor its people so simple and upright that the execution of the laws follows immediately from the public will, as is the case in a good democracy. Nor must a nation be so large that the leaders, scattered about in order to govern it, can each play the sovereign in his own department, and begin by making themselves independent in order finally to become the masters.

But if aristocracy requires somewhat fewer virtues than popular government, it also demands others that are proper to it, such as moderation among the wealthy and contentment among the poor. For it appears that rigorous equality would be out of place here. It was not observed even in Sparta.

Moreover, if this form of government carries with it a certain inequality of fortune, this is simply in order that in general the administration of public business may be entrusted to those who are best able to give all their time to it, but not, as Aristotle claims, in order that the rich may always be given preference. On the contrary, it is important that an opposite choice should occasionally teach the people that more important reasons for preference are to be found in a man's merit than in his wealth.

Chapter 6

On Monarchy

So far, we have considered the prince as a moral and collective person, united by the force of laws, and as the trustee of the executive power in the state. We have now to consider this power when it is joined together in the hands of a natural person, of a real man, who alone has the right to dispose of it in accordance with the laws. Such a person is called a monarch or a king.

In utter contrast with the other forms of administration where a collective entity represents an individual, in this form of administration an individual represents a collective entity; so that the moral unity constituting the prince is at the same time a physical unity, in which all the faculties which are combined by the law in the other forms of administration with such difficulty are found naturally combined.

Thus the will of the people, the will of the prince, the public force of the state, and the particular force

22. It is of great importance that laws should regulate the form of the election of magistrates, for if it is left to the will of the prince, it is impossible to avoid falling into a hereditary aristocracy, as has taken place in the Republics of *Venice* and *Berne*. Thus the former has long been a state in dissolution, while the latter maintains itself through the extreme wisdom of its senate. It is a very honorable and very dangerous exception.

of the government, all respond to the same moving agent; all the springs of the machine are in the same hand; everything moves toward the same end; there are no opposing movements which are at cross purposes with one another; and no constitution is imaginable in which a lesser effort produces a more considerable action. Archimedes sitting serenely on the shore and effortlessly launching a huge vessel is what comes to mind when I think of a capable monarch governing his vast states from his private study, and making everything move while appearing himself to be immovable.

But if there is no government that has more vigor, there is none where the private will has greater sway and more easily dominates the others. Everything moves toward the same end, it is true; but this end is not that of public felicity, and the very force of the administration unceasingly operates to the detriment of the state.

Kings want to be absolute, and from a distance one cries out to them that the best way to be so is to make themselves loved by their peoples. This maxim is very noble and even very true in certain respects. Unfortunately it will always be an object of derision in courts. The power that comes from the peoples' love is undoubtedly the greatest, but it is precarious and conditional. Princes will never be satisfied with it. The best kings want to be able to be wicked if it pleases them, without ceasing to be the masters. A political sermonizer might well say to them that since the people's force is their force, their greatest interest is that the people should be flourishing, numerous and formidable. They know perfectly well that this is not true. Their personal interest is first of all that the people should be weak and miserable and incapable of ever resisting them. I admit that, assuming the subjects were always in perfect submission, the interest of the prince would then be for the people to be powerful, so that this power, being his own, would render him formidable in the eyes of his neighbors. But since this interest is merely secondary and subordinate, and since the two suppositions are incompatible, it is natural that the princes should always give preference to the maxim that is the most immediately useful to them. This is the point that Samuel made so forcefully to the Hebrews, and that Machiavelli has made apparent. Under the pretext of teaching kings, he has taught important lessons to the peoples. Machiavelli's *The Prince* is the book of republicans.[23]

We have found, through general relationships, that the monarchy is suited only to large states, and we find this again in examining the monarchy itself. The more numerous the public administration, the more the ratio of the prince to subject diminishes and approaches equality, so that this ratio increases in proportion as the government is restricted, and is at its *maximum* when the government is in the hands of a single man. Then there is too great a distance between the prince and the people, and the state lacks cohesiveness. In order to bring about this cohesiveness, there must therefore be intermediate orders; there must be princes, grandees, and a nobility to fill them. Now none of this is suited to a small state, which is ruined by all these social levels.

But if it is difficult for a large state to be well governed, it is much harder still for it to be well governed by just one man, and everyone knows what happens when the king appoints substitutes.

An essential and inevitable defect, which will always place the monarchical form of government below the republican form, is that in the latter form the public voice hardly ever raises to the highest positions men who are not enlightened and capable and who would not fill their positions with honor. On the other hand, those who attain these positions in monarchies are most often petty bunglers, petty swindlers, petty intriguers, whose petty talents, which cause them to attain high positions at court, serve only to display their incompetence to the public as soon as they reach these positions. The populace is much less often in error in its choice than the prince, and a

23. [The following was inserted in the 1782 edition: "Machiavelli was a decent man and a good citizen. But since he was attached to the house of Medici, he was forced during the oppression of his homeland to disguise his love of liberty. The very choice of his execrable hero makes clear enough his hidden intention. And the contrast between the maxims of his book *The Prince* and those of his *Discourses on Titus Livy* and of his *History of Florence* shows that this profound political theorist has until now had only superficial or corrupt readers. The court of Rome has sternly prohibited his book. I can well believe it; it is the court he most clearly depicts."]

man of real merit in the ministry is almost as rare as a fool at the head of a republican government. Thus, when by some happy chance one of these men who are born to govern takes the helm of public business in a monarchy that has nearly been sunk by this crowd of fine managers, there is utter amazement at the resources he finds, and his arrival marks an era in the history of the country.

For a monarchical state to be capable of being well governed, its size or extent must be proportionate to the faculties of the one who governs. It is easier to conquer than to rule. With a long enough lever it is possible for a single finger to make the world shake; but holding it in place requires the shoulders of Hercules. However small a state may be, the prince is nearly always too small for it. When, on the contrary, it happens that the state is too small for its leader, which is quite rare, it is still poorly governed, since the leader, always pursuing his grand schemes, forgets the interests of the peoples, making them no less wretched through the abuse of talents he has too much of than does a leader who is limited for want of what he lacks. A kingdom must, so to speak, expand or contract with each reign, depending on the ability of the prince. On the other hand, since the talents of a senate have a greater degree of stability, the state can have permanent boundaries without the administration working any less well.

The most obvious disadvantage of the government of just one man is the lack of that continuous line of succession which forms an unbroken bond of unity in the other two forms of government. When one king dies, another is needed. Elections leave dangerous intervals and are stormy. And unless the citizens have a disinterestedness and integrity that seldom accompanies this form of government, intrigue and corruption enter the picture. It is difficult for one to whom the state has sold itself not to sell it in turn, and reimburse himself at the expense of the weak for the money extorted from him by the powerful. Sooner or later everything becomes venal under such an administration, and in these circumstances, the peace enjoyed under kings is worse than the disorders of the interregna.

What has been done to prevent these ills? In certain families, crowns have been made hereditary, and an order of succession has been established which prevents all dispute when kings die. That is to say, by substituting the disadvantage of regencies for that of elections, an apparent tranquillity has been preferred to a wise administration, the risk of having children, monsters, or imbeciles for leaders has been preferred to having to argue over the choice of good kings. No consideration has been given to the fact that in being thus exposed to the risk of the alternative, nearly all the odds are against them. There was a lot of sense in what Dionysius the Younger said in reply to his father, who, while reproaching his son for some shameful action, said "Have I given you such an example?" "Ah," replied the son, "but your father was not king."

When a man has been elevated to command others, everything conspires to deprive him of justice and reason. A great deal of effort is made, it is said, to teach young princes the art of ruling. It does not appear that this education does them any good. It would be better to begin by teaching them the art of obeying. The greatest kings whom history celebrates were not brought up to reign. It is a science one is never less in possession of than after one has learned too much, and that one acquires it better in obeying than in commanding. *For the most useful as well as the shortest method of finding out what is good and what is bad is to consider what you would have wished or not wished to have happened under another prince.*[24]

One result of this lack of coherence is the instability of the royal form of government, which, now regulated by one plan now by another according to the character of the ruling prince or of those who rule for him, cannot have a fixed object for very long or a consistent policy. This variation always causes the state to drift from maxim to maxim, from project to project, and does not take place in the other forms of government, where the prince is always the same. It is also apparent that in general, if there is more cunning in a royal court, there is more wisdom in a senate; and that republics proceed toward their objectives by means of policies that are more consistent and better followed. On the other hand, each revolution in

24. Tacitus, *Histories*, Book I. [Rousseau here quotes the Latin.]

the ministry produces a revolution in the state, since the maxim common to all ministers and nearly all kings is to do the reverse of their predecessor in everything.

From this same incoherence we derive the solution to a sophism that is very familiar to royalist political theorists. Not only is civil government compared to domestic government and the prince to the father of the family (an error already refuted), but this magistrate is also liberally given all the virtues he might need, and it is always presupposed that the prince is what he ought to be. With the help of this presupposition, the royal form of government is obviously preferable to any other, since it is unquestionably the strongest; and it lacks only a corporate will that is more in conformity with the general will in order to be the best as well.

But if according to Plato,[25] a king by nature is such a rare person, how many times will nature and fortune converge to crown him; and if a royal education necessarily corrupts those who receive it, what is to be hoped from a series of men who have been brought up to reign? Surely then it is deliberate self-deception to confuse the royal form of government with that of a good king. To see what this form of government is in itself, we need to consider it under princes who are incompetent or wicked, for either they come to the throne wicked or incompetent, or else the throne makes them so.

These difficulties have not escaped the attention of our authors, but they have not been troubled by them. The remedy, they say, is to obey without a murmur. God in his anger gives us bad kings, and they must be endured as punishments from heaven. No doubt this sort of talk is edifying, however I do not know but that it belongs more in a pulpit than in a book on political theory. What is to be said of a physician who promises miracles, and whose art consists entirely of exhorting his sick patient to practice patience? It is quite obvious that we must put up with a bad government when that is what we have. The question would be how to find a good one.

25. *The Statesman.*

Chapter 7

On Mixed Government

Strictly speaking, there is no such thing as a simple form of government. A single leader must have subordinate magistrates; a popular government must have a leader. Thus in the distribution of the executive power there is always a gradation from the greater to the lesser number, with the difference that sometimes the greater number depends on the few, and sometimes the few depend on the greater number.

At times the distribution is equal, either when the constitutive parts are in a state of mutual dependence, as in the government of England; or when the authority of each part is independent but imperfect, as in Poland. This latter form is bad, since there is no unity in the government and the state lacks a bond of unity.

Which one is better, a simple or a mixed form of government? A question much debated among political theorists, to which the same reply must be given that I gave above regarding every form of government.

In itself the simple form of government is the best, precisely because it is simple. But when the executive power is not sufficiently dependent upon the legislative power, that is to say, when there is more of a ratio between the prince and the sovereign than between the people and the prince, this defect in the proportion must be remedied by dividing the government; for then all of its parts have no less authority over the subjects, and their division makes all of them together less forceful against the sovereign.

The same disadvantage can also be prevented through the establishment of intermediate magistrates, who, by being utterly separate from the government, serve merely to balance the two powers and to maintain their respective rights. In that case, the government is not mixed; it is tempered.

The opposite difficulty can be remedied by similar means. And when the government is too slack, tribunals can be set up to give it a concentrated focus. This is done in all democracies. In the first case the government is divided in order to weaken it, and in the second to strengthen it. For the *maximum* of force and weakness are found equally in the simple forms

of government, while the mixed forms of government provide an intermediate amount of strength.

Chapter 8

That Not All Forms of Government Are Suited to All Countries

Since liberty is not a fruit of every climate, it is not within the reach of all peoples. The more one meditates on this principle established by Montesquieu, the more one is aware of its truth. The more one contests it, the more occasions there are for establishing it by means of new proofs.

In all the governments in the world, the public person consumes, but produces nothing. Whence therefore does it get the substance it consumes? It is from the labor of its members. It is the surplus of private individuals that produces what is needed by the public. Whence it follows that the civil state can subsist only so long as men's labor produces more than they need.

Now this surplus is not the same in every country in the world. In many countries it is considerable; in others it is moderate; in others it is nil; in still others it is negative.

This ratio depends on the fertility of the climate, the sort of labor the land requires, the nature of its products, the force of its inhabitants, the greater or lesser consumption they need, and many other similar ratios of which it is composed.

On the other hand, not all governments are of the same nature. They are more or less voracious; and the differences are founded on this added principle that the greater the distance the public contributions are from their source, the more onerous they are. It is not on the basis of the amount of the taxes that this burden is to be measured, but on the basis of the path they have to travel in order to return to the hands from which they came. When this circulation is prompt and well established, it is unimportant whether one pays little or a great deal. The populace is always rich and the finances are always in good shape. On the contrary, however little the populace gives, when this small amount does not return, it is soon wiped out by continual giving. The state is never rich and the populace is always destitute.

It follows from this that the greater the distance between the people and the government, the more onerous the taxes become. Thus in a democracy the populace is the least burdened; in an aristocracy it is more so; in a monarchy it bears the heaviest weight. Monarchy, therefore, is suited only to wealthy nations; aristocracy to states of moderate wealth and size; democracy to states that are small and poor.

In fact, the more one reflects on it, the more one finds in it the difference between free and monarchical states. In the former, everything is used for the common utility. In the latter, the public and private forces are reciprocal, the one being augmented by the weakening of the other. Finally, instead of governing subjects in order to make them happy, despotism makes them miserable in order to govern them.

Thus in each climate there are natural causes on the basis of which one can assign the form of government that the force of the climate requires, and can even say what kind of inhabitants it should have. Barren and unproductive lands, where the product is not worth the labor, ought to remain uncultivated and deserted, or peopled only by savages. Places where men's labor yields only what is necessary ought to be inhabited by barbarous peoples; in places such as these all polity would be impossible. Places where the surplus of products over labor is moderate are suited to free peoples. Those where an abundant and fertile soil produces a great deal in return for a small amount of labor require a monarchical form of government, in order that the subject's excess of surplus may be consumed by the prince's luxurious living. For it is better for this excess to be absorbed by the government than dissipated by private individuals. I realize that there are exceptions; but these exceptions themselves prove the rule, in that sooner or later they produce revolutions that restore things to the order of nature.

General laws should always be distinguished from the particular causes that can modify their effect. Even if the entire south were covered with republics and the entire north with despotic states, it would still be no less true that the effect of climate makes despotism suited to hot countries, barbarism to cold countries, and good polity to intermediate regions. I

also realize that, while granting the principle, disputes may arise over its application. It could be said that there are cold countries that are very fertile and southern ones that are quite barren. But this poses a difficulty only for those who have not examined the thing in all its relationships. As I have said, it is necessary to take into account those of labor, force, consumption, and so on.

Let us suppose that there are two parcels of land of equal size, one of which yields five units and the other yields ten. If the inhabitants of the first parcel consume four units and the inhabitants of the second consume nine, the excess of the first will be one-fifth and that of the other will be one-tenth. Since the ratio of these two excesses is therefore the inverse of that of the products, the parcel of land that produces only five units will yield a surplus that is double that of the parcel of land that produces ten.

But it is not a question of a double product, and I do not believe that anyone dares, as a general rule, to place the fertility of a cold country even on an equal footing with that of hot countries. Nevertheless, let us assume that this equality does obtain. Let us, if you will, reckon England to be the equal of Sicily, and Poland the equal of Egypt. Further south we have Africa and the Indies; further north we have nothing at all. To achieve this equality of product, what difference must there be in agricultural techniques? In Sicily one needs merely to scratch the soil; in England what efforts it demands to work it! Now where more hands are needed to obtain the same product, the surplus ought necessarily to be less.

Consider too that the same number of men consumes much less in hot countries. The climate demands that a person keep sober in order to be in good health. Europeans wanting to live there just as they do at home would all die of dysentery and indigestion. *We are*, says Chardin, *carnivorous beasts, wolves, in comparison with the Asians. Some attribute the sobriety of the Persians to the fact that their land is less cultivated. On the contrary, I believe that this country is less abundant in commodities because the inhabitants need less. If their frugality*, he continues, *were an effect of the country's scarcity, only the poor would eat little; however, it is generally the case that everyone does so. And more or less would be eaten in each province according to the fertility of the country; however, the same sobriety is found throughout the kingdom. They take great pride in their lifestyle, saying that one has only to look at their complexions to recognize how far it excels that of the Christians. In fact, the complexion of the Persians is clear. They have fair skin, fine and polished, whereas the complexion of their Armenian subjects, who live in the European style, is coarse and blotchy, and their bodies are fat and heavy.*

The closer you come to the equator, the less people live on. They rarely eat meat; rice, maize, couscous, millet and cassava are their usual diet. In the Indies there are millions of men whose sustenance costs less than a penny a day. In Europe itself we see noticeable differences in appetite between the peoples of the north and the south. A Spaniard will live for eight days on a German's dinner. In countries where men are the most voracious, luxury too turns toward things edible. In England, luxury is shown in a table loaded with meats; in Italy you are regaled on sugar and flowers.

Luxury in clothing also offers similar differences. In the climate where the seasonal changes are sudden and violent, people have better and simpler clothing. In climates where people clothe themselves merely for ornamental purposes, flashiness is more sought after than utility. The clothes themselves are a luxury there. In Naples you see men strolling everyday along the Posilippo decked out in gold-embroidered coats and bare legged. It is the same with buildings; magnificence is the sole consideration when there is nothing to fear from the weather. In Paris or London, people want to be housed warmly and comfortably. In Madrid, there are superb salons, but no windows that close, and people sleep in rat holes.

In hot countries foodstuffs are considerably more substantial and succulent. This is a third difference which cannot help but influence the second. Why do people eat so many vegetables in Italy? Because there they are good, nourishing, and have an excellent flavor. In France, where they are fed nothing but water, they are not nourishing at all, and are nearly counted for nothing at table. Be that as it may, they occupy no less land and cost at least as much effort to cultivate. It is a known fact that the wheats of Barbary, in other respects inferior to those of France, yield far more flour, and that those of France, for their part, yield more wheats than those of the north. It can be inferred from this that a similar gradation

in the same direction is generally observed from the equator to the pole. Now is it not a distinct disadvantage to have a smaller quantity of food in an equal amount of produce?

To all these different considerations, I can add one which depends on and strengthens them. It is that hot countries have less of a need for inhabitants than do cold countries, and yet could feed more of them. This produces a double surplus, always to the advantage of despotism. The greater the area occupied by the same number of inhabitants, the more difficult it becomes to revolt, since concerted action cannot be taken promptly and secretly; and it is always easy for the government to discover plots and cut off communications. But the closer together a numerous people is drawn, the less the government can usurp from the sovereign. The leaders deliberate as safely in their rooms as the prince does in his council; and the crowd assembles as quickly in public squares as do troops in their quarters. In this regard, the advantage of a tyrannical government, therefore, is that of acting over great distances. With the help of the points of support it establishes, its force increases with distance like that of levers.[26] On the other hand, the strength of the people acts only when concentrated; it evaporates and is lost as it spreads, like the effect of gunpowder scattered on the ground, which catches fire only one grain at a time. The least populated countries are thus the best suited for tyranny. Ferocious animals reign only in deserts.

Chapter 9

On the Signs of a Good Government

When the question arises which one is absolutely the best government, an insoluble question is being raised because it is indeterminate. Or, if you wish, it has as many good answers as there are possible combinations in the absolute and relative positions of peoples.

But if it is asked by what sign it is possible to know that a given people is well or poorly governed, this is another matter, and the question of fact could be resolved.

However, nothing is answered, since each wants to answer it in his own way. The subjects praise public tranquillity; the citizens praise the liberty of private individuals. The former prefers the security of possessions; the latter that of persons. The former has it that the best government is the one that is most severe; the latter maintains that the best government is the one that is mildest. This one wants crimes to be punished, and that one wants them prevented. The former think it a good thing to be feared by their neighbors; the latter prefer to be ignored by them. The one is content so long as money circulates; the other demands that the people have bread. Even if agreement were had on these and similar points, would we be any closer to an answer? Since moral quantities do not allow of precise measurement, even if there were agreement regarding the sign, how could there be agreement regarding the evaluation.

For my part, I am always astonished that such a simple sign is overlooked or that people are of such bad faith as not to agree on it. What is the goal of the political association? It is the preservation and prosperity of its members. And what is the surest sign that they are preserved and prospering? It is their number and their population. Therefore do not go looking elsewhere for this much disputed sign. All other things being equal, the government under which, without external means, without naturalizations, without colonies, the citizens become populous and multiply the most, is infallibly the best government. That government under which a populace diminishes and dies out is the worst. Calculators, it is now up to you. Count, measure, compare.[27]

---

26. This does not contradict what I said earlier in Book II, Chapter 9, regarding the disadvantages of large states, for there it was a question of the authority of the government over its members, and here it is a question of its force against the subjects. Its scattered members serve it as points of support for acting from a distance upon the people, but it has no support for acting directly on these members themselves. Thus in the one case the length of the lever causes its weakness, and in the other case its force.

27. We should judge on this same principle the centuries that merit preference with respect to the prosperity of the human race. Those in which letters and arts are known to have flourished have been admired too much,

Chapter 10

On the Abuse of Government and Its Tendency to Degenerate

Just as the private will acts constantly against the general will, so the government makes a continual effort against sovereignty. The more this effort increases, the more the constitution is altered. And since there is here no other corporate will which, by resisting the will of the prince, would create an equilibrium with it, sooner or later the prince must finally oppress the sovereign and break the social treaty. That is the inherent and inevitable vice which, from the birth of the body politic, tends unceasingly to destroy it, just as old age and death destroy the human body.

There are two general ways in which a government degenerates, namely, when it shrinks, or when the state dissolves.

The government shrinks when it passes from a large to a small number, that is to say, from democracy to aristocracy, and from aristocracy to royalty. That is its natural inclination.[28] If it were to go backward

without penetrating the secret object of their cultivation, and without considering its devastating effect, *and this was called humanity by the inexperienced, when it was a part of servitude.* [Rousseau here quotes Tacitus, *Agricola*, 21, in Latin.] Will we never see in the maxims of books the crude interest that causes the authors to speak? No. Whatever they may say, when a country is depopulated, it is not true, despite its brilliance, that all goes well; and the fact that a poet has an income of a hundred thousand livres is not sufficient to make his century the best of all. The apparent calm and tranquillity of the leader ought to be less of an object of consideration than the well-being of whole nations and especially of the most populous states. A hailstorm may devastate a few cantons, but it rarely causes famine. Riots and civil wars may greatly disturb the leaders, but they are not the true misfortunes of the people, who may even have a reprieve while people argue over who will tyrannize them. It is their permanent condition that causes real periods of prosperity or calamity. It is when everything remains crushed under the yoke that everything decays. It is then that the leaders destroy them at will, *where they bring about solitude they call it peace.*
